So far Hegel has dealt properly only with the observable world as the undetermined generic essence of the individual. Whatever is observable in the individual must be in her "world." By introducing specific examples of the kind of individuality that interests a biographer, I have already anticipated much of what Hegel has only implied about the possibility of a law that connects the individual with her world. We can see that the "law of identity" connects them; and that turns out to be more interesting than it sounds, because the *real* law of identity includes contradiction and mediation. The hall of pictures is never simply a hall of mirrors.

- 10./307. We have to start from the centre of the sphere because the mirroring is *not* Leibnizian-logical. The individual mirrors the world in an ambiguous practical relation to it. Freedom alone determines where the relation is identity and where contradiction.

According to the Leibnizian view, the individual and the world are *identical*. The *mirroring* of the world at the spherical surface is the unfolding of the monadic essence at the centre. But this is not the kind of identity that exists between rational individuals and their world. For actual individuals the world exists both to be accepted, and to be negated. The biographer must first try to mirror the world of the subject as it was "in and for itself." But even for *observing* Reason this means not just the world as it existed for other people generally, but the world that *could not be overridden*—the world that determined the success and failure of individual projects. It is not only success but failure that interests a biographer; and failure has to be comprehended in terms of the world as it is "in and for itself." But

(adopting Hegel's own metaphor) even failure can be comprehended properly only from the active living centre of the sphere, i.e. from the viewpoint of the individual concerned.

This is what the "windowlessness" of the monad means for actual observation. We have to see the world the way the subject did and know what she was trying to do, even in order to estimate her failure; and Leibniz himself agrees that (since we are all finite and none of us is God) this effort of the pure observer *must* fail. The self-definition of the subject remains an act of freedom. Hegel simply adds that *for observation* this means that the identity of the individual with the world includes contradiction (even the contradiction of outright crime, which is failure by definition, and ought to fail in fact). What mediates between identity and simple contradiction—the middle way between them—is observable only as arbitrary choice. Biographers do not try to explain everything; and the observer's comprehension (whether of success or failure) can never be "perfect" (in the formal or Leibnizian sense).²¹ Our justified right to lament the early death of Keats, or of Mozart, springs precisely from the fact that we *cannot* infer the poetry and music that they might have produced, from *any* degree of comprehension of what they did produce. Here we have the "psychological necessity" that is not an "empty phrase" but the lesson of Hegelian logic. We are not supposed to be reconciled with the world because we see that nothing in it could have been otherwise (as Leibniz thought), but rather because we comprehend that *our seeing that things could have been and can always be otherwise is the way things absolutely are and ought to be*.

- 11./308. Thus the *sides* do not have a lawlike relation. The individual *is* the *identity* of the world that he accepts, with what he does with it or in it.

The reconciled *result* of the movement of the logical concept of the individual through its psychological experience is the concept of "psychological necessity" (or the concept of the rational monad as identical with its world). But because the world of the individual does *not* exist in and for itself, but is only her "indeterminate essence"—for even a successful life of crime is possible after all²²—the concept of "psychological necessity" inverts itself directly into "psychological freedom." The arbitrary "freedom of choice" of the individual is precisely what the "laws of logic" reveal to our observation as the essence of Reason in its self-observation. Individuality is the indissoluble unity of a cultural heritage that is accepted, with a cultural mark that is made. Where and how the acceptance stops and the mark is made, is logically unpredictable and formally incomprehensible. In flat contradiction of all of Leibniz' logical applications of the "laws of thought," this is the truth enshrined in the Leibnizian concept of the *monad*. So the hypothesis of a divine knowledge of the monad that is purely logical (in the formal sense) is quite absurd. There is no hall where the pictures become mirrors, and "God" is the self in the middle; and, if we divide the unity into the world-in-itself, and the individuality that subsists for itself, i.e., if we try to treat them both as subsisting on their own account, we only experience this absurdity. They can be observed like this, for

the world is there, and the individual comes into it and leaves a mark; but no “necessary” relation can be observed at all.

The active individual who is observed is *embodied*. This is something that I have been ignoring in using the paradigm of the biographer as observer, since biography is usually concerned with the dead (and generally treats even a living subject as one who is no longer active). Hegel’s psychologist, on the other hand, is an ethical scientist concerned with living individuals. So observational Reason has one last chance. We can take our identity of “outer” and “inner,” of “necessity” and “freedom,” and separate the sides for observation by taking the organic body as the “outer” through which the expression of inward “individuality” is observed.

V A(c): Observation of the Connection of Self-Consciousness with Its Immediate Actuality: Physiognomy and Phrenology

Since we have seen that the biographer is the best paradigm of the observer of rational individuality, it might seem that we can leave out the study of the rational individual as a living organism altogether. Our object is already the object of the biographer: the individual in her own world.

But it is precisely the living organism which is educated to be a rational agent; and the rational psychologist (whether she is aware of it or not) is visible to us in the context of the Aristotelian order of the practical sciences. She observes the living individual, and she discovers that the individual escapes the bounds of her observation. When the biographer observes that individual in her own world, the problem is overcome—but only because the individuality is observed as a “complete life.” We can now take this “result” and observe it as the subjective focus of life in action.

This advance involves taking the living embodiment of the individual into account. In Logic we were observing only the universal aspect of the “mind” (for the instinctive observer) or of the “spirit” (for us). Like the universal unconscious Life (of which it is the subjectivity) the logical Concept turns over necessarily into the Concept of Subjective Spirit. In Psychology we observe this in its particular shape; the naïve observer is writing the educator’s manual of the later Enlightenment. But our object was the sort of Psychology that Hegel offers in his Philosophy of Spirit. The two poles come together in the problem of the “individual” as it is faced by a biographer. The discovery of the point at which the biographer must fail, brings us logically to the observation of the actual living individual; and we must necessarily turn back to the “Observation of Nature” now, because the living individual is an embodied organism in the natural environment. Thus, the whole movement of Observation is a circular logical progression in accordance with the method of experiential development.

Also, the recognition of freedom (upon which the perfect observation of individuality founders) brings us back to the normative project of psychology. Both for us, and for the empirical psychologist, the object of observation is the structure of Sittlichkeit. Formal logic is the instrumental science of rationality, and normative psychology is the science of good citizenship. We find that we have to return to natural science, with its ideal of predictive knowledge, in order to carry out the project of educational psychology. The obser-

vation of crime is peculiarly important here. It is easily shown that individuals who are perfectly familiar with the laws and customs, and who can conform when they know they are observed, sometimes try to evade observation because they want to "break the law." It is a truth of formal logic that only cases of failure to evade observation can actually be directly observed, but the existence of many successes can be inferred from the observed results of deeds whose agents remain unknown. Thus the search for a law by which the criminal type can be identified, is logically imposed or dictated by the concrete logic of ethics or statesmanship; and this social motivation was consciously present in the minds of the actual proponents of the observational sciences that we shall study in this section.

Physiognomy fails to be an observational science, first because "body-language" cannot be effectively translated into the language of science, and secondly because all physical expression is subject to voluntary control. When the living body proves to be an impossible means of access to the "inner" as an sich (precisely because it is the medium of transition for the an sich into Fürsichsein) what is left is the body as an Ansichsein. As a "thing" its being-in-itself is directly identical with its being-for-us as the perceivers. We have discovered that we cannot read from its living use, what the user means. Can we read from what it is outwardly, the truth of what its living consciousness is inwardly?

It is debatable how we ought to take this final transition of Observing Reason methodically. Hegel himself says that our last result is to be taken two ways (par. 344). We might argue that Physiognomy negates itself so directly in "experience" as to leave this dead result. But Hegel is careful to record Lavater's rejection of Phrenology. So he wants us to see this transition as the movement of the "self-conscious body" Concept into its simple antithesis: the dead body. This closes Observation into a perfect circle, since the observer now observes herself as a mere element in the Mineralogical Organism. But it means that the progressive result of this phase of Observation is not visible in Section A of chapter V at all. It only becomes visible in the transition to Section B. The real thinghood of Reason is the embodied consciousness expressing itself actively in its environment.

(d) *Observing the Soul in Its Bodily Expression (Lavater)*

- 12./309. Since there is no law for the relation of self and world, observation distinguishes between self-consciousness and the body. It attends to the antithesis that is wiped out in the peculiar determinacy of the singular active agent.

In the first paragraph Hegel merely presents the positive result of the preceding moment; my analysis goes slightly beyond that and partially anticipates the next paragraph because it is difficult both to express the argument in ordinary English, and to abbreviate it, without looking ahead. The positive individuality that escapes from rational observation is a *free* agent who is both in and for herself. As "for herself" she is free. But as "in herself" she is part of the observable world. She is a living organism that relates to the world as such.

Pure self-consciousness is *Fürsichselbstsein* (par. 301). But we have known ever since the "first experience" of Self-Consciousness that this being-for-self is dependent upon the living body. So now in the third moment of rational Observation we

are “driven back to” the living organism which was our (adequate) object in the first moment. In the Observation of Nature we observed the body; and in Self-Observation we observed the soul. Now we must observe the relation of soul to body. This is the overall structure; and although the explicit outcome is more comprehensively negative at every stage we must not lose sight of this logical movement. At the same time, the advance from stage to stage is methodically regular. In logical and psychological observation we discovered that the individual is free. We must now look for a rational law *within* that self-liberated individuality. We know from our earlier experience of it that it has an observable and a non-observable side. Can we now find the clue to its “self-conscious” inwardness in the organic shape that we left behind earlier?

We should not overlook the Spinozist background of this new standpoint. Spinoza taught that “the order of Ideas is the same as the order of things” and that the human body is the proximate object of the human mind. He was thinking of how all of our knowledge of the world is necessarily mediated through the bodily senses; but it follows from his general position, that some motion of the body must correspond to every motion of the mind. The fundamental project of Physiognomy rests upon this presupposition; and all behavioral approaches to the mind are “physiognomic” in principle. Physiognomy was a very crude and primitive form of science, but not a pseudo-science. Hegel’s own naturalistic reinterpretation of the Leibnizian monad allows, and implicitly justifies, our being “driven back” from Leibniz to Spinoza at this point. Our object may not appear to be greatly enriched by this, but we shall see in due course that “appearances” are deceptive.

- 13./310. The individual has a body (naturally given); and since he *is* only what he has done, can we not read off what he is from this original record of his doings?

The individual has an “*original determinate being*—a determinacy that is in concept the same as what psychology wanted to find outside him.” The “*original determinate Being*” is the individual’s body; and it is “original” because it was formed by the life-process before she is conscious of it. What psychology wanted to find outside, but could not, was the individual’s conscious “world.” Our own world belongs to each of us in a “windowless monad” way. So the claim that the body is “according to the Concept the same” should be interpreted in terms of Spinoza’s doctrine that “the object of the Idea constituting the human mind is the body, or a certain mode of extension actually existing, and nothing else.”²³ Our bodies are the key to our private worlds. The world in itself (both physical and social, i.e. natural and spiritual) is the “indeterminate essence” of all individuality. What determines it, on the hypothesis of this new mode of observation, is its reception and transformation in and by the bodily organs, without which the individual could not be conscious of it at all. The body is an observable object, so the problem is to learn to interpret from its outward shape what is going on “inside its consciousness.”

- 14./311. Observed in its own natural and cultural environment the body is the visible record of the individual’s active self-expression. How then is this record to be interpreted?

Hegel did not have an actual science to deal with, which aspired to explain singular acts or even the routinized oddities of single individuals. The underlying assumption of Lavater's Physiognomy was that different individuals would take the impress of general natural and cultural conditions in different ways according to their *nature*, which was assumed to consist of a repertory of dispositions or tendencies. If we ask how Physiognomy can expect to fare any better than the educational psychology that we have already observed (which attempted to comprehend individual behavior on the basis of these same assumptions with the clear consciousness of individual freedom) the answer is that now the bodily signs are supposed to give us a reliable index of the activity of arbitrary choice. Physiognomy is the putative science of "body language." The body as naturally given (including its natural and cultural environment) determines the range of what the individual *can* do; as the expression of what she *has done* (against that background) it shows what she is now disposed to do.

When we try to observe the psychological formation of character, it becomes apparent quite rapidly that we cannot do it. We can never tell that the desired habit has been properly formed. We can observe the performance of the action, but we cannot know when the individual is doing it "for its own sake"—to use the Aristotelian language—rather than because the agent knows we are watching. Sherlock Holmes, however, is an expert physiognomist. He frequently reads the observable bodily signs of what the individual *habitually* does. That his imaginary performances are so plausible for us shows that we believe (or would very much like to believe) that this kind of observation is possible; and it also illustrates the advance over simple psychological observation. "This being"—the body that the individual has certainly molded *for its own sake*—"is the expression of the inner [conscious] agent." Observing the body makes the process of discovering the "law of individuality" *sylogistic* in Hegel's sense. The body serves as a "middle" term—a visible record of the Aristotelian character. Here is our new lawlike expression relation.²⁴ But we have to discover how we should *read* the record.

- 15./312. The body is an "organ" of expression. I affect the world through it. But that (uttered) expression I lose. My speech and work is not an expression, it is *me*; but because it is my *uttered* self, it falls prey to reworking by others. Also I may be faking, or I may fail. And the "organs of utterance" are then just part of the fake or failure.

Before we examine this paragraph, we ought to notice first that in paragraph 311 Hegel began by mentioning the natural and cultural environment as impressed in the bodily type. Travellers, observing local "types," were among the most enthusiastic physiognomists of the time. The novel *Sophia's Journey*, which distracted the schoolboy Hegel for most of a day from the studies to which he had intended to devote his time, was full of physiognomic observations; and Hegel himself recorded a few observations of his own some years later when he was hiking in the Swiss Alps.²⁵ So although he may have been sceptical about physiognomy even in this generic application by 1806, Hegel was not insensible or unsympathetic to the eighteenth century conviction that there were national and local types and characters.

But as a means of understanding *individuals* he does not believe that it has any validity; and he does not hide that fact, even in his initial presentation of Lavater's case (which begins here).

We work on our bodies to make them the effective instruments of the self-expression that is really important to us. The body is the mediating term of our real utterance; mouth and limbs are our principal "means" of expression. But our real expressions become free *from* us. On the one hand others can twist them to suit themselves, and on the other hand, we are free of them ourselves; and quite apart from the wilfulness of others, we may fail to express what we meant to, or we may mean to deceive others and succeed in doing that.

In its actual instrumental use the body cannot be the reliable *sign* that the rational observer needs. If our expression is both truthful and successful, then it is not an *expression* of our intent; it *is* our intent. It is the inner itself "uttered."²⁶ What we say or do is identically what we mean. But because the utterance is there independently no one can be intuitively certain of its truthful status, or its correct interpretation. This forces us to consider *how* it is uttered. But the mouth or the hand is just the instrument of the intent; if there is a failure, or if the intent is to deceive, then (in so far as they are instruments under voluntary control) they can become part of the deceit, or be the actual occasion for the failure.

- 16./313. As an inert thing the body is no use for interpretation, because the conventions for reading what is "written" there are arbitrary and cannot be fixed.

Having disposed of the mouth and limbs, which simply become part of the action, and hence are of no use as an independent index of the intent, Hegel now gives us *Lavater's* argument against the *skull*. The hypothesis of the phrenologists, Gall and Spurzheim, was precisely that the outer *Gestalt* received the impression of the inner organism *passively* as a subsisting thing. Lavater's reason for rejecting this approach is that there is no rational way of determining what the "impression" means. One can take any bump as the sign of anything. This already anticipates what Hegel himself will say later in its proper place. We can only understand why it needs to be said here, if we grasp that paragraphs 312 and 313 are intended to eliminate the two extremes, between which Physiognomy is the rational mean.

We ought to notice at this point the affinity between Lavater and Lamarck. Whatever impress the body takes from its struggle either with the natural environment or in cultural discipline is physiognomically interpretable. A very important spiritual inference can be securely founded, for example, on the state of the old man's teeth in one of the fossils found at Chou kou t'ien. He could not have reached the age he did, with his teeth as worn down as they were, apart from the existence of a family bond, which Hegel would be happy to have me call *love*. This is a proper *physiognomic* inference, and it concerns individual relations. It is quite a *rational* observation, and it must be sharply distinguished from the quasi-phrenological arguments about the advance of human intelligence that are based upon measurements of surviving fossil brain-cases.²⁷

- 17./314. Physiognomy, however, claims to study character as the identity of conscious essence and subsisting shape in their natural and necessary connection (unlike astrology or palmistry).

Lavater eagerly insisted that whereas there are many arts of divination which are nothing but superstition, Physiognomy is a scientific discipline. From the *Gestalt* of the body we can infer the character of the individual. Among the superstitions from which he distinguished it, the most venerable is astrology. The tradition was probably old when Plato made a mythic use of it in the *Timaeus*, and a mythic criticism of it in the *Phaedrus*.²⁸ I do not know where palmistry originated, but Hegel's willingness to call both astrology and palmistry "sciences" is a backhanded slap at Lavater who distinguishes his "science" as a proper one from the others which are not sciences at all. Hegel does, however, draw the appropriate distinction between them; and we may notice that palmistry does not suffer by comparison with phrenology. The configuration of the heavens at the time of birth *is* more external; and any causal influence *must* there pass from "outer" to "inner."

- 18./315. Next to the tongue, however, the hand is the instrument of our self-definition. So palmistry can *almost* claim to take the same short cut as physiognomy. The hand *is* our potential.

This paragraph is a puzzling interjection into Hegel's statement of the case for Physiognomy. Lavater did consider the hand as a physiognomic index (and also the handwriting). That is alluded to in the next paragraph. But unlike the palmist (or for that matter the policeman) Lavater was not concerned with any patterns that are put on our hands by nature. If the physiognomist believes in natural hand types his belief is of a Lamarckian kind, and is not the fortune-teller's faith that the *future* is revealed in what is naturally given. Hegel seems to have brought in this ironic comparison of physiognomy with palmistry in order to make two points of his own.

The first is that what we do with hand and tongue *is* our actual self-definition. What we say actualizes our rational individuality more immediately and unambiguously; but what we do with our hands (including writing, though that is not explicitly referred to until the next paragraph) is the abiding *record* of our individual existence. The hand can with justice be called the *Ansich* of rational individuality, because it makes the mark that is our *Anundfürsichsein*.

The second point is that this realization of the rational self as a monad can only be rationally observed and assessed after our death. Solon's proverbial saying (recorded by Herodotus as part of his conversation with King Croesus: "Call no man happy until he is dead")²⁹ expressed the Greek *tragic* sense that one's "destiny" (*Schicksal*) is always at the mercy of higher powers. The word *eudaimon* (which is ordinarily translated "happy") meant etymologically, and in the popular mind, that one enjoyed the favor of a spirit or *daimon*. But Heracleitus (and others after him) insisted that we are the architects of our own good fortune, and that "character is the *daimon* for man." Aristotle, who developed the concept of *eudaimonia* as "the life in accordance with the best and most complete virtue"—i.e. with

the perfect *character*—dealt with Solon’s point by distinguishing between “happiness” (which can be *marred* but never destroyed by misfortune) and “blessedness” (the perfection which only the favor of fortune can add to “happiness”).³⁰

It is here, I think, that we find the reason for Hegel’s curious decision to linger with palmistry, and to contrast the fairground fortune teller as well as Lavater with Solon. The hand is (as he says) the principal agent by which we “make our fortunes.” But the palmist recognizes (and Lavater does not) that our fortune or destiny is “out of our hands” (as active agents). The introduction of the word *Schicksal* is the key here. “Destiny”—in the naked conceptual form of Necessity—will be the first experience of the self-actualizing rational self when we get to it. Between now and then Destiny will appear to the supposedly rational fortune teller (the phrenologist) as *death*, the one rational certainty for which the skull is a non-arbitrary sign. But Destiny appears prophetically here (in its ordinary guise) as that aspect of the individual’s real life in the world which the rational observer of individuality as an organic totality is ignoring. The addition of palmistry makes the hand into a *complete* image of human destiny. It is the oracle of our fate, as well as the agent of it.

- 19./316. We can see now why we need an organ of expression that is no more than that (i.e., it does not complete a *deed*, such as speech, which *is* the self and also a free object). We need a sign that is *simply* observable (so that we don’t have to collect a universe of fragments). Characteristics of the hand, timbre of the voice, handwriting, are fair candidates.

We are now ready for Lavater’s solution to the problem of what to observe. The organs of the body are not to be observed as the actual *agents* of the intended deed. For then the “intention” of the deed becomes ambiguous. What is being done speaks for itself, and if the deed is a concealment, that is what the doing realizes (see par. 312 which is simply summarized here). The organ is to be observed as the necessary middle term between intention and action. It is there to be studied all the time both before and after action. It is outwardly visible, but never separate (like an action) from the inward thoughts and intentions of the agent. The individual’s deeds are many and various, but all are mediated, all pass through hand or mouth, so hands and face and tone of voice (and the handwriting) are where the simple disposition will show.³¹ All that the agent has done, and all that she has suffered through circumstance and destiny, is recorded in these organs of the will. The handwriting is included because although it can only be observed in specimens that are external *products* of acts it reveals character as much as the tones of voice or mobile expressions of the face; and it has the advantage of permanent observability as a *thing*.³² All of these observable traits are windows on the monad whose singular acts are just isolated details of a complex interaction with the world.

- 20./317. But the whole body is a language of gesture, of inhibited action, and of self-feeling (especially the face).

Once we understand the principle, every movable aspect of the body becomes a possible object of physiognomic observation. The whole body is the medium of an unself-conscious language. Actors, of course, make this naïve expression the object of conscious technique (and that will be the downfall of this “science” in a nutshell). But even in acting the goal is to let the expression come as spontaneously as it did and does before the actors controlled (or when they are not controlling) it.

Lavater anticipated Freud in regarding body-language as a system of *inhibited* impulse, and hence as a rational source for the betrayal of secret vices. But there is an important difference. The *Psychopathology of Everyday Life* is directly continuous with Lavater’s “physiognomy” as far as conscious and preconscious motivation is concerned. But Freud thinks the body betrays genuinely “unconscious” impulses and wishes. Lavater thinks, rather, that we can observe the “act of concealment,” and thus make all action essentially truthful. The body betrays how the agent is “reflecting” upon the outward act.

It is in this perspective that we can recognize physiognomy as the resolution of the problem posed by the psychological discovery that the individual *may or may not* accept the values that make virtuous acts genuinely virtuous. The body shows what she is saying to herself. That is the function of physiognomy as a science of “individual” observation. It aims at the discovery and unmasking of dishonesty. Thus, if one says that nail-biting is a sign of ethical “tension,” that is sufficient for the instrumental needs of rational observation. It does not matter that the tension may have many causes. Even the rational psychologist will be able to discover what the trouble is as long as the nail-biter is *honest*. It is where she starts *lying* that physiognomy is needed.³³

- 21./318. Thus the inhibited action reveals the *real* intention of the actual one. But the bodily expression is both inscrutable and controllable; so that if physiognomy *were* a science one would only have to study it in order to defeat its observational use. The face can tell us something or nothing—like the behavior in psychology.

The case for Lavater’s “science” is now complete. The rational observer is supposed to be able to see in the bodily demeanour what the real mind of the active agent is: it is “the reflectedness of the individual out of his actuality.” In ordinary life we *do* “see” whether people mean what they say or not.³⁴ But just as we need conventions about the signs used in writing, so there are conventional interpretations of bodily expression; otherwise the expression is inscrutable, it means nothing. For the interpretation to be “scientific” the convention must be known; and once it is known it can be inhibited or used falsely. Animals in the wild *learn* to interpret the cries both of their own and of other species. But the reliability of the interpretation depends precisely on the fact that the behavior is not inhibited, *not* controlled. In a minimal sense the cries may be *meant*. For instance, the blue-jay’s excitement may be reinforced by the reaction that its alarm provokes. Animals teach their young, and many species enjoy playing (both activities involve controlled and inhibited behavior).

Chimpanzees may even reach the stage of “the boy who cried wolf.” But whether any species other than our own can *pretend* at that level or not, this is the point where physiognomy breaks down. Anyone who has played poker much, knows that Shakespeare’s Duncan goes too far when he says: “There’s no art/ To find the mind’s construction in the face.” There *is* an art, a Platonic art of opposites—i.e. an art both of finding and of hiding. Some have it (in one or both forms). Others don’t (and steady losses can teach those who have it not, that it exists). But it is an art that logically *cannot* become a science—not a proper Platonic art in fact. For, supposing that one *can* say how one does it, that is just what one must *not* talk about; so it is essentially what Plato called *empeiria*, a knack. It is effective only within a limited circle of individuals. There may be some who have an almost universally effective poker face; but by the same token there is no one who can read all faces equally.

Lichtenberg, like Shakespeare’s Duncan, overstates the case. But it is probable that the best poker players win more by concealment than by insight. Sherlock Holmes is imaginary; but there are great illusionists in every generation. In any case, the very fact that the “art” is “of opposites” (as Plato would have said) proves Hegel’s essential point: the physiognomist is in no better case than the psychological observer. As soon as the individual who wants to live in a private world realizes that a window has been discovered she can take steps to obscure it. Observing Reason must learn, in the end, that the private world contains nothing essential. The will and the deed are public and identical. This is far from being the end of the story of the private self, but at the level of rational observation at least, Hegel is explicitly a behaviorist.³⁵

- 22./319. Individuality expresses itself in its work. Reason instinctively treats this externality as the unessential (inverting the truth as in Understanding). “What he really *means*” is what counts, and we see that in his spontaneous expression.

The “experience” of physiognomy is very quickly displayed. In essence Hegel finishes with it in his first quotation from Lichtenberg: if one knew that one’s expression was being read by a scientist, a courageous resolution would defeat her. This is a contrary to fact conditional, and there is another one like it coming from the same source a bit later on. But this first one reveals already the interesting and paradoxical fact that no one actually has the “experience” of physiognomy as a science, because there *is* no science.

Once this is recognized—and Hegel has proved that there is no experience corresponding to the concept by showing why there cannot be one—the interesting thing for *us* to observe is the context of rational assumptions that leads the ethical observer to think that there ought to be such a science. That structure of assumptions must be tested against the experience of ethical life. Then the second Lichtenberg quotation can tell us why there ought *not* to be any such science, why it is unethical to act and speak as we would if we believed in it.

The basic hypothesis of the physiognomist is that the outer can be separated from the inner aspect of action, and that the inner aspect is what is *true*. This

assumption arises naturally from psychological observation as an educational discipline. Rational psychology is the theoretical foundation of practical science (in Aristotle's sense). That is to say that it gets its standards and its goal-definition from ethics. It is important for the educator to know whether the subject is really becoming "virtuous" or not. This seems to lead us toward the Kantian concern with *intention* as what determines the worth of the act. But what Aristotle was concerned about was the reliable performance of the act which a practically wise man would define to be appropriate to the situation. Theoretical certainty that the act was indeed virtuous was not the goal; for if the underlying habit was not really a virtuous one, that would eventually become apparent.

Practical expression, not theoretical intention, is what counts. The whole Kantian approach to ethics is upside down or backwards; it is the extension of the law-mechanism of Understanding into the free world of Reason. According to the first inversion of Understanding, it is the intelligible, inner world of perfectly stable order that is *real*. But it is only in the sensible world comprehended as "appearance" that this noumenal world is actually realized. Kantian ethics must be understood through a similar comprehension of the world of real actions. Lavater's attempt to invert the "true intention" into the *body*, so that it can simply be there for us to see, only makes the falsity (and indeed the *evil*) of the whole theoretical concern with inward righteousness explicit. Reason came forth from that inwardness where sin and righteousness are eternally united in their contradiction. There cannot be a greater error than to want to go back there. This was easy to grasp at the inorganic level. But the lesson is only learned slowly and painfully about the self-consciousness of the organism. The absurdity of a distinct *observational* standard of "intention" is the first lesson.³⁶

- 23./320. We all make spot judgments about one another based on impressions. These are judgments about the "Spirit" conveyed in the impression. But such judgments are unreliable opinions. Physiognomy wants to make them into a science and say "he is a *potential* thief, murderer, etc." But its descriptions of the relevant facial characteristics remain hopelessly inadequate. The individual's facial *expression* cannot *be* verbally expressed. That alone makes it certain that physiognomy cannot be a science.

Having shown why a "science" of physiognomy is impossible in practice and absurd in theory, Hegel turns now to the actual practice of physiognomy as an empirical art. Obviously the physiognomy that we all practice ("I don't like the *look* of him," "She has such an *honest* face" and so on) is frequently no more than the sort of prejudice that tells more about ourselves, or the mood of the moment, than about those who are subjected to it. It is doubtful that we ought to concede Lavater's assumption that there are "natural" physiognomists whose first impressions are usually right. The insight of a good card-player is not immediate but a trained expectation; and it is soundest where the group are old acquaintances. It is always guesswork no matter how "educated" the guessing may be.

In order for physiognomy to be even a natural skill, there has to be some bodily aspect that reveals the *capacity* for murder, or theft etc. In fact, Lavater did not

believe that “capacities” were distributed by nature in that way. He was a Protestant minister, with a fully developed (Augustinian) Unhappy Consciousness. Anyone was capable of any sin, he thought, if the stresses and temptations of the moment were great enough. At least, he says explicitly that anyone can be a thief; therefore, he reasons, anyone can show the bodily “mien” of a thief.³⁷ So he would be the first to agree that the “thievish potential” is quite lost in “the concrete infinitely determinate character of the *singular* individual.” No matter how carefully we characterize a bodily mien, the description can never be detailed enough to capture the individual. We can describe three people as a thief, a nice man, and a natural, unspoiled girl; and we can say the first has a flat forehead, the second has a long nose, and the third has curly brown hair. But we cannot make any description adequate to our immediate impression either on the ethical or on the physical side. We are dealing here with the intuitive “feeling” and the “look” of people; we have come back to the kind of sense-certainty that is in principle *uncertain*, precisely because it is linguistically ineffable.

- 24./321. The “laws” of how the body expresses the spirit can only be vague conjectures (and the physiognomist cannot fail to know that). Also the guesses will reflect personal prejudices.

James Joyce solves the problem of physiognomic description about as well as it can be solved when he uses the same form of words to describe a young girl, and the stream that is to become a river (it is accurate to say that he is facing the physiognomic problem, because he intends the river as a symbol of the course of human life): “She was just a young, thin, pale, soft, shy, slim, slip of a thing then, sauntering by *silva* moon lake.”³⁸ This is ineffably “subjective,” but it creates a presence with *universal* import. It does not state (or presuppose) any laws that I can think of; but it *suggests* the identity that Lavater was conscious of, and wanted to make laws about; and it contributes something more significant to “the understanding and love of mankind” (which Lavater’s science aimed to advance) than the “laws” which Lichtenberg wittily compares with the prejudiced generalizations of a more prosaic washerwoman. It is not part of “science,” but it illustrates the two-sided genius of language, which points away from sense-certainty, while creating an image that has all the immediacy which makes occasional moments of sense-certainty radiantly memorable for all of us. For me at least this unforgettable example illuminates how Physiognomy belongs to “absolute knowledge.”³⁹

- 25./322. A man’s true being is his deed. If I say I know him better by his face, he will hit me [and let *my* face show what I am]. The face is there to be hit, and the hitting teaches us that individuality is action, the negating of what is there. There is no ambiguity or guesswork about it; the spirit is not yet explicitly present, but what is *actual* is clear enough. Someone who thinks only of his supposed potential, deceives himself. Of course one’s deeds can be misinterpreted, but if they are anything real they will outlast that.

The second quotation from Lichtenberg tells us why we *ought* not to aspire to a science of physiognomy. A black eye would be even more appropriate than a thick ear for someone who commented that being honest was costing the agent a great effort, and took this as a sign that she was really not honest at all. The effort might indeed be perfectly observable in one's demeanour; but one wonders how Lavater (whose "love of mankind" was as genuine as his understanding of temptation, for he died of an infection incurred while tending the wounded victims of Napoleon's Swiss campaign in 1801) would have diagnosed the physiognomy of Ebenezer Scrooge on Christmas morning. Certainly he agreed that "the true being of the man is his deed"; yet the accompanying "physiognomy" may be either that of self-conquest, or that of liberation.

It is more interesting to consider the relation of Hegel's thesis to the work of Freud. For the whole psychoanalytic approach to our behavior is a subtle and sophisticated development of the physiognomy of conflict. It is not the face, so much as things one says spontaneously, and the dreams one has, etc., that the analyst looks at; but he says just what Lichtenberg promises that no "brav Kerl" will *ever* tolerate, and he does not get punched for it. The point is, of course, that no one goes to the analyst feeling like a "brav Kerl"; and the analyst is not passing judgment like one of Plato's examiners after a battlefield test, or after one of the drinking parties proposed in the first book of the *Laws*.

There are a few points about the identity of the real individual with her deeds that deserve to be underlined (though for the most part the argument of this long paragraph is unwontedly clear and simple). The black eye (if we may substitute that case) is the "sublated being" of the face that provided the physiognomist's triumphant insight. What the blow means is fully expressed, and the helplessness of language in that respect is no longer a difficulty. "Explanations" are still called for; one would hardly expect the physiognomist to take the point that his *theory* has been refuted without some further discussion. But in this appropriate act (appropriate given that the physiognomist is not an old man, a woman, or even like Lavater a man of the cloth, and so on for all the relevant customary expectations) the *brav Kerl* has established his character.

In the simple act, "he is not posited as spirit." What does that mean? If the physiognomist protests, and our *brav Kerl* is articulate enough to say what Lichtenberg says for him—that he has *only* done what any decent guy would do "bis ans Ende der Welt"—then what Hegel calls "true Spirit" is "posited." But there is some ambiguity about this positing. It is easier to see that he is "posited as spirit" when he is not a *brav Kerl* at all, but a veritable *Schelm in Herzen* ["a rogue at heart"] talking to his analyst.⁴⁰

When Hegel speaks of the individual's "deceiving himself . . . and fancying that in his own inwardness he is something other than he is in his deed," he is anticipating the dialectic of Reason as *die Sache selbst*; and this is true again when he comments that "in as much as it goes to work and becomes the work [*zum Werke wird*], individuality surrenders itself to [or becomes fair game for] transformation and perversion." It is necessary to make a proleptic allusion to that final resolution now,

because it is perfectly possible for the active individual to take the part of observer, and to observe herself. Being *ex hypothesi* rational she cannot deceive herself in direct psychological observation; and one would think that she neither can nor needs to be her own physiognomist (except in the limit case of the professional actor, or the agent setting out to defeat a physiognomist). But, in fact, “physiognomy” is exactly the conceptual structure of psychological self-deception. One can look at one’s own “inner face” and convince oneself that one has all kinds of unrealized potential, and that *that* is one’s “real self.”

So the place and function of physiognomy in establishing Observing Reason as a stable self-maintaining *Gestalt* is a crucially important one, even if the pretence that sense-certainty can become the foundation for a proper science is logically absurd. We must not be misled by Hegel’s rhetorical zeal. He wants us to see how hypocritical it is to admire the virtue of one’s own character, simply as character; and how lazy it is to believe with Lady Catherine de Bourgh that “There are few people in England, I suppose, who have more true enjoyment of music than myself, or a better natural taste. If I had ever learnt [to play the piano], I should have been a great proficient.”⁴¹ He wants us to see that the position is *sterile*. But he emphasizes all this because we have to understand why the rational spirit itself becomes dissatisfied and moves on.

The very fact that the emphasis is needed indicates that there is a temptation to stay, that the position can *satisfy* people of intelligence who take themselves and life very seriously. Lavater’s “science” made a great impression on some of the best minds of the time, from Goethe downwards. We can readily see why it was an interesting and attractive project for all writers and readers who were interested in the portrayal of “character.”⁴² But Hegel recognized that as a science (or even as a perceptual “art”) physiognomy promised to be just the conceptual complement that the Aristotelian ethics needed to make it into a properly modern form of rational observation. Hegel was himself an Aristotelian in social ethics. To expose the error of Lavater was, for him, a first step in the overthrow of the prevailing Kantian moralism; and this was an essential prerequisite for the proper regeneration of the “substantial” spirit that Aristotle’s *Ethics* expressed.

(e) *The Outer as a Record of the Inner (Gall)*

- 26./323. Psychology looks at the relation of self-consciousness to the outside world; Physiognomy looks to the body for its most direct expression; finally we can look to the body-structure as a mirror of the spirit’s potential.

In Physiognomy we returned to the observation of the organism as the key to the hidden activity of self-consciousness. Thus the speculative inspiration of Lavater’s science (whether he knew it or not) was Spinoza’s doctrine of the perfect parallelism of soul and body, thought and extension. But the rational psychology that recognizes the *freedom* of self-consciousness, is obliged to conceive individuality in the manner, not of Spinoza, but of Leibniz; and the rational observer of the organism

only finds herself with a proper “object” for the formulation of universal “laws” about the parallel of thought and extension, when she has a dead organism on the anatomy table. Logically, therefore, the reintegration of the successful observation of the inorganic, the one mode of rational observation that does produce laws, into the observational philosophy of Spirit, is the necessary climax of Reason as Observation. There must be some way in which the free, self-defining, fully *monadic* character of the individual can be acknowledged, without the monad’s becoming really “windowless.” Reason itself, which demands and presupposes its own freedom from the inside, equally requires that from the outside everything it observes should be rationally determined.

One can see this Spinozist imperative working in Leibniz himself; and the antinomy of rational freedom and determinism came to its critical resolution only in Kant’s separation of the noumenal from the phenomenal world. Hegel’s philosophy of Spirit aims to sublimate that dualism, which is typical or definitive of the standpoint called Understanding. But Understanding (and hence that dualism with it) remains the primordial form of Reason itself; all rational activity is, and must remain, founded upon it. Hence (according to Hegel’s own doctrine of “absolute knowledge”) we absolutely *know* that any acceptable resolution of the antinomy of freedom and determinism must leave open the possibility of an *understandable* explanation of *free* actions.

I feel sure, for instance, that no one will ever explain the composition of *Hamlet* in terms of “observational Reason.” But I always hope to be enlightened by the efforts of psychoanalysts (whom I take to be the modern “physiognomists”) to explain it; and if my hopes are generally disappointed, I can still become interested in the *difference* between what the observer takes to be enlightening, and the enlightenment that I was looking for.

This reflection helps us to understand a paradox. When we come to “Phrenology” in its place in the sequence of observational sciences, it appears to be nothing but a freak. Physiognomy or Mesmerism we can readily understand as passing fashions. They were bubbles that burst quite soon; but they expressed the rational optimism of the time, they were the sort of *scientific* fashions which we expect to find in a world that believes in the perfectibility of man, and the imminent arrival of an age in which the advancement of science will make human lordship over nature complete.

But in order to believe in Phrenology it seems that one has to be as naïve as the young town girl who “crosses the palm” of the gypsy woman with silver at the annual fair, in order to hear the old folktale of the sleeping beauty applied to herself. How can it be, we ask, that in this age, a *scientific* fortune-teller could impose upon the educated who laughed at that girl even more readily than they did at her pious sister who still prayed to the Virgin for a miracle—for the old gypsy was a social outcast, but one still had to be careful what one said about prayers and miracles, even in Protestant circles where the Virgin was fair game.

Yet the fact is that, although physiognomy only ever looked like a “science” at the level of the *species*, and never at the level of individual observation at all, Phre-

nology was an important science, with many practitioners and with its own societies and journals. It lasted a long time, and was no more troubled by the attacks of critics like Lichtenberg and Hegel, than “natural theology” was by Hume. In Europe, at least, it was supported mainly by intellectuals with an active social conscience and a strong commitment to social reform. It perished only when the development of neurophysiology made the cruder approach to the brain via the skull superfluous; and while it existed it made a significant contribution to the nascent science of sociology, especially the sociology of deviant behavior.⁴³ In this area it produced the one scientist whose name is as well (or better) remembered than that of the founder: the Italian criminologist, Cesare Lombroso (1836–1909). The founder himself, Franz Josef Gall (1758–1828) was respected as a brain-anatomist, even by medical men who were properly sceptical about whether the study of the living skull could effectively be used to interpret, test, and extend the findings of the knife in the cadaver.

I mentioned the pious sister, who prefers the help of the Virgin to the second sight of the gypsy woman, for a reason. The intellectual freethinkers agreed with the gypsy and her client that there were no miracles; and of course they were *not* fortune-tellers as far as the external fate of the individual was concerned. They *believed* in “fate” at that level too. But it was the impersonal fate of scientific law, not the gypsy’s Providence (which is as directly concerned with Cinderella or the Sleeping Beauty as the Blessed Virgin was with Joan of Arc and the coronation at Rheims). The freethinkers believed that everything had a cause. The fact that when this view is extended to the human mind it becomes dangerous to religion, and gets censored and condemned as such,⁴⁴ only underlines its “scientific” character, and strengthens the faith of its intellectual supporters. The fairground gypsy is an enemy of *orthodox* religion too. But no one has ever mistaken her for a scientist. She belongs to the older religion of the “happy” consciousness. Her classical sister was the Pythian priestess of the oracle.

27./324. This is a direct return to the Understanding’s formulation of causal connections.

Phrenology is a causal theory. However unsuccessful it may have been in practice, it is not conceptually absurd in the way that physiognomy was. Hegel will seek to show that the project *is* conceptually absurd; and he will show that to his own satisfaction. But the absurdity involved is only the *general* (or dialectical) absurdity of the Understanding at its plainest and most explicit: the absurdity of identifying the concrete with the abstract, the living with the dead, the form with the content, the mathematical with the rational. *That* identification of opposites is the eternal fount of all empirical science; the “error” is radically different from the logical mistake of trying to make sensory immediacy into one of the terms of a scientific law. Physiognomy is not, and cannot possibly become, an observational *science*. Its data are not measurable and quantifiable, for they are not even properly determinable (or linguistically describable).⁴⁵

Physiognomy corresponds, at the level of self-consciousness, to the dynamic

theory of physiology as a sensible, irritable, and reproductive system. That theory could never become a properly scientific one either, on account of its logical indeterminacy. The “spiritual science” that properly corresponds to our modern physiology (which is quantitative and hence “scientific” in the observational sense) is depth psychology. It is still doubtful whether this can become an observational “science” because of the essentially singular (and hence ineffable or unquantifiable) status of the data. But dynamic physiology became a science when it became technologically possible to apply anatomical methods to the living organism; and it is clear that the advance of depth psychology to properly scientific status must depend on whether the neurological and genetic sciences that have replaced “skull-theory” can similarly provide an observational foundation for the *id* and the *super-ego* (or whatever theoretical constructs may replace them).⁴⁶

To draw attention to these developments and possibilities is not to be anti-Hegelian (or even neutrally *un-Hegelian*). It is not even to criticize Hegel. It is only to criticize a certain *understanding* of Hegel—a reading of him which is certainly plausible and very widespread, but which is nonetheless demonstrably mistaken. Hegel waxes very eloquent about the folly of “skull-theory.” The closing pages of his discussion of it are among the most memorable in the book; and I shall try to show when we come to them that his absolute contempt is logically justified, and that his irony and wit are as deeply wise as he obviously believes they are. “Skull-theory” is the *absolute* turning point of the book. This is the Calvary where singular Reason is crucified, and the spirit of “absolute knowledge” rises from the grave. The book divides here. The negative part ends, and the positive part (the part that needs to be recapitulated in chapter VIII) begins. Here, if anywhere, therefore, Hegel must be absolutely sincere in his criticism; and here, if anywhere, he must be categorically correct if his “absolute knowledge” really is *absolute* in any determinable sense.

But “absolute knowledge” is only the *goal*, not the *content*, of the “science of experience.” And what the science of experience castigates as absurd, it has first declared (and shown) to be *necessary*. We have already noted that Hegel *studied* anatomy; and that the result of his studies was *not* just the negative critique in the *Phenomenology* but the positive deployment of his knowledge in the “Philosophy of Nature.” “Skull-theory” belongs to the *Phenomenology* alone; Gall’s “science” offered nothing to be recuperated in the system.⁴⁷ There can be no doubt that Hegel regarded it as the *reductio ad absurdum* of the observational attitude, and the logical vanishing point of empirical knowledge.

That assessment was in essence correct; and the insight that it was correct, certainly facilitated the birth of “the science of experience.” I will not say that the “science of experience” and the concept of “absolute knowledge” could *only* be born when Gall was lecturing to enthusiastic audiences. It seems to me unHegelian to suppose that historical necessity is like that; it brings us too close in spirit to the Providence that sees the fall of every sparrow. But I *will* say that if the birth of “absolute knowledge” had somehow been delayed from 1807 until 1977, we should have seen our latter-day Hegel assailing the thesis of J.Z. Young that “for our study

of man we should try to proceed as far as we can with the use of principles of physics and chemistry”⁴⁸ almost as violently as the historical Hegel assails Gall’s thesis. But then in his “Philosophy of Subjective Spirit” we should find an impressive survey of Young’s attempts at brain-modelling.⁴⁹

- 28./325. Where should we look? To the causal ground of the organ through which consciousness controls the body. If we can identify the organ of self-consciousness we can’t be defeated by a mere *resolve* [see par. 318].

Hegel knows, of course, that Plato and Aristotle believed pure thinking was a disembodied activity. But even for them, phenomenal consciousness was a bodily function; and Hegel rejects the incipient dualism of spirit and body present in classical thought, just as he rejects all of the Christian theological and intellectual developments of it. So he agrees with Gall’s hypothesis in this respect: there *is* a bodily organ of thought, and if it *can* be observed, then the physiognomic problem of concealment and deceit cannot arise. Wherever my thinking goes on, it is *for myself*. I cannot *both* think, and conceal my thinking from another, or be directly concerned with how it looks to another (as an actor is concerned about reproducing the physiognomy of intentions). The bodily organ of consciousness is its “being”; and this being is not an *objective* being towards which consciousness can be *indifferent* and act manipulatively. The problem is to identify it, since in some sense it is the whole body that is conscious.

- 29./326. What about the liver for example? The organs in the torso are clearly the seat of animal functions.

Consciousness is spontaneously (i.e. unmaskably) present in the body in two modes. There are the involuntary sensations and feelings, and those that are subject to voluntary control. Hegel chooses the *liver* as the paradigmatic organ of the involuntary life of organic sensation, because Plato suggested it as the organ of supernatural inspiration. Plato was probably being ironic (or at least Hegel took his teaching in that sense).⁵⁰ The “prophets” of Hegel’s time are the romantic high priests of “genius,” so by implication he is putting *them* in their place here. He brings this point out explicitly in the Preface (pars. 57, 68–70). The liver is the household hearth of the body, so to speak; and hence he who appeals to the “oracle in his own breast” is “antihuman” since “what is bestial consists in sticking at the [level of] feeling, being able to communicate only through that” (par. 69). The supposed union of the highest spiritual and the lowest animal functions in the liver is fraudulent. Seen in that perspective the liver is analogous to the skull (with Gall as the prophetic priest of that *scientific* oracle). When we have properly observed the very peculiar spark of truth in “skull-theory” we shall be offered an analogy with the organ that genuinely does unite the highest and lowest functions of *organic* life.

- 30./327. The nervous system controls movement. But this leads us to the brain and spinal cord as the centre from which it is controlled. The brain can be thought of as having

different functions in its different regions (in spite of the essentially fluid nature of the life process). Surely it *must* be thought of in this way, for it is only a middle term between incorporeal spirit and the body.

The voluntary functions of conscious life are carried on mainly by the brain and nervous system. Hegel knows that brain and nervous system sustain many involuntary and unconscious functions, but these are not relevant at this point. He repeats only as much of his theory of physiology and anthropology as is necessary for the purpose here. At present, he is only outlining the groundwork of Gall's theory (which he accepts as scientific fact). The spinal cord, which is the lifeline of the nervous system, is encased *within* the *spine*, which is the bone upon which the whole structure of the organism as a "being-for-another" is founded; and the brain, from which all the organic functions are directed (so that all the systems or moments of the "absolute fluidity" dissolve into it) is similarly encased in the skull.⁵¹

Gall was noteworthy as one of the early theorists of differentiated brain functions; but when he states this part of Gall's theory, Hegel ceases to speak categorically. He says that "it can be imagined [*vorgestellt*] that the fluid *being* of spirit's being-within-self is an articulated one; and it seems (*scheint*) that it must be imagined in that way." Clearly he regarded this as no more than a possibility; and he doubted whether it was the case. He would be delighted by the evidence we now have that although some brain-functions (control of tongue and hand specifically) are localized, the function can be taken over by other parts of the brain if the original location is damaged. This is just the sort of empirical finding that he would take as confirmation of the thesis that "all the cycles . . . are immediately dissolved and no distinction is expressed as *subsisting* (als *seiender*)."⁵²

- 31./328. What this organ presents to outside view is a bone. It exercises a causal effect on skull and backbone; but we can ignore the latter because, as Gall says, we always do. Except, of course, in flogging (but *that* is no argument because corporal punishment goes beyond *that* area). This corporal punishment "proof" is as good as any "construction" to show that spirit is not just in the head. The very concept of phrenology proves *that* and experience supports the view (we don't *do* anything with our skull). The brain is the living organ, and the skull is "dead head."

The crucial hypothesis of skull-theory was not the already debatable view that every part of the brain had its own function, but the further one that the physical formation of the brain is perfectly reflected in the formation of the skull that encases it. Gall clearly held that the controlling function of the brain in life was matched by a spiritual control over the whole process of bodily formation from the embryonic stage onwards. Thus the skull was the "effect" of the brain that it housed. Modern theorists of the evolution of human intelligence accept one very general form of the basic thesis of phrenology: that the increase in the size of the brain-case is an index of the increased size of the brain, and that this in turn indicates the possession of a more complex repertory of modes of behavior, and an increase in that capacity to control behavior which we call "intelligence." But (as

far as I know) Gall's original view that brain development somehow *causes* skull development is not maintained, even in the inverse form, by anyone.

In any case, no one in Hegel's time pretended to know how the "spirit" was causally effective in and upon the body, so it makes little difference if we state Gall's theory as the view that there is a *preestablished harmony* between the formation of the brain, and the formation of the skull that houses it. If we regard the human head as the materialized form of a Leibnizian monad—so that the observation of the external shape provides us with a *window* upon what goes on inside—then we can appreciate the attraction of Gall's hypothesis for an intellectual world which believed equally devoutly in universal causal determinism as the foundation of the order of nature, and in the rational freedom and responsibility of the individual agent as the foundation of any rational social order.

The *priority* (both ontological and teleological) of rational freedom *vis-à-vis* physical necessity is absolutely essential to the resolution of the antinomy between determinism and freedom; and this was clearly recognized by Gall's disciples. But the conceiving of this priority as a *causal* relation involved the implicit resurrection of the antinomy. Hegel is only obliged to take skull-theory seriously at all, because his own "Logic" is a reformulation of this priority of rational freedom as the priority of Spirit (which he conceives of as a *communally* founded movement of individuality). The basic thesis of his discussion of Observing Reason is that "causality" (as conceived in Newtonian mechanics) cannot express the actual relation between the organism and its environment. Obviously therefore it cannot express the higher relation between rational freedom and physical necessity. Skull-theory is where the rebirth of the antinomy (as the postulate of a "preestablished harmony") becomes so patent that every intelligent observer can see it. Hence it is the turning point of Reason where the Hegelian concept of spiritual freedom is born into its community.

Punishment is the most primitive, and the most generally evident, shape of the causal influence of the (social) spirit upon the individual body. So Hegel points out that men are flogged on their backs to drive out their bad habits and inculcate good ones.⁵³ But he concedes ironically that we may accept the claim that the skull is the "peculiarly proper place where the spirit is [*eigentlichen Ort des Daseins des Geistes*]" because that is what we always *do* think of. We can be satisfied with this argument, because his own counterargument is not a sound reason for including the backbone.⁵⁴ It proves "too much" since corporal punishment is also administered to other parts (e.g. in schools the backside, or the hand); and it takes many shapes in which the bones are not directly affected at all (such as restriction of diet and incarceration).⁵⁵ Hegel *wants* to prove too much here, because the inclusion of the backbone within the acknowledged scope of skull-theory would not make it any less arbitrary and absurd; and the point of his comment that Gall's argument on this point is "not too bad" will soon become apparent. It would be difficult for an argument to be "too bad" for this theory, since the evidence offered has, generally speaking, no weight or relevance at all.

Gall counts, in Hegel's eyes, as one of the *formalist* philosophers of nature. His

appeal to our ordinary common sense assumptions is typical of the naïve empiricism of the formalist standpoint. Actually his position is adopted *a priori*. The brain is the immediate being of the spirit; and the skull is its way of “being there” passively. The rest of the organism is a system of “organs,” which are conceptually excluded from the sphere of rational observation, because they are not simply *there* as a passive record.

It is precisely because we do not *do* anything with our skulls, that we can expect to find in them a reliable (uncorrupted) record of what we naturally *are*. Experience guides us to the right view of where and how the inner freedom of the spirit is expressed in the outer determinism of nature. This is the “construction” of skull-theory which Hegel says is “as good as that of many other doctrines of natural philosophy.” The question asked is: where can the record of what the spirit naturally *is*, be observed, undistorted and undefaced? and the answer is: *the skull* contains the immediate organ of spirit. The brain is the living head that controls the body; and the skull is its dead record (in the dead Latin of the alchemists).⁵⁶

- 32./329. The only relation possible is a quantitative one. The differential development of the brain creates bumps and flat parts. But the bone is a living formation so *its* spontaneous development affects how the brain can develop as much as vice-versa. For the interpretation it would make no difference. If both sides develop spontaneously, however, there is *no causal* link (but a preestablished harmony). Yet it is a causal relation of reciprocity that is actually posited.

The last sentence of paragraph 328 seems to mark the end of Hegel’s formal statement of the “Concept” of Phrenology. If this view (which originated with Lason) is correct, then the “experience” of this *Gestalt* of rational consciousness begins with *our* observation of it.⁵⁷ In the view of Gall as Hegel has stated it, it is obviously a serious problem to decide whether it is the growth and formation of the skull that conditions that of the brain, or vice versa. Gall himself (like most other “nature-philosophers”) was a “spiritualist.” But Hegel himself is what we may call a “vitalist” (of a non-vicious kind), i.e. one who believes, like Aristotle, that the full actualization of each level of organic function is the precondition for the development of the next higher one. So he is more inclined to think of the formation of the skull as conditioning that of the brain. He points out that it makes no difference to the logical functioning of the concept if it is inverted in this way. But he silently ignores the fact that the doctrine takes on a naturalistic (and hence irreligious) tinge if it is looked at in that perspective. The *adequate* perspective (as I have already suggested) is that of perfect *reciprocity* (or “preestablished harmony”), rather than a *causal* dependence in either direction.

This is the one logical improvement that *our* observation can contribute to skull-theory as a *Gestalt* of Reason. But when we improve it in this way, we have to admit at once, that the development of skull and brain are empirically independent. Far from being Leibnizian, the sort of preestablished harmony that exists in living growth means precisely that brain and skull need *not* “correspond” in any necessary way. They are like the shape of the grape and the taste of the wine. If the

grapes are stunted in their growth, the wine will not be as good as it might be; but there is no positively necessary relation between shape and taste at all.

As far as I can understand it, this is exactly the view of the modern students of the fossil and the living human skull. Hegel's view sublates the position of Gall altogether; and what matters to him is that the postulate of a perfect causal reciprocity *along with* the naturally necessary "harmony" is absolutely gratuitous. But his position leaves plenty of room for empirical inquiries and hypotheses that do not make extravagant causal assumptions; and that is not accidental, because even skull-theory is a permanent *Gestalt* of Reason. Reason itself is not a *memory*; it is the "daylight of the present."⁵⁸

- 33./330. The two spontaneous organic processes can only have an indefinite, unbounded connection. Supposing the brain were regional, physical growth need not correspond directly with "strength" or "weakness" of the function. But regionalization is an irrational assumption, for what is regionalized at the body's periphery must be fluid at the centre; and if we cannot know what the spontaneous formation of the brain means, still less can we know how to read its effect on the skull. A plausible analogy can be found in support of any view.

We can argue both for and against a variety of views about the relation of the brain and the skull. If the brain is the immediate organ of self-consciousness then already we do not know what the relation of this outer side to its own "inner" is. The organic formation of the skull proceeds independently of that of the brain (and is certainly not mechanically determined by it). Even if Gall's view that the brain itself is a collection of distinct organs⁵⁹ were correct, it would not follow that a bigger organ was a better one (or a smaller one for that matter). So the bumps and hollows on the skull cannot tell us anything about the capacities inside.

Hegel's own view is that everything in the brain must *logically* be "fluid" since the systems it controls cannot themselves be separated, but exist only as recognizable "moments" in one living process. In principle he has turned out to be right; but Gall's view about the regionalization of the brain was right too. So it is good to see that Hegel gives pride of place to the "critical" standpoint; we can argue the point both ways, and the question must remain open until some way of investigation is found. This is the *only* view he offers about the "bigger equals better" thesis, and about the consequent significance of the skull's capacity, and of its bumps and hollows.

- 34./331. It does not matter what the brain/skull relation is, since we are dealing with the skull/mind relation. Observation is claiming "Man is his skull-bone."

In any case, the thesis that the skull is a visible record of the capacities of the mind can be examined on its own account. This is where the "experience" of Phrenology begins properly. Hegel's own view of how consciousness can logically express itself in the brain needed to be stated, since otherwise, the positive result of this moment of the dialectic would be much less than "absolute knowledge"

requires. But Hegel's own theory can only claim the status of a logical theory that *we* observe. So we might argue that we have only helped the observed Concept to complete itself. On this view, the two preceding paragraphs are somewhat like the sections on "Life" and "Desire." We have to step in and take the part of the Concept itself that we are observing; otherwise this *Gestalt* of consciousness would not properly survive our passing. But now the *reconstructive* phase of the critique is complete, and the destructive experience of the dialectic can take over.

What exists as the embodied self-consciousness (in its maturely stabilized form) is an ethically active character. We know already that this needs to be formed and molded by a process of social education. What could it possibly mean, therefore, for it to be *naturally registered* in a bone that is formed independently through a process of nature that was virtually complete before the social formation process begins? The hypothesis involves a return to the standpoint of "external teleology" and postulates a Designing Mind that poses the created mind-body to itself as a riddle.

What aspect of human life and experience can be signified by the proposition "the observable actuality of human nature is the skull bone"? We already know that no empirical scientific significance is to be looked for. So although this point is repeated and illustrated in the "experience" that follows, we should be expecting the discussion to take a new turn. The outcome of this experience will not be an object which can be inverted into a new *theoretical* subject. The next inversion will be from theory to practice. Only a *practical* shape of Spirit can be generated now. "Observation" has reached the point of self-nullification.

- 35./332. The skull-bone does indeed have the general *Bedeutung* of being the immediate actuality of spirit. But how can it tell us anything?

When Hegel concedes that the skull-bone "does, of course, have in general the meaning of being the immediate actuality of the spirit," we must grasp at once that a transition in meaning has occurred. For in paragraphs 329–330 he has already demonstrated clearly that it is *not* the "immediate actuality" of spirit when we consider its natural origin. "Experience" is now going to transform our interpretation of what this proposition means. Gall wants the interpretation to be that the different areas of the skull represent different aspects of spiritual being. How are we to interpret this *Bedeutung*? Even to translate *bedeuten* in this paragraph is difficult. For "meaning" and "to mean" are the expressions which we have conventionally adopted for *Meinung* and *meinen*. Yet we cannot use "significance" and "signify" here (as we normally do) since Hegel is about to remind us that the logical difference between Physiognomy and Phrenology is precisely the fact that (unlike facial expression, gesture, handwriting, etc.) the skull is not a *sign* and it makes no *signs*. So I am obliged to use the *meaning* terminology by anticipation, since it can only be that mode of interpretation which is involved. The areas of the skull *intimate* or hint at different aspects of spiritual being.

- 36./333. It does not move expressively or appear to us as a *signal* (the name *Yorick*, not his skull, is a signal for Hamlet). It *reminds* us of the brain and of other skulls.

Gall himself emphasizes the passive inertness of the skull. Nothing that it supposedly tells us is an activity in which it is itself involved. It can be *used* to make signs—for “nodding” and “shaking” the head have firmly established conventional meanings, and a jerk of the head can beckon or point a direction—but it is not even a natural pointer like a signpost.

Yet if a dead skull is identified for us, we may recall the whole life and character of the living person to whom it belonged. It would not seem nearly so natural for Hamlet to recall the “fellow of infinite jest, of most excellent fancy” if the gravedigger presented him with Yorick’s thigh-bone. When the person is dead, it is the skull that is most reminiscent of his or her living presence. The jests and fancies were born in Yorick’s skull. Hegel throws the point about Yorick in with the immediate purpose of showing what a difference the *name* makes. But it has the important significance of drawing our attention to the fact that the skull is *not* just a bone. More than any other bone it is unmistakably *human*; and it tells us that the human owner is *dead*. Hamlet, with Yorick’s skull, remembering how imbued with the “comic” spirit of happiness Yorick was, brings us back to Solon’s point about human happiness. The happiness of comedy is what the good character cannot guarantee. In general, it is a gift of fortune. Yet the spirit of comedy itself is a human (i.e. spiritual) gift, which arises from the cultivation of naturally given capacities. Hamlet can remember what Yorick was like; but even if his *natural* endowment could be read from the skull-bone, no one who was simply interpreting the bone, without knowing the name, could possibly say how that natural endowment had been employed in actual life.

When Hegel himself writes that “there is nothing else to be immediately seen or meant in [or on—German *an*] the skull than just itself” he is obviously adopting the standpoint of Gall himself (as a *scientific* observer). Gall observes the skull in the living subject. For him the suggestion of *death* is not *direct* (as it was in Shakespeare’s graveyard, or in the tomb that the Crusaders fought for because they believed a dead man had been placed in it who never became a mere skull). But the spiritual associations which the skull as an “immediate” symbol of death mediates, are very much in Hegel’s mind. The “skull-place of the spirit” (i.e. Golgotha or Calvary, the place where the divine man who rose from that empty tomb died) is the last image that the book will leave with us; and the way that the “recalling” in that final chapter begins from “Phrenology” shows that the echo is deliberate (par. 790). It is the shift from the observing perspective of Gall to the recollecting perspective of Hamlet that makes this moment the fulcrum upon which the whole book turns; and it is a perfectly natural and proper shift, since the whole context of the “observation of self-consciousness”—including the aims and purposes of Gall’s own science—is *ethical*.

- 37./334. Might its bumps etc. perhaps tell us what capacities are inside? When we consider how difficult it is to diagnose the significance of a headache this seems unlikely.

Supposing that the skull does somehow receive the impress of the brain, we can only tell what part of it receives a certain impression by locating the feelings that

we have in our heads. But feelings are hopelessly ambiguous. Some people find it hurts to think; but no one can distinguish the feelings associated with different kinds of mental activity; and even the “meaning” of simple pains like headache defies all medical skill as far as reliable diagnosis is concerned.⁶⁰

- 38./335. If there is a relation it must be an arbitrarily pre-established harmony of spirit and matter. For the spiritual side we must depend on the present contents of our psychology-sack. (The simpler and more ossified these are, the better.) But the atomized content of the soul would actually, like Israel, surpass the sands, and how could we know which grain belongs to whom? The idea that there is a *connection* is absurd.

What actually happens in phrenological interpretation is more arbitrary (and less empirical) than any appeal to feelings. The names of spiritual capacities are conventionally associated with bumps and hollows on the skull. So what the skull can mean depends on how varied the contents of our sack of observed psychological faculties is. If our list of ethical capacities is short our skull-mapping will be easier. But since the goal of the science is to interpret character and to make ethical discriminations, and since everyone has *all* human faculties in some measure, even the task of applying our general interpretive map to any particular head becomes hopeless. Supposing there *is* a murderous bump, how can we identify it among all the possible locations where there *might* be a bump if the bumps had not been elsewhere? The nameable facets of human character are like the numberless progeny promised to Abraham (Genesis 22, 17); whereas our “ossified” list is more like the twelve sons of Jacob who fathered the tribes. What observation actually teaches us is that a poet (or a murderer) can have a head of any shape just as the rain can come at any moment upon any day; so experience shows that we do not have any actual science of the skull-shape.

As Flay says, the *obviousness* of this difficulty is clear evidence that “Observing Reason” has encountered the impossibility of discovering a “law of individuality.”⁶¹ Observing Reason has reached its *limit*. There is nowhere else to go within the observational standpoint. We must not deny or belittle the great achievements of the regionalized brain physiology and neurology of which Gall (together with Comte and all of Gall’s earnest Victorian admirers) had a dim and distant prophetic vision. But *for us*, the logical trap has closed: Observing Reason is forced to depend upon the arbitrary and irrational interpretation of what is observable. All that remains for us to do now is to sum up its experience as a whole, in order to see where we must go next.

- 39./336. The possibility of a correlation is there; but it is easier to correlate a rascal’s bumps with what *other* people do (like the cuckold’s horns). What is absurd is the idea of discovering the correlation.

“But there could be a science of the skull,” says the enthusiastic follower of Gall. “Of course, we do not have it yet, but we have to work on it.” Hegel’s answer is to point out how the everyday phrenology of common sense works. We assign

imaginary horns to the man whose wife deceives him with someone else; and we give someone real bumps (but of a non-bony kind) when we catch them stealing from us.

We can *imagine* anything we like. Science is only possible where there is a certain logical structure that makes this free imagining illegitimate. Our children sing of “the cow jumping over the moon”; but the actual cow of rational observation cannot do that, any more than the bone of the skull can have for the scientific observer the spiritual significance that it assumes for Hamlet once he is supplied with the name of Yorick.

- 40./337. But suppose we go to work. We only claim to discover a potential; so whenever experience contradicts our findings, we say that nevertheless the “tendency” is there and experience ought to correspond, but things don’t always work out because of freedom.

If we suppose that we need no logical principles except the axiom that “the outer is the expression of the inner,” we can still make the attempt. We may think (as Gall did) that the comparative anatomy of men and animals will help us. But how are we to decide what the *spiritual* disposition of the animal is? We can only enter into its inner life (in the conscious sense) in a limited way (and with much difficulty). We learn just one thing from this comparative study: the vital importance of human freedom.⁶² The observation of the individual’s natural capacities in the skull can only tell us what “tendencies” (*Anlagen*) are actually present. But laws about tendencies are infinitely elastic. They will always allow for surprises and exceptions.⁶³ So the assumption of lawlike necessity in the order of nature, which is fundamental to Observing Reason at every stage, is now consciously surrendered. The experience of rational observation has been one of failure from the moment that Reason sought to observe itself in the organism. But now the inevitability of failure is posited by the observing subject; and in this way Observing Reason finally sublates itself.

- 41./338. So what the bumps, etc. *actually* signify is a self-contradiction. The “tendency” is only what *ought* to be, but *need not* be. The bone tells us something yet nothing (necessarily).

Since “tendencies” are mere *oughts* which are unaffected by their failure to be actualized, Reason (which, by definition, is “that which actualizes itself”) has now arrived at the moment of explicit self-contradiction. The “meaning” of the bone is equally *no* meaning. The logic of the observer’s own position makes this admission necessary. The facts of observation have already shown that no actual science is possible. But now the assumptions of the science about its *object* lead to the admission that the project is logically absurd. The bone is a perceptual object; but its *Meinung* is a return, at the level of Understanding, to the immediately contradictory character of sense-certainty. This is so far true that even a statistical quantification of the *Anlage* probably cannot save it. The list of “psychological tendencies” in the sack (i.e. the head) is either too short for the possible meanings

of each tendency to be enumerated and statistically measured, or too long to be localized, even in the most tentative way, upon the skull.

It is important to see that the possibility or impossibility of this quantification does not interest Hegel. He is not attacking the possibility of a behavioral sociology (or political science) in which the alternative outcomes are logically identified, the empirical responses classified, and the results statistically tabulated, to produce a theory of *probabilities*.⁶⁴ What interests him is the logical character of a theory of *tendencies* as it applies to the individual case. Here the observation of the self-conscious individual reaches the point where it must necessarily affirm an *infinite judgment* (or a logical contradiction). Thus a point of transition is reached; and the transition is not to the higher level of generality involved in the statistical observation of populations. But that is because it is not the structure of the observational sciences with which we are concerned. We are generating “the science of the experience of consciousness”; and consciousness has a natural focus that is logically and inalienably *individual*.

- 42./339. This approach glimpses the truth that *Sein* is not the truth of *Geist*. Consciousness is only *actual* through the negation and abolition of Being in this *external thing* sense. So what Gall does is a denial of Reason. The critical distinction between “outer” and “inner” makes it appear legitimate, but it is not. The appropriate response (on the thick-ear analogy) would be to break the phrenologist’s skull.

In Gall’s science Reason experiences nothing but this self-contradiction. What is determinately true is the negative side: Being is not the truth of Spirit. This is only a simple negation, the simple inversion of the skull-theorist’s position. Phrenology contains and acknowledges it explicitly. The negation of the negation must establish the truth of both sides of this *Gegensatz* (not simply, of course, but at a higher level); and in the process the living soul-body unity (with its practical relation of end and means, as asserted by Physiognomy) must be reinstated likewise.

First then, the truth that “the spirit is not a bone” is easily grasped, because the proposition “the spirit is a bone” is an *infinite* judgment. To put this another way, the proposition involves a category mistake: a bone is logically not the kind of thing that “the spirit” can be. But if that is the truth of the matter, how can there be *any* sense in which “the spirit is the skull” is reinstated as true?

We have to start with the fundamental assumption which made Gall’s science appear to be a plausible project in the first place. In his overbold attempt to develop the anatomical theory of the brain through the study of the skull, the *only* logical foundation that still survives is the abstract principle “the outer is the expression of the inner.” We have already seen that the physiognomist uses this proposition to give a mistaken interpretation of “inwardness”; and from that experience we have learned that *expression* has to be taken in a very strong sense. The outer is the *expression* of the inner only when, and so far as, it is the *actuality*, the true fulfilment of the inner. Human self-expression is the work of tongue and hand, and of the rational cunning that saves the hand and back from labour; it is not a matter of smiles and frowns, or of handwriting legible and illegible.

Once we know this, why do we bother with skull-theorists at all? We can see why the psychologists and the physiognomists were led on to this extreme. But why did we have to follow their lead? We know that it is not always necessary for the science of consciousness to study how some particular problem is resolved in the system of the sciences itself; and since the move from face and gesture to the skull is an error in the perspective indicated by *our* science, why must we accept the necessity of the detour? What can Phrenology teach us when we have already passed through Anatomy? Why do we not go straight on from anatomy to study rational self-consciousness as self-actualizing?

The answer is that at that point the concept of self-actualizing self-consciousness was not fully formed. It shows itself clearly when the indignantly (and perhaps painfully) honest man gives the physiognomist a black eye, for suggesting that in his heart he is a rogue. But even then the Concept is not self-consciously finite; it does not yet contain the limit that makes it truly an individual. If the skull-theorist makes the same accusation against our sincerely committed but inarticulate honest man, on the score that his skull bone reveals a mass of "evil tendencies," the logical response, says Hegel, would be to break his skull. We should notice that the phrenologist's claim is tantamount to that of the dogmatic theologian who preaches to the Unhappy Consciousness that we are all involved in *original* sin (whereas the physiognomist is like a moral adviser who says simply that we are sinners).

No one, however inarticulate, will consider it legitimate to go to the length of this revival of the life-and-death struggle. But that is what the "infinite judgment" of Observing Reason has brought us back to. A man with a broken skull is either dead, or in imminent danger of death until the bone mends. That is the hidden side of Hegel's comment. We are now passing from nature to Spirit, from necessity to freedom; and that point is aptly made by recalling the original breach with nature made by the free self-assertion that cares nothing for death. But now the transition is from *rational* nature to *rational* freedom. The insulted citizen will *not* actually go beyond the black eye that he already gave to the physiognomist; and the reason is that he knows full well that "the skull is the *immediate actuality* of spirit" (par. 332). If he breaks the idiotic fellow's skull, the man will die; and spirit is only *immediately* actual in *living* human individuals.⁶⁵ The actively rational self-consciousness knows that its true expression is its *work*. But it also knows (more adequately than the physiognomist) what it means to be embodied. That is why skull-theory is the *absolute* turning point in our story.

(f) *The Transition to Self-Actualization*

- 43./340. So Reason instinctively rejects this nonsense. But that is not the same as knowing why it *is* nonsense. What we face here is the error of observing Reason unveiled. Reason must now turn round completely. A great error is the portal of an even greater truth, just as the Jewish projection of God beyond nature was the portal of human salvation. To get *stuck* in the error is to be damned, but the *journey* is necessary.

Phrenology is a disease of the *sophisticated* mind. While Reason is still a “raw instinct” (i.e. before the advent of the Critical Philosophy, and in any mind that has not become accustomed to having it both ways in the matter of freedom and determinism) the scientific status of Phrenology will be denied, and its claims will be rejected out of hand. But the cultivated Johnsonian good sense that will unhesitatingly consign both Gall and the gypsy fortune-teller to the same limbo of irreligious presumption, cannot tell what the difference between them is (or even that there *is* a difference). Dr. Johnson will say “By their fruits ye shall know them.” But by that test you cannot tell one barren tree from another; so he will not recognize the kinship between himself and Gall.

Gall represents the last outcome of the *cultivated* instinct of Reason. He has caught sight of the goal of scientific cognition: a system of *comprehensive* knowledge. But he has only the formal principle of scientific understanding with which to achieve it. That is what is formulated in Kant’s deduction of the categories. But the “instinct of Reason” (both in its “raw” commonsense form, and in its sophisticated or scientific form) is essentially a pre-Kantian mode of consciousness. For Kant understood that his categories (and in particular his conception of causal law) applied *constitutively* only to the inorganic sphere.⁶⁶ Hegel’s critique of Observational Reason is essentially Kantian in its inspiration. The “instinct of Reason” regards all of Nature as one great system of “necessary” laws. Its great philosophical champions are Spinoza and Leibniz.

It was only with the advent of Kant that instinctive Reason became capable of self-transcendence. Kant showed how the antinomy between the freedom that is essential to Reason as self-conscious, and the necessity that Reason posits in its operation as Understanding, could (in principle) be resolved.⁶⁷ We find the distinction between “inner” freedom and “outer” necessity in Spinoza and Leibniz. But Kant separated the phenomenal from the noumenal realm in the interest of a *radical* freedom of practical Reason, for which there was no room in the great rationalists. Gall is still only an “instinctive” reasoner; and the instinct of ordinary common sense tells us that he is *wrong*. But he has an *Ahndung des Erkennens* that will take us beyond the ideal of comprehensive Reason as we meet it in Spinoza and Leibniz.

Hegel unfolds the whole comedy of instinctive Reason in the context of the axiom that “the outer is the expression of the inner.” Franz Josef Gall appears as the scientific clown who brings the Leibnizian understanding of inner and outer into direct relation with the ordinary view of freedom and responsibility. The direct clash of Reason with itself as Understanding is necessary in order to breach the instinctive self-possession of Reason, and set it on the painful road of self-making and self-recovery that constitutes the cycle of its true actuality. Gall’s thought is about the worst that can deserve the name of Reason at all (the belief of the fairground gypsy does not). To mention Phrenology in the same breath with Spinoza’s *Ethics* and the *Monadology* of Leibniz is a kind of intellectual blasphemy. Yet Gall’s skull-theory was demonstrably inspired by the intellectual ideal of science found in those works. That is why the theory found, and for a long time retained, a following among freethinking intellectuals, and even among scientists.

As Hegel clearly intimates, it is a case of the worst being the corruption of the best. But he uses the "Aristotelian" dictum dialectically. The highest intellectual vision of the old culture must be inverted into its most flagrant stupidity in order to be inverted again into the concretely rational scientific ideal of the new age.⁶⁸

It is in this light that we must interpret Hegel's comparison of the followers of Gall with the Jews. This is another sign that the book has reached its absolute turning point. For the *Phenomenology of Spirit* is essentially the story of how the invisible spiritual Lord of Abraham and Moses became visibly human in Jesus, and by this route became the universal spirit that manifests itself in the history of mankind. The Jewish people rejected Jesus (who announced the coming of a new Kingdom, and the abiding presence of the Spirit) and demanded the release of Barabbas, the robber. Since Jesus was crucified between two thieves, they can be said (symbolically) to have chosen the skull that remained on earth; and their descendants have paid dearly for this in the cultural world of the "second relationship" of Unhappy Consciousness (where "the whole mode of existence steps over onto the side of singularity as the shape of the Unchangeable"—par. 210).

"Reason" is the *immediate* aspect of the arrival of the third relationship (where the Changeable Consciousness "finds *itself* as the singular in the Unchangeable.") The comparison with Gall helps us to understand the status in the new world of the community that refused to move out of the first relationship.⁶⁹ Skull-theory is what most deserves to be "cast out" of the world of Reason, just as the Jewish *Volk* was *das Verworfenste* in the world of religious Authority. But Gall is the heir of Spinoza and Leibniz, and he has caught a glimpse of the true freedom of cognition in Kant; similarly the Jews who stand at the portal of salvation but refuse to pass through are the heirs of Abraham and Moses (who invented the Unchangeable Beyond and defined the "first" *lawful* relationship to it); and in their prophetic tradition they have glimpsed the possibility of the third relationship.

At this point, the fact that Phrenology is recognized as a necessary *Gestalt* of Reason becomes immensely significant. Hegel must surely have thought that with the arrival of a more adequate logic of science Gall's Phrenology would lose all of its intellectually competent adherents. And in the same way he must have expected that his gospel of Absolute Knowledge would be received as readily by philosophically minded Jews as by philosophical Christians. But he recognized that there would always be rational observers who were anti-philosophical, and for whom the commitment to science was identical with a commitment to "law" (i.e. to the assumption of universal determinism); in the same way there would always be a community for whom God was "the Law," and for whom the second relationship existed only in the "infinitely contradictory" form of their own status as "the chosen people." They must be accepted into the perfect charity of the Spirit, just as such freaks of the determinist spirit as Gall's skull-theory must be accepted into the scientific community.⁷⁰ The spirit of "election" (and of persecution) in religion is the analogue of the unreflective contradiction that we are observing in Phrenology. This hell of the "unholy void" (*unselige Leere*) is the extreme *Gegensatz* out of which the Spirit returns into itself. By comparing the Jews with the skull-theorists,

Hegel reminds us that the transition from theoretical to practical Reason is also a genuine and radical conversion experience in the history of our social life.

- 44./341. We must now survey the circle that we have just completed. From the first, Observation is an abstract intellectual process. We began with experiments at the inorganic level. The inner unity of phenomena was what *we* discovered by making things move; the organism, on the other hand, is a self-moving, self-maintaining inner unity. But its inner unity is not observable; it is either spread out in the perpetual variety of life, or else it is an invisible “inside.” Life is free but not *for itself*; so it refers us to the self (which is its own purpose).

The “experience” of Phrenology is now complete. But because it has brought us round to the observation of the inorganic being from which we began (so that Observation has become a cyclic self-standing whole) the *result* of Phrenology is twofold: Physiognomy and Phrenology bring us to a new concept of the singular self, whereas the completion of Observing Reason brings us to a new concept of the world as a whole. This last is the result of the whole process, and the statement of it requires a summing up of the whole process.

Rational observation is not concerned with singular sensible being (which is the object of Understanding on the side of Utterance) but with the *comprehensive* intelligible world. It aims first to observe the universal relationships of inorganic nature. The cases and instances in which these universal laws are observed “get lost” (through abstraction in the experimental process, see par. 251). All that matters is the structure of the process under observation.

In an inorganic process there is no self-maintaining inner unity. The unity is observed in the experiment, but it does not “stand up for itself” (*existieren*). This “standing forth” of the essence is what is distinctive of the organism.⁷¹ Life makes a cycle that is self-maintaining; and before that breaks down, it makes the beginning of another one like itself. The organism is the instinct of Reason in its *objective* shape.

We should notice, however, that in this review it is an objective fact that the organism does not match up to the self-consciousness that is observing it. It is only a singular thing that “is there.” It is a *living* thing, but its life, its real Concept, is not present for observation. It is implicitly free (i.e., it is spontaneous) but it does not exist for itself. It is an objective purpose (which refers *us* to the observing subject who has purposes). Hegel’s reference to the wisdom for which the organism exists as a natural purpose directs our attention back to the Argument from Design as the logical formulation through which Observing Reason provides itself with what it cannot observe. The representatives of this natural theology, with its hypothesis of the “Author of Nature,” were legion, so we do not have to give a definite name to this *Gestalt*. The theistic hypothesis is just the way in which the Observation of Nature makes itself into the resting concept of External Teleology (and so into a stable *Gestalt* of Reason). Interpreting the singular organism in terms of the inverse concept of Immanent Teleology teaches *us* the lesson that the “beyond” or the “inside” of the living thing points only to the true inwardness of

self-consciousness.⁷² Thus the organic object inverts itself comprehensively into the rational subject, which has its own rationality (or wisdom) as its purpose. This is the next object for Observing Reason.

- 45./342. This brings Reason to Self-Observation. The observational stance seeks first to ossify the logical moments of its freedom; when these run together (for us) into their unity, it observes the unity interacting with the world. Action has to be interpreted in terms of thought; and the thought is uttered as spontaneous body-language. But that language is essentially ambiguous for interpretation.

The summary of this stage makes the dialectical movement plainer than it is in the original text. The movement from Logic to Psychology depends on *our* knowing what the logical self is. This enables us to comprehend the singular rational self-consciousness as the actual Concept. The self as psychological agent is the inversion of the actual Concept within its opposite, the world; and *we* must comprehend that Spirit (though only *an sich selbst*) is the “necessity” of the relation between this observable self and its world. In the third moment of the observation of the rational self, Observation gets on bodily terms⁷³ with its object and compares its action with its private thoughts. For the intended object of observation is the conjectural (*gemeinter*) inward spirit. Both as thinking and as willing that inward subject is essentially *embodied*. This is the necessary unity “in its own self.” It is the embodied spirit that is objective; even the inner thoughts are observable in the body. But the utterance of thoughts and purposes in body-language remains ambiguous. It may be truthful or it may not.

This third phase in the summary is clearly Physiognomy; bodily expression makes the inner observable, so that we can compare the action with the thought. Physiognomy is presented as the methodical *result* of Logical and Psychological observation. It purports to resolve the problem of how psychological observation can achieve logical certainty.

Hegel is not mechanically repeating and epitomizing what he argued in the earlier discussion. His purpose is to focus attention on Phrenology as the *final* “result” of the whole movement. So he presents Physiognomy (which does offer a resolution of the problem of the ethical observer) in *that* perspective. Physiognomy is logically continuous with psychological observation, whereas the move to Phrenology involves a violent break, and a return to an external mode of experimental observation, in place of one that is “within the *gemeinten* Spirit.” Without this violent break we could not close the circle of Observation as a whole.

- 46./343. So we come finally to what is unambiguously fixed. But now we contradict the position we had reached at the very beginning. Lifeless being is now identified as what spirit is. Of course Gall himself is no materialist. But what he *says* is: Spirit is a *thing* like a bone.

The perspective within which Hegel developed the argument of chapter 12 was that of the science of consciousness—i.e. it was *our* observational standpoint. We

were obliged to take the Hegelian view of logic in order to make the transition to psychology; and as a result we were truly conscious of the real Spirit (objective and subjective) which was only *gemeint* for the psychological observer. The perspective of this present review, on the other hand, is that of the empirical observer herself. The observation of Nature (inorganic and organic) is its first position; the observation of Spirit (formal Logic, normative Ethics, rational Physiognomy) is its first inversion; and Phrenology (Spirit observed as a natural organic and inorganic whole) is the second inversion.

The shift of perspective is required in order for us to see Phrenology as the *result* of the whole process of Observing Reason; and that in turn is required in order for Phrenology to generate, by determinate negation, not a new form of *Observing* Reason, but a new form of Reason altogether—one that is no longer satisfied simply to *observe*.

The very concept of Observation dictates that the truth is what is “out there.” So the truth of the observing activity must be in the object that it discovers out there even when it is seeking the point of origin for its own thinking capacity. This is so natural and obvious that it is quite hard for many of us now—living as we do in a world in which scientific enlightenment is more general, and religious faith rarer and more attenuated than it was in Hegel’s time—to recognize the paradox involved in identifying even our own theorizing about brain states with the brain states themselves. *Nothing* observable *is* what we say that it does (or means) in our conscious activity. The great virtue of Gall’s phrenological approach, from the logical point of view, is that by identifying the brain-states with a supposed record on the skull he makes the paradox patent.

The brain is very much part of a living organism. When it is damaged, consciousness is impaired, or ceases; when the organism dies, the brain putrifies into what Hegel would have called a “chemical” mush, and is rapidly absorbed into the earth. Shakespeare’s Gravedigger (not perhaps the most respected of scientific observers, but the one whom Hegel’s text suggests) claims that the soft parts even of a tanner’s body will not last beyond nine years in the earth. The skull reveals its essentially *inorganic* character by lasting like a rock. So brain and skull together (which is how Gall’s science wants to connect them as “inner” and “outer”) form a very apt microcosm of the Infinite of Understanding in this “return of rational observation into itself” as the Observation of spiritual Nature.

Observing Reason, which began as the antithesis of empiricism and rationalism,⁷⁴ ends by incorporating the crudest form of empiricism into the most dogmatic formal schema of rationalism. *Our* initial formal comprehension of what rational observation is (that Reason seeks *itself*, as universal, in the immediate order of things, as singular) has finally come to be the explicit self-consciousness of the Observing Reason that we are observing. Of course, even the phrenological observer does not mean simply to identify Spirit with a bone. The bone *represents* what Spirit can do. The position is openly absurd because, being sincere spiritualists, the phrenologists admit that we do not, and cannot, predict what Spirit will do. But its absurdity is phenomenologically necessary, because it is only this

openly admitted contradiction that will lead us to recognize the logical contradiction involved in all of the subtler observational ways of filling in the formula "The spirit is . . ." ⁷⁵

In spite of the formal contradiction involved, it is still *true* that "the spirit is." For the spirit *to be* is contradictory; but the spirit *is* all the same. The proposition has two opposite meanings: one for us, and another for the rational observer who needs to make her standpoint into a self-preserving total *Gestalt*.

- 47./344. The significance of this is twofold: *philosophically* it is the fulfilment of the penitential discipline of the Unhappy Consciousness. *Reason* identifies itself as a *possession*. The *category* is the unity of being with my own [thing]. This category is what is observed as a possession in the skull. That "the self is a thing" is an "infinite judgment." But the recognition that our logic drives us to this mistake, is a great turning point, which we must never lose sight of from here on. This brute contradiction has to be progressively mediated into meaningfulness. The self is a thing, because it *is* the activity of producing itself as a thing.

In this paragraph Hegel states the positive meaning of the basic thesis of Observation *for us*. This is the determinate negation that produces for us the new object for our own phenomenological observation. The next paragraph closes up the observational standpoint into a stronghold within which the rational observers can forever continue to plant the flag of discovery in new territories. The final paragraph relates the two interpretations.

As *we* observe it, Rational Observation turns the inevitable and perpetual failure of the Unhappy Consciousness into the happiness of perpetual success. The Unhappy Consciousness strove to make its own selfhood into a mere object of consciousness. It strove to *be* "consciousness," and was *unhappy* in that role because it could never get away from being a self.⁷⁶ The only true Self was "the Unchangeable Consciousness," the divine mind in which (through the action of God's grace) the changeable finite mind could behold itself as "saved"—i.e. as the restored *image* of God or as finite Reason. Human life was for it an unending, logically hopeless, struggle (sustained only by the supernatural revelation of the action and motion of the Unchangeable) to harmonize finite desire, labour, and enjoyment with that vision, by abandoning and rejecting the conditions of human life itself. Natural life is to be viewed as a thing, or as something that has no essence in itself, but is only an *instrument* for Self-Consciousness. This was how it appeared to the primitive Self-Consciousness at the moment of its emergence; but at the end of its development there was the important difference that, like all other *things*, the living thing was seen to belong rightfully to the Unchangeable Self-Consciousness. Hence it should be developed and cared for.

Reason knows itself to be this absolute self to whom all things rightfully belong. It is the unity of "self" and "being"—the two sides that the Unhappy Consciousness strove to separate. Instinctive Reason (the animal that *possesses* Reason) is the conscious singular self as a concrete universal; it is the "rational being," the self that defines itself as *having* Reason. The Category is "the *immediate* unity of *being*

and *owning* (*des Seins und des Seinen*)";⁷⁷ the claim to *be* rational is identical with the claim to *have* Reason (as a property). Observing Reason surveys what belongs to it in the way that a Lord surveys his *things*. So it must observe itself as its own Serf, the most important of *its* things; and in doing that it beholds not its own servitude to necessity, but its essential freedom. That is how Observing Reason inverts its whole standpoint.

Observing Reason knows instinctively that it *is* all reality. That "certainty" has now been mediated into the proposition that Reason is the Category that *owns* everything. The Category is the Self that both *is* and *has* Reason. It has now passed through the whole range of *being*, and it has formed the concept of itself as both *being and owning* the body in which it sought finally to observe itself. But its observation has shown that neither the being nor the owning is directly possible. Death reveals the absurdity of both. Reason must turn from the question of what it *is* in the body, to the question of how it *acts*, how it *makes itself to be there* in the world. As a result it will emerge as the developed Category of rational individual action. At this present juncture, the attempt of Reason to observe itself in the skull, has taught us that the embodied life is Reason's own, and that it cannot be alienated into an object for observation. The "soft" parts (observed in Physiognomy) and the "hard" parts (observed in Phrenology) together form the *thinghood* of Reason. The rational thing *has* Reason, but only while it is alive; and being alive, it *must* die.

We shall find, by experience, that the converse relation is a more adequate comprehension of the truth. As Reason actualizes itself in this self-conscious thing, it will emerge that *Reason has this thing* as its agent; but the ambiguity of the proposition's being true in both forms will survive to trouble us until we reach the "absolute self" in Religion. The radical ambiguity is the shape of the "infinite judgment" that "the self is a thing." Reason as Observation adopted the position of the Unchangeable Consciousness who "owns all things." How unsatisfactory that position is, we finally realize when it tries to own *itself* as a thing (the skull-record). The *immediacy* of the ownership relation must now be mediated. The self is to *be for itself*, by actualizing itself as its own end. In this process all of the thing-world that it rationally owns will be used. The knowledge that *I have is for my use*; and the object of my using it is to realize my own ends, or to actualize *myself*. Using the rational knowledge of everything will be the new and higher way for Reason to express its "certainty of being all reality."

Because it is Observing *Reason*, even the consciousness that we are observing must, in some manner, see what we see (as rational *observers*). That is why Gall's clear admission that he is observing human *freedom* is important. He does not observe it in a concretely logical way; for if he did he would recognize that it cannot be observed like an object that is "possessed." It is a self-realizing actuality, and it cannot be observed in the world as a thing, but only as an activity. Gall can observe Reason as a potential that we *possess*, only by contradicting his own basic assumption. He is observing a necessity that is free, and creating a science that knows itself to be no science. This is important because this same contradictory assumption is made by all of the sciences which observe human potential in the

conceptual context of “natural necessity.” Of course, it is not necessary to make that assumption; but to begin by consciously avoiding it, involves *inverting* the whole concept of “science.” That is what Hegel does in the System.

- 48./345. Secondly this result is the descent from Reason to empiricism. We ignore the category-mistake by covering it up behind all sorts of categorical screens.

Phrenology represents the closure of the cycle of Observing Reason through a return at the highest level to the absolutely naïve empiricism from which it began at the lowest. The nature of the soul is to be read off from the skull-bone, like the shape and measurements of the body. What we comprehend is that the self is a thing that is nothing, a thing that acts to give itself finite objective thinghood, but always transcends that again. This meaning is not present for the empiricist self at all, because the first principle of its logic is (as Bishop Butler says somewhere) “Everything is what it is, and not another thing.” Because it is “honest,” and has a deep-down sense of what Spirit really is, this self covers up the disgrace of its assumption under a whole battery of technical terms. But these terms (beginning with the basic ones of “cause” and “effect”) cannot have their regular meanings, and because of the open contradiction of the assumption, they have no determinable meaning at all.

We shall meet the “honest” consciousness openly confronted by its own disgrace at the climax of the section on “culture” (pars. 520–526). At that stage we shall be observing the Concept of Observing Reason in motion as a Judgment. Here we can observe the structure of the Concept at rest. Phrenology shows us the whole structure without a mask. On the surface there is the honest observer who says “facts are facts, and we just have to find them out.” But the foundation of this “honesty” is the instinctive knowledge that its own self-conscious finding is not the kind of fact that can simply be found; so it erects a screen of words between the contradictory aspects of its “honesty,” in which both sides are mingled. The essentially two-faced structure of Physiognomy showed us how and why this is possible: Rameau’s Nephew, who is an expert clown, will expose it all to public view. Physiognomy is the “honest” consciousness *completed* through union with its *Gegensatz*.⁷⁸ Since it is Observing Reason (just as we are) it must know what we do. But it resolves the problem of the “speculative proposition” (pars. 60–66) in the *ad hoc* manner that Hegel calls *räsonnieren* in the Preface. The whole of his discussion of the “argumentative” and the “speculative” approaches in the Preface is relevant here (and that is another sign of how crucial this present turning point is).

- 49./346. My brain is not an “external object.” It is the way in which I am aware of *part of my world*. When we bring “observation” to this final object in which it recognizes that it has its own seat, we have to recognize that the self is an activity of self-production in the mode of objectivity. This is true even about the sensuous presentational world that is identified as the not-self precisely because it provides the stage and raw material for practical activity. That this raw material *is* the self seems absurd. But the “infinite judgment” becomes supremely meaningful when interpreted not as a fixed

identity, but as the *form* of a self-realizing process. That a scientific *folly* such as phrenology should contain the deepest truth is analogous with the combination of the functions of seminal discharge and urination in the same organ.

Behind Gall's truly absurd hypothesis about the skull, there lies his quite distinguished work on the anatomy of the brain. The Critical Editors think that Hegel's reference to "brain-fibres" reflects his reading of Charles Bonnet.⁷⁹ But I cannot see any reason to look beyond his knowledge of Gall's work here (however careless and secondhand that knowledge may have been). For Gall thought of the "nerve-fibre" as the basic element out of which brain and spinal cord were constituted; and it is *his* belief that these physically observable things impress a spiritual meaning on the skull that Hegel is concerned with.

Against this error, Hegel urges that the "fibres" of nerve *theory* are not the directly visible things; they are hypothetical entities whose being and action are not visible at all. The *visible* things are as "dead" in principle as the skull (which is not really dead either). They will still be there (though not for long) when life and spirit are gone; and it is then, indeed, that most of the observing will be done. The living brain and nervous system is a theoretical construct; and obviously there can be no "absolute knowledge" of such constructs. Hegel speaks more contemptuously of their cognitive status here than he did even about the "sensitive" and "irritable systems" as the theoretical bases of organic life. This is because we are now in the sphere of "Spirit" which has consciousness as its real "inner"; and "consciousness" is the object of *our* science. When we turn to the *Encyclopedia* and study the transition from the organism to subjective spirit, the importance of the transition is still obvious. But the dialectical continuity of scientific knowledge (and the interdependence of the two sides) is equally clear. Hegel's contempt for "hypothesis" is dictated by the fact that in this present book he conceives himself to be doing logic. But he only did logic in order to do "real philosophy."⁸⁰

To take the spirit for an immediately observable thing like the skull is the ultimate rational stupidity. The observer only retains contact with her rationality by denying her own fundamental assumption and admitting that the most she can observe is the free potential of the spirit. This is the inversion that carries us forward.⁸¹ To unfold the spiritual significance of what is so absurdly pictured in Gall's "science," to display the *actuality* of the free potential that he inconsistently aims to observe scientifically, will require the rest of Hegel's treatise. Absolute Spirit, for which the skull is only a necessary *moment*, will rise from Calvary only on the last page. But the very first experience of the singular rational organism whose freedom Gall was honest enough to recognize inside his skull, is the encounter with "Necessity" in the shape of death. Thus the most immediate spiritual significance of the "infinite judgment" that "Spirit is a thing" is that the finite rational spirit is mortal. This is also the rational ground of the "unhappiness" of consciousness. So Phrenology truly is the absolute turning point of the *Phenomenology*.

Hegel's parting shot for Gall is an appeal to what he regards as nature's metaphor for the infinite judgment. In the male animal organism the functions of urination

and begetting are combined in a single organ. The spirit employs the animal organisms which it uses up and wastes, to express its potential for the creation of its own world of free expression. Already at the end of Unhappy Consciousness, Hegel has let Luther express the spiritual awareness that the life of the body is a waste, and is fit only for wasting. Now he uses the water of the body in a traditionally religious way as the symbol for the life of the spirit.⁸² But whereas his use of Luther's symbolism for bodily life was veiled in a scientific expression—"the enemy shows himself in his own proper shape in the animal functions [*in den thierischen Functionen*]" (par. 225)—his metaphor for spiritual existence is expressed in Luther's own vulgar down-to-earth vernacular. He speaks not of *Urinieren* (as a professorial observer would) but of *Pissen* (as Luther's Bible does). Academic dog-Latin belongs to the old world of spiritual authority. In the "daylight of the present" even philosophic science must speak the language of the people, and not pretend to be an *authority*. But equally the philosophic observer must look for the depth of the Spirit in what is thus said "for the people"; and we must expect to find that the deep significance of what is said here is quite opposite to what appears on the surface.⁸³

Notes

1. Compare *Enz.*, section 246 Anm. It would not be impossible, nor would it lose *all* of its significance. There are many students of Hegel's *Phenomenology* (and even of his *Logic*) who want to make these works into the foundation for a "wisdom" that is far removed from the "Encyclopedia of the Philosophical Sciences." But for someone who believes in *Hegel's* wisdom this is an occasion for regret, because those anti-scientific students interpret Hegel's logical criticisms of empirical scientific inquiry in a way that impedes the understanding and appreciation of his own goals by the scientific minds to whom his message was originally addressed.

2. D.-K. 68, B 118.

3. Hence, too, the condemnation of "Aristotelian" modes of speculative philosophy in 1277, and the eventual triumph of Ockham and the *via moderna*, was inevitable. But the *via moderna* is the critical principle of "pure insight," so the impending emergence of "Reason" is not hard to recognize.

4. We shall find it hard to linger at that stage, because we agree with Hegel before he can speak, so that the discussion has no point; hence we are apt to miss his point altogether, or to grasp it only superficially, and to find his vehemence bewildering and embarrassing. Hegel himself pokes fun, so we take refuge in laughter with relief.

5. There are, of course, many (on both sides) who will regard it as blasphemous (in opposite senses) to say that Hegel was both serious, and insightfully meticulous, about formal logic. But *they* will not complain of Hegel's brevity here; and (like all of us in the "Phrenology" section) they will never appreciate how important the point is, because they have already agreed (or disagreed) with the argument too quickly.

6. We shall see that a partially identical justification can be offered for the summary dismissal of faculty psychology. This underlines the *disproportion* of his discussion of biology.

7. Findlay is right, and Flay is wrong, about Hegel's attitude to the *Principia Mathematica* of Russell and Whitehead, and to all the numerous progeny of the original Turing machines

(see Findlay 1958, 107; Flay 1984, 326–327, n. 32). But Findlay is not correct about Hegel's reason for finding nothing valuable for the "science of experience" in formal logic. In *this* connection Hegel would "welcome" formal logic precisely because it recognizes its own "vanishing character." That is not a "more radical lack" (as Flay says) but a considerable advance in self-conscious rationality. It is Flay (not Hegel) who finds this "lack" antipathetic. Lauer (1976, 143–144) has Hegel's view right.

8. My nodding acquaintance with some forms of Indian speculation suggests that the comprehension of the whole need not be what *we* call "science." But then the speculative logic will not be "scientifically" developed either. This is not to say (as Hegel seems to have believed) that it cannot be developed beyond the most primitive categories of "scientific" logic. The speculative logic of Socrates was not systematically developed either. But Hegel would never make the mistake of arguing that it was confined within the logical sphere of "Being." That Indian speculation existed in the context of the caste system should not be ignored. But Socrates, Plato and Aristotle existed in the world of "natural slavery." (This whole problem belongs to the context of Hegel's seventh chapter; and only some dispositional suggestions can be expected from a consciousness formed by the same "experience" that is harvested in Hegel's "Science.")

9. This is obviously and explicitly true of the *Phenomenology* as the "science of experience" (see paragraph 30). But Hegel is here distinguishing Logic as the "science of the sciences." The empirical sciences that we have been observing are the "content" that Logic requires.

10. Compare further the discussion of both kinds of logic in the Preface (especially pars. 38–51).

11. We are not directly interested in "depth psychology" either. But in so far as that deals with the suppressed aspects of a *divided* will, it is continuous with our interest. But I do not think that this continuity can be formulated in naïvely observational terms. Our own kind of observation (which rests on the dynamic consciousness that "what is" contains "what was" in a sublated form) is necessary for that kind of psychology.

12. That is why the supremely learned Doctor Faust is such an appropriate *Gestalt* for self-actualizing Reason, when we get to it; he is the consummately *educated* spirit.

13. We can legitimately regard Hegel's remarks about the psychological observation of individuals as his own verdict on all the books that treat his "science of experience" as if it were a bran-tub of psychological types—a modern, and Teutonically mystified, version of Theophrastus' *Characters*, so to speak. Loewenberg's book is the clearest example of this type, but Robert Solomon comes close to it, and there are other offenders who should study paragraph 304 and then look at themselves in the mirror.

14. See the *First System Programme* (December 1796?) in *Sunlight*, 510–512. (As far as the argument here is concerned it does not matter whether Hegel was the actual author of that piece. The copyist (if that is what he was) is applauding an attempt to develop Schiller's ideas. Compare further Letter 11, *Briefe* I, 25; Butler and Seiler, 36).

15. Hegel's decision that the emphasis of Schiller and Hölderlin on the aesthetic harmony of "nature" was logically mistaken, and that the message of the myth in Genesis 2 is logically correct, was arguably the most important crisis of his Jena years. This was the real death of his "Greek ideal." Only the subsequent crisis in his conception of "logic" (which led to the birth of the *Phenomenology*) rivals this in importance. The crucial texts belong to 1803. They will be published in *G.W.V.*; see for the present, M. Baum and K. Meist (1977).

16. An enlightened society will want its citizens to be *personally* (or subjectively) “happy”; and to that end it may well find that scientific surveys of what people want, personally, and of what they do, privately, are useful. So a quantitative or statistical version of the observational study dismissed here may find its place in the “system of the sciences.” But *that* science is not relevant to the “experience of consciousness.” It does not focus on the individual, and hence it is not a necessary link in our advance to “absolute knowledge.”

17. Plato only justified the *isolation* of “thought-criminals” from the community, and the use of rational persuasion to cure them (not physical or physiological compulsion). As usual, he represents the “natural” consciousness at its best. During the *Bildung* of Spirit, ideological heretics were burned (by Catholic and Calvinist authorities) or executed as political traitors (in the Anglican communion). But physical torture was an essential part of all Western systems of justice before 1789.

18. The three paragraphs on logic have the regular structure: concept, experience, result. But the concept is a mere name, “the Concept itself that exists as Concept, or Self-Consciousness,” since for Observation there is literally nothing but the verbal definition there.

19. The structure of the sentence in which Hegel *seems* to list *three* relations of individuality to the universal should be noticed. Logically it is clear that the first two relations (passive reception and opposition “or rather *verkehren*”) refer back to paragraph 302 (where they are listed together and the *verkehren* is explained as *criminal* defiance of law and custom); whereas the *sowie* clause which follows the bar (and which also has two sides) refers back to paragraph 300.

20. Flay (1984, 127 and 327, n. 34) thinks that he disagrees with Kainz (1976, 111) about the law of individuality. But their views are not seriously in conflict with one another. The apparent disagreement arises, because they expound Hegel’s text, without trying to assume the posture of Observing Reason itself; so what they focus on is different sides of it. They think of “necessity” and “freedom” as contradictory opposites; but Hegel is interested in how the two sides are united. The commentators (quite generally) take it that Hegel wants to show that there is not and cannot be a “law of individuality.” But in fact, he shows us *first* that *there is and must be one*, and *then* that *there is not and cannot be one*. Without the positive thesis the posture of the observer would not be one of “Reason” at all.)

21. Thus Collingwood was still the unwitting prisoner of Leibnizian formalism when he argued that only “success” can be properly comprehended by the historian. Both he and Croce fell back into the rationalism of Spinoza and Leibniz in their belief that the historian must have no truck with “what might have been.” Instead it is precisely the appreciation of the “might have been” that gives history its human (or “spiritual”) significance. Yet Croce is right, of course, in arguing that the historian cannot rationally discuss “What would have happened if . . .” That question, too, presupposes a Leibnizian logic.

22. This is the point of Plato’s myth of Gyges; and when Hegel refers to crime at the end of paragraph 302 he seems to be referring to a *life* of crime. His use of the Kantian principle of universalizability goes beyond what a single act could justify: “or in that the individual sublates the universal actuality in a universal way, and thus acts for everyone, and brings another world, a different justice, law and customs [into being] in place of those already there.” The rational observer can only observe habitual crime *empirically* in the context of the operation of the *Recht, Gesetz und Sitten* that are *vorhanden*. So the fact that Hegel speaks of the world of the criminal as independent in this way (without any reference to the punishment that reveals its singular contingency) indicates that psychological observation is

concerned with what is subjectively *possible*. (This is also implied in the forward movement from logic to psychology; the latter must retain the conceptual generality of the former.)

23. *Ethics*, Part II, Prop. XIII.

24. The observer sees through the bodily sign to the inner disposition. Loewenberg (1965, 144), followed by Lauer (1976, 146), suggest that “if these pseudo-sciences had not existed, Hegel would almost have had to invent them, since that is the direction in which the dialectic as he describes it is moving”. But of course, the “dialectic” here is the dialectic of actual *experience*, so it must not generate any *inventions* on our part. Neither Loewenberg nor Lauer *explains* what the dialectical movement is. Flay (1984, 127–128) does this quite well. But as far as *explicit* logic is concerned, he suffers from the misguided belief that he has a pragmatic logic of experience that is better than Hegel’s “dialectic.” So he cannot deal with the social character of the *Phenomenology* programmatically at all.

25. See his two diaries (*G.W.* I, 31, lines 4–10; and *Dok.* 221–244).

26. This is the key to the transition from Observation to Real Individuality at the level of the individual consciousness that “has” Reason. But I have indicated in the previous paragraph why the observer does not make that transition at once. The observational scientist wants to overcome the twin problems of misunderstanding and deceit (which the Real Individuals will experience). In the rational society that is speculatively self-conscious, “misunderstanding” is “understood” as necessary, and deceit is “comprehended” as an aspect of the finiteness of individuality. Thus Hegel can say in the *Encyclopedia* lectures that “a man is nothing but the series of his acts” (*Enz.*, sec. 140 Z; cf. *Philosophy of Right*, sec. 124 Anm.). But in the *Phenomenology* we must follow the path of finitude to its *absolute* limit (death) in order to make the transition to “self-actualization” through the “living Infinite” of the *Volk* (which is Spirit’s *substantial* “thinghood”).

27. For brain-case measurement see, for example, Carleton S. Coon, *The Origin of Races* (New York, Knopf, 1962, *passim*). (He also describes the Chou kou t’ien fossils.)

28. In the *Timaeus* (42D) the Divine Craftsman *sows* the created rational souls in the earth, moon and planets. This was certainly influential in the later tradition of Western astrology (especially the Stoic tradition). In the *Phaedrus* (247A) on the other hand the souls *choose* the planetary God in whose train they follow.

29. Herodotus, *Histories*, I, 5. (Compare the last three lines of Sophocles’ *Oedipus Tyrannus*.)

30. Heraclitus, D.-K. 22 B 119 (Kahn, CXIV); Aristotle, *Nicomachean Ethics*, I, 10 (1100a 10–1101a 21).

31. In paragraph 314 Hegel used “*diese Züge der Hand*” for the palm-lines which the fair-ground fortune-teller attends to. But the English translator should use “traits” both there and here, because the features referred to are quite different in the two contexts. Plato and Aristotle would have agreed with Lavater that (for instance) bitten nails and nicotine stains are *ethically* significant. We do not have to be Sherlock Holmes to do *some* effective physiognomic observation of the hands.

I do not see why MacIntyre (1972, 221–222) says that Hegel’s argument shows “that the physiognomist’s treatment of the face as expressive of character, and the physiognomist’s treatment of the face as (at least sometimes) the effect of character cannot be combined without damaging inconsistency.” As far as I can see, it is precisely this combination that gives the face (and other active organs) their status as a “middle”—and hence gives physiognomy the logical claim to be a science. There is no difficulty about the *logical construction* here. But, unfortunately—as Shakespeare’s King Duncan says—“There’s no *art*/ To find the mind’s construction in the face” (*Macbeth*, I, iv, lines 12–13).

32. The code can no more be broken, alas, than the phrenological code of the skull. But the successful dating of Hegel's early manuscripts through the evolution of various letter forms over time illustrates one way in which handwriting can, indeed, be studied as a record of "character." Unfortunately for Lavater there is little reason to believe that *ethical* character is what is coded in it.

33. Thus the Freudian hypothesis that the nail-biter does not *know* what the real trouble is, *sublates* the whole standpoint of Observing Reason. The *Psychopathology of Everyday Life* is a "spiritual" inquiry (in which the effective consensus of patient and observer is the only standard of "truth").

34. MacIntyre (1972, 220) remarks that "physiognomy was an ancient science." There is, in fact, a treatise on it among the writings ascribed to Aristotle. This is now classified as spurious. But it was accepted as Aristotelian by the Arabs, and by medieval Christian students. Bartholomew of Messina translated it into Latin at the court of Manfred in Sicily between 1258 and 1266.

Nowadays a lot of books are written about "games people play," and about the skilful interpretation of body language generally. All who are engaged in "public relations"—especially business or commercial relations, advertising, and sales promotion, but also, for instance, courtroom law—need to be able to read the signs by which they can judge whether they are really having the effect or influence that they wish to have. So books on "physiognomy" will always be sure of a market. But this is a "science" that belongs essentially to Plato's Cave; and I fancy that Lavater himself might agree with me that in this perspective its contribution to the "advancement of *Menschenkenntnis* and *Menschenliebe*" is a highly ambiguous one.

35. MacIntyre says that in his discussion of physiognomy "Hegel . . . sides with Ryle in the *Concept of Mind* in his enmity to the notion of dispositions as causes of the actions that manifest them" (MacIntyre, 1972, 221). One cannot quarrel with this statement, because Hegel's polemic against *causal laws* of the kind that Newton discovered is continuous from the moment that we reach the observation of the organism. But it is not a perspicuous way to state Hegel's position all the same, because the Aristotelian conceptions of disposition, habit, character (and "cause") are the fundamental building blocks of Hegel's position. (I think this is true of Ryle also).

36. M. Emerson (1987) is right in arguing that both Wittgenstein and Merleau-Ponty agree with Hegel's view that the distinction between "inner" and "outer" is a mistake. (Emerson himself is much indebted to Hyppolite [1946, I, 255–61; 1974, 264–71].)

37. *Physiognomische Fragmente*, Essay 4, Leipzig, 1778, 110.

38. *Finnegans Wake*, London, Faber, 1939, 202, lines 26–28.

39. It is different, for instance, from the idealization of girlhood that Hegel will locate for us in Greek religion—different even from the nymphs because they will never grow old—a destiny that Joyce's telltale "then" already suggests.

40. Or in the earlier time to his confessor; but then it was the "Holy Spirit" that was explicitly "posited."

41. Jane Austen, *Pride and Prejudice*, chapter VIII. Lady Catherine is an admirable study of the simple "physiognomy" of the *strong will*. She is unquestionably both "determined" and "energetic." But she never *does* anything except mind other people's business. Hegel would have been delighted with this example of how it is possible to *exist* as a mere physiognomy. (Many of Jane Austen's secondary characters exist in this mode—and in great variety—

because there was so little real work that the landed gentry were allowed by their code to do. Lady Catherine, however, has clearly *chosen* her self-satisfied path in life.)

42. This is documented by G. Tytler (1982).

43. At the statistical level I am not sure that it has perished even yet. Charles Morris seems to have aimed to carry on the work of Lombroso; and, of course, skull-study is a fundamental aspect of the evolutionary science of human intelligence. But there is the important difference that modern craniology *depends upon* neurophysiology. For the students of phrenology the dependence went the other way.

44. Gall's views were legally condemned and banned as irreligious in some parts of Germany (see Baillie, 337). In England a law of Elizabeth against physiognomists was revived in 1743. But Petry (*Subjective Spirit* II, 632–633) indicates that practitioners were to be whipped as rogues and vagabonds. So it seems probable that Shakespeare's Duncan in *Macbeth* was giving the educated man's verdict on a recognized *fraud*.

45. With the advent of the movie camera and the computer, it is conceivable that this conceptual difficulty has been overcome. Thus a "science" of physiognomy may now be possible; and in the political world of direct democracy made possible by television, the rational ground for developing this science, if it is indeed possible, clearly exists. But it will have quite the opposite teleological structure to the science of Lavater. It will be a *practical* science of presentation not a *theoretical* science of observation. Its *telos* (as Plato would have said) will be not knowledge but persuasion. (The "lie-detector," if it can be perfected, will take us from perceptual observation to the "first inversion" of the Understanding—and so to an observational science of sorts.)

46. See E. M. Hundert (1987) for an interesting philosophical foray in this direction (Junian psychology looks too much like the observational theory of "faculties" and "passions" to be reducible to a "science" with a determinate conceptual structure).

47. Both physiognomy and phrenology are dismissed out of hand in the *Encyclopedia*, section 411. But there is a sympathetic discussion of body-shape and body language in the lectures. Lavater was given a couple of sentences in at least one course. *Systematically* speaking "the judgment based on physiognomic expression has . . . only the value of an *immediate* judgment, which can just as easily be untrue as it can be true. For this reason there has rightly been a withdrawal of the exaggerated attention that was formerly devoted to physiognomy, when Lavater made such a fuss about it, and the most extraordinary benefits were promised from it for the much vaunted 'knowledge of mankind.'"

48. *Introduction to the Study of Man*, 13.

49. MacIntyre's interpretation of Hegel's discussion of phrenology leads him to the conclusion (1972, 233–234) that "between the Hegelian mode of understanding human action and the mode that has dominated modern thinking about the relevance of such sciences as neurophysiology and genetics, there is a basic incompatibility." This is a mistake that arises from concentrating on the *Phenomenology*—which has its own special purpose—and ignoring the *Encyclopedia*. Also we must realize that the object of phrenology, neurophysiology, genetics, and Hegelian "anthropology" is the understanding of human *nature*; the theory of human *action* belongs to a different set of empirical sciences, and to other parts both of the "science of consciousness" and of the "system."

50. *Timaeus* 71–72. Hegel had appealed to this passage in one of his polemics against the romantic cult of genius (end of 1804, or possibly 1805 [Rosenkranz 186; Harris and Knox, 260]).

51. Hegel himself accepted Goethe's (and Oken's) view that the skull is a set of transformed vertebrae.

52. Eric von der Luft (1987, 27–29) has drawn attention to the existence of two modes of interpretation of “observation” in present day medical science: “reductionist” science and “hierarchic” science. He sees that Hegel successfully employs Gall's Phrenology as the *reductio ad absurdum* of the *reductionist* model. But it is important to Hegel that Gall himself was not a “reductionist.” Like most other interpreters, von der Luft sees only the negative programme of Hegel's experiential science (the drive to “sublate” and to pass on to the next rung of the ladder).

53. We should particularly remember the military and naval discipline of the time.

54. In point of fact, Gall did a lot of work on the evolution of the nervous system as it can be observed through the comparative anatomy of higher and lower organisms. He showed in this way that the formation of the brain is the climax of nerve-development. Hegel presumably knew this; and his substitution of a commonsense argument is an ironic comment on the general level of “skull-theory.”

55. Students in the *Stift* at Tübingen whose conduct was unsatisfactory were sometimes deprived of their wine-portions for a few days or subjected to a few hours of what was called *Karker*. Simple imprisonment is, of course, still the most widely employed of the “other external ways to get at the activity of the spirit, in order to stimulate or inhibit it.”

56. *Caput mortuum* was the alchemist's term for the residuum left after exhaustive distillation. Hence it applies to anything from which everything valuable or interesting has been removed.

57. I am not sure how *our* critical observations are to be regarded. We are only observers, so no real violation of the method is involved; but perhaps paragraphs 329–330 belong to the Concept. (See further the beginning of the commentary on par. 331 below.)

58. As my readers will have realized by this time, it is only the “brain-mind” identity that is a permanent *Gestalt* of Reason. (Physiognomy and Phrenology together are the *Gestalt* of the “body-mind” identity in Hegel's own time.)

59. He believed that “the very soul that sees through the organ of sight and smells through the organ of smell, learns by heart through the organ of memory and demonstrates goodness through the organ of goodheartedness” (*Schreiben über seinen Prodromus*, 321; cited in *G.W.* IX, 505 in connection with 181, 39 [Miller, par. 328, page 198]).

60. It is worthy of note that the criterion of *feeling* enters only at the level where scientific observation has reached its limit. This is clearly relevant to Hegel's polemic against the cult of “feeling” in religion.

61. Flay (1984, 131). He points out in his note that this point had already been grasped by H. Krumpel (1972, 41–46).

62. According to Hegel's own theory of the organism, animal life (and even plant life) is “free” too. Observational Reason is marked throughout by a rigorous acceptance of the dichotomy between freedom and determinism. Hegel's own view replaces this by a continuum; even the motion of the heavenly bodies exhibits what Spinoza and Leibniz were prepared to call “freedom,” and Hegel acknowledges *that* sense also. But the presence of consciousness (with the resultant possibility of foresight, calculation and choice) makes a crucial difference. This is where “Spirit”—self-awareness in otherness—begins.

63. This was, no doubt, a very convenient aspect of Gall's science for George Combe, one of Gall's leading followers in Britain, when Marian Evans, a friend of some years, and “the

noblest woman that I have seen” abandoned her freethinking intellectual friends (who were all true believers in Gall’s “science”) and formed her adulterous union with G. H. Lewes—one of the foremost critics of phrenology. Combe asked whether there was insanity in the Evans family. Was there not a bump somewhere that ought to have rendered the inquiry superfluous? (See G. S. Haight, ed., *Selections from George Eliot’s Letters*, Yale, 1985, 151.)

64. He is not *contemplating* any such science here either; but it is easy to show (from his own use of *physiognomic* assumptions at the level of general cultural interpretation) that he is not in principle opposed to it.

65. In the United States Phrenology became for a time a recognized profession. “Qualified” practitioners supplied “skull-readings”; and it was not unusual for employers to ask domestic servants to submit a “reading” with their regular letters of reference. I do not know whether there is any record of violence committed by disappointed servants either against phrenologists or against self-righteously credulous employers. But in the economic context of nineteenth century immigration it does not seem impossible.

66. This claim is more contentious than I realized. But see K. R. Westphal (1996b).

67. His “solution” was only an intermediate step in the maturing of Reason. We shall see it dialectically transformed in due course.

68. Kainz is therefore justified in speaking of a “paradoxical rebound” through which Reason “arrives at its highest point” (1976, 114). This is exactly what happens. Also his chart on 115 shows how and why the “rebound” occurs. So (unlike Findlay) he does not deserve the brickbat Flay hurls at him (Flay, 1984, 328, n. 47).

69. Hegel clearly credits the *invention* of the Unhappy Consciousness to the Jews here: “What it [the Jewish Volk] ought to be in and for itself, this essentiality of self [*Selbstwesenheit*] it is not for itself, but instead it displaces it beyond itself.” In the same way Gall displaces the actuality of his science (lawful correlation) beyond it. But his skull-theory has only a trigger-function, whereas Moses on Mount Sinai (and the people that set itself apart at his behest) created the *Gegensatz* which the whole *Phenomenology of Spirit* (as the objective movement of the *Weltgeist*) must resolve.

70. This is not the whole story. For the scientific community of Reason can cherish the legitimate hope that all such freaks will be eliminated as the logical self-comprehension of the community becomes more perfect. But it is not rational to hope that the “unhappiness” of the spirit (which logically brings authority and persecution with it) will ever completely disappear; and for a “people” to cling to the sense of being chosen by God as the vessels of his truth, when they are chosen for persecution by other peoples, is simply the alienated form that Reason is bound to assume.

We should remember the importance of Lessing’s *Nathan* in Hegel’s intellectual formation. Hegel was always conscious that what was “cast out” might actually be the saving truth. For a balanced account of his mature views about the “Jewish problem” in his own community see E. von der Luft (1989c); see also O. Pöggeler (1974).

71. Hegel believed that each of the four elements goes through a cycle of transformations—but this cycle does not have an inner dynamo. Only the whole weather cycle of the Earth (which is externally powered by the free motion of the Solar System) is self-maintaining. For the two-sided self-maintenance of the organism see further *Toward the Sunlight*, 261–279, 432–441.

72. The Concept is not visible as such in the living thing. It is outside it (in the mind of the observer), and beyond it (in the perpetual cycle of the generations). This “beyondness” is an

“insideness” because the real Concept is the always invisible *form* that drives the whole visible cycle.

73. “Er an sich selbst nur ist die Nothwendigkeit dieser Beziehung; die Beobachtung rückt ihm näher auf den Leib . . .” The referents of *er* and *ihm* are difficult to harmonize. Since *ihm* must be the object of *Beobachtung* De Negri took *er* to refer back to *Gegenstand*. But this produces no very obvious sense. The only sense that it does make is more easily secured by taking *er* to be *der Geist* (as the English translators do). We have to understand that *ihm* is only *der gemeinte Geist* (and that is what is meant by *an sich selbst nur*). So the sense is: “Spirit [as we observe] is the necessity of this connection; but Spirit is only implicit for Observing Reason [and we observe that too]; observation presses it [the *meant* Spirit] right to the body . . .”

74. Hegel says: “What was sublated from the very first observation of inorganic nature—viz, that the Concept should be present as thing—this last mode reinstates . . .” If we return to the beginning of the main discussion, we can see that the sublated empiricism is the *necessary* first moment of Observation (pars. 244–245); and it is precisely in the present paragraph that Hegel is constrained to acknowledge that Gall is not a materialist. So the properly comprehensive statement of the conceptual motion is that Observation begins with rationalism sublating empiricism and ends with empiricism sublating rationalism.

75. “The spirit *is* the skull-record” has *no* scientific content except a category mistake. But to suppose that this formal contradiction is all that should matter to a Hegelian in *all* of the observational sciences of spirit, is to suppose that formal logic matters more than Hegelian logic, or that formal falsity is more important than dialectical truth. The importance of uncovering contradiction in the rational standpoint that takes formal logic as its foundation, is that it legitimates our move from this standpoint in our quest for “absolute knowledge” (i.e. our quest for the *concrete* logic of human cognition).

76. It is here that Hegel makes the paradox of the Unhappy *Consciousness* (which is the climactic mode of *Self-Consciousness*) explicit. Eric von der Luft (1987, 37–38) has drawn attention to Hegel’s punning presentation of Gall as nature’s wrath, bringing us to the Calvary of the Spirit in the *Aesthetics—T.W.-A.* 14, 369–370; Knox, 715–716. The “skull-place” is part of the last image in the *Phenomenology* (par. 808).

77. Ownership of an *instrument* is the “instinctively rational” relationship of *external* teleology. The formula first appears in the Real Philosophy of 1805/1806 (*G.W.* VIII, 166, line 20). It expresses Self-Consciousness as Desire; so the circle of Self-Consciousness as Reason closes here for the first time. This is the Faustian self-consciousness in its developed shape.

78. The disrupted consciousness of Rameau is simply the dialectical moment of the self-consciousness of “honesty.” Mein Herr Philosoph and Young Rameau provide the opposite faces of Physiognomy.

79. *Analytischer Versuch über die Seelenkräfte*, Leipzig, 1770. Hegel owned this German translation by C. G. Schütz. Bonsiepen and Heede quote some passages about the hypothetical physical analogue of syllogistic reasoning, which would certainly have caught Hegel’s attention. Certainly it is Bonnet whose view was so rudely dismissed in the *Difference* essay—see Harris and Cerf, 162 at note 9.

80. We ought not to read the *Phenomenology* as if it was written by the nephew of Rameau (though that is now becoming rather fashionable). The last sentence of paragraph 65 contains Hegel’s verdict on what such interpretations are worth.

81. The observably embodied free potential truly is a “living *thing*”; the free spirit comes to birth embodied in an organism. So the “result” of Observing Reason is the rational living

organism (just as the “result” of Understanding was the eternal organism of free motion). The intervening process of “Self-Consciousness” was the production of the Spirit as absolute *authority*. The crucial difference between the two “results” is that the living organism is *self-consciously* rational. But that is only the positive side. Negatively, the crucial difference is that the living organism *dies*, it is mortal.

82. In the religious tradition it is the water of the Earth’s rivers that symbolizes the Spirit. The rivers are fed by the weather cycle which is the “life” of the infinite organism—the cycle of heaven and earth. Like the foaming forth of Spirit directly from the skull-place, Hegel’s move from the inorganic cosmic metaphor of religion to the organic microcosmic metaphor of Reason, expresses his speculative doctrine of God’s Incarnation in human Reason. (The transition from the phrenologist’s “reading” to the living *Volk* and the active agent is certainly one place where the rhetorical approach of J. H. Smith (1988), H. Sussman (1982) and C. Sills (1989) is in place. But the “metaphorical” connections are too many and various to be easily classifiable under any one trope.)

83. The only thing that could be more mistaken than Findlay’s belief that Hegel is simply making a joke (1958, 109) is his belief that Hegel regards a combination of functions which strikes us as an irony of nature as an adequate ground for a logical transition—compare M. Kusch 1984, 118, n. 4. I was amused to discover that the *N.E.D.* calls Findlay’s super-professorial use of “micturition,” for urination, *erroneous*. His substitution of “orgasm” for Hegel’s “generation” (in his Analysis of par. 346) is philosophically “erroneous” also, but it led Alan White to the insightful comment that the “I = I” of primitive Self-Consciousness is a philosophical orgasm (1985, 239–242).

Concluding Intermezzo

1. The Prospect

At this point where Reason has completed its survey of the reality that it instinctively knows to be itself, we can see why it is logically obliged to become aware of itself as a self-generating activity. The cumulative result of rational observation has been that Reason comprehends itself in the embodied consciousness as a thing. Observational psychology taught us that there is no "law of individuality." Physiognomy taught us that the individual agent cannot be indirectly observed; and Phrenology has shown that it is logically absurd to suppose that the rational individual is there to be observed at all. Thus the observing consciousness has learned what became apparent to us when we reached Psychology. We saw then already that we were observing the spirit in its world. We can observe that, because spirit is there in its world. But it cannot be observed immediately as a finite object (like the laws God gave to Moses on tablets of stone). We can only observe it because it has actively produced itself as a thing-world.

Of course, the empirical observer knows just as well as we do that the self expresses itself fully only in the social world; and that it can be observed there. But she deceives herself into thinking that the real self is the inner self, the unexpressed potential. If we are to know the self as it truly is, she says, we must find a way of observing that potential. To do that was the project of Phrenology; but the phrenological observer discovers only freedom and finitude (death).

That result, therefore, is the subject of the next experience. Phrenology is a necessary step in the dialectical progression of Observation because it successfully reduces the career of Observing Reason to that. The Reason that is all reality observes itself first as the "living Earth"—the macrocosm that maintains life in all of its forms. Then it observes itself as a rational life. In itself, it is not just a thinker, but an individual agent; but it cannot successfully observe itself as a determinate physiognomy of Reason. So in its last throw, it seeks to observe itself as the result of the whole process of Reason in nature. The operation of nature as a whole has made it what it is. So its logical hypothesis is that maturation in the environment of the living earth has inscribed its universal potential upon its skull.

When we speak like this, the evident absurdity of the position consists only in the assumption that what Nature has done in producing the rational self can be read by the rational observer. Even the empirical self-observer knows that she is free (and responsible

for what she makes of herself); and she also knows that she is finite. The idea that the program of this finitude is given by Nature (as a rational instinct) must give way now to the active rational instinct that has all of the knowledge rational observation can supply, within the conceptual context of the certainty that "every man is the smith of his own fortune."¹ The result that becomes the subject of the new experience is simply the object as it showed itself to the phrenologist. But this active subject knows that there can be no reading of her individuality until her skull is in the graveyard.

This result produces a total inversion of Observation. The active self goes out to make its fortune in the world. It knows (just as we do) that it has come to birth in the order of living nature, and that it has been educated, and supplied with observational knowledge, by its ethical community. Its Reason is the capacity for free self-expression that it has. In its use of its rational freedom it is a law unto itself. But it has long ago learned that both Nature and the ethical community which enabled it to develop its Reason, are governed by laws of their own. So Reason as "the Category" is now at odds with itself. It is a divided Category, a universal that is self-opposed.

The rest of Hegel's book is the story of this self-opposition within Reason. The principal ground for dividing his book (and my commentary) at this point, is the fact that Hegel himself recurs to this moment as the starting point for his circular presentation of Absolute Knowing. Absolute Knowing is the function of the rationally free self that escapes from the phrenologist with the certain knowledge that it is indeed a thing. As Observing Reason it was "all reality," i.e., all thinghood. But as the result of Observation it is this skull of which Hamlet says with grim humour "Now get you to my lady's chamber, and tell her, let her paint an inch thick, to this favor she must come. Make her laugh at that."²

At the end of Hegel's book we are not provoked to laugh, but we are invited to rejoice. For it is from this "skull-place" that the infinitude of the Spirit foams forth. It is the circle of the "skull places" that I want to make clear in my commentary. The individual Reason has not yet completed its "experience." It must learn to harmonize itself as subjective freedom with the universal "category" of the rational community's ethical life; and then it must discover that it cannot generate the content of that category, indeed that it cannot even generate the form of it. The pure form that it does generate is logically empty, and will accept contradictory contents as its filling. The actual form and content must come to the individual intuitively, as an immediate knowledge of what appears to be a "law of nature."

The moment at which the "unwritten eternal law" is proclaimed is one of two places where Hegel marks an important dividing point in his book. This is where the final syllogism of Spirit (Finite, Infinite and Absolute) begins. At this point "God as Substance" appears, and the story of his evolution into Subject begins to unfold. And since Spirit is an objective social phenomenon, there are grounds for arguing that this God is a transcendent being of some kind, which supervenes in human experience from above. This does not seem to me to be the correct interpretation of Hegel; I am certain, at least, that it is not logically necessary. Hegel was educated to believe that "In God, we live and move and have our being." So it is possible that he did hold that the advent of Spirit was the appearing of a being that is both supernatural and superhuman. This is

*possible, because the Romantic age experienced the world differently than we do; and it is logically allowable in a formal sense. The belief had to be possible, because orthodoxy required everyone to hold it; but it is not necessary. Indeed, there is a logical difficulty about it, because this God is a Ding an sich. By definition, his being is beyond our experience.*³

There was a powerful party among the intellectuals of Hegel's time who did not believe that the absolute Being was a self at all. Hegel was out to convince them that they needed to reconsider their "rational" position. He wanted to show that, according to the prevailing view of natural necessity, human freedom is supernatural. The divine in his lexicon is what is both truly free and absolutely necessary. The Science of Experience is the science of those beliefs that are "absolutely necessary" for the comprehension of human experience in its freedom.

The beginning of Hegel's sixth chapter is not in fact the most important point of division in the structure of the book as he finally envisaged it. The Preface tells us that the Absolute must be comprehended "not as Substance, but just as much as Subject"; and the "appearing of Spirit" is announced at the dawn of Self-Consciousness, as the "desire for another self" (in the early pages of chapter IV). But the Table of Contents indicates that the beginning of chapter V is actually the most important structural division in the book. For chapters V to VIII are all subordinated together under the letter "C."

My own decision to break the commentary in the middle of Hegel's chapter V is guided by my understanding of this division in the Table of Contents. Chapter V (as I understand it) is about Subjective Spirit. The introduction of the Concept of Spirit in chapter IV is meant to alert us to the fact that human self-consciousness is always spiritual. But the finite self is not aware of its spiritual structure until we reach the Unhappy Consciousness; and rational Observation identifies with God (rather than with its own finite embodiment) until we reach this present juncture in chapter V. Both we, and the consciousness that we are observing, are aware of Spirit as the objective totality from the observation of Psychology onwards. But it is only now (in Self-Actualizing Reason) that Spirit becomes the actual subject; and even now it is interacting with itself instinctively, in the dialectic of the divided category of "Reality."

So the remainder of chapter V is transitional. It forms the subjective prelude to the phenomenology of Spirit as a self-conscious unity. The "Necessity" upon which the instinct of finite Reason comes to grief is the totality of "Life" not as a natural, but as an ethical order; and what follows is the evolution of ethical selfhood. Thus, Hegel is obliged to introduce and discuss das Volk at this point, because it is not just the singular object of the phrenologist that appears as a subject now. The universal object of Psychology becomes implicitly a subject too. The Ethical Substance is the necessary context in which "self-making" occurs. At first it is not recognized as "another self," but only as a blind fate; and after that it is an alienated self (the conventional law of those who need to be enlightened). But it is there from the first; so we must see it plainly without any disguises. Antigone's "unwritten law" is one side of the law with which "Virtue" is reconciled. "Law-testing Reason" can only be brought to recognize its futility, because what it wants to validate is already self-validated as it stands. This self-validating reality arrives on the scene now, as the truly universal thinghood of Reason.

2. The Balance Sheet

Having arrived at the point where the two essential moments (of social substance and individual self-conscious agency) are plainly visible, let us recall briefly (and “conversationally”) how we got here. It will be helpful to make a sort of balance sheet of the argument, because—quite apart from any estimate of its methodical success—the recollection of experience is meant to be cumulative. The rational self takes itself to be immediately given—coming straight from the hand of God into the Garden of Eden, so to speak. This self is the rational animal, Reason is its “nature,” and everyone in Reason’s world knows that they are in “the daylight of the present” (par. 177). But actually, Reason came, most recently, through a curtain behind which there is universal guilt and universal contrition. Reason is the Unhappy Consciousness that has cast off its unhappiness, and drowned the memory of it in the joyful awareness of union with God as the universal light; and behind that nearest curtain there are other experiences of which the tensions are still alive in Reason, driving it forward to repeat them at higher levels of complexity. What differentiates us from Reason as we now observe it, is precisely that we do remember what is there in the darkness that the dawn of the present day banished; and we know how the tensions are logically interlocked and interwoven. It is fitting for us to rehearse our lessons briefly, before we go forward to discover where, and how, our daylight first dawned.⁴

We began with the experiences that are essential to scientific consciousness as such. The pattern of the movement from Sense-Certainty, through Perception, to Understanding, is one that we have just repeated (so Hegel will tell us in par. 348) at the level of Rational Observation. Rational Self-Actualization will repeat the “double movement of Self-Consciousness, and pass over out of independence into its freedom.” We shall see that both in its naive shape, and in its rational repetition, this movement of Self-Consciousness is properly a historical achievement, rather than a personal one.

The movement of Consciousness we must all go through personally (if we are to be intelligent readers of this book); and (since not many of us already want to be philosophers while we are still children in school) we philosophers generally go through it in a fairly mature way. But we do not go through it systematically, because in ordinary consciousness, the stages remain all mixed up. We begin identifying things as types as soon as we have any working control of language (perhaps sooner); and we are aware of the world as a system of forces and laws not much later. I have identified the resolve to do philosophy (or it might be the determination to be a “scientist” of some sort) as the moment of necessary transition from Sense-Certainty to Perception. The decision to study any fundamental science is a commitment to pursue Understanding, and to establish consciously (or to absorb and improve) the universal conceptual structure into which all of our practical commerce with the natural order fits.⁵

Since few of us comprehend the “leading of language” logically, these life decisions and choices generally do not remove us consciously from the domain of Sense-Certainty. We acquired some of our vocabulary through ostensive definition, and in our practical life we are pointing at things all the time (often by purely linguistic means). So we form and maintain the natural assumption that that sort of experience and usage is what language and thought are founded on. This is the “philosophy of common sense”; someone

like Eddington, who is conscious of the theoretical character of the Understanding, may well become puzzled about how the writing table can be two things, only one of which can be pointed at. But she never doubts that the second one is somehow there, behind the phenomenal "curtain" that we do point at.

*We all know, all the time, that we are denizens of this world of scientific common sense. Hegel's "Idealism" aims to change our view of where the phenomenal curtain is, and what is behind it. So the one crucial step to be mindful of in the phenomenology of "Consciousness" is the last one. The comprehensive inversion of the perceptual and the theoretical standpoints, takes us from the sphere of understandable natural necessity, to the sphere of natural life as the spontaneous self-maintenance of a balance of opposites. The natural self who knows "This is my world," has a history that Reason forgets very easily, because Reason is the recovery of the primitive confidence. We have to go through the experience of Self-Consciousness, in order to discover what pure thinking (thinking as and for the universal self) is. Then, at the level of Observing Reason, we can recognize the human organism as the instinctive shape of rational freedom. Our own bodies are our "Reason" as a sense-certain object; and the empirical observation that organizes the world of this rational living thing imaginatively, is the self-conscious expansion of that same organic activity. Critical Reason (which we shall arrive at only in the final phase of Hegel's chapter, when "the Category" comes to self-consciousness), is the transitional self-negation of this instinctive organization of *Vorstellungen*. When this Critical Reason arrives at the admission of its own practical helplessness, the real evolution of speculative Reason as the purely intellectual self-conception of the rational community can be comprehended.⁶ In the first stage of this higher process, the rational imagination becomes creative. We shall watch it project the image of the community's self-consciousness in the Olympian council of its Gods. This is the first stage of the "homecoming" of the abstractly intellectual (and hence inhuman) Author of Nature, which instinctive Reason, with its practical utilitarian understanding of the concept of purpose, is obliged to postulate.*

Rational Life, as an instinctive mode of being, takes shape as the family. We can see already how the concept of Life provided in Hegel's fourth chapter, is what becomes the object of biological observation generally. But it is only in the human body that Reason can properly be said to behold itself as an "object"; and the emergence of Desire (as the immediate shape of Self-Consciousness) from Life, requires us to concentrate our attention on the process of human organic development. In the normal course of human organic life—the pattern intended by "Nature" as Kant would have said—an ideal family relationship is established, such that "the Genus" can stably maintain itself, and realize itself to the full. In this pattern, all natural desires are satisfied.⁷

In the self-conscious organism, the spontaneity of Life becomes a conscious will to be "independent." This is the instinctive desire for "another self." In the context of social evolution, this desire is stimulated and maintained by the need of the community to defend itself. But a peaceable community that lives in natural harmony with nature and with its neighbors is quite conceivable, and the cultural record suggests that it has sometimes existed. Since the breaching of the harmony of natural desire would not happen without aggression, the tendency to aggression must be founded in the logic of human

development; and Hegel regards it as the necessary “middle” for the concept of freedom. Without warfare, and the recognition of independence, or the willing acceptance of dependence and subjection, we could never reach the philosophical freedom that is the goal of Reason.

Philosophical “freedom of thought” is the sublation of natural aggression that begins in Stoicism. Communities do not “think” in the proper sense. They can be “self-conscious” only in the mode of free (i.e. aesthetic) imagination. Athena’s children are free in and with her freedom. They cannot be free if she is not. It is the philosopher who thinks freely for the universal human community. So we have the formal birth of “freedom of thought” before us, when Democritus proclaims that “for the wise man the whole Earth is open.”⁸ But this does not become a universal option until all of the free communities have been reduced to dependent subjection. For although it is only the individual who can be thoughtfully free, it is only the community that can be really independent (or forcefully subjected).

As a singular Gestalt, the life and death struggle is a boundary phenomenon. We see it properly only in those individuals who are the singular voice of their community. When there are two claimants for the “kingship,” the struggle can occur in its pure shape. We all experience the need for recognition, and up to a point, we struggle for it. But in the common experience of our education as individuals it is submission that is rational. We learn to desire the other self that is imposed upon us as the price of universal recognition. The general grasp of this fact has frequently distorted the interpretation of the life-and-death struggle in a Hobbesian direction. The Stoic doctrine of freedom gives the lie to Hobbes, and to all of his bourgeois and Marxist disciples. Willingness to accept death is the condition of rational existence. In the world in which there are no independent communities, and consequently no free citizens, but only many shapes of servitude, it is irrational to enter upon a life and death struggle, because only one result is possible. But at that point the universal freedom of individual choice that is implicit in this rational conclusion becomes apparent. We can no longer risk our lives—there is no risk, for the outcome of any open struggle is a certainty. But we can all choose our deaths; and the ethical ground for our choice is no longer the independence of our community, but the integrity of our own freedom as rational individuals.

This integrity of Reason is still only an empty formal ideal. The very fact that a freely chosen death is the true certificate of freedom, shows us that enjoyment can only be a perpetual retreat from life. The freedom of the Stoic is a continual surrendering of any and every thing by which she could be bound. When the Sceptic shows that no knowledge of the Universal Reason is possible, that the freedom secured is a freedom without positive Reason, then the rational inadequacy of life within a community of unequal recognition becomes evident. Emperor and slave can both enjoy the freedom of the Stoic sage; but that is precisely because this lordship of self, is a lordship of nothing objective. It is only a Satanic pride that should be voluntarily surrendered to God, the absolute Lord who graciously gives us his Truth because he is our Father who loves us.

When we make ourselves “equal in the sight of God” because we are his children rather than his servants, the natural community based upon the dependence-independence relation of unequal recognition is implicitly sublated. This spiritual community of

equals is the community of Reason; but it is still self-alienated. God himself is our brother; but he has passed over to his own kingdom of pure thought, and we can only be assured of our reconciliation with him, through a miraculous communication mediated by his divinely authorized "minister." Our communication with him is only a picture of Reason. None of it is the work of our own Reason. Only when we become the subject of an experience that has this shape, does the autonomy of our Reason become recognized and explicit. There is no longer any need of a miraculous gift. We are the representatives of God, and there is nothing supernatural or incomprehensible in what we do or say.

*To begin with, this liberation is an instinctive one. We simply forget the Unhappy Consciousness of universal sinfulness and dependence upon Grace; the world of Reason is a restored Garden of Eden. But just as the advent of Stoic freedom as a universal option can only take place in the world of legal status, so the advent of Reason presupposes the world of Faith (see par. 232 and commentary). The faithful Christian has the divine voice of the Shaped Unchangeable within her. Faith is the other side of Reason; it will manifest itself only in Reason's world (the Enlightenment). Reason itself has no religion; yet like the Faith with which it keeps company, it needs a God in the Beyond, because it is still at the level of *Vorstellung*. Only the Reason of Fichte's Idealism really knows that it is "all reality." That is the climax of its development. The instinctive Reason that we have been observing is consciously God's "representative"; and we have just seen it come face to face with the finitude that that status implies.*

The Reason that accepts its finite body as the naturally given starting point for the expression of infinite selfhood, will now go on to make itself into the self-conscious infinite Category. It will sublimate all the differences of the spiritual kingdom of animals (another essentially instinctive shape of Reason); but it will then find that (like Stoicism) it has no control of its content. The difference between the two situations is that in Reason's world, the content is all there, and it is securely known to be rational. Reason exists in "the daylight of the present." So the task of raising its "certainty" to "Truth"—which still remains for us—is simply a recollective one. The positive achievement of chapter V is the establishment of the categorical certainty of "Idealism." This Fichtean concept was needed as the interpretive context for all the finite empirical observation that we have to comprehend. But it is only now, in the middle of Hegel's chapter, that its self-conscious career actually begins.

This new career is the "phenomenology of Spirit" in a properly self-conscious sense. Hegel introduced the concept of Spirit, as soon as we reached the "desire for another self," because it is logically present in all communication between rational selves. But now Spirit is explicitly objective. I have called this volume "The pilgrimage of Reason," because the conscious finite Reason has pursued its search logically to its own tomb. Gall cannot observe our essence on our skulls; but when we are skulls, our story can be written, and our essence can be learned from it. To look for a "law of individuality" in the living "representative" of Reason is absurd; but biography, however limited its success may be, is not an absurd undertaking. Logically, we have now come to the point of resurrection "in the Spirit." With Fichte's Ego we shall also have reached our focus point in the present. We shall find that our capacity for critical comprehension of the present world teaches us nothing. Then we shall embark self-consciously upon our odyssey of spiritual

recollection. But the Spirit that presented itself as an object in Psychology, is now with us as the Substance—the real object that is an active subject. The still-finite consciousness that we are observing does not yet recognize it properly. But only if we recognize it now, shall we be able to understand the formal transition to Spirit when we come to it; and Hegel clearly wants us to recognize “True Spirit” at this point, for he explains (at some length) that both the actual ground and the actual goal of Reason’s self-realization is das Volk (par. 350).

Notes

1. This was how the proverb ran in Hegel’s world—he uses it in his Logic lectures at Berlin.

2. *Hamlet*, Act V, scene 1 (lines 198–201 in the Yale Edition).

3. The most carefully *critical* statement of this view of “Spirit” is given by Charles Taylor. But the result of all his care is that I cannot understand what “the Spirit” is (and I don’t believe that anyone else can). Naturally I am loath to ascribe to Hegel a doctrine that passes my understanding, as long as I can find a consistent interpretation of what he says that I do seem to myself to understand.

4. For another brief survey of the movement of Hegel’s argument see H. S. Harris (1994).

5. We always need perceptual knowledge in order to talk about our sense-certain world. We move to Perception properly when the *typing* of things becomes our conscious cognitive concern. At that stage we need some Understanding as the conceptual context of our “thing-world.” We move to “Understanding” properly when the unifying *ground* of the perceptual world becomes our focal concern.

6. This “real evolution” *must*, of course, have already happened objectively in history, or there could not be a community of “instinctive reasoners” with an Understanding concept of their world.

7. What is natural is what appears to be so in the universal “light” of instinctive Reason.

8. D.-K. 68 B 247.

Index for Secondary Literature

This index contains all references to secondary discussions of Hegel from his biographer Karl Rosenkranz to the present. Post-Hegelian philosophers such as Bertrand Russell, and others who have not been cited for comments on Hegel, will be found in the Analytical Index that follows.

Analytical Index

The following abbreviations have been employed in this Index: H = Hegel, *Phen.* = *Phenomenology of Spirit*, I = individual, P = particular, S = singular, U = universal. The name G.W.F. Hegel is not indexed. His works will be found under their normal titles. Essays and fragments are listed in quotation marks.

- Abelard, Peter: 228, 431–3
 Abraham: 61, 404, 593, 598
 Absolute, the: self-manifesting, 1; religious, 8–9; not presupposition, 13, 228–9; presence of, 34, 89, 102, 142, 145, 164, 166, 169, 184, 196–8, 230, 259, 265; Substance and Subject, 54, 99; abyss, 52–3, 128; God as, 58; as Spirit, 63, 85–6; self-intuitive, 93, 128; in and for self, 205; going out of Self, 458; Being as Self, 618
 Absolute Identity: intuition, 48–9, 460; Schelling's, 56; formal, 125; abyss, 128
 absolute knowing (knowledge): in *Phen.*, 8–9, 55, 58; and natural consciousness, 15, 28, 200, 554, 617; and forgiveness, 29; *Gestalt* of, 40, 204; problematically intuitive, 56, 69, 461; and Religion, 82, 420, 422, 598; and Logic, 94, 559; of knowing, 179, 189–90; focal point, 192; philosophic community, 193–4; Sense-Certainty as, 210–3; circle of, 226, 230; comprehensive, 228–9, 559; of fact, 445; critical, 466–7; as standard, 535; Physiognomy in, 580; birth of, 585
 Absolute Self: Beyond, 396; comprehends finite, 397; becomes Spirit, 402
 Absolute Spirit: and human cognition, 26; Substance-Subject, 84–6, 422; self-intuitive, 93; not cause, 100; procession of, 101; and Logic, 204; Unhappy Consciousness of, 396, 398, 404; syllogism of, 617
 absolution: of sin, 429–30, 432; as reconciliation, 429, 433–6; not performative, 434–5; and Reason, 450, 469; and devotion, 553
 abstract(ion): and concrete, 36; concepts, 74–5; of Perception, 256; generation of, 284; and speculation, 411–2; separation, 429, 431; living and dead, 524; of Reason, 556, 563
 abyss: Absolute as, 52–3, 128; Kantian term, 96
 Academy: Scepticism in, 389
 Achilles: 31, 33; “natural” paradigm, 164, 355–7, 373–4; fate, 355, 375
 acid and base: not things, 253, 258, 487, 489; neutrality of, 493; paradigm, 503; in synsomatics, 543–4
 action: compete, 161; and intention, 298; pure, 361; of Unchangeable, 433–6; and thought, 600; achieves/negates thinghood, 604
 actor: as physiognomist, 582
 actual(ity) [*Wirklich(keit)*]: and possibility, 14–5, 187; non-spatial, 117; conscious, 121, 591; is the U, 143–5, 159; rationality of, 183–5; external, 227–8; and Force, 274–6; self-negating, 424–5; spiritual/external, 476–7, 539, 595; public, 580–1; of freedom, 605
 Adam: 209, 213, 328, 359, 378, 419, 442, 452, 485, 553; fallen, 360, 367, 369
 adaptation: designed, 496, 500–1; self-preservative, 498; environmental, 537–8
 advice: *see* counsel
 Aegisthus: 375
 Aeschylus: 353; *Seven*, 160; *Eumenides*, 339; and True Spirit, 353
Aesthetics: Calvary in, 614
 aether: physical/intellectual, 65–6, 286–8, 304–5, 307; concept, 100, of Reason, 192–3, 279, 397
 Agamemnon: 31
 aggression: conceptual function, 620–1
 Ajax: 355
 Alexander: 175, 220, 384, 406

- alienation: Here/Yonder, 79; spirit/matter, 476; of Reason, 553
- almsgiving: 431–2
- analogy: use of, 492; helpful, 503; critique, 542
- analysis: method, 77–9, 106, 141–2
- Ananias: 161
- anatomy: paradigm science, 36–8, 585; H's study of, 36, 585; truth of, 58; comparative, 507, 594, 612; observational, 514–7, 549, 556, 582–3; lesson of, 519–21, 559, 596; of brain, 584, 595, 605
- Anaxagoras: *Nous*, 134–5, 137, 140, 156–7, 279, 312; in the tradition, 279; matter, 309
- Anaximander: God, 97; tradition of, 310; Boundless, 506
- Andacht*: 413, 442 (*see* devotion)
- Andenken*: and *Denken*, 411–2
- animal(s): brute/rational, 225–8; wisdom of, 225–7, 236–7, 239; self-differentiated, 484–6; rational, 502; automata, 503; organism, 508 (*see* organism)
- animal functions: eliminative, 427–8, 606
- animal kingdom: spiritual, 563
- animal spirits: 546
- announcement: publisher's, 30 (*see* *Anzeige*)
- Anselm: Ontological Proof, 145–6, 398, 412–3; God, 399; teacher, 413–4; saint, 419; paradigm, 439–40; prayer, 442
- Ansichsein*: *see* being in itself
- Anstoss*: *Ding an sich*, 466–7; superfluous, 503–4; outer as such, 524
- Anthropology: H's, 611
- Antigone: and Creon, 77, 354; unwritten law, 323, 339, 392, 444, 618; and Faust, 335; paradigm, 563
- antinom(y)(ies): of Sceptics, 393–4; freedom/determinism, 588–9, 597, 612
- antithesis (*Gegensatz*): time/eternity, 15, 284; freedom/servitude, 17; noumenon/phenomenon, 27; inner/outer, 41, 297; faith/knowledge, 41–2; of Consciousness, 85–6; Appearance/Supersensible, 261, 297; for self/for other, 264–6; form/content, 273–4, 283; U/S, 279; positive/negative, 283–4; self/substance, 335; Faith/Reason, 449–50, 454; Life/Self-Consciousness, 449; thought/Nature, 479; fixated, 504; soul/body, 571–2; Being/Spirit, 595; Void/full, 598; empiricism/rationalism, 601
- Anzeige*: of publisher, 30; on *Einleitung*, 162–3; book-structure in, 194–5; value of, 207
- apathy: as goal, 385
- Apostolic succession: 430
- Appearance: of Force, 272, 310; solicited, 273; moments, 275; and Law, 276–89; and show, 276; totality of, 276–7, 579; as appearance, 281–3; Law of, 290–1; completion of, 293; and possibility, 300; curtain of, 307–8; world of, 391; actuality of, 523
- apperception: unity of, 463, 466–7
- Appetite: 320 (*see* Desire)
- apprehension: uncomprehending, 209
- argumentation (*räsonnieren*): method, 123–5, 157–8, 604; limits, 136; philosophical/unphilosophical, 137–46
- Argument from Design: 498, 501–2, 538, 599
- Aristophanes: 77; *Clouds*, 197, 392; in Plato, 325
- Aristotle: *sophia*, 40–1; virtue, 41, 579; teleology, 60; in tradition, 76, 160, 389; God, 96–7, 179, 192; Nature, 99, 535, 541; *Metaphysics*, 106, 137, 153, 156, 192, 232, 234, 550; habituation, 116, 334, 365; mathematics, 117, 153, 498, 522; logic, 123, 177, 252, 289, 462; “form” in, 129, 132, 137, 140, 157, 235, 486, 499, 502, 546, 589; in speculative tradition, 150; named, 157; dialectic, 166–7; knowledge, 168, 185, 273, 282, 309, 554–5; soul, 173, 179; singular ineffable, 217; time, 218, 223, 535; Cratylus, 221; Xenophanes, 230; *Physics*, 235; senses, 248, 258, 309, 494; Substance, 275; and Plato, 302, 313, 526; *De Anima*, 309, 546; appetite, 320, 338; slaves, 374, 376–7, 437, 607; and Heraclitus, 388; thought, 423, 586; and H, 486–8; biology, 497, 505; Pythagoreans, 525; eternal world, 533; prime matter, 544; scientific precision, 549; ethics, 561, 573, 579, 582, 598; and nominalism, 606
- arithmetic: schema of time, 120–1
- association of ideas: 536
- astrology: 575, 609
- ataraxia: Sceptic, 393–4, 397; origins, 438
- Athanasius: 432
- Athena: 339, 621
- Athens: and *Weltgeist*, 404
- Atomism: atoms and void, 87, 109; and Understanding, 234, 258
- Attraction: bare Law-concept, 284–6, 294; of repulsion, 286, 297, 299, 301; of opposites, 291–2; noumenal, 304–5; sexual, 324–5, 327
- Aufhebung(en)*: origins, 5, 20–1, 545; social, 103; “putting by”, 224, 361; of “this”, 240; of *Ding*, 251–2, 268; of sexual independence, 324–6; of Life, 354–5
- Augustine, St.: on time, 59; self-certainty, 165; despair, 176, 395, 440, 580; conversion, 188, 398, 403, 425; God, 399; experience, 403–4;

- De Trinitate*, 438; *Confessions*, 438; faith, 439; paradigm, 440; and Descartes, 470
- Augustus: 209
- Austen, Jane: *Pride and Prejudice*, 582, 610–1
- Author of Nature: Creator, 475, 591, 599; and Matter, 480; projected, 498–9, 501–2; postulated, 503–5; myth, 538; inhuman, 620
- authority: familial, 332–3; of Desire, 348; Lordly, 359–61; sublated, 382–3; priestly, 430, 445–6, 598; origin of, 435–6
- autonomy: not singular, 436
- awareness: reflective modes, 299–300
- Bacchus: revel of, 111, 121–2, 154, 156, 323, 507
- Bacon, Francis: despised tradition, 17–8; turning point, 47, 158, 455, 460, 468, 549, 562; empiricism, 93–4, 481, 505; knowledge–power, 106, 319, 337, 470, 475, 535; observation in, 133; on revenge, 295
- bad infinite: mathematical, 117–8, 120; of senses, 210, 213, 266; of explanation, 285, 475; of struggle, 355–6; of moral progress, 455; of description, 554, 580; of naming, 593
- Barabbas: 598
- Bardili: and Reinhold, 5, 16, 52, 55, 56, 68, 95, 125, 129, 312, 552
- Bartholomew of Messina: 610
- Bauersfrau*: paradigm, 212–4, 216–7, 235–6, 238; and philosopher, 212–3; world of, 243, 504; self-certain, 315, 318
- Beautiful Soul: Jesus, 5, 20; model, 78, 156, 180; unhappy, 163, 181, 200, 202
- Beauty: Idea, 3, 134–5; hates Understanding, 77–8; intuition, 156–7; objective/subjective, 416
- Becoming: first concrete thought, 98, 224; *Gestalt*, 222–3
- Bedeutung*: rendering, 591
- Beethoven, L. van: 565
- begetting: and urination, 604–6
- Begierde*: appetitive, 109, 320, 338 (*see* Desire)
- Begriff*: rendering, 90 (*see* Concept)
- behavior: animal, 577–8
- behaviorism: observational, 578
- Being: as thought, 61, 134–5, 230, 472; God as, 143–6; pure, 210, 213, 215–8, 382; transcends sense, 225, 284; living, 323–4, 586; differentiation of, 462; and Self, 477; levels, 506; Chain of, 524–5, 530–1, 535–6, 539, 550–1; perversion into, 559–60, 600; and owning, 602–3
- being for self (*Fürsichsein*): and *Ansichsein*, 72–3, 571; and being for other, 265–6, 269; of Lord and Serf, 364, 366–7; thought as, 383–4; extinguished, 428–30; and for-other, 496; life as, 504; in other, 528; self-feeling, 548
- being in itself (*Ansichsein*): and being for self, 72–3; thought as, 383–4; body as, 571; *see also* in itself
- belief: empirical, 112–3; religious, *see* faith, Faith
- belief of the world: 398, 404
- Berkeley, G.: empiricist, 197; idealism, 219, 239, 539
- Berlin Phenomenology*: 102
- berserker: 354–5
- Bestehen*: in Substance, 323–4
- Beyond: and Here, 80, 336; unobservable, 400; for Unhappy Consciousness, 406–8; empty, 423; as community, 448–9; for Faith, 622; for Reason, 622
- Bible: John, 3, 61, 63, 99, 416, 444; Luther's, 8, 445, 454, 606; Romans, 62; Acts, 63, 161; Matthew, 161, 197, 444; Psalms, 94, 392, 414; Apocrypha, 161, 532; Mark, 197, 416, 444; Luke, 197, 444; Genesis, 219, 314, 359, 377–8, 607; "lying with", 326; God, 399; Christian, 409; I Corinthians, 427; Latin, 430; mediation of, 430, 445, 454
- Bichat, M.F.X.: physiology, 508–11, 525, 547
- Big Bang: 99, 558
- Big Brother: violates logic, 219–20
- Bildung*: individual, 3, 38–9, 66, 69–70, 78, 91, 92, 173–80, 235; of *Weltgeist*, 28, 69–70, 80, 92, 104; process, 38–9; senses of, 103; classical/modern, 163, 564; natural, 163, 331–2, 341–2, 370, 379; time-bound, 201; community of, 333; disciplinary, 364–5, 409–10, 430, 563, 608; of Faith, 418 (*see also* Culture)
- biography: task of, 565–70
- biology: H's, 485–7, 497; evolutionary, 485–7; necessity in, 521, not observational, 525, 547; molecular, 526; empirical, 554
- "black cows": 51–3, 95, 96
- Blake, William: 532, 537
- blood: circulation, 516
- Blumenbach, J. F.: 542
- body (human): as middle, 321–3, 359–60, 571, 573, 576; organism, 423, 427, 495, 499, 501–22, 570, 605–6, 620; and soul, 503, 505–22; alive/dead, 505, 562, 571; form, 546; and mine, 572, 612; observation of, 614
- body-language: no science, 571, 600; putative science, 573, 576–7; modern work, 610; in *Encyclopedie*, 611
- Boehme, J.: and Identity Philosophy, 43, 46–7, 57, 128; Tieck and, 94; *Mysterium Magnum*, 98; in the tradition, 150, 441
- Boethius: 27, 56; *De consolazione phil.*, 26
- Bonaventura, St.: 20, 533; *Itinerarium*, 20, 68, 551

- Bondage: of Desire, 331, 357–8, 362, 364–5, 374; natural, 358; of debt, 358; universal, 362, 385; *see also* Lordship/Bondage, serf, serfdom
- bone: and plant, 37; Spirit as, 601 (*see* skull)
- Boniface VIII, Pope: 436
- Bonnet, C.: 605
- boredom: of world, 94, 437
- Boscovich, R.: 312
- Botha, P. W.: 442
- brain: anatomy, 584, 595, 605; regional, 586–7, 590; organ, 601; not external, 604, 612
- Brooks, T.: 161
- Brown, John: medical theory, 126–7, 441, 505, 510, 512, 521, 527, 547–8, 550
- Bruno, Giordano: 28
- Buddha: 72
- Buffon, G.-L., comte de: 534, 551
- burlesque: “Unhappy Consciousness” not, 444, 446
- Burton, Sir Thomas: 113
- Butler, Joseph: 135, 604
- Cacciaguida: 107
- Caesar, C. Julius: 106, 113–4, 157
- calculus: significance, 559, 565
- Callicles: 331
- Calvary: *see* Cross
- Calvin, John: 608
- Cambridge Platonists: 90, 168
- Campe, J. H.: 99
- Camus, Albert: 336, 541; *L’Étranger*, 229; *Myth of Sisyphus*, 482
- Cantor, G.: 118, 153
- capacit(y)(ies): psychological, 561–3, 593; criminal, 579–80
- Capaneus: 159
- caput mortuum*: 612
- Caracalla: 400
- Carneades: Sceptic, 158, 372, 410; and Zeno, 185; dialectic, 389, 392, 394–5, 437; saved, 397; at Rome, 438; paradigm, 440
- Carroll, Lewis: *Alice*, 123, 234, 334, 373, 395
- catastrophism: H’s, 534, 537
- categories: H’s, 204; deduction of, 463; dialectic of, 464–5; Critical theory, 472
- Category, the: of thinking Being, 461–2, 561, 603, 620, 622; pure, 466–8; *Sache selbst*, 471, 477; of Idealism, 473–4; U-S unity, 602–3; divided, 617–8
- category mistake: infinite judgment as, 595, 604, 614
- Catholicism: H and, 44; Universal, 45, 359, 365, 453, 471, 541; Unhappy Consciousness of, 440; authority, 430, 435
- causality: category, 128; occult causes, 476, 480–1, 539; “wandering cause”, 488, 532; discovery of, 555; universal, 584, 587–8 (*see also* determinism)
- Cavendish, Henry: 494
- “C. Die Wissenschaft”: 8, 22, 206–7
- Certainty: quest for, 90, 206; of self, 101 (*see* Self-certainty); of senses, 131, 164 (*see* Sense-Certainty); of reference, 221–5, 227–8; of Reason, 307, 449–52, 457–9, 460–1, 539, 553, 622; structure of, 316, 319; of faith, 450–1; of free agency, 464–5
- changeable consciousness: and Unchangeable, 395–8, 400–2, 421; self-creative, 421–2
- “Chapter V”: difficulties, 468
- character(s): classifiable, 563; formation of, 563–4; inferred, 573–4; as *daimon*, 575–6; *Vorstellung* of, 582
- charity: 296, 598 (*see* forgiveness)
- Chaucer, Geoffrey: 429
- check: 503–4; *see Anstoss*
- chemism: perceptual, 245; neutrality, 253; paradigm, 486–9, 493, 519–20; cyclic, 489, 495; process, 505; of life, 525–6
- Chemistry: perceptually founded, 251
- child: significance of, 327, 340
- choice: original, 328, 349, 357, 373; right/wrong, 361; signs of, 573
- Christ: Spirit, 62, 165, 403–5, 408, 414–6, 418, 445, 454, 459–60; in Heaven, 404, 407, 409–10, 422, 425–7, 445, 451; Body of, 407–10, 425, 451, 459–60; God-Man, 415; risen, 425; and Church, 430
- Chrysippus: Stoic, 385, 394–5, 438, 440
- Church: primitive, 3, 64; “Invisible”, 3; Universal, 44–6, 359, 365, 471, 541; authority of, 430, 435, 448; Triumphant, 448
- Cicero, M. Tullius: 384, 399, 436, 437, 438
- Cinderella: 584
- circle: of cognition, 49; of concept(s), 80, 82, 98, 116, 149–50, 304–5; of *Phen.*, 97; construction, 115; of explanation, 317; of life-process, 508; dynamic, 528; of observation, 552, 599–601; of skull-place, 617
- Civil Society: not Lordship/Bondage, 376; not “unhappy”, 437
- classification: rational, 480, 482–5, 556; real/nominal, 484; breakdown of, 487–9; scale of, 552
- Cleanthes (of Assos): 475
- Clytaemnestra: 375
- cogito*: significance, 452–6; origin, 470

- cognition: absolute, 10 (*see* absolute knowing); circle of, 49; and "knowledge", 112; instrumental, 168, 170, 177; medium, 168, 170, 197–8; philosophical, 172; power/object, 181–3, 192; process, 184–8, 192; goal of, 189–90; and self-consciousness, 194, 337; poverty of, 209–10; constructive, 257; perceptual, 282–3; relative, 391; logic of, 490
- cohesion: inorganic, 527–8
- Collingwood, R. C.: primitive survivals, 103; reenactment, 106; on failure, 608
- Combe, George: 612
- Comedy: *Phen.* as, 18, 29; Scepticism and, 405; happiness of, 592
- common sense: natural, 66, 92, 102, 174, 203, 210–2, 597; needs ladder, 89; philosophical, 92, 138, 160, 210–2, 238–57; anti-philosophical, 147–51; critique of, 148–9; dogmatic, 200; truly sound, 256; untruth of, 256–7; religious, 416; phrenology in, 593–4; scientific, 619–20
- communication: desire for, 201–2; linguistic, 222; spirit as, 622
- community: free, 56, 621; rational, 81, 108; infinite, 133; scientific, 141, 150–1, 456; religious, 180, 418–9, 426; thing as, 244–5; spiritual/physical, 252; as continuity, 255; two-sided, 266; real/ideal, 296–7; natural, 339–40, 352; foundation of individuality, 588, 617
- complementarity: logical, 293–4
- comprehension: of time, 26–7, 468; not practical, 97; and recollection, 105–6; not mathematical, 117–8; our own, 140, 146, 208, 211–2; as knowledge, 170, 607; not predictive, 251; rational, 266, 272, 518, 597; Stoic, 387; external, 522
- Comte, Auguste: 53
- Concept (*Begriff*): mediates life, 7, 44; element of the True, 39, 41–3; topic of *Phen.*, 42; and Idea, 42; ourselves as, 43, 319; develops, 47; like oak tree, 47–8, 58; *Dasein* of, 83 (*see Dasein*); Spirit as, 63, 79, 93; circular movement, 98, 116, 149–50, 304–5, 372; final cause, 117; life of, 129–31, 137–8, 495; standing in for, 133, 158, 178, 264, 267–8, 306–7, 589–91; "Self-Consciousness" as, 163, 194, 343–4; of knowing, 174–7; its own object, 179, 183, 244, 263–76, 278, 292, 299–300, 556, 599; and experience, 181–3 (*see* experience); contains antithesis, 196; Judgment, syllogism, 207; U, P, S moments, 242, 244, 307–8; actual essence, 274–6; and natural law, 285–7; self-inverting, 293; resting, 350, 372, 604; death as, 356, 499, 522, 524; Desire as, 372–3; immanent, 414; self-specifying, 488; friends of, 538–9, 552; active U, 546; infinite, 554; logical, 561, 570; how known, 613–4
- concepts: abstract, 74–5, 549; concrete, 80–1; circular, 80, 82; quantitative, 117; as souls, 137; plastic, 144–5; inform communities, 157; and Sense-Certainty, 233; of Perception, 253, 477; dialectical, 288, 489–90; material, 492–3; regulative, 514; dynamic, 518; relations of, 519
- Concept of Life: concrete, 4–5, 25–6, 111, 129–30; dynamic, 122, 301; subject-object, 310; in *Logic*, 314; not self-conscious, 320–2, 599; at Frankfurt, 338, 544; rational, 487–8, 495, 530, 532; universal, 523–4, 546, 556, 570; U, P, S in, 530–2; critical, 547
- Concept of Spirit: universal, 26, 83, 219; community, 56, 64, 86; theoretical, 65; *Weltgeist* as, 69–70, 200; defined, 165, 191, 334–5; syllogism of, 194–5, 617; turning-point, 342; Recognition as, 344; as contradiction, 395, 397; Reason as, 460
- Condillac, E. B. de: 517, 562
- Condition of Right: World *Gestalt*, 18; servitude in, 376
- confession: purification by, 429–30, 443
- conflict: physiognomy of, 581
- Conscience: World *Gestalt*, 17; certainty of, 101; concretizes abstractions, 353; self-making in, 418
- Consciousness (*Bewusstsein*): experience of, 1 (*see* experience of consciousness); standpoint, 6, 113–4, 133–4, 165, 171, 179, 199, 619; system of, 11–2; natural, 15–6 (*see* natural consciousness); history of, 16–7; sensible/intellectual, 68; simplest concept, 81; structure of, 84–5, 170, 181, 213; Infinity of, 130–1; own Concept, 178–9, 181; Stations of, 178–9 (*see* Cross); behind its back, 184–5, 202, 447, 555, 565; "to" and "for", 203; "for it" and "for us", 204; community of, 218; Self in, 233; philosophical, 246; essentially perceptual, 262, 274; Absolute, 302; and Self-Consciousness, 303–4, 316–8; as Desire, 318–9; dialectic of, 391–3, 395; as schema, 403–5; fallen and pure, 406–7, 409–10; observation of, 479, 531; true inner, 508–9; and Life, 530–1; rational, 556; negative, 595
- "Consciousness": process and result, 131; transition from, 133–4, 318; in *Anzeige*, 163; as "first movement", 193–4; preliminary, 206, 264; repetition of, 467; movement of, 619–20
- consecration: of Nature, 444, 454

- Constantine: conversion, 398, 400, 406, 441
- construction: mathematical/conceptual, 114–6, 290; philosophical, 126–7; phenomenological, 133–4; scientific, 308–9; 589, 605
- contingency: of “fact”, 114–5
- continuity: and universality, 255; quantitative, 284
- contradiction: *Ding* as, 252–3, 259, 464, 601–2; truth as, 300; Infinite as, 314; in identity, 343, 569; in freedom, 357; Sceptical, 394–7; in Unhappy Consciousness, 397, 423; dialectical, 463, 543, 603–4; in Reason, 468, 472–4; experienced, 492, 556; and mediation, 558–9; of Phrenology, 594–5
- contrite consciousness: mystery, 451
- convention: and reality, 233–4, 258
- Conversation-Lexicon*: cited, 13, 24–5
- conversion: experience, 177–8, 188; of Unhappy Consciousness, 425–6
- Coon, C. S.: 609
- Copernicus, Nikolas: 167, 276, 541
- corpse: dissection of, 36, 515–6, 556; and stuffed dummy, 520
- correctness: not absolute, 112
- correspondence: unachievable, 488; of concept and fact, 490
- counsel: of minister, 429–30, 446–7; of forgiveness, 434
- craft(s): mastery of, 365, 370; in Ethical Substance, 379; servile, 382
- Cratylus: pointing, 221, 223, 230–1, 236
- creation: and begetting, 420–1, 423; Stoic moment, 437; concept, 452–3; dogma, 486, 533
- Creon: 77, 354
- crime: and punishment, 298, 569–71; self-assertive, 353; capacity for, 564; life of, 608
- criterion: Stoic, 388
- Critical Journal*: policy of, 172; “Introduction”, 198
- critical Reason: emergence of, 448–9, 452, 454–6, 461–2; problematic, 544, 547; and instinct, 597, 620
- Critolaus: 438
- Croesus: 575
- Cross, the: “Stations”, 29, 68, 163, 173, 175, 195, 199, 538; crucifixion, 78, 107, 404, 407, 605; and Pentecost, 175; mystery of, 226–7; symbol of forgiveness, 296; and Resurrection, 585, 592
- Crucifixion: *see* Cross
- Crusades: pilgrimage, 362, 398, 443; failure of, 452–4, 469, 592
- Culture: discipline of, 163; world of, 421, 425; self in, 479, 567–8; honesty in, 604 (*see also Bildung*)
- cunning of Reason: indifference, 502; consequences, 535; saves labor, 595
- custom: ethical, 478, 565, 571 (*see* Ethical Substance)
- Cuvier, Georges: 507; comparative work, 487, 521–2, 542, 550; catastrophism, 534
- Cyrus: 220
- Dalton, J.: porosity, 268
- damnation: not external threat, 430
- Dante Alighieri: *Comedy*, 18, 29, 44, 45, 46, 59, 74, 80, 94, 107, 345, 423, 428, 434, 436; his time, 112–3; numerical structure, 201; free choice, 423
- D’Argenson, Comte: 504
- Darstellung*: *see* display
- Darwin, Charles: revolution, 488; classification, 524; natural selection, 533; *Origin of Species*, 537–8; individual, 565
- Dasein*: perceptual, 37, 135, 154; of Spirit, 64; of *Gestalten*, 82–4, 115, 222; of Concept, 83, 119, 215; rendering, 91; pointing at, 98; transcending of, 104–6; and *Wirklichkeit*, 117; of Reason, 154; and flux, 236; of body, 361, 389; fear as, 386
- daylight: spiritual, 215, 221, 334, 336, 342, 590, 606, 619, 622–3
- death: conceptual, 8, 233, 476; moment of Life, 131, 321, 326–7, 575, 605; sublation of, 179; natural, 333–4, 375, 496, 499, 522–3, 556; violent, 349, 353–4; self-negating, 354–6; risk of, 355; absolute Lord, 367, 369, 382–3; free, 385, 621; and Beyond, 415; preparing, 500; significance, 558, 603; as destiny, 576
- Death of God: in Unhappy Consciousness, 405, 413
- deception: deliberate, 574; of Real Individuals, 609
- deduction: transcendental, 220; of Categories, 597
- deed: true expression of agent, 580–1
- definition: reflective, 38, 79; of truth, 182–3
- Defoe, Daniel: *Crusoe*, 377
- Deism: alienated, 86–7, 166
- de Luc, J. A.: 153
- Democritus: Atomism, 87, 247, 258; *ataraxia*, 438; Understanding, 485, 554–5; freedom, 621
- dependence: bodily, 355, 359–60
- Descartes, René: in speculative tradition, 14–5, 80, 123–4, 142, 146; in *Phen.*, 16; turning–

- point, 17–8, 47, 158–9, 205, 455, 460–1, 468, 562; self-certainty, 17, 97, 134, 144, 153, 165, 340, 371, 451, 454–6; and Fichte, 28, 458; thinking substance, 61, 107, 133, 203, 412, 462, 501; method, 78; observation in, 133–4; named, 157; rationalism, 168, 170, 451, 454, 475; *Meditations*, 175, 257, 453, 464, 546; doubt, 175–7, 179, 200, 211–2, 216, 412, 438, 477; error, 244; dualism, 459, 462, 464, 504; animals, 503, soul/body, 546
- description: rational, 480, 482; dynamic, 513; bad infinity, 580
- Desfontaines, Abbé Guyot: 504
- design: and law, 496, 498; error, 498–501
- Desire (*Begierde*): primitive *Gestalt*, 226, 318–21, 328–36, 543, 620; for truth, 318, 490–1, 618; finite, 329, 331–2; levels of, 331–2; of another's desire, 341; simple concept, 342, 346, 358; reflective, 342; self-liberating, 343–4; not reciprocal, 347–8; and play, 349; maturing of, 350, 353, 355, 371, 384–5, 438; of another self, 363, 618, 620, 622; for Recognition, 374; "Unhappy", 417–24; necessary, 427; inverted, 431; resting Concept, 438; self of, 469; arbitrary, 502
- despair: highway of, 29, 163, 175–7, 180; moment of, 139, 440; of *Weltgeist*, 158; and logic, 184–5; Sceptical, 200, 225; suicidal, 428
- destiny (*Schicksal*): *see* Fate
- determinate negation: generative, 5, 106, 177–8; process, 186–9, 565; of "sweet", 294, 297; and inversion, 314; not sceptical, 391
- determinism: mechanical, 550; critical sublation, 583; and Religion, 584, 589; and freedom, 588–9; belief in, 598, 612; *see also* necessity
- devotion (*Andacht*): of Unhappy Consciousness, 410–7, 424, 427–9; mute, 411, 413; absolved, 433–6, 447; as tuning, 445; surrender of, 451; and labor, 553
- D'Holbach, P.H.T., Baron: materialist, 87, 517
- dialectic: method, 25; Kantian, 37, 40, 459; defined, 80; ancient, 82, 149–50, 389, 391–3; modern, 82, 132; motion, 97, 99; and dialogue, 108–9, 146; term in *Phen.*, 159; of Many/Wise, 166–7, 170; hidden, 185, 591; of Sense-Certainty, 225, 233; of *Gestalten*, 204, 227, 591
- dialogue: and dialectic, 108–9, 146; of soul, 146; of philosophy, 149; of consciousness, 229–31
- Diderot, Denis: *Rameau's Nephew*, 78, 94, 107, 176, 179, 372, 386, 394, 604, 614
- Diez, Karl: 2, 3
- difference: specific, 247, 251, 253, 489; quantitative, 253; supersensible, 280; categorical, 468; *see also* distinction
- Difference*: aim of, 5–6; Fichte in, 50, 126, 472–3; Reinhold in, 68, 197–8; and *Vorrede*, 91; Identity in, 96; triplicity in, 155; on speculative proposition, 159; Recognition in, 542; brain-fibres, 614
- digestion: abdominal, 509, 512
- Ding*: and *Sache*, 37, 211; rendering, 91; types, 208, 238; perceptual, 223–4, 478; and properties, 239; plural S, 247, 261; in itself for another, 249, 316; contradictory, 252–3, 259, 464, 601–2; appearance, 465; and *Begriff*, 475
- Ding an sich*: unknowable, 170, 464, 526; problematic, 181–2, 205, 298, 310, 313; superfluous, 192, 202, 511; supersensible, 255, 280; concept, 261–3, 283; order of Nature, 266; not relative, 391; evolution of, 465–7; God as, 618
- Diogenes: 157, 236, 372, 489
- Diogenes Laertius: 236, 358, 438, 543
- Diogenes of Seleucia: 438
- Dionysus Zagreus: 107
- Diotima: *Hyperion*, 58; *Symposium*, 338
- discovery: observational, 482–3; scientific, 541
- dishonesty: unmasked, 577
- display: *Phen.* as, 38; philosophical, 41
- disposition: intentional, 573, 576, 610
- Dissertation*: compass theory, 126
- distinction: essential, 250; quantitative, 283–5; positive/negative, 284; and identity, 301–2; of Reason, 305–6; living, 322–3, 326; self-abolishing, 343; Reason/Understanding, 485; *see also* difference
- dog-Latin: 550, 606
- dogmatism: of Spinoza, 96; and T/F logic, 113–4; idealist, 131–3; sublated, 179; critique of, 456, 458, 460
- double inversion: of Sense-Certainty, 224, 305–6; of *Ding*, 261; of Life, 325–6; of Lordship/Bondage, 362, 364, 381–2; of Infinite, 402; of Unhappy Consciousness, 425; of Observing Reason, 495, 498, 517, 601; of skull theory, 595; of Rationalism, 598; of Perception, 620
- double negation: speculative, 56–7, 60, 66, 79, 100–1; expansion by, 130–1, 224; of sense-world, 294, 296
- doubt: critical, 165–7; theoretical, 175, 216 (*see also* despair)
- Doyle, Sir Arthur Conan: Holmes, 573, 609
- drive (*Trieb*): blind, 354, self-abolishing, 500

- dualism: being/thought, 256–7, 262–3, 305, 462, 583; superficial, 476; mind/matter, 501; and vitalism, 505; spirit/matter, 533, 585
- Duboc, E.C.B.: 199
- Dufay, C. F.: 543
- Duns Scotus, John: 144, 217
- duplication: of intelligible world, 299
- Earth, the: magnet, 293, 296; U I, 321–2, 523–4, 531, 534–5; home of Life, 483, 495, 534, 616; history of, 533
- Earthly City: of Stoics and Sceptics, 411
- Eckhart, Meister: 160
- ecological balance: Infinite as, 302; not conscious, 536, 537
- ecology: potential science, 516, 538, 549
- economy, the: gravitational, 523
- Eddington: 277, 309, 620
- Eden: Garden, 619, 622
- edification: critique of, 45–6, 93, 207; and clarification, 159
- education: recollective, 69, 71, 75, 103; ancient/modern, 78–80; dispositional, 322–3, 344, 348–9; disciplinary, 322–3, 348, 563; and death, 500; psychology of, 561, 591; personal, 621; *see also Bildung*
- ego: in Schelling, 3; in Fichte, 17; self-positing, 56; theoretical, 59; pure, 76, 329, 475; as point, 225–6; natural, 327–8, 457; infant, 329–31; self-mediation, 335; abstract, 375; free, 457; *see also self*
- Eigensinn*: in Bondage, 367–70, 372; in Unhappy Consciousness, 385–7, 394
- Einleitung*: summarized, 24–5; Absolute in, 28; title, 32; programme of, 33; and *Vorrede*, 40, 90; method in, 97, 382, 556; commentary, 162–95; structure, 202; omission in, 209
- Einstein, Albert: 284
- elasticity: organic/inorganic, 509
- electricity: theory, 126–7; polar, 287, 298, 314; static, 493–5, 543; “matter”, 544
- Electra: 375
- element(s): of Science, 64–5; of self, 75, 77; of cognition, 84, 87; of Logic, 87–8; of Philosophy, 157; language as, 232; natural, 483, 533–4, 613; Life as, 523
- embodiment: of Concept in *Gestalt*, 343; of individual, 356, 570; of Reason, 616
- Emperor: divine, 425
- Empire: Roman U, 359, 365; and Church, 404; culture of, 541
- empiricism: sceptical, 52, 211, 214; and rationalism, 138–9, 183, 614; H’s radical, 168, 203, 490; instrumental, 169; dogmatic, 171, 253–4, 278, 481, 539–41, 601, 604; critique of, 198; nominalist, 256; cyclic moment, 465–7; Enlightened, 470; mathematical, 477–8
- Encyclopedia*: origins, 1, 6–8, 21–2; and *Phen.*, 12, 24, 67–8, 101–2; *Logic*, 25 (*see Encyclopedia Logic*); parts, 67; self-sufficient, 68; introduction, 45, 67–8, 80; “Phenomenology” in, 193, 202; final syllogisms, 207; Recognition in, 371; Lordship/Bondage in, 375; physiology in, 511–2; classification in, 542; organism in, 547–8; anatomy in, 549–50; evolution in, 551; empiricism in, 552, 606; Psychology in, 561; Subjective Spirit in, 605; as wisdom, 606, Physiognomy and Phrenology in, 611
- Encyclopedia Logic*: Introduction, 45, 67–8, 80, 98, 99; Subject in, 96; *Vorstellung* in, 105; transition to Nature, 310, 387; servile consciousness in, 379; instinctive Reason in, 539; and Real Philosophy, 540; biology in, 544; human identity, 609; *see also Encyclopedia*
- Encyclopédie, La Grande*: 475, 539
- end: and means, 330
- energy: concept not mature, 494; quantum of, 526; continuum, 544
- Engels, F.: 97
- enjoyment: thanks for, 422
- Enlightenment: and Faith, 46, 414–5, 422, 454; eudaemonism of, 46, 180; alienated, 77–8; H and, 83–4, 177, 549 (*see also daylight*); common sense of, 87, 92, 151; Reason in, 468, 622
- ens realissimum*: God as, 175, 176, 205
- Entäusserung*: Marx on, 104
- entia rationis*: 256–7, 557–60
- Entzweiung*: of Substance, 56; cultural, 305; *see need, Union*
- environment: observation of, 479–95, 554; interaction with, 496, 522–39; true Infinite, 498
- Epic: *Phen.* as, 29, 31–2
- Epictetus: daytime in, 186, 215, 221; sense-certainty, 232; freedom of, 385–6; paradigm, 440
- Epicurus: 87, 109, 438
- epistemology: *Phen.* as, 203; of Self-Consciousness, 337; empiricist, 475, 491
- equal Recognition: of True Spirit, 354–6; modern, 371
- Erikson, Erik: 445
- Erinnerung*: 5, 73–5, 77 (*see recollection*)
- Erkennen*: *see cognition*
- eros*: 320 (*see Desire*)
- error: of Sense-Certainty, 211; perceptual, 243–4, 246; problem, 477; necessary, 498–501; conceptual, 505–7, 584; portal of truth, 596–7

- Erscheinung*: of Reason, 279–80; totality of, 280, 393; in experiment, 282; ethical, 295 (*see* Appearance)
- Eschenmayer, A.K.A.: 154; and Schelling, 42, 45–7, 49–50, 92, 95, 98, 124, 128, 314; monochrome formalist, 128–30, 134, 152, 156, 172, 280–1, 311, 550
- Essence: mathematical, 115; as *Ansich*, 181; in Sense–Certainty, 214, 218–9; in Perception, 239, 246–7, 249–55, 261–2, 277, 474; in another, 259; of Force, 275–6; of action, 361; freedom, 383, S U, 424–5; indeterminate, 568
- Estrangement: in language, 135; and Recognition, 378; structure of, 541
- Eteocles: 17, 351; paradigm, 28, 355, 373–4
- eternal return: myth, 121
- eternity: and time, 14–5, 18
- ethical life (*Sittlichkeit*): Greek, 8, 13; harmony of, 77; communal structure, 561, 570, 578–9, 617
- Ethical Substance: Greek, 8, 13, 76–7; Medieval, 44; individuated, 70; aesthetic, 76–7; medium, 335, 336, 618
- ethics: natural, 294–5, 392; applied, 561; of intention, 579; social, 582; and Phrenology, 592
- Euclid: space, 113, 117; geometry, 120, 225; named, 157
- eudaemonism: *see* Enlightenment
- eudaimonia*: and character, 40, 575–6
- Euripides: 76, 122, 392
- Eurytus: 525
- Evans, Marian (George Eliot): 612
- Eve: 213, 328, 444
- evil: subjective, 221–2, 416
- evolution: logical, 485–6, 533, 537–8; real, 485–6, 533, 545; rejected, 497, 534–5, 551; Phrenology and, 609, 611
- Existence: of truth, 40; reflective, 340
- experience: Science of, 1 (*see* Science of Experience); of Consciousness, 1 (*see* Experience of Consciousness); logic of, 25–6; of Concept, 33, 163–4, 181–3, 185–9, 227–8, 231, 244–9, 556, 565; motion, 33, 140, 187, 189–90; death in, 77; of resurrection, 77; self-closing, 82; alienation in, 86; Baconian, 93; self-negating, 111; lessons of, 136, 168, 182, 186; as Self-Concept, 208; practical, 222; of Perception, 244–9; sensory, 248; of Force, 274–300; transmission of, 332; of Spirit, 334; of Desire, 334; of freedom, 336; “first”, 344, 357, 359–60, 372; of Recognition, 348–9; of Lord, 382; logical cycle, 465; comprehension of, 559; of Physiognomy, 578; of Phrenology, 589–95; of Subjective Reason, 617; *see also*: experience of consciousness, Science of Experience
- experience of consciousness: Science of, 1 (*see* Science of Experience); at Frankfurt, 5; and *Weltgeist*, 11, 70, 406; process, 24–6; concept, 81; standpoint, 83–6; comprehensive, 190–1, 195; paradigm of, 228; U range, 336; first, 344, 357, 359–60, 372; Sceptical, 393; faithful, 409; climax, 537
- experiment: controlled, 281–2, 492–3; Understanding and, 282, 311; by Observing Reason, 311, 480; and thinghood, 496; and Concept, 548, 599
- explanation: tautology of, 288–90, 302–4; paradox of, 312, 315; circle of, 317; imperative of, 528; of free acts, 583
- expression: of self, 381–2, 595; law of, 505–26, 539, 594–5, 597; bodily, 571, 573–4; controlled, 571; inscrutable, 577; active, 578
- extension: receptacle, 268–9, 271; abstraction, 524; and thought, 269, 582
- externality: to Concept, 285–7; of world, 389
- face: as “middle”, 609
- fact: simple and known, 186–7
- factor(s): 512–3
- faculties: 561–3
- failure: in life, 568–9, 608; crime as, 569
- Faith: *Gestalt*, 10; and faith, 43–5, 439; and logic, 107–8; rational, 133, 423, 455; and salvation, 176; and Insight, 176, 426; objectivity of, 400–2, 418, 422; ambiguity, 423, 425; and Enlightenment, 433; disconsolate, 438; Unhappy Consciousness and, 402, 439–40; not thinking, 445; and Reason, 449–50, 454, 542, 622
- faith: evolution of, 41–6; age of, 43–4, 564; as knowledge, 112, 171, 412; and Beyond, 281; receptive, 397–8; leap, 400, 411; and Faith, 400, 439; first posit, 445; philosophical, 535
- “Faith and Knowledge”: topic, 6, 42–3, 45–6, 94, 176, 305, 467; productive imagination, 52, 95; Religion in, 100, 416, 443; quoted, 167; eudaemonism, 180; Jacobi in, 197; immoralism, 313; Idealism in, 472–3; Critical Philosophy, 472
- Fall: into finitude, 314–5
- fals(e)(ity): T/F logic, 37, 110–1; philosophical, 111–2; not unreal, 111; not moment of truth, 113; of mathematics, 115–6; of consciousness, 151–2
- false consciousness: and ideology, 410
- falsification: empirical, 112

- family(ies): ethical I, 295; *Gestalt* of Life, 321–8; origin of Self-Consciousness, 327; community of, 339–40; Recognition in, 350; piety of, 354; struggle in, 373–4; and mortality, 531; instinctive Reason, 620
- fasting: 431–2
- Fate (*Schicksal*): Greeks and, 4; Jews and, 4; reverence for, 4–5; and necessity, 15; tragic, 355–6; love of, 357–8, 390, 450; Lordship of, 407–8; self-made, 575–6, 617, 623; determinism as, 584; Ethical Substance as, 618
- Faust: 344, 351; self-assertive, 17, 329, 335, 341, 345, 350, 353, 358, 375, 532; cultured paradigm, 91, 164, 329, 340–1, 607, 614; and Gretchen, 328–9; Recognition, 347, 461; failure, 532
- fear: of death, 349, 364, 367–70; of Lord, 359, 365, 370, 380; formative, 367–9; and love, 370; of freedom, 380
- featherless biped: 489, 543
- feeling: devotion as, 412–5; theology of, 443; of concept, 500; as Concept, 545; as oracle, 586; ambiguous, 592–3; as criterion, 612
- felicity: Hobbesian, 331, 341
- feud: 293, 295 (*see* revenge)
- Fichte, J. G.: Ego, 3, 5, 17, 20, 56, 80, 126, 133, 140, 142, 169–70, 230, 234, 236, 305–7, 319, 329, 449, 452, 454–6, 459–60, 462–3, 469, 471, 504, 622; Hölderlin and, 4, 460, 468; and Schelling, 5; influence on H, 6, 9–11, 16–7, 94, 96, 473; *Wissenschaftslehre*, 10, 17, 28, 98, 142, 455, 468; in speculative tradition, 14, 142, 145–6, 203, 423, 475, 505; *Revelation*, 20; critique of, 33, 50; philosophy personal, 38, 91; philosophy of subjectivity, 46, 87, 156, 158, 180, 305, 410, 440, 505; critique of, 33, 50; and formalism, 52, 99, 126–9, 467, 472; infinite striving, 55; intuition in, 57; *Way to the Blessed Life*, 61; God, 61, 107; introducing philosophy, 68–9; *Vocation*, 69, “Sunclear Report”, 69; *Verdienst* of, 96, 134, 142, 155, 174, 259, 315, 460; practical Reason, 116, 169, 175–6, 197, 342, 490; *Atheismusstreit*, 148; sceptical, 170–1, 176–7, 201; and common sense, 172; project, 178, 455, 458–61, 464–6, 474, 476–7, 479, 622; recognition, 307, 371, 373–4, 377, 379; *System der Sittenlehre*, 354; pure Reason, 409; Category, 462–3, 467, 469, 471–2; postulation, 502; *Anstoss*, 524
- finit(e)(ude): and Infinite, 56, 314–5; dimensions of, 224; of existence, 226–7
- Fink, J.C.F.: 19
- First Philosophy of Spirit*: mortal struggle in, 373, 380; *Bildung* in, 379
- First Relationship: of Unhappy Consciousness, 405–30; returns, 423; sublated, 425–7; not properly Judaic, 441
- “First System Programme”: project, 3, 4, 10
- Fischer, Johanna: 340
- fixation: anal, 567–8
- flogging: 587–8
- fluidity: of Life, 322–8, 364, 507–11, 515–7, 533–4, 547; organic, 325–6, 523; of Consciousness, 333; fear as, 386; natural, 487–8, 527; of “matters”, 494
- flux: of Being, 136, 208, 225–6, 240, 244–5
- Force: intelligible, 208, 485, 489–90; transition to, 239; self-doubled, 254, 270, 272–3, 275; continuum, 259; and Manifestation, 261–308; fount of “matters”, 267–8; center and field, 268; moments of, 269; proper, 268, 271–2; cycle, 272, 276; in itself, 274; comprehended, 274–5, 300–1; contingency of, 286–7; and Law, 289–90, 303, 619; attractive/repulsive, 292; as World, 300; parallelogram of, 304; transition to Life, 307–8, 316–8; concept-limits, 309–10; free, 320; and Thought, 383; Stoics lacked concept, 389–90; dynamic concept, 478; polarized, 493, 505
- forgiveness: evil and, 181; judicial, 294, 296; charitable, 296, 298; of penitent, 426–30
- form(s): pure, 40; philosophical, 54; living, 131–2; and matter, 132; and content, 136, 519, 558–9
- form of servant: Christ’s, 423
- formalism: philosophical, 7, 30, 40, 48, 50–2, 54–5, 99; in Reinhold, 16; in Kant, 16, 95; Schelling and, 50–1, 95; critique of, 124–31; schematizing, 125, 155–6, 505, 519, 550, 552; in natural philosophy, 510, 512–3, 521, 526–9, 539; of Reason, 557, 608; Phrenology as, 588–9
- formal logic: T/F error, 37, 110–6; and formalism, 51–2; and mathematics, 117–8, 289; Stoic, 386–7; and Concept, 539, 557–60, 606–8, 614; instrumental, 570; and Psychology, 600
- formative activity: as *Bildung*, 365–9, 380 (*see* *Bildung*)
- Formey, Samuel: 107
- for self and for another: identical, 265–6, 269
- fortune: making of, 576, 617, 623
- “fragments of Historical Studies”: cited, 161
- Francis, St.: 411, 432, 454
- Franklin, Benjamin: 494, 543

French Revolution: H's attitude, 2; and *Phen.*, 46–7

Fürsichsein: see Being for self

Freedom: Concept, 17; in God, 56; negative/positive, 99, 364; evolution of, 133, 458, 618–21; dawn of, 158; of movement, 215; of choice, 235; and language, 237; and Force, 254; experimental, 282; of self, 294, 296, 344; and necessity, 298, 485, 495, 612; world of, 296, 307–8; unconditioned, 319, 322, 352–4, 363; self-certain, 329; mediated, 331; embodied, 331, 464–5; objective, 336, 344; reciprocal, 346–7, 396; exclusive, 351, 357; of Lord, 363, 382; self-forming, 382; self-abolished, 400–1; of God, 421–2; German, 455, 470; and Nature, 488–9; of Reason, 502, 597, 603; and Phrenology, 594; of action, 603–4

freedom of thought: restless, 179; logical origin, 382–3; sublates aggression, 383, 621; self-certain, 383; lifeless, 385–6; Concept and experience, 389

Freud, Sigmund: 329, 376; *er_s*, 325, 338; narcissism, 338, 340; unconscious, 568, 610; body-language, 577; depth-analysis, 581

Fries, J. F.: 102, 154–5

future: open, 13

Gabler, G. A.: memories, 8, 22, 102, 196

Galen: 113, 152

Galileo Galilei: mechanics, 117, 119, 282, 336, 506, 517; primary qualities, 251, 258, 477–8; standpoint, 308, 313, 475, 478, 488, 493, 541

Gall, Franz Josef: Phrenology, 37, 152, 527, 545, 564, 574, 582, 585–6, 588–95, 597–8, 600–1, 603, 611–4, 622; physiology, 584, 587, 605

Gattung: self-maintaining, 323–4, 328–9, 331; self-knowing, 333–4; and Genus, 334, 530, 532–3; in brutes, 340; rational, 340; reproductive, 509; and *Art*, 134, 530–1; see also Genus

Gaunilo: 145, 159, 412–3

Gebhard, Blessed: 420

Gedanke(n): sublation of, 116; abstract, 447, 449; of Reason, 450, 482; and *Vorstellungen*, 481; see thought

Gegensatz: see antithesis

Gegenstoss: of thought, 141, 142–4

Gehler, G.S.T.: 153

Geist: see Spirit

Gemüth: from Schiller, 442–3

gene-pool: species as, 531

generations: mortal, 322–4

genetics: and Phrenology, 585

Genghis Khan: 376

genius: romantic, 94; and prophecy, 124, 586; inspiration of, 124–5; antiphilosophic, 147–50; critique of, 160; and doubt, 167, 169–70

Genus: of life and thought, 134, 332–4, 533–4, 538; of selfhood, 252; living infinite, 321; concrete, 323–4, 342; process, 325–7, 329–30, 508; U and P, 321, 488, 532, 537; permanent, 530, 620; not observable, 531, 556–7; S, 531; numbered, 532; U I, 537 (see also *Gattung*)

geology: as science, 483–4; anticipatory, 487

geometry: discovery of, 116

German: philosophy in, 44, 94

Gesetz: sphere of Understanding, 520–1 (see natural law)

Gestalt: of God, 4, 84–5; of truth, 40; structure, 97, 205–6; no names, 107; stations, 173; individual, 190, 372, 397–8, 400, 440; of world, 190, 265; of self-certainty, 211, 232; of Understanding, 265; of Self-Consciousness, 278, 304–5; of Infinite, 299–300, 321–2; of Life, 321–8; of Recognition, 343–4; of Freedom of Thought, 384; of Unhappy Consciousness, 397–8, 400, 405–6; of Unchangeable, 407 (see Shaped Unchangeable); living species, 524–5; permanent, 550; mature, 563

Ghert, P. G. van: 102

Gibbon, Edward: 3, 113, 376

gifts: God's, 420–1, 431

Girondins: H and, 2

Glaucus: 375

God: Spirit, 1, 31, 63, 163–6, 403–4, 617–8; drawing near, 3, 10, 169; *Gestalt*, 4, 347; biography of, 10, 63, 69, 82, 140–1, 404–5; logical, 14–5, 83, 146, 300–2, 602; in tradition, 26, 31, 88, 194, 226–7, 399, 403–5, 598, 621; Light-Essence, 54; Substance, 54–5, 81, 99; Subject, 55–6, 66, 81, 96, 99, 179; Trinity, 56, 63–4, 107–8; love of, 57, 97; evil in, 57; union with, 58, 65, 170, 192; philosophical, 60–3, 80, 87–8, 96–7, 143–6, 387, 569; incarnate, 60 (see Incarnation); Love, 61, 63; mere name, 61, 84; projection, 64, 596–7; Kingdom of, 66; as Nature, 130, 133, 269; represented, 139, 142; Creator, 359; death of, 405; Unknown, 408; faith-contact, 412–3; immanent/transcendent, 415–6; not a self, 459; analogy useless, 542

Gods: Greek, 4, 226–7, 620 (see their names)

Gödel, Kurt: 111

Görres, J.: formalism of, 42, 45–7, 50–1, 94–5, 128–9, 156, 172; religion, 61, 99, 160, 311

- Goethe, J. W. von: 440; influence of, 12, 91; *Faust*, 18, 103, 328–9, 341, 371; H and, 22, 155, 206; Beautiful Soul in, 78; “Faust-fragment”, 340, 347, 371; affinity in, 486–7; and Oken, 516, 549; *Urpflanze*, 531; individual, 565; and physiognomy, 582; skull, 612
- Golgotha: *see* Cross
- Good Friday: historic, 406–17
- Gorgias: 232
- gorilla: imitative, 334–5
- Gospel: H’s reading, 2–3; significance of, 175, 387; proclamation, 407–8, 410
- grace: visible, 411; of God, 421, 622
- grafting: significance, 531
- gravitation: social, 523 (*see* gravity)
- gravity: Force-paradigm, 269–70, 286; cause of, 281, 288–9; law of, 284–5, 294, 304, 312; finite, 292; and unified science, 492–3; specific, 526–9
- Great Year: and Substance, 119, 121
- Greek(s): idealized, 2–4, 94, 607; True Spirit, 44, 79, 349–51, 384, 581, 623; religion, 4, 226–7, 387, 610, 620
- grief: Infinite, 401–2, 445–6
- Grosseteste, Robert: 540
- growth: and nutrition, 352–6, 512–3
- guessing: educated, 579–80
- Guido da Montefeltro: 434
- Guillotin, J. I.: 2
- habit(uation): self-making, 365, 542; capacity, 561; signs of, 573; active, 579
- Haller, A. von: piety, 280, 311; physiology, 508–9, 547
- hand: in physiognomy, 575–6; handwriting, 575–6, 610
- happiness: as *eudaimonia*, 40, 592; Stoic, 385; Enlightened, 46, 180; as goal, 608
- Happy Consciousness: and Unhappy, 308; Oracle in, 584
- harmony: of natural desire, 332–3, 349–50, 371, 384, 620
- Haydn, F. J.: 566
- Heaven: *Vorstellung*, 447
- Heavenly City: of pilgrimage, 411
- Hector: 373
- hedonism: and instinctive Reason, 340; theory, 562
- Hegel, Christiane: 90
- Held, J. C.: 102
- Helena, St.: 441
- Helvétius, C.-A.: 517, 562
- Hemsterhuis, F.: 97
- Heracleitus: in tradition, 14, 97, 215; motion in, 236, 301; Logos, 279, 295; polarity, 295, 297; and Stoics, 388–9; character, 575, 609
- Hercules: 395
- Herder, J. von: 45–6, 93–4, 309; *God*, 45
- Herodotus: 104, 609
- heroes: role-models, 335
- Hilbert, David: 118, 153
- Hinrichs, W. F.: 309
- Hippocrates: 438
- “Historical Fragments”: (1797–1800), 376
- historical materialism: of H, 409–10
- history: Absolute in, 1 (*see* God, biography of); of mankind, 3–4; of Reason, 6, 11; transcendental, 14; scientific order in, 69, 200, 471; making and knowing, 72–3, 114; Enlightened, 113; contingency of, 220–1, 536; of salvation, 402; comprehension of, 549, 608
- history of philosophy: H’s lectures, 8, 22, 68, 93; and religion, 15–16, 18
- History of Philosophy*: H’s lectures, 93; Scepticism in, 232; Scholasticism in, 441; genesis of H’s idealism, 466; Reason not religious, 469
- Hitler, Adolf: 442
- Hobbes, Thomas: method, 124; enmity, 295, 349, 352, 621; felicity, 327, 331, 355; self, 329–31, 350–1, 353; *Leviathan*, 341; will to power, 355, 373–4; Reason, 357, 373; H and, 371, 373–4, 379; ethics, 562
- Hölderlin, J.C.F.: influenced H, 2, 4–5, 28, 93, 314, 379, 460, 466, 468, 545, 607; friendship, 3, 19; *Hyperion*, 18, 58, 78, 98; Identity Philosophy, 57–8, 93–4; critique of, 93; Beautiful Soul, 156
- Holy Spirit: and H’s Spirit, 192
- Homer: 8, 31, 501; Recognition, 345; Achilles in, 356, 373; *Iliad*, 375–6
- homology: biological, 487
- honesty: modern Stoicism, 386, 604, 614; physiognomy of, 581
- honor: principle, 295, 353–5; feudal, 374–5; struggle for, 380
- house and tree: examples, 215, 217, 224, 232, 235
- heart: *Gemüth*, 414–5; purification, 424, 427, 443; self, 417, 431
- heat: fluid, 494–5; “matter”, 544
- humanity: U S, 83–4, 113; Stoic ideal, 385; U P, 488; of Science, 518
- Hume, David: scepticism, 52, 131, 168, 216, 225, 232, 555; historian, 113; mitigated Sceptic, 158, 211, 290; project, 176; empiricist, 197, 214, 259, 432, 527; *Dialogues*, 211, 538; self in, 213, 482; *First Enquiry*, 232, 236; feeling,

- 247, 484; impressions, 262; ideas, 288; induction, 337, 491–2, 541; custom, 392; ought/is, 490–1; natural theology, 584
- Hutton, James: 537
- hypothesis: feigning, 288–9; framing of, 528, 605
- Ich*: see ego, self
- Idea, the: and Concept, 42, 137, 510; intuitive, 93; not controller, 100–1; dialectic of, 105; Platonic, 134–5; specified, 134; never “forgot-ten”, 228; othering of, 302, 486; Life as, 523; and Ideal, 531; friends of, 539
- idea(s): Way of, 43, 472, 475; and impressions, 87; instruments, 169; sensible, 248, 262, 481; and facts, 253, 256, 389; relation of, 288; *Vorstellungen*, 481–2; abstract, 481; Ideas, rational, 572
- Ideal: and Idea, 531, 551
- idealism: H’s objective, 87, 203, 316, 452, 620, 622; and dogmatism, 96, 131–2, 246–9, 539; formal, 126, 306, 460, 468, 473–4, 526–7; of all philosophy, 156; and realism, 197, 256; subjective, 197, 219, 239, 246–9; Critical, 246–7, 258–9, 454–68, 474, 525; and Rationalism, 456–7; degenerate, 462–4, 467–8, 472
- identification: with role-model, 338
- identity: speculative, 47–53; formal, 47–53, 290; circular, 97; thought-being, 131, 135–6, 305; actual-rational, 183–4; of indiscernibles, 259; Force-Utterance, 269; in itself-for us, 274; attraction-repulsion, 291–2; and distinction, 301–2; in itself-for other, 301, 317; self-world, 308, 568–9; expressive, 480, 505–6; of self, 482; structure-function, 544–5; mind-body, 545, 612; and contradiction, 558–9
- Identity philosophy: logic of, 10, 25, 69, 93; Idea/Concept in, 47–8, 54, 539; formalism in, 48–9, 52, 125–6, 280; intuition in, 93; aim of, 55, 174–5; night/day in, 114; tradition of, 279; Life in, 302; and dogmatism, 460; *Potenz* in, 521; unconscious Spirit in, 546
- image of God: interpretation, 413
- imaginatio*: and *ratio*, 278; shows, 283; Reason in, 466, 506
- imagination: productive, 52, 472; and Science, 594, 620–1
- immediacy: feeling, 45–6, 98; knowledge, 45–6, 98, 209–10, 219; and mediation, 210–1, 213; negative, 225
- immortality: postulate of, 80
- Imperative: Categorical, 2
- impression(s): heap of, 246–8; types, 248, 262, 482; of environment, 574; of character, 579–80
- Incarnation: philosophical, 60, 347, 598, 615; traditional, 62, 406–8; in *Phen.*, 164–5, 402–4; antithesis in, 407
- independence: of properties, 247; of selves, 345–6; and dependence, 358, 378; of things, 322–3, 355–6, 359–60; and expression, 381; Concept of, 390–1; of life, 497; mind/body, 502–3; skull/brain, 589; and freedom, 619
- Indian speculation: 607
- indifference: point of, 5–6; of instinct, 502; of Concept/thing, 503; of individual/world, 566; of biographer, 567
- Individual(ity): ambiguity, 73; of things, 227; organic, 487; and Sense-Certainty, 534; and Culture, 564–70; spiritual, 566; receptive/reactive, 566–7; Earth as, 566 (see Earth, the); active, 580–1, 619; of consciousness, 595
- induction: philosophical, 200, 203, 205; problem of, 474–5, 491–2
- ineffability: of sense-immediacy, 210, 217, 585
- Infini(t)e(y): of Life, 4–5, 302, 321–8, 485, 523; of Understanding, 130, 133, 299–308, 391; Substance-Subject, 133; of thought/extension, 135; objective, 208, 275, 299–308; selfless, 302–3; self-sundered, 303; and finite, 303; presence of, 303, 315; and Will of God, 450; of Reason, 453, 474–5; Earth as, 498; bad and true, 554 (see bad infinite)
- infinite judgment: antithesis, 472–3, 595; self is thing, 602–5
- influence: of environment, 497, 538–9; spiritual, 566–7
- inhibition: of impulse, 577
- in itself: and in itself for us, 181, 190, 246; and for other, 259, 301, 317; and for us, 274; see also being in itself
- inner and outer: inversion, 299; unity, 300, 536, 610; mind/world, 304; self/things, 307–8, 310, 319, 480; of organism, 505–26, 548, 556; of inner, 507, 510, 522–3; of outer, 507, 525; true outer, 516, 522–3; of free self, 570, 572; separable, 578–9; relation unknown, 590; law, 594–5, 597; brain/skull, 601
- Inner Teacher: Spirit as, 403–4, 445
- inorganic: sphere of Understanding, 488; comprehended, 526, 583; process, 599; and organic, 601
- Insight: and salvation, 176; complacent, 180; communal, 426
- instinct: abolishes freedom, 502; and Reason, 504 (see instinctive Reason); of Concept, 542
- instinctive Reason: inductive, 154, 484; anti-speculative, 437–8; frustrated, 461; Category, 469,

- 540; precritical, 474–6, 480–1, 539; classifies, 480, 484, 556; naive, 485, 488–92, 499, 532; comprehensive, 493; and speculative, 494–5; and natural instinct, 502, 504; projective, 501, 545, 553, 620; mathematical, 536, 544; shapes, 541; inversion in, 578; rejects Phrenology, 596–7; rational *animal*, 599, 602, 622; active, 617; forgetful, 622; as Understanding, 623
- instrumental Reason: use of, 522
- intellect: object of observation, 555; critical, 555
- intention: expression of, 576–7, 579; inversion of, 579
- interpretation: expressive principle, 519; active, 567; problematic, 572–3; of H, 585
- “Introduction”: to *Phen.* (see *Einleitung*)
- “Introduction to Philosophy”: project, 6; lectures, 23
- introspection: critical, 166
- intuition: intellectual, 5, 13–5, 42–3, 49, 55–7, 93, 115, 117–8, 145, 167, 280–1, 535; and concept, 7, 42; and critical logic, 69; pure, 114–5, 117–8, 120; ethical, 148; aesthetic, 164; of sense, 164; forms of, 214–8, 231
- inversion: of tradition, 10; of Religion, 18; experience/Science, 64, 66; control/freedom, 65; of inversion, 66 (see double inversion); speculative, 100–1; observable, 185, 187–8, 205; of Sense–Certainty, 218–9; of Perception, 249, 261; of Force Concept, 274–5; of supersensible, 292–300 (see Inverted World); not formal, 294; ethical, 294–6, 307; of Law, 298, 312–3; of Understanding, 304–5, 322, 339, 579; in reciprocity, 347; in Lordship/Bondage, 362–70; of Stoicism, 389; by Instinctive Reason, 578; of Observation, 591; of skull-theory, 595, 605
- Inverted World: comprehensive, 292–300, 485, 519; spiritual, 296; of explanation, 307; literary, 313; unconscious, 322; Sceptical, 393–4
- Invisible Church: as Subject, 81
- inwardness: of things, 267, 270–1, 276–7, 279–80; simple, 283–4; as Necessity, 287–8; self-inversion of, 290–3; see also inner and outer
- irritability: function, 507–15; defined, 508; terminology, 521
- Ismene: 354
- Jackson, Andrew: 61
- Jacob: 18, 46, 94, 593
- Jacobi, F. H.: 42, 45, 49; Lessing’s Spinozism, 19, 54, 87; pantheist error, 26; immediate knowledge, 43, 67, 98, 152, 158, 209–10, 213–4; critique of, 46–7, 160, 172, 197–8, 283; *Spinoza Letters*, 54, 100, 129; Beautiful Soul in, 78; and Herder, 45, 93–4; *David Hume*, 92, 156, 232; mysticism, 129, 169, 198, 221, 229, 280; geometric method, 154; and Hume, 236; ethics, 298, 313; Unhappy Consciousness, 404, 415; faith, 423
- Jacobins: H as, 2, 19
- James, Henry: 341, 372
- Jean Paul (J.P.F. Richter): “black cows”, 52–3, 95, 124, 280, 311
- Jena: battle of, 22, 47
- Jerusalem: and Unhappy Consciousness, 404, 406
- Jesus: Berne essay, 2; Beautiful Soul, 4–5, 20, 78, 298; identity with God, 61–5, 100; as *Spirit*, 62, 165, 378; promises Spirit, 63, 66; “dead bury dead”, 110, 161; not named, 157; death, 175, 296, 415, 417, 423, 598; Krug and, 220; forgiveness, 295, 426–7, 429–30, 434; ministry, 404; Resurrection, 405, 416, 421; Last Supper, 413–4, 420, 426, 442; and family, 418–9
- Jews: God, 225 (see Moses); in First Relationship, 4, 407, 613; saving error of, 596–8; chosen people, 589, 613
- Joachim of Flora: 441
- Joan of Arc: 584
- John of Duns: see Duns Scotus
- Johnson, Samuel: 597
- Joyce, James: *Finnegans Wake*, 580, 610
- Judas Iscariot: 197
- Judgment: speculative, 142–3; “Reason” as, 163, 194; H’s use, 196, 207, 357; of God, 297, 402–4, 407, 420; “Self-Consciousness” as, 343–70, 378; Recognition as, 372–3; of opinion, 579; of Observing Reason, 604
- Julian the Apostate: 405–6
- Jung, Carl: 152
- justice: and pardon, 294–6
- justification: by faith, 424; rational, 425, 450
- Kästner, A. G.: 119, 153
- Kant, Immanuel: 480; Categorical Imperative, 2, 19, 195; H and, 2–3, 156, 527–8, 537; *Religion*, 3, 171; influence of, 4, 9–12, 16, 27, 201; in *Phen.*, 4, 100, 473; critical logic, 6, 29, 69, 154, 268; in speculative tradition, 14, 76, 78, 123, 134, 277, 279, 310, 460, 546; transcendental project, 15, 168–9, 171, 176–7, 185, 197–8, 455–6, 461, 467–8, 474, 479, 481–2, 510, 540, 542, 547, 598; *Crit. Pure Reason*, 16, 271, 200; and empiricists, 17, 167, 185, 199, 549; postulation, 27, 490, 502–3; Scepticism, 28, 170, 178, 280–1, 311, 464, 471, 555; dialectic, 37–8, 40, 200, 459; philosophy of subjectivity, 46, 87, 180, 305, 410, 440, 505;

- turning point, 47, 477; and Hume, 52, 131, 462; forms of intuition, 59, 215, 231, 235, 287, 464; *Naturzweck*, 60, 494, 504, 544, 620; moral law, 62, 180, 211, 298, 313, 329, 341–2, 377, 436, 454, 468; formal, 95, 125, 147, 155–6; *Abgrund* in, 96; natural philosophy, 100, 127; mathematics, 114–5, 117–8, 120, 126; antinomies, 126, 155, 158, 489, 521, 534; and Jacobi, 129; and Fichte, 140, 142, 466–7, 490; and “common sense”, 147; named, 157; abstract, 165; Copernican revolution, 167–8, 541; *Ding an sich*, 181–2, 202, 205, 261–2, 313, 466, 524, 526; subjective idealism, 219; Understanding, 278, 288, 305, 520, 541; perception, 282; modal categories, 309; and Stoics, 388; pure Reason, 409, 423; categories, 462–3, 469, 472, 539, 597; schematism, 472, 478, 488, 493, 514; Idea/Ideal, 531, 551; punishment, 564; ethics, 579, 582–3, 608
- Keats, John: 569
- Kenntnis*: H's use, 37; stage of fixation, 124
- Kepler, J.: celestial mechanics, 116, 119, 276, 282, 322, 475, 510
- Kiellmeyer, C. F.: 508, 513, 548
- Kind: *see* *Gattung*, Genus
- Kingdom of God: Beyond, 432–3
- Kipling, Rudyard: 293
- knack: Platonic, 578–9, 582
- knowing: phenomenal, 67–8; false, 110–3, 152; and belief, 112–3, 152; of good/evil, 113; concept and reality, 174–5; in itself for us, 181–2; immediate, 209–10, 225, 230 (*see also* knowledge)
- knowledge: appearing of, 174–7, 199; immediate, 225; as standard, 280; and power, 319, 475, 535; and Desire, 321; goal of self, 332; faith as, 412; creative, 453; phenomenal, 467–8; for use, 603
- Köppen, Friedrich: 92, 314, 376
- Krug, W. T.: 12, 160, 231, 463; challenge, 220
- Kung, Fu Tse (Confucius): 72
- labor: of negative, 57–8, 97–8; of *Weltgeist*, 71–2; origin, 328, 330; natural/forced, 330, 341, 417–8; as middle, 359–60; of self-formation, 364–9, 378; of Unhappy Consciousness, 417–24; physical/mental, 417–8, 442; and thanksgiving, 420, 427, 553; inverted, 431; Marxist studies, 443–4
- ladder: of cognition, 65, 67; *Phen.* as, 72; dispensable, 101; who needs, 178
- Lamarck, J. B. de: biology, 533, 538, 550–1, 574–5
- Lambert, J. H.: 16, 27, 100
- LaMettrie, J. O. de: materialist, 87, 517, 538, 562
- Lanfranc: 419
- language: limit of, 209–10, 580–1; and sense-world, 209–10, 342; freedom of, 217; truth of, 218; leading of, 227–32, 237, 254, 393, 580, 619; in *Phen.*, 230–1; theory of, 233
- Lao Tze: 72
- Laplace, P. S. de: 488, 538, 540, 555
- Last Judgment: 403, 405
- Lavater, J. K.: Physiognomy, 571, 573–7, 579–82, 609–11
- Law: of God, 4, 392, 408; positive, 4–5, 392, 408; moral, 5; of Nature [ethical], 81 (*see* Law of Nature); shapes of, 190; natural [physical], 208 (*see* natural law); of honor, 295
- Lawgiver: God as, 399, 401, 403–4, 409
- law of individuality: observable, 563–70; in biography, 566–9, 622; syllogistic, 573; impossible, 593; dialectic, 608
- Law of Nature: H's lectures, 5–7, 12, 14, 44, 93, 375; resting Kingdom, 295–8; Stoic, 387, 392; rational, 519, 521, 560, 572
- laws of thought: formal: 536, 557–60; conceptual, 558–60; in Leibniz, 566
- Law-Testing Reason: futile, 618
- legal status: world of, 622
- Leibniz, G. W. von: in speculative tradition, 14, 123, 210, 277, 536, 597–8; *Monadology*, 27, 59, 61, 259, 535, 566, 597; romantic reading, 28, 552; thinking substance, 54–5, 61, 133, 456; rationalism, 75, 541, 608, 612; *Nouveaux Essais*, 76; God, 80, 143–4, 300, 545; optimism, 180; monad, 258, 545, 566–9; 572, 583, 588; Force, 314; Lordship/Bondage, 376; rational faith, 423; Chain of Being, 524–5, 551; harmony, 589
- LeSage, G. L.: 119
- Lessing, G. E.: *Nathan*, 2, 111, 151–2, 450, 613; Spinozist, 3, 54, 129; influence, 19
- Leutwein, C.P.F.: 2, 3, 19
- Lewes, G. H.: 549, 613
- Lichtenberg, G. C.: named, 157; electricity, 494; on physiognomy, 578, 580–1, 584
- Life: Concept, 4–5, 129–30, 496, 524, 547; phenomenology of, 25, 58, 320–8; Substance, 39, 60; and philosophy, 44, 101, 111; and Idea, 101; unrest of, 119, 122, 525, 536, 539; mortal, 132–3, 496–7, 524–5, 535, 612; Force and, 301–2, 307, 318, 480, 506; Infinite, 302, 307, 321–7, 343, 349, 485, 546; in *Logic*, 314; religion of, 302, 321; medium, 335, 338, 523; Frankfurt concept, 338, 544; in the *Volk*, 356, 375–6; and environment, 479–95, 554;

- observed, 487–8; sphere of Reason, 488, 495, 530, 532; U and P in, 530–1, 535; U and S in, 534
- Life-force: freedom of, 523–5
- life in the *Volk*: ideal, 356, 375–6
- “Life of Jesus”: and *Phen.*, 20
- “Light-Essence”: as Sense-Certainty, 302
- limit(s): in calculus, 559, 565
- lingering: importance of, 70–3, 77, 606
- liver: function of, 586
- Living Work of Art: primitive consciousness, 122; Eleusis in, 226
- location: fixing, 225
- Locke, John: 480, 539; way of ideas, 43, 50, 73–4, 76, 78, 203, 232, 246–8, 262, 466–7, 472, 475, 481; method, 83, 123; empiricist tradition, 94, 167–8, 170–1, 176, 185, 197, 199, 214, 478; and Newton, 110, 215, 290; *Essay*, 167–8, 197, 258; substance, 181–2, 213, 262, 466–7; common sense, 246–8, 258, 477; State of Nature, 330, 373; rational faith, 423; standpoint, 481, 555
- Logic: speculative, 5, 11, 32, 87–8, 113–4, 195, 264, 268, 289, 557–60, 588, 607, 614; critical, 6, 69, 172, 268; and metaphysics, 6–8; in *Phen.*, 12, 32, 40–1, 85–6, 136; priority of, 13; and time, 14, 173; and Real Philosophy, 30, 191, 540; formal, 51 (*see* formal logic); self-moving, 81; and Spirit, 83, 192; not mathematical, 111; *docens/utens*, 118; as method, 122–5, 137–8; project of, 305, 491, 543, 565, 601, 614; image of God, 399; inductive, 475, 484, 539; dialectical, 479, 548; and Psychology, 564–5
- Logic*: of 1804/5, 336; of *Encyclopedia*, 45 (*see* *Encyclopedia Logic*); *Science of Logic*, 109 (*see* *Science of Logic*); of Nuremberg, 469
- Logic and Metaphysics*: lectures, 6–8, 16, 21–2, 159
- Logos: mystic, 3, 63, 450; Stoic, 386–7; begotten, 420, 423, 431; Creator, 444
- Lombroso, C.: 584, 611
- Longfellow, H. W.: 209
- Lord: natural, 330, 341; and serf, 358–60, 365; and world, 358–9; God as, 370, 378–80, 420; of the World, 384, 387; Sceptic, 395; death as, 367, 369, 382–3; unreal, 396; future of, 442; of Nature, 535
- Lordship and Bondage: transition to, 158; discussed, 356–70; and Art Religion, 374; historical, 375; literature, 376; not internal, 377–8, 381; antithesis, 382; of Reason, 385; conventional, 391; Egyptian, 405; transition from, 436, 458; dualism in, 501
- Lord’s Prayer: significance, 426
- Lorenz, K.: 500, 545
- Louis XIV: 103
- Louis XVI: 2
- Love: experience, 5, 325, 327; divine, 41, 43, 57; of God, 65; Frankfurt ideal, 93; intellectual, 156; and recognition, 327; ladder of, 370; and Law, 545
- “Love”: *Aufhebung* in, 20–1
- Lucretius Carus, T.: 540
- Luther, Martin: German bible, 8, 606; turning point, 47, 158, 388, 398, 406, 424, 468; H and, 103, 142, 414, 423–4, 441; not named, 157; resolve of, 176, 178, 353–4; and Faith, 425, 436, 439–40; constipation, 426–8, 445, 567–8, 606; and indulgences, 434; first Mass, 445, 451; witness of Spirit, 428, 454
- MacCary, W. T.: 375
- machine: organism not, 503
- macrocosm: observed, 495, 544, 616
- magnetism: theory, 126–7, 130; and gravity, 287–8; polar, 292–5, 297, 304, 493; universal, 293, 296
- magnitude: concern of mathematics, 116–7; conceptless, 117, 153
- Maimon, S.: 310
- Malan, P. F.: 442
- Malthus, T. R.: *On Population*, 523
- Manfred: 610
- Manifest Religion: absolutism in, 17; shapes of, 190; death of God, 405
- Mann, Thomas: 1
- Many, the: *see* dialectic
- Marcus Aurelius: Divine Service, 362, 440; freedom of thought, 385–6
- Martha: 419
- Mary (of Bethany): 419
- Mary Magdalen: 416
- Mary, Virgin: 583–4
- Mass, the: miracle, 413–4, 420, 431; institution of, 426; interpretations, 442; mystery, 451–2
- mastery: and Lordship, 378
- materialism: Enlightened, 86–7, 166; mechanical, 251; in Unhappy Consciousness, 540
- mathematics: H’s lectures, 8; method, 110–1, 113–6, 123, 153; and history, 114; applied, 118–9; and logic, 123; knowledge of, 152; abstract, 475–7, 559
- Matter: and motion, 111; intelligible, 301, 544; and “matters”, 480; dynamic concept, 494–5

- matters: perceptual, 242, 247–9, 251–3, 258; and Force, 267–8, 271–2, 309; and Matter, 480, 494–5; conceptual, 492–4; observable, 544
 meaning: and reference, 217–8; not comprehended, 227; *see Meinung*
 measure: not purposive, 117; quantitative, 519–22; organic, 532
 mechanics: celestial, 113, 116, 119, 304; sight and touch in, 248; metaphysics of, 251, 475–6, 478; necessity, 492; human, 517
 mechanism: and chemism, 493; spiritual, 523, 562
 mediation: Conceptual, 7, 44; and immediacy, 58–9; temporal, 75; Is/Ought, 79; of Sense-Certainty, 213–4; of certainty, 319–20; of Desire, 331–2; of struggle, 356–7; linguistic, 451–2; logical, 558–60
 mediator: external, 425; counsellor, 429–30, 433–3, 622; Reason as, 447–9
 medicine: standpoint, 505; social, 564
Meinung: true/false, 37, 144; on language, 209, 217–8, 220; on sensation, 209–10; inversion of, 393; of dualism, 478; of living order, 538–9; and *Bedeutung*, 591; nothing, 594
 memory: mechanical, 431–2, 545 (*see recollection*)
 Mendel, Gregor: 538
 Mesmerism: passing fashion, 583
 metaphor: in *Phen.*, 260, 615
 metaphysics: and logic, 6–8; in *Phen.*, 12; critical, 16; mechanical, 251, 475–6, 478
 method: of *Phen.*, 24–5, 36, 39, 263, 570, 572; philosophical, 30, 81, 98, 159, 479, 536, 553; geometric, 122–5, 154; empirical, 123–4, 510–2, 536; scientific, 282, 514; experimental, 438
 Michelet, K. L.: 23, 547
 microcosm: and macrocosm, 495–6
 Milton, John: 31
 mills: of Life, 523–4, 531–3
 mind: and world, 275, 283; and ideas, 477; and body, 501–3, 562; and Nature, 554; machine, 562; U aspect, 570
 Mineralogical Organism: repossessed, 534; Earth as, 540; body in, 571
 minister: mediator, 429–30, 622
 mirroring: of monad, 566–9
 Mitylene: Athens and, 358
 molecules: and atoms, 526
 Molière: 315
 Mommsen, T.: 152
 monad: and world, 566–70; self-expressive, 567; natural, 572, 575; windows in, 576, 578, 583, 588
 monkeys: and humans, 543
 Monk, R.: *Wittgenstein*, 153
 Montaigne, Michel de: 438
 Moore, G. E.: common sense, 176, 211, 229, 462, 506
 morality: transcended, 17; not a postulate, 503
 Moral World-Order: God as, 61, 63
 Moral World-View: and Leibniz, 27; classless, 373
 Morris, Charles: 611
 Morris, William: 379
 mortal struggle: *Gestalt*, 17, 28, 349–50, 352–6; beginning of freedom, 60; necessary, 372; beginning of *Phen.*, 372, 374; not rational, 596; limit case, 621
 Moses: God of, 33, 88, 109, 143–6, 157, 159, 405, 450, 598; founder, 65; Krug and, 220; life, 314; Law, 377, 392, 616; Covenant, 408, 613
 motion: U concept, 285, 287–8; primacy of, 301; non-observable, 513
 Mozart, W. A.: 566–9
 muscles: system, 508–11
 Mysteries: of Eleusis, 225–7
 mysticism: in H, 20; romantic, 128–30; sceptical, 169; philosophical, 229; natural, 540

- plant(s): not individuated, 484, 486
- Platner, E.: 16, 78, 107
- Plato: and H, 2–4, 43, 90–1, 300, 328, 334; *Republic*, 13, 116, 331, 332, 335, 339, 340, 342, 350, 355, 369, 509, 547, 563, 608; *Cratylus*, 37; and “Concept”, 42; “Cave”, 46, 205; *Parmenides*, 61, 98, 120, 149–50; Socrates and, 77, 147–8, 341; education, 70, 153, 333, 348–50, 352, 581, 608; in tradition, 76, 170, 199, 313, 425; *polis* of, 78, 106; philosophy/poetry, 79, 160; *Politicus*, 106, 543; *Meno*, 116; dialogue, 109, 231; mathematics, 118, 120, 540; time, 119, 323; Ideas, 134–5, 140, 156, 235, 539; *Sophist*, 137; on thought, 146, 315, 586; myths, 150; *Phaedo*, 156; soul, 157; *Laws*, 157, 581; named, 157; rationalism, 168, 178; present, 212; sense experience, 221, 301, 389, 427; *Theaetetus*, 257; receptacle, 268; aether, 279; Good, 302, 522; *Timaeus*, 302, 309, 322, 339,

- 488, 533, 575, 609, 611; *er_s*, 320, 325, 338, 342, 370; City in Heaven, 323; *Gorgias*, 331; *Protagoras*, 332; *Symposium*, 338, 340; Recognition, 345; slaves, 374, 607; dialectic, 389; image-object, 487; wandering cause, 488; inner, 506; dyad, 521–2; genetics, 526; watchdogs, 542; natural science, 554–5; *Phaedrus*, 575, 609; “art”, 578; liver, 586; *telos*, 611
- play: divine, 57; equal/manipulative, 349–50; of animals, 500; free, 563
- play of Forces: middle, 276–80; and law of Force, 282–3; perceptual, 290–2; self-conscious, 349–50, 352; experience as, 393–4
- pleasure: sexual, 327, 340
- plenitude: principle of, 537
- pleroma*: 5
- Plotinus: 302, 408, 421
- Plutarch: 358
- poetry: and prophecy, 31–2; poetic philosophy, 148–9; war with philosophy, 160
- pointing: truth of, 221–5; concept, 236; and Perception, 238; inverted, 329; of Unhappy Consciousness, 415
- polarity: of Understanding, 130; indifference of, 285; natural, 293–5, 297–9; ethical, 293–5; thought/Being, 302; life/death, 324; sexual, 324–5; of chemism, 493; of life, 525
- polemic: use of, 137; *Phen.* not, 160
- polis*: strong, 78; as U, 79; downfall, 175; and nation-state, 373
- Polyneices: 17, 351, 373–5; paradigm, 28, 355, 374
- porosity: of “matters”, 268
- Posidonius: 388, 397, 401
- “Positivity Essay”: and Gospel, 2
- possibility: and actuality, 14–5; free, 300
- postulat(e)(ion): rational, 3, 10, 171, 422; of absolute knowledge, 55, 62; of God, 64; Kingdom of Ends, 80; of matter, 86; immortality, 133; by H, 201, 254; bad infinity in, 455; unverifiable, 490; scientific, 493, 509, 514–6; dispensable, 502
- potentiality: “nothing” of “this”, 240–1
- Practical Reason: freedom of, 597; and theoretical, 599
- practice: and theory, 337
- prayer: as thought, 413
- predestination: ignored, 441
- prediction: scientific, 289
- preestablished harmony: skull-brain, 588–90, 593
- presentation: comprehensive, 389
- presupposition: provisional, 257
- priest: mediator, 447–8; implicitly “risen”, 451
- prime matter: bad metaphysics of, 251
- principles: basic, 124
- probability: empirical, 491–2; statistical, 595
- Proclus: 155
- projection: God as, 64
- proof: moral, 3, 10, 20; speculative, 10–1, 145–6; mathematical, 114–6, 119; geometric, 115–7; and argument, 123–4
- property: of Substance, 73; of *Ding*, 239–58; ranges, 240–2; ownership, 330; serf as, 366; land as, 366
- prophecy: standpoint of, 31–2; philosophical, 149–50
- propositions: basic, 62–3, 99; speculative, 142–6, 159, 604
- Protagoras: relativism, 218–9, 221, 234, 329
- Protestantism: Unhappy Consciousness in, 415, 460
- Providence: 402, 450, 585
- psycho-analysis: practice of, 581; explanation in, 583
- psychology: transcendental, 14; observational, 516, 557, 560–70, 593–5; normative, 560–4, 579, 582; concept, 561, 565; discussion-structure, 564, 606; and spirit, 470, 600; and Physio-gnomy, 573, 578; depth, 585, 607, 610, 611; result, 616, 618
- Ptolemy of Alexandria: 475
- punishment: intention, 298; H’s theory, 564; corporal, 588; methods, 612
- purpose: objective, 499, 599; contingent/necessary, 499–500; external, 499, 501–2; internal, 504; no inorganic, 527; in Ch. V, 545; *see also* teleology
- Pythagoras: God, 97; theorem, 115–6, 170; measure, 117, 313, 525; community, 230; heavens, 284, 311
- Qualit(y)(ies): as *Dasein*, 134–5; primary/secondary, 247, 251, 258, 283, 477–8; and Quantity, 253, 283–4, 513
- quantification: error, 513; not pointless, 521–2
- Quantity: and Measure, 117; U distinction, 283; measures of, 519–21; and mathematical Reason, 541; relation of, 589
- Rameau, J.-F.: *see* Diderot
- räsonnieren*: *see* argumentation
- ratio: quantitative, 153
- ratio*: and *imaginatio*, 64
- rationalism: traditional, 124, 132–3, 138–9, 179–80, 456; paralysis of, 133; moral, 133; concept-norm, 183; and speculation, 465–7; mathematical, 477–8, 539; sublates empiricism, 614

- rationality: formal/concrete, 123–4; human mark, 489, 619
- rationalization(s): of Perception, 259–60
- Real Philosophy: project, 13, 136, 517; and Logic, 14; two parts, 30, 32; Idea in, 42; and *Phen.*, 82, 191; of 1805/6, 340, 523, 545–6, 614; biology in, 485–6
- Real(ity): certainty of, 453; transcendental, 458, 553–4; ordinary, 469; sensible/intellectual, 471–2; inner, 579; Reason and, 617
- realism: dogmatic, 238–44; critical, 247; scientific, 316
- Reason: Enlightened, 2, 28, 84, 564, 622; and freedom, 3; *Gestalt*, 17–8, 399, 468; *Bildung* of, 39; and Understanding, 39, 80, 95, 158, 206, 308, 452, 532, 541, 556, 597; daylight of, 47 (*see* daylight); intuitive, 49; circle of, 49, 59, 450–1, 465–6; and teleology, 59–60, 524, 532; and Spirit, 60–1; pure/speculative, 80, 477, 490, 556, 565; not legislative, 116; self-concept, 130, 158, 452–3, 473, 616–7; cosmic, 140, 193–4; *Dasein* of, 154, 164; critique of, 166–9; practical, 169; natural, 177; restless, 179–80; actuality of, 183–5; Judgment, 194, 426; and religion, 200; subjective, 208, 448, 454, 459–60, 503, 596, 602–3; certainty of, 278, 449–52, 471; our own viewpoint, 279; birth of, 349, 363, 373, 443, 456, 471, 554; spark of, 383, 387, 391, 438; Unhappy Consciousness of, 435–6, 481, 598; instinctive, 448–9; critical, 448–9 (*see* critical Reason); no religion, 450, 457; all reality, 451–3, 455, 478; inversion of, 453, 473; history, 454–8, 461; forgetful, 457, 459, 461, 620; truth-standard, 458, 473; antithesis in, 479; abstract, 468, 479, 519, 524; disorder in, 488; and passions, 502; experimental, 540; as thing, 554; community of, 621–2
- reciprocity: implicit/explicit, 286; of Recognition, 346–7, 431; logical, 361; skull-brain, 589–90
- Recognition: sense-certain, 37, 374; principle, 100; struggle for, 172, 332, 345, 450, 486, 621; perceptual, 242–3; inversion of, 307; voluntary, 327–8, 333–6, 342, 384; Concept, 343–51, 374; Judgment, 344; evolution of, 348–9, 371; reciprocal, 346–7, 431; unequal, 351, 356–62, 621; of dead, 371; world of, 384–5; in Unhappy Consciousness, 416–7
- recollection (*Erinnerung*): process, 71–3, 208, *Phen.* as, 104–6; Being of *Wissen*, 120, 123; conscious/unconscious, 204–5; and memory, 545
- reconciliation: with Fate, 4; religious, 44, 420, 423–34; of U-P, 373; with world, 569
- reference: and meaning, 216–7, 220–5, 465; fundamental, 226, 232
- reflection: critical, 6, 11, 176, 247–8; speculative, 56–7, 140; external, 115–6, 130, 262, 485–7, 526; absolute, 131, 174–5, 196, 205, 457; outward/upward, 245–6, 261, 263, 293, 421–3, 508–9, 512, 519, 521, 545; as soliciting, 283; and intention, 577
- Reformation, the: “second”, 3; significance, 452–4, 469–70
- refutation: philosophical, 62
- Reid, Thomas: sense-certainty, 18, 216, 229, 231; common sense, 29, 210, 247; following of, 148
- Reinhold, C. L.: logic of, 5, 52, 56, 95, 125, 129, 312; influence of, 5, 9, 16, 28, 107, 203, *Contributions*, 16, 55, 197; and Kant, 27; philosophy personal, 38, 91; founding Science, 68; analysis in, 78; critique, 160, 169, 172, 197–8
- relation(s): perceptual, 249–55; external, 249–50, 259, 300–1; internal, 252, 259, 300–1; thinghood as, 261; mediate/immediate, 359–60; of ideas, 557; soul-body, 572; brain-skull, 590
- Relationship (*Verhältnis*): polar, 293 (*see* polarity); and Force, 309 (*see* Force); in Unhappy Consciousness, 403–4 (*see* Unhappy Consciousness)
- relativity theory: H and, 118–20
- Religion: experience, 6–8, 13, 65; and Philosophy, 18, 26, 44–5, 165, 193, 200; intuitive, 43; of Art, 107; and finite consciousness, 108; shapes of God, 190; of Self-Certainty, 230; in Understanding, 302; of Life, 321, 339; Lordship/Bondage in, 376
- Rembrandt van Rijn: 71
- renunciation: of selfhood, 431–3, 447–8; of Reason, 431–3
- repentance: bad Infinite, 401–2, 431
- representing: of Concept, 128, 130; formal, 529–30, 532
- reproduction: biological, 325, 507–9; cycle, 502, 513–4
- Resignation: of Unhappy Consciousness, 422
- resolve: philosophical, 109, 202; Lutheran, 175–6
- respect: fearful, 368–70
- responsibility: of free agent, 597, 616–7
- Rest: primacy of, 301
- Restoration: of 1815, 47
- result: and method, 36; and process, 36, 38
- Resurrection: historic, 405, 592; of body, 421, 423; spiritual, 605, 622

- Revelation: free gift, 396, 399, 404; contradictory, 401; Absolute Other, 402, 404, 407; Concept, 402; historic, 404–8
- revenge: justice of, 294–5
- revolution: German, 3; French, *see* French Revolution; Copernican, 167–8; Industrial, 537; scientific, 541
- Richelieu, A. J. du Plessis, duc de: 546
- Right: legal, 386
- Righteousness: inward, 579
- Risen Lord: 416, 425 (*see* Christ)
- Robespierre, M. de: 47, 103
- Robinet, J. B.: 179
- Robin Hood: 298
- Roman Law: Stoic/Sceptic aspect, 407
- Romantic(ism): H's critique, 45–7, 147–51
- Rome: universal Lord, 358–9; and *Weltgeist*, 404–5 (*see* Empire)
- Roscelin: 228
- Rousseau, J.-J.: 2–3
- Ruskin, John: 379
- Russell, B.A.W. 3rd Earl: and Spinoza, 129; empiricism, 212; common sense, 259; constructivism, 308–9; certainty of Reason, 470; *Principia Mathematica*, 606
- Sabbath: of the world, 420
- Sache*: meaning of, 37; rendering, 90–1; observation of, 115–6, 560–3; named, 208, 218, 254; and *Ding*, 211, 214, 238; facts, 219, 223–4, 243, 316; and *Sache selbst*, 464
- Sache selbst*: Philosophy as, 38, 164, 179, 383; rendering, 90–1; of Understanding, 290–2; Spirit, 464, 466; Category, 471; Reason, 477–8; Concept, 529; dialectic of, 581
- sacrament(s): acts of God, 433
- sage: philosopher not, 94, 400; Stoic, 384; Sceptic as, 389, 413
- Saladin: 151
- Salat, J.: 160
- salvation: and grace, 296–8, 313; antithesis in, 410–1; promised, 433–4
- Salzmann: 99
- Samuel: prophet, 28
- sanctification: *see* consecration
- Sapphira: 161
- Sappho: 325
- Saul (king): 405
- Saul of Tarsus: 425 (*see* Paul)
- Savior: God as, 407; encounter with, 409–10; dead, 413, 423; presence, 414, 417; life, 417–9, 426
- Scepticism: modern, 11, 28, 52, 139–40, 178, 211, 215–6, 225, 229, 259, 277, 471–2; ancient, 11, 140, 150, 175, 178, 225, 232, 372, 384, 387–96; mystical, 15, 129, 280; self-completing, 109, 175–7, 200–2, 400–1, 465–7; experience of, 163; critical, 165–71, 280; *Gestalt*, 180, 228, 557; and despair, 185; heritage of, 399–400; inverted, 401, 408; comic, 405–10, 555; free thought, 411–2, 448, 450–1, 458, 621; sublated, 413–4; broken, 421–2, 453; indifference in, 503
- “Scepticism Essay”: ancient/modern scepticism, 11, 24, 198; and *Phen.*, 200–1
- Schein*: of opposition, 183; and *Erscheinung*, 280–1; ethical, 295; consciousness as, 387; Perception as, 387, 393; plant-sex as, 486; surface, 523
- Schelling, F.W.J.: friendship, 3, 19–20, 548; Identity Philosophy, 5, 15, 47–9, 52–6, 92, 95, 114–5, 155, 174–5, 338, 459–60, 521; disagreement, 6, 13, 27, 114, 311, 314, 461, 551; “School”, 7, 50–1, 95, 125, 128, 148, 505, 512, 521, 526, 549, 552; influence, 9–12, 94, 126, 172, 468; *Transcendental Idealism*, 10, 27, 69, 126, 127; in speculative tradition, 14–5, 279–80, 317, 466; and *Phen.*, 22, 42, 93, 552; *Ideen*, 27–8, 96, 153, 302; *Bruno*, 28, 52, 96, 314; H's critique, 42, 53; Spinozism of, 45, 97; philosophy of Nature, 48–50, 52, 174, 281, 300, 461, 539–40, 546–8, 551; and formalism, 50–1, 95, 126–7, 311, 512–4, 521, 528–9, 550; intuition in, 57; *Darstellung*, 69; Mother of God, 93; *University Studies*, 94; *Abgrund* in, 96; *Fernere Darstellungen*, 98, 152, 528; mathematics, 119; polarity, 130, 155–6; and common sense, 172; *Freedom*, 314; *World Soul*, 508; cohesion, 528–9; *Freedom*, 551
- schema(tism): formal, 118, 125–6, 472, 478, 485, 488, 493, 505–6, 511–2, 518–20, 532, 553, 601; speculative, 463, 465, 472, 478, 484, 488, 493, 514, 553
- Schiller, F.C.J.: influenced H, 3–4, 98, 551, 563, 607; *Aufheben*, 21; play in, 57, 70, 97; critique of, 93; *Robbers*, 298; *Gemüt*, 442–3; *Aesthetic Letters*, 551, 563
- Schlegel, Friedrich: romantic, 45, “black cows”, 52–3, 95, 280; conversion, 93; *Lyceum*, 105–6; critique, 147–50, 160
- Schleiermacher, F.D.E.: critique, 42, 45, 93, 149; intuition of Universe, 43; religion, 46, 172; immediate knowledge, 67, 198; *Reden*, 92–3; *Addresses*, 172, 198; Unhappy Consciousness, 404, 415
- Schmerz*: grief, 401
- Scholasticism: thought of, 411, 441

Schopenhauer, Arthur: 115, 445

Schütz, C. G.: 614

Schulze, G. E.: scepticism, 11, 172, 198, 225, 231, 463

Schulze, Johannes: 241

Schwab, T.: 19

Science (speculative): of Experience, 1 (*see* Science of Experience); System of, 1, 84, 128–9, 151, 493, 498, 518, 594, 603–4; recollective, 11, 71–88, 177; Philosophy as, 25, 39–41; abstract/concrete, 36, 88; and pseudo-science, 36–7; and empirical, 37, 542, 554–5, 584, 597; evolution of, 47–50, 171–2, 548; intuitive, 55, 57; religion and, 63–7, 164–5, 200, 416; and common sense, 66; standpoint of, 67; and logic, 555, 565 (*see* Logic)

Science of Experience: spiritual, 1, 63–4; recollective, 5, 25, 70, 202, 251, 288, 441, 468, 479, 545; title, 11, 30–1, 162, 164–5, 471; logical, 25–6, 41, 81–2, 88, 141, 173, 191; real, 32–3, 78–9, 99, 111, 192, 280–1, 482–3, 505; circular, 82, 90, 190–1; standpoint, 83–6; time ripe, 89; beginning, 92, 98, 457; method, 111, 373–4, 512, 520, 526, 585, 609, 618; theory of self, 120, 134, 532, 595; story of *Weltgeist*, 158–9; truth in, 182; openness, 189–90; pilgrimage, 195; reflective, 196; psychology in, 374; mortal struggle in, 376; comprehends *Erscheinung*, 393; anatomy in, 516; and philosophy of history, 518

Science of Logic: history in, 11, 157; God in, 13–4; and *Phen.*, 29, 41–3, 48–9, 90, 109; atemporal, 81–3, 558; pistol metaphor, 103; method in, 123, 136, 565; *Phen.* parallel, 136, 191, 234; Life in, 339; Nature in, 387, 437; categories in, 463; of 1831, 541; “natural logic” in, 542

scurvy: example of, 497

second inversion: of world, 322

Second Relationship: of Unhappy Consciousness, 403–36; far off, 441; ending of, 453–4

Seele: life-principle, 339

Sehnsucht: yearning, 414–5; sublation of, 443

Selbstzweck: organism as, 499, 501–2, 524–5; not hidden, 502–4, 547

self: finite, 56, 225–6, 236; not fixed, 80–1; and others, 85, 335; negative, 87; dialectic of, 165; U moment, 208, 219–20, 223, 620; solipsism, 234; sense-certain, 302–3; in itself, 317; “I am I”, 319, 477; free, 320–1, 396; Concept, 336, 359–60, 600; object, 345–6; rational, 383, 477, 484–5, 619; broken, 418–20; alienated, 429–30, 618; infinite, 420, 602–3; uttered, 573–5; and thinghood, 602; inner, 616; *see also* ego

Self-Actualizing Reason: turning point, 194–5; instinctive, 539; and Psychology, 561; transition to, 596–600; repeats “Self-Consciousness”, 618–9

self-certainty: and Science, 66; sense-certain, 306; practical, 306–8, 318; not Cartesian, 340; as self-judgment, 344; display of, 353–4, 362; self-contained, 359

Self-Concept: motion of, 130, 208, 344; infinite, 133, 346–7; *Weltgeist* as, 140; *Begriff* as, 146, 600; of experience, 262, 278; our concern, 505

Self-Consciousness: concept, 17–8, 554; absolute, 26, 67; finite, 26, 87, 158, 394; and Reason, 47; atomic, 64; philosophic, 178; practical, 230; as Force, 274; *Gestalt*, 304–8; unconditioned, 316–8; truth-standard, 317–8, 452; and Understanding, 318, 341; tautology of, 319–20, 454–6; motion, 319–20, 337; middle, 321–2, 336, 358; reciprocal, 334; divided, 343–5, 358, 361; abstract, 353–4; forlorn, 394; *Vorstellung*, 447; historic, 453; and Consciousness, 458, 460–1, 485; and feeling, 500; observed, 502; natural, 502–3, 561–2; pure, 553–60, 571; active, 560; empirical, 560–606; and body, 571

“Self-Consciousness”: uncultured, 163–4; middle, 193; Concept, 194–5; result, 615; movement, 619–20

self-deception: of Perception, 466; and Physiognomy, 582

self-definition: Reason as, 485; task of, 568–9

self-feeling: active/passive, 499–501, 512, 576–7; family and, 545; of Life-process, 548

self-formation: *see* *Bildung*

selfhood: and Desire, 331–5, 502; problematic, 352; ethical, 618

self-identity: abstract/concrete, 131–2; of ego, 344, 347; lost, 395–6

self-preservation: of organism, 325, 427–8, 496–502, 503, 567; of species, 326, 504; desire, 333; essential, 356; inorganic, 527, 529–30; process, 550, 552

self-recognition: in other, 56, 129; common sense/Science, 199; Spirit as, 343, 350

self-repulsion: of same-named, 290–300; of Self-Consciousness, 304, 383–4; of Life, 321, 324–5; of Recognition, 345–7; of thought, 381; of Unchangeable, 401

sensation: sense experience, 226–7, 389–90; and Sense-Certainty, 232; senses, 248, 481, 572; and conception, 253

sense: one's own, 367–9, 381–2; alien, 367–9

- Sense-Certainty: concept, 18, 209–10, 300–1; night in, 33; time in, 59, 83; naive, 92, 257–8, 453, 460, 474–5, 538–9; *Gestalt*, 98, 229; comprehensive, 131, 559; truth-standard, 132, 202; sublated presence, 174, 243; and Scepticism, 178, 212, 392; discussed, 208–28; religious, 210, 213–4, 416; error in, 211–2; philosophic, 214–6, 230, 232, 300–1, 474–5, 594; ineffable, 220, 580, 582; paradigm, 233; and Perception, 238–9; self-certain, 306; inverted, 328–9; and Reason, 466–7
- sensibility: and supersensible, 255; function, 507–15; terminology, 521
- serf: *Gestalt*, 344; and Lord, 358–60; and world, 358–60; self-bonded, 360; truth of, 363–4; as soldier, 364–5; self-discovery, 365–6, 368; experience of, 382, 421, 423; Stoic as, 395; labor of, 417–8, 420–1
- serfdom: conventional, 350, 437; dependence in, 360; essential, 361–3; inversion, 362–3, 417–8, 431; truth, 362–3; shared, 371; no “Spirit”, 371–2
- service: as truth, 362; as freedom, 363, 365; divine, 429–31
- servitude: world of, 377, 621
- sexes: independent, 324–6; desire, 325–7, 339; plant, 486; related, 487, 500; rivalry, 542
- Sextus Empiricus: Scepticism, 11, 232, 399, 437
- Shaffer, Peter: 567
- Shakespeare, William: 413; *Hamlet*, 37, 194, 507, 558, 583, 592, 594, 601, 617, 623; *Macbeth*, 295, 355, 375, 578, 609, 611; *Romeo and Juliet*, 295
- shape: organic, 507; see *Gestalt*
- Shaped Unchangeable: *Gestalt*, 402–10, 419–21; necessary, 445; salvation by, 447; surrender to, 449; and Faith, 622
- show: and Appearance, 276; see *Schein*
- siderism: 552
- sin: and reconciliation, 4; and repentance, 401–2; sense of, 410–1, 413, 416, 427–8; and evil, 579
- Sinclair, I. von: 240
- Singular(ity): and community, 70; ineffable, 217, 220–1, 225–8, 233; and essence, 254; human, 364–5, 460, 464–5; sublated, 429–30, 451; category, 462–5, 471, 532; of systems, 516; and U, 531
- Sisyphus: 482
- Sittlichkeit*: see ethical life
- skull: Reason-container, 476, 478, 602–3; living, 584, 601; theory, 585–6, 588; and brain, 587, 589; and backbone, 587, 612; record, 589, 601, 603, 614, 616–7; and mind, 590–2; and Spirit, 591, 596, 601, 603; place, 614, 617 (see Cross); and biography, 622
- slavery: H's view, 442
- Smith, Adam: 523
- social order: actual concept, 351–2
- sociology: of deviance, 584; statistical, 595
- Socrates: and definitions, 77; *elenchus*, 79, 82, 106, 147–8, 212, 214, 245, 362, 607; dialogue, 109, 229, 235; Platonic, 156, 312, 555; not named, 157; irony, 231; and Heraclitus, 236; and Callicles, 331; “true City”, 335; and Hobbes, 341; his time, 164, 358, 607; and Thrasymachus, 369; and craftsmen, 370; as hero, 441; inner, 506; and “Laws”, 563
- Solar System: time-paradigm, 119, 121, 532; gravity-model, 269–70; as *Erscheinung*, 276; as Infinite, 322–3
- solicitation: of Forces, 271–4; mutual, 272–3, 310, 317, 349; tautologous, 290
- solipsism: impossible, 220–1; not asserted, 234, 337
- Solon: 157, 575–6, 592
- Sophia*: complete virtue, 40; goal of Science, 40–1
- Sophia's Journey*: 573
- Sophists: 77, 106, 555
- Sophocles: True Spirit in, 18, 76, 353; named, 157; *Antigone*, 339, 354; and mortal struggle, 373
- sorcery: H's Science not, 97
- soul: moving principle, 87, 157; Neoplatonic, 137; natural consciousness, 173; Beautiful, 180; conversation of, 304; immortal, 447; and body, 480, 503, 505–26, 546, 582, 612; vegetable, 508–9
- Soviet Hegel criticism: 103
- Space: geometric, 113, 116–8; sense-certain, 215–25; external relations, 259; social 259; and time, 287; moment of Force, 300–1
- Sparta: and Messene, 358
- Species: living, 134, 483–4, 502, 556, 566; difference, 483–4; U and P moments, 487–8; conventional, 531, 551; classified, 533, 535–7, 556; origin of, 534, 536–7
- specific gravity: observed, 487–8; inner shape, 525–6; concept, 527–30; first inversion, 532
- speculation: and reflection, 6, 11; and common sense, 7, 15–6; intuitive, 14–5; introduction to, 195; rediscovered, 463; formal, 526; logic of, 558–9, 561
- speech: immediate relation, 359
- Spinoza, Benedict: Lessing and, 3; in speculative tradition, 14, 61, 123, 133, 145, 206, 212, 313–4, 456, 466, 470, 477, 562, 608; *De Intel-*

- lectus Emendatione*, 25; Jacobi and, 45, 87, 100; atheism, 54, 612; in Identity Philosophy, 55–6, 97, 114; intellectual love, 57, 97, 156; *Ethics*, 115, 129, 269, 456, 597; God of, 96, 130, 143–4, 269, 300, 302; and Descartes, 107; substance, 264; Herder and, 87, 309; Substance, 310; mind/body, 502, 572, 582–3; *imaginatio*, 506
- Spirit: self-positing, 26, 81, 200, 581; history of, 31–5, 554; philosophy of, 32, 190–1; chalice of, 42–3; estranged, 45; Concept, 56, 86, 191, 334–5, 342, 344, 395, 397, 449, 460; God as, 63, 219, 226, 402–3, 432, 610 (see Absolute Spirit); *Vorstellung*, 63–5, 69–70; True, 76–7 (see True Spirit); first and last, 83, 588, 596; Subject–Object, 86, 460–1, 600–1; defined, 165; present, 169, 297, 448; appearing of, 174–5; world-shape, 190; finite, 193, 304, 451–3, 561–2, 565; objective, 193–5; syllogism, 195, 617, 623; Reason and, 193–5, 436, 460, 473, 554, 623; moments of, 399; witness of, 454; and Nature, 486, 563, 615; embodied, 533, 553–4; conscious/unconscious, 546; logical, 554, 570; depth, 606
- “Spirit of Christianity”: revision, 5; Beautiful Soul in, 20; Life in, 338; the Mass in, 442
- Spurzheim, J.: 574
- Stalin, Joseph: 442
- state of nature: ethical, 295; desire in, 330; paradigm, 351; and authority, 373, 375
- statesmanship: logic of, 571
- statistics: objective probability, 491–2, 520, 608, 611; quantum, 526; economic, 549
- Steffens, Heinrich: memories, 52, 95; formalist, 95, 128, 130, 136, 155, 527–32, 551–2
- Steuart, Sir James D.: 442
- Stevenson, R. L.: 188
- Stilpo: 236–7
- stimulus: and response, 512
- stipulation: linguistic, 144, 159
- Stoicism: formal thinking, 139–40, 150, 411–2, 425, 450–2, 454, 457, 503, 621; and *Bildung*, 158; presentation, 175; peace of mind, 179–80; freedom of thought, 383–94, 458, 460, 621–2; Roman/Greek, 384–5; and Lordship/Bondage, 388–90, 436; given content, 396; heritage of, 399–400; tragic, 405, 407–8; sublated, 409–10, 413–4; suicide in, 423, 428; following Nature, 437, 475; U Recognition, 448, 450; certainty of, 453; in history, 471; causes in, 555
- Storr, G. C.: 2, 20
- Strawson, P. F.: 371
- struggle: for Recognition, 345, 358, 374–5; for existence, 536, 538; see also mortal struggle
- Subject: individual/social, 39, 323; Absolute as, 54–6, 61–2; substantial, 70–1, 87–8, 146, 264, 479; God as, 81 (see God); logical-real, 96; represented, 139–42; self-constructing, 62, 140; embodied, 600
- Subjective Spirit: and Self-Consciousness, 193–4; finite, 451–3, 617; pure, 460, 554; immediate, 596, 618
- sublation: preservation in, 188–9 (see *Aufhebung*)
- Substance: and Subject, 39, 71–2, 81, 84–7, 96, 111, 131, 181, 406, 618; of Spinoza, 45 (see Spinoza); Absolute as, 54–6; Trinity as, 64; of Spirit, 64, 460; social, 70, 103, 322–3, 619; labor of, 71; thought, 80, 263; self-moving, 87, 271; natural, 121, 134, 275, 322–3
- suicide: rational, 385; Stoic, 390, 428; sinful, 428
- supersensible: world not Concept, 263; constructed, 276–7; as Reason, 279–80; and sensible, 281–2; first/second, 291–2, 313; self as, 320; presence of, 335
- survival: of fittest, 523
- suspense: of judgment, 393–4, 410; of sceptical thinking, 395–436
- Swedenborg: 46, 281
- syllogism: of Spirit, 163, 194–5; H’s use, 196, 207; of *Encyclopedia*, 207; of Understanding, 279–81, 308, 310; of Lordship, 359–61; of Recognition, 372; of Self-Consciousness, 381; of penitence, 428–30; of expression, 507; of organism, 523, 534–6, 556; of action, 573
- synsomatics: 494, 543–4
- synthesis: of sense, 481
- System: Preface for, 1, 30 (see *Vorrede*); of 1806, 1, *Phen.* in, 1, 206, 511; of Kant, 3; of 1800, 5; parts of, 32, 88; and Science, 39–42, 145; Concept and, 304
- “Systemfragment”: 100
- System of Ethical Life*: philosophy in, 21, 100; *Bildung* in, 333; Mongol horde, 375–6; cunning in, 375; servitude in, 377; crafts in, 379; feeling in, 545
- System of Science*: announced, 162; absolute knowing in, 192
- “System Programme”: project, 20; Schiller in, 607
- systems: organic, 507–16; 546–7
- “Table of Contents”: *Phen.* structure in, 30; *Einleitung* in, 32; discussed, 193–5; “Chapter V” in, 206, 618
- taste: destructive test, 239–41

- tautology: of explanation, 288–90; speculative, 304, 343–4; of self, 319, 337–8, 449; Stoic, 387, 391
- teleology: external, 59–60, 498–9, 501–2, 536, 545, 591, 599, 614; internal, 59–60, 99, 498, 504, 536, 599; objective, 499, 504; subjective, 502
- tendency: freely suppressed, 594; indefinite, 594–5
- Terence (P. Terentius Afer): 152
- Terror: of 1793, 2; and Roman legions, 78; despair of, 177
- Test of Laws: tautology, 454
- Tetens, C.: 78, 107
- Tetzl, John: 436
- Thales: 389
- thanksgiving: recognitive, 413, 420, 427; linguistic, 422–4; *Schein*, 423; hypocrisy, 431–2
- Thens: community of, 218, 224
- theology: time-bound, 14
- Theophrastus: 607
- theory: scientific, 281–2, 494
- There: and Here, 224–5
- “Theses” of 1801, 4, 20
- Theseus: 355
- thief: potential, 580
- Thing: *see Sache*
- thing: mediated concept, 228, 477, 485; self-consciousness as, 432–3, 602; non-rational, 463–4; rational, 495; body as, 571; Spirit not, 595; *see also Ding*
- thinghood: aspects of, 241; U concept, 252, 262, 541; and Force, 254; of self, 258–9; made, 366; of Unhappy Consciousness, 415; actual, 476; of Reason, 478, 571, 603, 618; of Spirit, 595
- Thing-in-itself: *see Ding an sich*
- Thing itself: *see Sache selbst*
- thinking: verbal, 43; simplicity of, 135; formal, 138, 140, 381–95, 558; empirical, 138, 477–9; argumentative, 139; speculative, 139, 449, 451, 464, 553, 558, 560; representative, 140–3; and perceiving, 298; free, 299–300, 381–95; negative, 388–90, 463; of Unhappy Consciousness, 397, 404, 411–4; abstract, 411–2, 423, 433, 447, 462, 477–9, 501; “musical”, 414, 416–7, 429, 433, 442, 445; of Faith, 445; dialectical, 463; embodied, 586; *see also* thought
- Third Relationship: of Unhappy Consciousness, 405–6; and Second, 424; ambiguous, 470
- This: of Sense-Certainty, 213–28
- Thomas, St. (Apostle): 407
- Thomas Aquinas, St.: 107, 146
- thought: conceptual, 43, 79–81, 299; Beyond in, 45; pure, 61, 65, 382, 389, 540; and *Vorstellung*, 74–5, 77; games, 105; speculative, 106, 532; of Understanding, 124, 131–2; recollective, 161; objective, 261; reflective, 283, 387–94; abstract, 411–2; formal, 411–2; estranged, 413; free, 299–300, 381–95, 439; suspended, 395, 439; “thoughtless”, 481
- Thrasymachus: 331, 355, 369
- Thucydides: 374, 377
- Tieck, Ludwig: 94, 313
- time: philosophy in, 14; and eternity, 14–5, 26; comprehension of, 59; pure Concept, 64; present/past, 70, 75, 223; *Dasein* of Concept, 83, 119, 215, 300–1; mathematical, 113, 118–20, 322; natural, 118–22, 153, 312; ripeness of, 149–51, 161; spiritual, 153, 235, 312, 342; and Now, 187; sense-certain, 215–24; space and, 217–8, 287, 322; beginning of, 533
- Tinbergen, N.: 500
- Tomb: empty, 413, 415–7, 453–4, 592; of Reason, 622
- totality: of categories, 463; of Nature, 496
- touch: criterion of, 248
- Tragedy: *Phen.* as, 29; origin, 336; Stoicism and, 405
- transcendental turn: 489
- Trennung*: *see* Union, need
- Treviranus, G. R.: biology, 495, 539, 544, 551–2
- “Triangle Fragment”: 444
- Trinity, the: and Spirit, 56, 97; dogma, 397, 399, 432; in history, 402–3
- Troxler, I.P.V.: 21
- True, the: element, 39; whole, 58; subject/substance, 62; Absolute as, 171, presence of, 197–200; and Good, 387
- True Infinite: time-cycle as, 216, 305, 528; of Understanding, 301, 303; free, 307–8; of Reason, 499
- True Spirit: and philosophy, 79, Recognition in, 349–51, 354; freedom of, 384; self-positing, 581, 623
- trust: in God, 411; as surrender, 423; necessary, 450; and Reason, 460
- truth: logical, 34, 111–2, 227; philosophical, 37–8, 111–2, 121, 198, 202–3, 450; and falsity, 37, 62, 614; motion of, 81, 91; Concept, 83; and certainty, 90, 212; as Whole, 98; Bacchic revel, 107, 111, 120–2, 154; physical, 121, 468; historical, 121; moments of, 122, 174; and Recognition, 150; substantial, 135–6, 219, 317; time ripe, 149–51, 161; not external, 170; in itself/in itself for us, 181–7; native

- land of, 191, 278, 308, 317–20, 337–8, 372, 449, 455, 460; linguistic, 218; subjective, 219, 234, 317; conceptual, 225; perceptual, 243; of Understanding, 275, 277–8, 290, 390; of Reason, 279; absolute, 318–9, 450; of freedom, 352–4; of Lordship, 362, 381; of Desire, 366, 490–1; of Bondage, 366, 381; of Scepticism, 395; as correspondence, 471–2
- “Truth of Enlightenment”: division in, 109, 258; capitalist, 373; dualist, 476; critical, 541
- truth-frame: culturally relative, 111–3, 122
- truth-standard: initial, 180; Concept-Object, 183; changes, 184–9; absolute, 189–90; maintenance of, 202; of Sense-Certainty, 209, 211–2, 219, 222; of Perception, 243–4, 256; of Understanding, 281, 307, 320; of Self-Consciousness, 306–7, 316, 320, 330, 354; of Recognition, 346–7, 360; of Stoicism, 385, 387
- “Tübingen fragment”: inspiration of, 2
- Übergreifen*: of necessity, 299
- Unchangeable: Jewish God, 61–2, 99; Eternal, 99; substance, 184–5, 404, 406; and “unhappiness”, 337; God as, 395, 398–9; and Changeable, 395, 398; singularized, 401; *Gestalt*, 402–10, 419–21; recognition in, 402; Judge, 405; antithesis in, 415; true self, 602–3
- Unconditioned Universal: *Ding an sich*, 262–3, 274; antithesis in, 265–6, 273; inwardness, 267, 271, 319; Force as, 269–71; real Concept, 271; community as, 275; of Understanding, 278, 487–8; *Logos*, 279; Infinite as, 300; self-conscious, 304; motion of, 316; Life as, 321; thought as, 383; of Reason, 474
- unconscious: desires, 577
- Understanding (*Verstand*): Kantian, 3, 18; power, 36, 38, 43, 76–7, 95, 120, 129, 134, 387, 477, 482–3, 531; *Bildung* of, 39; thinking of, 49; representative, 49; Identity of, 51–2, 584; and Reason, 59, 79, 158, 312, 474, 489–91, 520, 541, 579, 597; purposive, 99, 288; naive, 71, 77, 114–6, 262–3, 304, 315–6; scientific, 71, 77, 117, 126–7, 130–5, 263, 541; subjective, 131; abyss, 132; and objectivity, 185, 210, 216, 224, 252, 263; theoretical/practical, 195; critical, 133–4, 208, 212, 228, 247–8, 261, 265, 273, 277, 281, 304, 315–7, 549, 553–4; and Sense-Certainty, 228, 230; and Perception, 249–257, 259, 623; sophistry of, 256–7; philosophical, 265, 269–70, 584, 601, 615, 619–20; motion of, 290, 293, 299–301, 518, 601; forgetful, 303; two worlds, 304–5, 317–8; and Life, 318, 321; and Self-Consciousness, 337, 383; of serf, 366; and Scepticism, 390, 392–3; inversion of, 391, 393, 489–90; and devotion, 412; inalienable, 432; not unhappy, 439; syllogism of, 448; metaphysics of, 476
- Unequal Recognition: contradictory, 347; struggle, 351–6; personal, 377–8; and equal, 380
- unhappiness: of finite self, 396–7, 399–400; of *Weltgeist*, 398, 400; *Gestalten*, 403, 439, 442; absolute, 418–9; sublated, 433; of persecution, 613
- Unhappy Consciousness: *Gestalt*, 10, 395, 398–9, 403–5; divided, 17, 395, 560, 598, 614, 622; Protestant, 45, 580; reconciled, 45–6, 374–5, 440–1, 458–9, 598, 602, 619; despair of, 139, 158, 163, 177; turning point, 179; way of life, 202; secular, 229, 394; philosophic, 235; and Reason, 308; anticipated, 311; and Lordship/Bondage, 378; Sceptical, 394; discussed, 395–436; *Weltgestalt*, 398–9, 403–5; no objectivity, 398; truth-standard, 398, 425; not self-conscious, 400, 402, 438, 447; not “burlesque”, 409; universal, 413; Judaic, 439, 598; and Reason, 448–9, 452, 540, 553; and Faith, 453, 598; and Phrenology, 596
- Union (*Vereinigung*): forms of, 4, 10, 23; motion to, 5; and *Trennung*, 20–1, 23; and distinction, 314; with Unchangeable, 401, 422–3
- unity: negative, 241–2 (*see* One); exclusive, 246; of Appearance, 599
- Universal (*Allgemeine*): as result, 35–6; and P (worlds), 70, 78–80, 103; and P (selves), 75, 78–80, 103; “cut off”, 78–80; abstract/concrete, 132; time as, 216, 234–6; sensible, 224, 227–8, 239, 242–3, 245, 254–5; space as, 234–6; unconditioned, 267 (*see* Unconditioned Universal); in and for itself, 275; and S, 449, 533, 556; as purpose, 507; formal, 532–4, 536; U, S, P in I, 534
- universal blood: of living Infinite, 302, 523; water-cycle, 302; origins, 314; pulsing, 321–3; Life as, 498
- Universal Individual: Earth as, 534, 536, 538, 566
- universe: intuition of, 43, 93; as organism, 126, 128–9
- unphilosophy: struggle of, 172
- unrest: dialectical, 289–90, 394
- untruth: despair over, 175, 200; of Perception, 256–7
- urination: and begetting, 604–6
- Urpflanze*: not visualizable, 531
- Utility: and naive self, 317–8; of labor, 418; universal, 541
- Utterance: solicited, 254; of “matters”, 268–71; moment, 272–3; external, 275

- Vendetta: *see* revenge
Verhältnis: syllogistic, 280 (*see* Relationship)
 verification: moment of cognition, 490
Verstand: *see* Understanding
Verstellung: movement of, 198
 Vesalius, A.: 37
 Vespasian: 406
Via moderna: 606
 Virgil (P. Virgilius Maro): 405
 virtue: *Gesinnung* and Law, 5, 618; philosophic, 40–1; moral, 579
 vision: and measurement, 248
 vitalism: formalist, 505; critical, 508
 Void: atoms and, 87, 109; Newtonian, 112
Volk: life in, 356; *Sache selbst*, 478; living Infinite, 609; Substance, 615, 623; Subject, 618, 623
 Voltaire: rationalist, 113, 432; *Candide*, 180, 536; *Alzire*, 546
 voluntary: *see* will
Vorrede: writing of, 10, 24, 29, 88–9; not after-thought, 12, 32; discussed, 30–161; system introduction, 1, 30, 32; paradox of, 33–4, 36; studies of, 88; H's analysis, 91; and *Anzeige*, 162–3; and *Einleitung*, 163
Vorsatz: ambiguous, 175–8
Vorstellung(en): of sciences, 36–8; and *Darstellung*, 41; speculative use, 46–7, 138; of *Phen.*, 54–63; of God as Spirit, 63–5, 164, 166; and *Gedanke*, 73, 77, 79–80; of doubt, 167; empirical, 168, 302; of cognition, 197; perceptual, 253; intellectual, 387–8; of Polarity, 297; and Concept, 289, 382–3; of Sense-Certainty, 329; not comprehensive, 393; of Faith, 412; of Resurrection, 425–6; of forgiveness, 429–30; of Reason, 433–6, 447, 449, 481, 622; of Creator, 452, 480; Nature as, 486, 517–8; of Life, 535–6, 556; literary, 582
 Voss, J. H.: 8, 22, 24, 157
 Wagner, J. J.: critique of, 45, 47, 51, 94, 99, 156; religion, 61, 314
 warfare: and freedom, 621
 “Wastebook”: and *Vorrede*, 12, 32, 89, 90; on Fichte, 16–7; “genius” in, 51, 147–50; aphorisms, 94–5, 99, 159–61, 229; on formalism, 99; mathematics in, 153; Frau Bauer in, 201; on Understanding, 207, 265
 water: cohesion of, 527–8; bodily, 606; symbolism, 615
 We, the: problem, 178, 201
Wechsel: of Appearance, 283–4; of motion, 290; Force and Law, 290–1; pure, 291–2, 299–300; of properties, 520
 weight: as Force, 492
 Wells, H. G.: 269
Weltgeist: U standpoint, 17–8; biography of, 23, 69–70, 75, 158–9, 199, 359, 384, 425, 456, 613; self-equal, 71, 75; observation of, 103, 140–1, 553; recollected, 178; Cosmic Reason, 193, 317; unhappiness of, 398, 404–6, 408–9; and Reason, 456, 461, 466–7; trust in, 535
 Wendt, J. A.: 24, 25
Werk: ambiguity of, 581
 Werner, A. G.: 534
 Wetzell, August: 19
 Whitehead, A.N.: 606
 Whitman, Walt: 29
 Whole: H's concept, 98
 will: free, 307, 620; of God, 307 (*see* Will of God); singular, 383, 392, 400; controlling, 571, 574, 577, 586–7; public, 578; physiognomy of, 610–1
 William I: 419
 William II: 419
 Will of God: *ens realissimum*, 175, 420–2; as authority, 353, 435–6; as Freedom, 400; and Sin, 409, 421; sublated, 422; and General Will, 433; as Reason, 447–50, 553; Understanding inverted, 485
 will to power: and recognition, 355; irrational, 373–4
 Windischmann, K.J.H.: 95, 233
 Winterl, J. J.: 494, 543
Wirklichkeit: presence of, 549; *see* Actuality
 Wise, the: *see* dialectic
wissen: and *Wissenschaft*, 39–41; *see* knowing, knowledge
 Wittgenstein, Ludwig: *Tractatus*, 101, 256; and Cantor, 118, 153; paradigm, 201; and dialectic, 204; pointing, 236; language, 237; on learning, 371; inner/outer, 610
 Wolff, Christian: influence, 107, 138–40, 142, 462, 544; method, 123–4, 542; and Stoicism, 386
 work: true expression, 596
 world: of self, 130–1, 568, 572; constructed, 187–9; of perceptual relations, 249–50; unperceived, 269; broken, 419; sanctified, 419–20, 444, 452; fixed/plastic, 568–9; of Reason, 599, 603
 World-Soul: Infinite, 281, 302–4; and *Weltgeist*, 317; problematic, 544
 World-Spirit: *see* *Weltgeist*
 worship: act of, 413–4
 wound: lesson of, 519–20
 Xenophanes: 119, 230, 276, 280
 Young, J. Z.: 585–6

Zahl: measurement, 532; as middle, 535–6

Zarathustra: 18, 96, 259

Zeno of Citium: and Carneades, 185; and common sense, 210; Stoicism, 385, 389

Zeno of Elea: dialectic, 223–4, 228, 389

Zerrissenheit: of culture, 78, 107

Zeus: 77, 392, 475

Zoology: descriptive, 487, 537–8, 561

zōon logikon: 450

Zusammenhang: of Reason, 560

Zweck: and *Ende*, 500; of family, 545

To the members of
St. Edmund Hall
where it was my good fortune
to be taught;
and of
Glendon College
where it has been my good fortune
to teach.

Dentro al cristallo che 'l vocabol porta,
cerchiando il mondo, del suo caro duce
sotto cui giacque ogne malizia morta,
di color d'oro in che raggio traluce
vid'io uno scaleo eretto in suso
tanto, che nol seguiva la mia luce.
Vidi anche per li gradi scender giuso
tanti splendor, ch'io pensai ch'ogne lume
che par nel ciel, quindi fosse diffuso.

(*Paradiso*, Canto XXI, 25–33)

Contents

Note on Conventions and Abbreviations	xii
Prelude	1
Notes	5
Chapter 1	
From Faust to Fichte (Almost!)	6
(B) The Actualization of Rational Self-Consciousness through Itself	6

Index of Secondary Literature	869
Analytical Index	874

Note on Conventions and Abbreviations

I have numbered the paragraphs of Hegel's text in two ways. For the convenience of those who use Miller's translation, I have adopted his running numbers (in spite of one or two mistakes that he made), but for the benefit of other readers, I have also numbered the paragraphs in each section. This should make it fairly easy to find the place in my commentary with any accurately printed text.

Bibliographical references in the Notes are given in abbreviated form: author's name, (publication date, page number or chapter). Translations of Hegel's works are similarly referred to by the translator's name with a page number. The full reference can be found by looking for the name and date in the Bibliography. Translations are listed in section 2 of the Bibliography specifically. Cross-references are provided in section 3 where confusion appeared likely.

The following abbreviations have been employed regularly:

<i>Akad.:</i>	Kant, Immanuel, <i>Gesammelte Schriften</i> , ed. Royal Prussian Academy, Berlin, Reimer, 1902–38.
<i>Anm.:</i>	Anmerkung (Remark)

Prelude

The singular consciousness has reached its Calvary. "Reason" is its last and highest "shape." But its natural destiny in that shape is to experience its alienation from the universal rational order which it instinctively assumes to be its own true Substance. It is alive and free; but in that Substance it meets only its own death. Where then is the substantial reality of its own living selfhood to be found?

The movement from Observing Reason to Self-Actualization is one that involves both the whole experience of Reason and the last stage. On the one hand, the self that was observed in Phrenology becomes the subject of the new experience; but, on the other hand, because that self was a rationally comprehended whole of expressive capacities, its living expression is in the world of rational observation. So the freedom of self-expression is faced by the necessity of the world, and the first discovery of the self-expressive singular shape is that its own world is a Necessity that is not dead, but independently alive and free. With this the dialectical interaction of the singular and universal sides of Active Reason begins. First the singular rational agent takes itself to be the principle of a freedom that must replace the law of worldly necessity; then it becomes the true consciousness of the law as opposed to a false worldly consciousness of it; and when the two sides of this consciousness recognize one another as equally necessary, rational Individuality is achieved.

Even then the identity of singular desire with universal law is ambiguous and unstable. The rational individuals all have their own lives to lead; and when they claim to be exercising their Reason, by doing what is best for everyone, it is evident both that their view of the rational good is biased, and that there is a competition to be the one individual who does the rational Thing.

The immediate solution of this problem is a new kind of distinction between the singular and the universal sides. The universal Thing cannot be done individually; but surely it can be said by any rational individual? Alas, we discover that this is not the case. The singular rational consciousness cannot say what is right, universally, and without regard to the social situation and circumstances. It cannot even furnish an infallible criterion for deciding which universal formulas can be "laws of rational freedom." We only think that we can do this (and even that we can state universal laws of good behavior) because we already know (instinctively) what we must do, not rationally and universally, but within the definite community of which we are already members.

With this discovery, singular consciousness leaves the centre of the stage and withdraws to the wings. The subject of experience now is the Spirit. "Spirit" has been explicitly present (for us) as the universal side of the singular consciousness, ever since the active career of Reason began. But now this universal side emerges as an independent "shape of consciousness." From this point onwards the agent that we observe is the social Substance which the singular active Reason faced at the beginning of its career.

But how can there be any subject that is not a singular self-consciousness? How can there be an agency that is communal? The answer is simply "through the rational recognition of it as such." There is a speech, a language and a saying that is not singular because it is communally recognized as authoritative. This is the "voice of Reason" which the Real Individual tried but failed to be. She was obliged to admit that practical Reason can only be effectively voiced by and for an actual community; and as soon as that admission is made, it is evident beyond argument that the voice of Reason is heard, and recognized as such, in every actual community.

The Dasein of the Spirit is language. Wherever I hear (or read) a speech which I recognize to be not mine or yours, but equally mine, yours and "ours" (with reference to a community of others for whom it is equally authoritative, sacred, or valid) there the Spirit is. Indeed, it was already there in the Necessity that brought Faust and Gretchen to ruin; but it was not yet recognized under its proper identity as the communal voice. The dialectical development of this recognition is the theme of Active Reason and Real Individuality. When the Categorical Imperative gives way to the commanding voice of Antigone's natural feeling, Spirit is recognized in its "immediately true" shape.

As the voice of immemorial custom, however, that shape is doubled, as soon as particular groups within a wider community begin to make their own social arrangements. They are bound to do this by the same necessity that drove the Real Individuals into Lawgiving. Someone has to be designated to make executive decisions, and settle disputes. So Custom itself dictates that certain human voices must be obeyed; and from the inevitable conflict between the universal voice that speaks to all, and the particular voice that Custom designates as authoritative for our particular group, springs disaster for the immediate (or True) Shape of Spirit as a communal self.

From the breakdown of Spirit as customary unanimity, ordinary commonsense "selves" emerge. But this world of private individuals is not, and cannot be, a properly rational world. For them the Law of Reason is a formal ideal. Everyone is now recognized individually for what they already were (and did) in the customary world. But the execution of the law still requires a singular agent; and the authority of the law must be maintained by a power that is no longer "ours" but alien and arbitrary. So the formal ideal of universal legal recognition turns into tyranny and the primitive "law of the stronger"—but on a universal scale.¹

To escape from this breakdown, the voice of the universal Spirit must be alienated conceptually. The authority of the law must be seen to come from outside the world of finite experience altogether. But this discarnate voice still has to be incarnated in individual agents; and we have seen already why a plurality of incarnations is unsatisfactory. So what is achieved now is a nationally universal incarnation of Reason—a voice that speaks for that universal community of communities which the voice of custom spoke to.

This time there is no division between the voice of God and the voice of the King: they are one and the same.

This situation still contains the same absurdity that was present in the world of legal recognition. The King is now a constitutional monarch, so there is not anarchy whenever he dies; but the faith in a divine authorization of the constitution, is faced by the insight that every rational consciousness must be recognized as such, and hence as equal. The absolute authority of God, becomes the universal law of Reason—and the Revolution follows.

At this point, the Spirit must retreat into the inward voice of moral duty; and instead of a dialectic of private and public interest, we have a dialectic of moral good and evil. We arrive at the “situated conscience” (i.e., the moral conscience in harmony with the constitutional law and with its own social situation). Spirit finally reaches its subjective extreme in the religious language of the Beautiful Soul; and this time the opposition between speech and action leads to the explicit appearance of God—the Absolute Spirit—as the word of forgiveness.

Once God himself is on the scene, the whole evolution of consciousness has to be gone through again on its substantial side. We now know that the Spiritual Substance is the community, so we can observe the human community coming to the collective self-consciousness of its place in, and its relation to, the natural order of Necessity. This is what was still left out of the evolution of human society as the divine voice of custom that was finally incarnated properly as the individuated voice of conscience. The terminus of this evolution of Substance is the same community of mutually respecting and forgiving consciences; and the end of Spirit’s odyssey is reached in the community of logical “science,” and the subjectivity of the philosophical self-consciousness.

Thus the final reality of the Absolute Spirit—which makes its first appearance as the “Yes” of acceptance exchanged mutually between the judging consciousness and the agent—is the System of Science itself communicated between the singular thinking consciousness of the philosopher, and the universal thinking community. If it were not for the “Science of Experience” the communication would only be effective between the philosopher and us, the philosophically prepared audience. But through the demonstrated identity of the religious community with “us,” the communication becomes universal.²

We should note that in the “Yes” of comprehending acceptance exchanged between agent and judge (both of them metaphysically sinners, because the act must fail to be a truly universal good, and the universal judgment to that effect must fail to be an actual good) the impersonal voice of the universal good (which Antigone received from above) has become completely incarnate as a human relation. Thus, the movement of the Objective Spirit as a transcendent subject is first from above downwards; and when its immediate Truth is shattered it moves from outside inwards, becoming in this way an intellectual voice from the Beyond—i.e. an inner voice that is taken to have its own place and being somewhere else. At this stage it is like the Imperial Roman Law, except that it is known to have its authoritative seat in the eternal world of thought. Antigone’s divine voice was that of our life itself in this world; it could not have a mediator, and it did not need one. It was symbolized by the stone figures of the Gods. The new thoughtfully universal divine voice is mediated to us by human advisers on behalf of the

community. When it assumes the forms and powers of external authority, it is simply falling back into the Roman Imperial shape from which it emerged. The proper destiny of that Imperial shape is to be “constitutionalized”; and the final emergence of the socially situated Conscience presupposes the constitutionalization of political life and its public law.

When the voice reaches the shape of Conscience (including Forgiveness) the integration of community and individual is achieved. The Spirit is simply the mediating discourse that maintains the identity between them. Now a new movement of integration can begin—one that goes from inside outwards. The free community can now be observed as it advances toward the full comprehension of its absolute relation with the environing world of natural necessity. For this we must go back to a time when human freedom was not even thought of, and the individual had no concept of herself as a responsible agent (or a sinner). The community begins as an immediate shared consciousness of the Absolute. It is like Faust except that it is not self-consciously assertive. We can think of it as going through the stages of Consciousness, Self-Consciousness and (Instinctive) Reason; or through the stages of Sense-Certainty, Perception and Understanding. But since it is necessarily a Spirit, the shapes in which Active Reason encounters Spirit without recognizing it are the most appropriate ones for the conceptual expression of the free Objective Spirit’s unrecognizing encounter with itself in the “absolute otherness” of Objective Necessity. We have here a further confirmation that the “odyssey of Spirit” can properly be said to begin with Self-Actualizing Reason. The necessary appearance of the self-conscious Volk at this point in the argument (as the contextual Concept for the phenomenology of the singular rational consciousness) reciprocally confirms this interpretation of the unselfconscious Absolute Spirit on its way to the immediately self-conscious identity of the Volk as “True Spirit.”

The self-consciously free objective (or communal) Spirit is reconciled with the absolute Necessity of things in the Art-Religion. Hegel tells us this explicitly, and thus provides us with the explanation of why the internal contradiction in the Concept of True Spirit was presented (both to it and to us, but with opposite intended “meanings”) through its literary art. True Spirit presents its relation with the Absolute to itself through the Olympian religion; but the relation between its own nature and its freedom is presented in the religion of the Underworld (to whose Justice Antigone appeals).

All religions must contain the two perspectives—backwards towards nature and forwards towards conceptual self-consciousness. But only what is necessary to our Science is dealt with explicitly in it. In its conceptual result, the Art-Religion shows the free community face to face with natural necessity (intuitively recognized). This stark opposition is the immediate Concept from which the syllogistic movement of the Manifest Religion begins. But its “phenomenology,” which is given first, shows us how both the appearing of the finite Spirit, and that of Objective Spirit, are taken up and integrated within it. From our own philosophical perspective we can finally understand why the phenomenology of Spirit required us to follow “the leading of language” from the very beginning. The free spirit is what is released in human thought; and as a substantial activity—an identity that is “not Substance, but just as much Subject [and Substance]”—thought must manifest itself to itself in discourse. It is not the (eternal) necessity of Platonic

truth, but a freedom that recognizes itself in the necessity of a conceptual motion. With that provisional (and still formal) comprehension we can begin.

Notes

1. M. H. Hoffheimer (1992, 1992b) has made two insightful surveys of Hegel's treatment of "Law" in the *Phenomenology*. His negative-sounding arguments can in general be seen as the opposite side of the dialectical continuity pointed out here. But I would say that it is the positive position that the dialectic returns to. Hegel does *not* mean to "reject law . . . as adequate foundation for freedom" (51). That is a *lawyer's* use of "adequate." (For another study of the concept of "law" in the *Phenomenology* see R. Bernasconi, 1989.)

Why norms and rules of all kinds contain a *dialectical* tendency is brought out with admirable clarity (and with examples at many levels) by F. L. Will (1993).

2. I suppose that when Habermas says "Hegel did not pursue any further the traces of communicative reason that are clearly to be found in his early writings" (1987, 31) he means to include the *Phenomenology* in the "early writings." But his comment still seems to me to be unjust to the great lecture-courses on Art, Religion and Philosophy. Hegel's work is all of it a theory of "communicative reason." (On Hegel and Habermas see R. B. Pippin [1991c] and A. K. Honneth [1991]).

Chapter 1

From Faust to Fichte (Almost!)

(B) *The Actualization of Rational Self-Consciousness through Itself*

The second part of Hegel's fifth chapter begins with this heading. Logically we have reached the self-consciousness that is naturally rational, i.e., the modern self that has Reason, and knows that every self must freely make its own destiny by the use of its Reason. This is the result that Phrenology has bequeathed to us as the subject of the new phase of experience. So we are now observing the rationally cultivated self as it finds itself in our modern world. The first Gestalt on our journey will be Faust (who deliberately turns his back on the "gray in gray" of scientific observation, and seeks to pluck the fruit of "life's golden tree"). Faust will find the structure of ethical life to be a harsh impersonal "Necessity"; and the result of his encounter with Necessity will be a conscious opposition between two universal laws (subjective and objective); this opposition will evolve until finally the rational subject who identifies with the objective law discovers that there is nothing left to struggle about. At that point we shall have reached the ordinary commonsensical awareness of the social world that we regard as the natural attitude now.

Hegel is very explicit that active Reason involves a self-conscious awareness of the need for communal recognition. Reason as the active Category, the active unity of the self with all reality, is the consciousness that everyone recognizes my rational freedom.¹ Thus active Reason—the consciousness that I am not a singular self, but the category of all selves—is already Spirit; but it does not know that. We could see this as soon as we began to observe Reason observing its own activity. But active Reason only knows it instinctively. This means that when it discovers that its instinctive assumption about the social world (of which it is fully aware in the "form of thinghood") does not correspond with empirical facts, its "certainty" assumes the form of a false "knowledge" of how things ought to be. The transformation of this practical certainty about what ought to be, into an adequate comprehension of how things actually are (i.e. an understanding that shows why they ought to be the way they are) is a process that remains instinctive in most "liberal" minds. On the surface of their consciousness liberal idealists tend to remain "bleeding hearts." This illustrates how the Gestalten are self-contained. As observers of experience we shall pass from one kind of "social improver" to another; and finally we shall come to rest with the instinctive conservatives who always knew that the world is just the way it should be.

In paragraph 348 Hegel tells us that “this Reason will run through the doubled motion of Self-Consciousness again, and pass over into its freedom out of independence.” From the poles that he gives there we can see that “this Reason” includes Individuality that is Real to Itself as well as Self-Actualizing Reason. The terminus of the parallel is the Happy Consciousness of the Ethical Substance. This is to be set beside the Unhappy Consciousness of the Unchangeable. So there is a mirror-inversion involved, because the Ethical Substance moves towards fragmented alienation, while the Unhappy Consciousness moves towards reconciliation and union. The beginning of the parallel is with an individual consciousness that “must demand and produce its actuality in the other.” This covers all the stages of Self-Actualization, so it is proper to assume that “Pleasure and Necessity” is the rational “desire for another self.” In that case we must see the conflict between the Law of the Heart and the Heartless Law as a life and death struggle; and it is Virtue that must acknowledge the Lordship of the Way of the World. Freedom of Thought becomes real freedom of action in the Spiritual Animal Kingdom; and it is reduced to Sceptical nullity in the universal Betrug. Finally the Unhappy Consciousness is inverted in Reason’s Law-Giving, Law-Testing and in True Substantiality.

(a) *The Clean Slate*

- 1./347. Observation finds the identity of self and thing. This identity is what it is as a mediated self-making process. As Spirit it relates to an object which is another self who recognizes it. *This* certainty is now to be raised to truth through *interaction* with selfhood *recognized* as free self-maker, but *experienced* as object.

The “result” of Rational Observation, was the embodied mortal self that knows it is *free*. As “subject” this living self exists in an ethical world (rather than a natural one). So the whole world of Observation (not just the object of the phrenologist) is inverted into a practical shape by the transformation of observation into action. It is logically necessary that the whole world of Observing Reason should change its character at this point. For although it is our last resulting shape that becomes the subject of the new phase, this subjectivity *entails* a new world, precisely because it has an active, not an observing attitude. So it is Observing Reason as a whole that is sublated in Self-Actualization. Reason is the “certainty of being all reality”; so when Reason develops, the whole world changes with it.

The new attitude is a mediated one. The observing self was immediately identical with its observed knowledge. Self-Actualizing Reason is a higher mode of Self-Consciousness; it knows that the objective world is there, but it is there to be transformed. Selfhood is not to be *found* in the world, but *expressed* there; Reason is not to be observed, but made. This making is an interaction, because the immediate object of this self-conscious activity is another self (and is soon to be recognized as a world of other selves).

The agent self is a rational self. So it does not need to struggle for recognition, because all rational selves *must* recognize one another as such. There is a world of embodied selves, and its “infinity” is the circularity of self-recognition, i.e. of Spirit. But this infinite self-recognition does not come into being automatically.

The active self has to *learn* how to recognize itself in the other. The other self whom it does spontaneously recognize will turn out not to be the total sum of the independent selfhood in the world.²

The object of the rational self-consciousness that has “found the thing as itself and itself as thing” is the self-conscious rational “thing” that is independent of it.³ This rational “thing” is what we shall be concerned with continuously from here onwards. It will be transformed, but it is not something that we can put behind us.

The primitively natural self-consciousness was concerned with another self-consciousness, and what it wanted to show was that it is free. But its singular freedom came into conflict with its own singular embodiment. Observing Reason has also had this disconcerting experience in its own way. It does not literally die in it, because its aim is different and its experience is different too; but it encounters death as the final frustration of its efforts; and it is sublated as a result, just as the natural freedom of Self-Consciousness was.

Observing Reason wanted to observe itself as universal in its own singular embodiment. It could universalize its knowledge of the inorganic into “laws”; but it found that the living spirit was indeed *free*. The skull (as the unmistakable record of death) bears witness only to the spirit’s liberation. The encounter of Hamlet with Yorick’s skull illustrates this point. Yorick is dead; but his spirit is still living in Hamlet’s memory.

Even when we were seeking to observe the spirit in its body language we found out where it really was; indeed, we knew where to look for it even as rational psychologists. The true expression of the rational self is in the world of human action. Every singular agent, being embodied, is a “thing”; and the philosophical message of Yorick’s skull is that spirit is not just singular freedom, but freedom realized in a universal thing. Yorick’s spirit is not dead, because it was not embodied in his skull, but in what he did in the world. It is the world which (as the real bearer of the spiritual record that Gall looked for in the skull) is the object of the rationally free self-consciousness; its universality consists precisely in my recognition that it is shared and made by every other rational agent with me. This is the independent object that has the “form of thinghood,” but is really a self-consciousness. Hegel says so explicitly. This objective Self-Consciousness is the ethical substance that Observation vainly sought for in the naturally given body of the singular subject.

The existence of this “universal thing,” this “independent object in the form of thinghood,” is very evident in all active experience, even though it is not sensibly singular, and hence not observable. What is not immediately evident is that it is “a self-consciousness.” The “active Reason” that we shall observe has only an instinctive awareness of that. But at every stage of our spiritual experience we must be aware of the *Volk* as our social substance. Thus Hegel thought of Württemberg as his *Volk* and spoke of himself as a Württemberger; but this *Volk* is only a potential self-consciousness. We have this civil consciousness as an inheritance from the Greeks. But we no longer have the Greek intuitive awareness of our community as a *self* (represented by our artists as Athena was for Athens). We have only the “certainty” that it is not “alien,” and the “knowledge” that we are “recognized” by it.⁴

“Observing Reason” itself (being an activity of essentially *universal* import) involves and presupposes this *real* Universal Self. It came before our observing eye as an object in “Psychology,” because we get our educational norms from it. But also it sustains our observing activity; indeed that is how it exists for Reason in its completely universal shape. Our scientific discoveries achieve the status of “knowledge,” only when they are published to the community of other interested observers. A rational observer cannot exist in isolation. It is of the essence of Reason that it belongs to everyone; so there have to be logically recognized ways of demanding and receiving recognition for a rational discovery, since otherwise it could not be that at all. A letter may be enough; but only if it goes to the right address. Writing to Mr. Henry Oldenburg as Secretary of the Royal Society established the status of a scientific claim clearly. This was illustrated even in the case of a scientific discovery as fundamental as the theory of natural selection.⁵

Even in the world of Observing Reason ethical conflicts could arise. The controversy about the discovery of the differential calculus illustrates this. So it is not surprising that the first experience of Practical Reason causes something analogous to the life-and-death struggle. The naïve agent self believes that it can make its own fortune in the world, and ignore whatever it does not perceive to be relevant. It knows that it needs a community, because it is aware of its own universal (i.e., shared or communal) character. But it does not yet have the awareness (which *we* have) that the community is its own thinghood. This consciousness is precisely what it has to “actualize completely through itself.” For Reason as Observation, “Spirit” was its own “meant” inwardness (not the customs and laws that are the substance of the community). Active Reason has the social world as its conscious object; but it does not have our memory of the experience of Observing Reason. In its primitive shape we shall see that its social world is reduced to the *natural* minimum where Reason’s “certainty” and “knowledge” can be *absolute*. But the “first experience” will teach the agent-self that it cannot take its pleasure in the social world just as it likes. The *real* objectivity of Reason has the necessary shape of universal custom or law. So, after that first experience, Active Reason ceases to be naïve; but even then it does not cease to be instinctive. It loses its instinctive character only after its second experience.

- 2./348. The pattern of development will repeat that of Self-Consciousness (just as Observation repeated the stages of Consciousness). As independent but singular, it will try to make the other over into its own image; learning what free universality is, it will identify with the community of mutual recognition and become the real substance of spirit (into which all singular shapes return).

Hegel points out here that the section on Reason as Observation was a recycling of Consciousness at the level of Rational Self-Consciousness. The correspondence is a strangely transmuted and ironic one, but it is there.⁶ Sense-Certainty becomes the certainty of Reason discovering and classifying everything in nature, and establishing the universal laws of the order. This certainty is secure at the foundations and runs away into abstraction as the observer reaches the organism.⁷

This moves us to the rational perception of the Self as a logical Thing (*Sache*) with psychological properties. Here the correspondence is more direct. There is no problem now about the identity of the thing with its properties, but it is a problem to determine what the real properties are.

This displacement of the problem from the identity of the thing to the identification of its properties is an inversion, because in Perception it is the properties (our “ideas”) that are immediately known. In the rational analogue of Understanding, the consequences are plainly visible. The Understanding itself constructs the purely intellectual infinite thing/Thing (*Ding an sich* for it, *Sache selbst* for us) which sustains all properties lawfully, Physiognomy teaches us that the logically active thing has *no* determinate properties except that of being able to assume any property it likes. Observed in the mode of Understanding, the active Thing is a divided infinite, an infinite judgment. Whereas the Understanding *resolves* the difficulties of Sense and Perception, Bodily Observation arrives at a contradiction; and the inversion of direction shows itself in the fact that Observing Reason *arrives* just where the Understanding started: at the radical separation of the sensible from the intelligible world.

Self-Actualization will repeat the dialectic of Self-Consciousness in a similarly transmuted and inverted way.⁸ I suggested a fairly detailed parallel in my preamble to this section. We shall have to examine it step by step as we go along. We must begin by seeing that the rational agent starts from the naturally given foundation with a clean slate. She is *not* in a “state of Nature” because she has a modern education, and lives in a modern rational community of equal recognition. But like the natural Self-Consciousness she has the awareness of her immediate being as sublated.

It is the embodied individual who acts. The free, living, individual was the result that Phrenology gave us. Active Reason is initially aware of itself only as an individual. It does not have to *prove* this to itself, because in its “Observation” process, Reason became clearly aware of itself as the universal category of all rational agents. But now (unlike Rational Observation) Active Reason begins with the Concept of itself as rationally individuated. It recognizes that it is one of *many* rational selves; but it does not care about the others. The immediate standpoint of Reason, as the observation of nature (which was reinstated in Physiognomy and Phrenology) entails that Active Reason must begin on the same level of spontaneous impulse as the natural Self-Consciousness. That was why I could make plausible use of Faust (who properly belongs *here*) as a paradigm of the primitive self-assertive Ego. Faust is quite aware that everyone recognizes his rational status; and he recognizes theirs, likewise. *He* is not in any danger of getting into a life and death struggle, and he does not keep serfs in fear of their lives. But the self-realization of others is not his concern; and the first lesson that life teaches him is that that is a mistake. This was the only lesson made fully explicit in Goethe’s “Faust-Fragment” (1790). The parallel with perfected Desire is a direct one. The rational Self must discover and experience what the other feels; but (as Reason) it must do so categorically or universally, since the *other* of rational consciousness is the human

Spirit as such. Reason is implicitly Spirit; so the object with which active Reason has the certainty of identity is Spirit. But because of its “form of thinghood” this active certainty is the certainty of identity with Spirit as Substance. We see first the figure of Rational Desire, and at the climax we shall reach the Happy Consciousness of the Ethical Substance. When the object is recognized as the spiritual substance, all of the forms of subjective consciousness flow back into it. This will be apparent to us as speculative observers; whereas the consciousness that we are observing, comes back simply to the complacent sense that it is the supreme judge by which everything rational is certified as such.

This paragraph identifies for us the poles of the movement: Faust and the Ethical Substance. It also reminds us that the intervening movement is “doubled.” When the natural Self-Consciousness met its *double* no equilibrium was possible, until one of the two accepted the dependent role. Then Self-Consciousness existed as *two* complementary half-selves. Unified again in the Stoic, the understanding self doubled itself as Stoic and Sceptic; and finally it achieved the infinite unity of an internalized contradiction as Unhappy Consciousness. The rational analogues of the beginning and end of this movement are Faust rejecting the Tree of Knowledge in favor of the Tree of Life, and Socrates conducting his internal dialogue with “the Laws.” What intervenes is a “doubled” movement analogous to that of lord and serf, and Stoic and Sceptic. The rest remains to be seen.

- 3./349. The spiritual substance is the concept that *we* are already conscious of as real. It is the realm of *Sittlichkeit*, i.e. a community of actual individuals whose spiritual essence is a unity. For them it is both another self-consciousness, and an existing thing; and precisely because they are at one with it, they are rationally self-conscious. *Law* is its abstract objectivity, but *custom* is their own self-conscious identity with it.

Nothing could demonstrate more graphically the fact that we have turned the crucial corner, and embarked on a new journey whose goal is positive, than the logical need to discuss the terminus of the movement at once. When Hegel says that this goal has “already arisen for us,” we should remember how he introduced the Concept of Spirit at the beginning of “Self-Consciousness” (par. 177). But that was only by anticipation. At that point he wanted to underline the fact that Self-Consciousness is “the realm where truth is at home” (par. 167); what logically arose was only the Concept of Spirit that we needed in order to interpret Desire properly. I took advantage of that to discuss how the *polis* satisfies Desire perfectly. I showed how it can be conceived to do that without a “struggle for recognition.”⁹ But it might plausibly be claimed that my commentary was going beyond what was unambiguously required and justified. “Truth is *at home*” (par. 167), and Desire is (or can be) satisfied without any radical conflict, in the Family. The defence for going beyond that, is that no nuclear family is a subsisting *realm*. In order to be a subsisting community the family becomes a tribe (which may hold a territory, and must have an authoritative head). Then, according to the young Hegel’s image of Theseus, a group of warring tribes may be reconciled by a charismatic leader into the community that calls itself a *polis*. This achievement will only be possible where

the tribes have a mass of customs in common, and in particular a mass of family pieties that are universally respected. In this sense—the sense of the *polis* as a community of families, for which Antigone will protest and die—Spirit as the “ethical substance” arises logically from (and for) natural desire; and for that reason natural Self-Consciousness can rightly be called “the realm where truth is at home.”

The *polis*, however, is not the Ethical Substance, but the ethical thing. The Substance is *das Volk*, the Hellenes who are a warring community of these “constitutions.” What arises “for the sake of life” is only the real Concept of the ethical *Ding*. Only now has the “ethical Substance” arisen logically as the objective of the instinct of Reason. Sophocles did right (in the *Oedipus at Colonus*) to make Theseus a contemporary of Creon’s. What Theseus created from the natural base of the Attic tribes was the political community, the rational authority of the “daylight” of Reason for which Creon stands. The Substance had to be there already; the ethical *thing* is secondary and derivative in the sight of natural self-consciousness. When it comes into conflict with natural piety it is nothing but arbitrary tyranny, the blind *hubris* of a man (or a council of men) which does not know itself, and respect its own limits. But natural Desire *needs* this community of rational recognition, and can never be harmoniously fulfilled without it; so, as Aristotle said, “the *polis* is natural, yet he who invented the *polis* was the greatest of benefactors.”¹⁰

This spiritual *Ding* is what arises now for Self-Actualizing Reason. It arose for us already when we were watching Reason (as Psychology) look for it *inside* the rational individual. We had to know, even then, that the real nature of the human spirit was what is expressed out in the world. The rational psychologist had to know it “instinctively” too (i.e. she had to be aware of it empirically). The problem for her was whether the rational self that she was observing was virtuous or criminal in *character*; and the criterion for that was the custom already incarnate in the observing self. But the naïve observer had not yet recognized that this custom was the real thinghood of the self.

The active rational self recognizes that the *thinghood* of Reason is its own self-expression; so, for it, that is still an objective to be realized. This self does not know that the objective is already real. Naïve Reason is unconscious of its identity with custom—the identity that Plato called “Justice.” But every citizen who has reached the “age of Reason,” must incarnate it, if her education has been successful. The active Reason we are observing has also been educated theoretically; but when it makes “self-realization” its goal, it forgets that education. It can do this, because (as we saw in our observation of Psychology) rational individuality has two sides. It will not forget the custom instinctively because it is the actual substance of rational self-consciousness. The custom can be violated, and rational individuals are bound to be aware of that; but they do not wilfully choose to break it. So far as they are substantively rational, they must feel they have brought shame on themselves if they cause it to break. Gretchen is only rational in an instinctive sense; but she feels the shame put upon her by the social Reason. Faust, on the other hand, is a perfect logical reasoner, who has consciously cast off all of his rationally imposed psychology. In Valentine he meets the instinctive response of one who knows that even to

allow another to breach the custom is a dishonorable submission to violence. The singular consciousness who is a “good character” has the “abstraction of universality” as part of her concrete working self-consciousness in this sense.¹¹

In the way in which the natural self-consciousness is aware of it, the ethical substance has a universal representative. Every member of the community is an “implicitly universal self-consciousness,” being aware of the *polis* not just as a “thing,” but as an embodied self-consciousness. This self-consciousness is the god or goddess of the city; and the city’s unbreakable laws and customs are the living body of this universal self (Athena at Athens, Hera at Argos, Zeus at Olympia and so on). This recognition-relation is the structure of Spirit (see pars. 25–26, 177); and this objectivity of Spirit is the “thinghood” of the rational self.¹²

- 4./350. The life of a *Volk* is the actualization of the concept of Spirit for intuition. Reason is a fluid Substance, stable, singular yet self-pluralizing, the soul and essence of its independent members, who are conscious that they are singular independent essences because they offer up their singularity, but also aware that the one essence is the *work* produced by their singular efforts.

The *polis* member can intuit her own perfect oneness with this other self. This is the complete actualization (*Verwirklichung*) of self-conscious Reason. It does not belong to the intermediate stage of Reason’s development, where we stand at present; it is the union of fulfilled Reason with fulfilled Self-Consciousness. Instead of the Unhappy Consciousness on one side, and the rational self as Pure Practical Reason on the other, we are here shown the Happy Rational Self-Consciousness (but at the level of *self-intuition*, not that of developed reasoning). Hegel’s chapter on Spirit begins with this self-intuitive community; so he is telling us here, how to conceive the transition from Law-testing Reason to True Spirit. Identification with the community gives me a substantial self which is the “negative [side] of my [natural] self”,¹³ and that identification means precisely that this substantial self is “*my* being for *myself*” (as Hegel puts it).

The metaphor of the *stars* here looks forward to the Light-Essence as the *real* concept of religious identity in its absolute simplicity (par. 685). The ethical substance “shatters [*zerspringt*] into many completely independent essences, just as light does into stars as countless points that give light on their own.” These *essences* are the singular community members; but, as we shall see, they cannot achieve “complete independence” without the preservative operation of family piety. Their destiny is to sacrifice their singular embodied being, because it is through this sacrifice that they shine forth like the stars as perpetual lights. By devoting their lives to the community they show that the substance is indeed their “soul and essence.” The effort of Psychology, Physiognomy and Phrenology to find a “soul” inside their living bodies was misdirected. The devoted sacrifice of their embodied lives in labor and service creates the body of the community that is their real “soul and essence.” They “bring forth the thinghood of spirit as their work (*Werk*)”; and in return the substance gives them “spiritual essences” of their very own.¹⁴

- 5./351. The satisfaction of life's most elementary needs depends on the might of the *Volk*. The *Volk* gives both form and content to the permanence of the individual's activity, i.e. he has a function, and his own advances become general possessions. Products become general goods, and needs are met by division of labor. Everyone becomes a thing, and the language of custom is the speech of the substance that all inherit and maintain. This substance also expresses the singular individuality of everyone; it is a Spirit in which they recognize themselves and each other. All are free because devoted to the maintenance of this general freedom.

As Aristotle says, "the *polis* comes into existence for the sake of life."¹⁵ "Life" (i.e., the Family) requires the maintenance of a self-sufficient community. The activity of individuals is directed towards their family-needs. It is the family that has "subsistent" (*seiend*) singularity; but it needs the *polis* for its defence. Military protection, however (the guarantee that living activity will persist safely as the form of the natural species), is not all that the *polis* provides; it provides the means of subsistence for all through the division of labor. Communal life is organized into the different crafts; everyone gets a family living by performing some recognized function to supply the general need. Family members aim to make a living, but what they produce is a general utility. In this "system of needs" everyone becomes an instrument; and our social function defines what we *are*.

The individual (always a male except in Plato's ideal Constitution) is directly conscious of the community as his object when he goes to the Assembly or the courts; and even more vividly, when he appears in armour with his field rations, ready for a military expedition or campaign. Then he is consciously making himself a thing (an expendable instrument); whereas his private existence can focus on the "enjoyment of life" which is its explicit goal. But this being-for-another (i.e., for the *polis*) is identical with his being-for-himself; what he says about it is that he is fighting for *his* hearth, his altars, his City, with its laws and its Gods that are equally his own. This is the "divine nature" of language (first mentioned in par. 110) revealing itself positively (or as wisdom). In this situation the individual says both that he *belongs* to the *polis*, and that the *polis* is *his*; his every expression reveals the identity of the self with its Substance. Those who march beside him are *his* fellow-citizens, devoted to the same laws and gods, because they are consciously part of the same Substance. The recognition of his own true Self in all these others is what Hegel called (in earlier essays such as *The System of Ethical Life* and *Natural Law*) "life in the *Volk*." Those who are destined to die in the battle will live on in the communal memory (and they know this because they have all participated in the public and the domestic cult of the dead).

This experience of *identity* is an experience of freedom. The opposition between "thinghood" (public service, or being for another) and "Self-Consciousness" (freedom, or being for self) is wiped out. There is no sense of a conflict, no subjection of the single life to an alien whole. The citizen who dies fighting expresses *himself*; he makes a voluntary sacrifice for the sake of the very Substance that makes the free enjoyment of life possible for himself and his family.¹⁶

- 6./352. The *Volk* is the realization of the Spirit as a thing. The individual finds her *Bestimmung* achieved. Wisdom and virtue are the following of the custom.

The phrenologist attempts to observe the human being as a perceptible thing with a secret “spirit” inside it. In paragraph 351 Hegel says explicitly that “the Laws” are the “universal objective thinghood” of the individual. We have to see the *polis* as a universal thing, with a completely public spirit that returns from it to the freely acknowledged, openly proclaimed, and completely demonstrated self-consciousness of the individual. In this perspective the *Volksgeist* is a perfect logical model of double inversion. The opposite poles that the educational psychologist observes (natural self-assertion and social custom) are brought together in a universal concept that has a higher level of comprehension.

We have to go back to the classical *polis* (which means remembering the citizen armies and their wars) because it is the battle and the campaign that actually resolves the difficulties of Hegel’s neo-Aristotelian psychologist. “True Spirit” does not need Physiognomy (still less Phrenology).¹⁷ The essentially ethical concern of the “Psychology” that enters into the “science of experience” is clearly visible at this point. It was a relatively little known Pythagorean named Xenophilus of whom it is reported that he said that a child would be best educated “if he were to belong to a city with good laws.”¹⁸ But Hegel no doubt took him to be recalling a tradition that went right back to the Master himself. The tradition that Plato himself received about Pythagoras confirms this interpretation; and Plato’s *Republic* is clearly inspired by it. But it is Socrates who is the paradigm case of “living” (i.e. in actual fact, *dying*) “according to the customs of one’s *Volk*”—even when they have *not* satisfied the Pythagorean standard of *eunomia*.¹⁹

(b) *Modern Morality*

- 7./353. But the self-consciousness that is only spirit in Concept has this realization either behind or ahead of it.

After writing for several paragraphs as if we were about to embark on the development of Spirit proper (instead of Active Reason) Hegel now does something even more paradoxical. He returns to the position we are actually in, but he calls it “Self-Consciousness,” not “Reason.” At this point he wants us to reach back to the beginning of Self-Consciousness (to par. 177 where the concept of “Spirit” was first introduced) as well as forward to the beginning of the chapter on Spirit. The actual emergence of Spirit is at the level of the immediate identification of the self-conscious individual with the body of social custom; and that has nothing to do with reflective rational thought. As the case of Socrates shows, rational thought need not alienate us from the truth of custom. But it can do so; and when practical Reason emerges as an immediate mode of Self-Consciousness it is bound to do so. Historically the singular self-consciousness comes into its “rights” (i.e. it ceases to be a criminal phenomenon) only after the decisive rupture and destruction of the

“true Spirit” (which has just been presented to us as the authentic “thinghood of Reason”). The “active Reason” that we are actually observing, on the other hand, is the Self-Consciousness that has emerged from the “night of the supersensible Beyond into the daylight of the present.”²⁰ Our modern, fully rational, Self-Consciousness necessarily has “True Spirit” *behind* it; and it has “Absolute Spirit”—the Spirit that is “not Substance, but just as much Subject” *ahead* of it. It is only in this intermediate situation that Reason can become fully individuated as self-consciousness. Before it can make itself as the subject, it has to have lost its substance.

Socrates is not alienated from his substance; but his trial is itself one of its death-throes. It occurs in the context of an “edict of oblivion” that the victorious Spartans compelled the restored Athenian democracy to pass; when Socrates was put on trial, Athena was no longer the source of her own wisdom, or the mistress of her own house. When he is put to death, free rational reflection, and the law as an alien power in the abstraction of thought, must arise willy-nilly (let Socrates preach identification with the Laws never so eloquently) because there is no longer a free Substance to identify with. That loss is our inherited condition.

- 8./354. The life of the *Volk* is the immediate reality of *Sittlichkeit*. Being immediate, universal *Sittlichkeit* exists determinately. This paradise must be left behind if its universal essence is to exist as knowledge.

As I have already said it is the thinking self-consciousness that must go forth from the happy state of ethical identification. Paragraphs 354 and 355 are devoted to the relation of *rational* self-consciousness to this singular communal Spirit (or determinate Substance). Then comes a paragraph on the problem of the rational self-consciousness seeking individual happiness when True Spirit is dead and gone. True Spirit is the starting point for the scientific comprehension of social experience. The point where we now stand is the turning point, because it is from the moment when the rationally active individual emerges that we can survey the whole evolution of the Spirit accurately. We ourselves are the *philosophical* shape of Observing Reason. But the objective reason why the individual active consciousness is bound to emerge is simply that the ethical life of a *Volk* is a contingent historical fact. When Socrates was put to death, the Substance with which he identified, the Spirit whose voice he heard speaking as “the Laws,” had just suffered an empirical defeat which was to prove fatal to it. That Substance was the “universe” of its citizens; but it was also just as “singular” as any family, and its “independence” was as fragile and uncertain as the continuance of a particular lifeline.

Rational reflection emerged within the Greek world, because the Greek cities were always fighting one another. They also traded with the barbarians, and existed under barbarian political suzerainty (specifically under the Medes, the Persians, and the Egyptians). The pluralism of cultural experience that this produced was an important contributory factor in the rise of the Sophists (who represent the principle of abstract thought in its alienation from ethical custom). But this presence of “critical” Reason was not fatal to the Ethical Substance; quite the contrary, in fact, if we think that the existence of the Sophists was essential to the appearance of

Socrates, Plato, and Aristotle. Aristotle's pupil Alexander was another matter altogether, because the perfecting of the Macedonian army showed that the *polis*-system was not an independent substance capable of maintaining human virtue at its "best and most complete."

Already the hegemony of Athens had given way to that of Sparta, and Sparta to Thebes. But with the triumph of Macedon, the *polis* gave way as a *system*. Philosophy now had to become "the guide of life" with the radical awareness that (as Democritus put it already in the lifetime of Socrates) "to the wise man, all the earth is open to walk; for the native land of the good soul is the cosmos as a whole."²¹ This is the Self-Consciousness of the "realm where truth is at home." But in the "cosmos" to which Democritus looked with such confidence, the only universally prevailing law was the oldest and (as Plato might have said) worst of rights: the "law of the stronger." So it was not the open earth that the free philosopher actually walked, but the inner realm of thought that was eventually to become a dark night of unhappiness. Active Reason is the return to union of the natural and the rational self-consciousness which went apart when the ethical substance was smashed. For Active Reason "all the earth is walkable" indeed. But it does not yet have the concretely reflective awareness of its essence as "spirit." It is "abstract" reflection, with the natural life of the subject as a free self-consciousness to reflect upon. It does not know that it is on the way back to a reflective identity of itself (the universal subject of scientific knowledge), with the Substance (first of the *nation* whose many *Völker* speak the same language, and finally of that same "cosmos as a whole" to which Democritus referred). The "appearing of the Spirit" as a self-consciously universal community is only *now* beginning in the daylight of the present; it will not end until we have travelled all the way from the Athens of Sophocles and Socrates to the *rationality* universal Church.²² The first half of the journey (in which the universal Concept of Reason itself was generated) is just as essential as the modern journey that we are about to observe. That earlier pilgrimage will have to be repossessed when the self-conscious concept of Reason moves from its immediate subjective status into its "truth" as Spirit.

- 9./355. The singular consciousness that has its existence in the *Volk* is a solid trust. But once it is thoughtfully aware that it is independent, this trustful identity is lost. From being a vanishing moment in the social whole, individual Reason becomes living truth, and the whole becomes just a "thought."

The fate of Socrates illustrates the unreflective "solidity" of the self-consciousness that directly identifies with its ethical substance. He, who can articulate the spirit of the Laws so clearly as a reflective subject, appears to the solidary ethical consciousness of his fellow citizens as a dangerous subversive from several points of view. He does nothing, and he goes round like a beggar (though he does not beg); he talks to the young who (for quite proper customary reasons) have still nothing to do; and what he says is indistinguishable from what the Sophists—who are acknowledged subversives—say. But the Sophists are quite ready to answer the questions they raise if someone pays them to do it, whereas Socrates offers no

answers, and takes no money. His object, apparently, is to make everyone care for their own soul. But the soul is the human essence; and we Athenians have Athena as the soul of our city. We all have our household gods too, but this cult of the individual soul, this urge to know a self and achieve a virtue, which is either more comprehensive than that of the City or more aristocratic (or both) is obviously a dangerous rival to the wisdom that sprang from the head of Zeus without a mother.

Socrates, who certainly taught that "Virtue is knowledge" if he taught anything, and who presumably recommended the "care of the soul" on that basis,²³ was the incarnation of Active Reason as an "abstract moment within the Substance." All of the ways in which he was different, were ways in which he was self-isolated. The isolation was not part of his intention; and if the Peloponnesian War had not proved as fatal as moderates like Sophocles and Aristophanes always feared that it would, Socrates' trial would have been only one of the contingencies with which the political life of the Athenian democracy was always (and necessarily) filled.²⁴ What made the fate of Socrates emblematic was the fact that the City (with its substantial tradition from which Socrates was not inwardly alienated) had already condemned itself to death.

Socrates certainly had not come to the thought of "being a pure *singularity für sich*." He could not contemplate going off to Boeotia (as Democritus could). But the jurors decided that he *was* just "a pure singularity *für sich*"; and (as Socrates foresaw, and perhaps Democritus also) it was to Boeotia—the proverbial land without culture—that the whole ethical world went.

- 10./356. Or, this happiness is the paradise that is to be reached. At the stage we have reached, Spirit has not realized itself as a thinghood. The singular rational consciousness has self-realization as a *mission*; and it has the certainty that its happiness is there waiting to be found in the world. It sets out to make its fortune.

Socrates and Democritus have not yet "come forth against" (*gegenübergetreten*—par. 355) the laws and customs. Even Protagoras (whose theory is pictured by Aristophanes as a contest between the Just and the Unjust Logos) clearly holds that the "common logos" is the fount of right and justice. But it was Protagoras who expressed the social "substance" as a "relationship": or as what the Greeks called "the law of the stronger."

We have already seen how Hegel invokes this law as the "first experience" of Self-Consciousness. But the "first experience" of Active Reason is rather different. As Hegel turns to consider the problem and prospects of singular Reason in the world, we have a chance to estimate the difference. Neither the natural nor the rational self-consciousness has any memory of a "Paradise Lost" that is to become "Paradise Regained"; and the natural goal of both is *happiness* (meaning the satisfaction of natural desires). But the rational self lives in a world of *utilities*. It does not have to fight everyone else, because society exists for it as a system in which everyone helps everyone else to achieve happiness. The goal of active Reason is its own duplication. It seeks to make the world that faces it reasonable. Everywhere it wants to find only itself. But this self-realization is ambiguous in

meaning. As Virtue, Reason will have the goal of “universal enlightenment” quite explicitly. But in its primitive shape its goal is simply to see a fulfilled or happy self in the world instead of an unhappy observer facing an unsatisfying world; and at all stages of its evolution the goal of Active Reason will be individual happiness. Unlike the natural self, however, it seeks this goal universally. Its own initial selfishness is just an impulsive oversight.

- 11./357. Active Reason is at the beginning of its ethical experience of the world. Before it reaches the ethical substance, it has only natural impulses; after it has lost it, these natural impulses are bound up with the consciousness of its true vocation. The buildup to the ethical substance transforms the impulses, the breakdown transforms our attitude towards them: for the latter is concerned with *Moralität*, as the rational consciousness of the ethical substance, rather than with *Sittlichkeit*. The three shapes of Reason constitute only the subjective side of the genesis of *Moralität*, not the side of its emergence from the Substance. We have lost the ethical substance, so this is the aspect that belongs to our world.

Hegel now brings the two standpoints (ours and that of active Reason itself) together, in a paragraph that is extremely dense and confusing. We must expound it fully and carefully in order to show that there is no confusion in Hegel’s own mind.

The thinghood of Reason, the truth that active Reason is striving to “actualize,” is the self-knowing identity of substantial necessity with individual freedom which was realized in the *polis*. But the self-knowledge that we are observing has to begin from nothing. This singular consciousness is just the instinctive certainty that Reason is what it does. The natural self-consciousness of chapter IV (the self that is only implicitly rational) needs to create the ethical substance in order to actualize its own rationality. That is not what we are observing now. Our concern is with an Active Reason that exists in the world of rational Observation; it has *our* social world as its stage and repertory. All of the impulses of natural life, are now experienced in the context of a definition of self-fulfilment (or happiness) that is known. This is an inheritance of Greek wisdom; but it is inherited as theoretical knowledge, not as actual virtue. In the Greek experience all the forms of natural impulse were consciously subordinated to the public good of the City. Every family got its living for this year in order to go on to the new season and do the same again next year; and every generation prepared the way for the next generation to do the same. But everyone knew that this family happiness was not valid in isolation; they were citizens, and their singularity was sublated in the maintenance of the community. Now the City is gone, and only the rational ideal of individual happiness in this world remains.

The free rational individual in the modern world has nothing but these universal natural needs to fall back on as the content of the rational self she wants to create. Like the freedom of the Lord in the world of the natural self, the higher freedom of Reason now exists (paradoxically) only in order to organize the life of natural necessity.

Essentially, therefore, the active world of Reason is the world of Civil Society. In this world there is nothing “rational” about the wars of particular societies; the

values of patriotism are a snare and a delusion. The goal of life must be the creation of a world of peace and plenty in which the truth of Enlightenment (as we shall become familiar with it later on) can be spread. The gospel of rational Enlightenment—"the true vocation (*Bestimmung*) and essentiality of Reason"—is itself the gospel of peace and plenty, and the promise of a land flowing with milk and honey. The political organization of life is now seen only as the instrument of Reason for the achievement of this goal. Even in the sphere of public service the ideal of Reason is to establish the bourgeois system of free competition, and the career open to the talents. No one identifies with any of the social machinery as her ethical essence. The social substance is *selbstlos*; "selfhood" belongs only to the individuals who have their careers to make, and their family fortunes to maintain.

In this modern situation of emergent individual Reason, we become subjectively aware that there is a higher goal than the natural goal of happiness; but the higher goal is now a personal one. What Active Reason will discover is *Morality*, the ideal of free obedience to a law that one gives to oneself. This law is not given by Zeus or Athena; for that matter, it is not given by the "universally rational God" of Moses or of Kant either, though we shall have some trouble getting him out of the way.

Reason has no problems with divine lawgivers. It is certain of its immediate unity with God, so it does not need any religion at all. The religion of rational enlightenment—when we do get to it—will be called "the exhalation of a stale gas" (par. 586). That is another of Hegel's vulgar sallies (in polite language). Chapter V itself ends with the abstract formula of the Categorical Imperative. All of the "content" of our modern *Moralität* will come from the restored *Sittlichkeit* of the new "philosophical" age which is now dawning (par. 11). Our own Science is only the newborn *Concept* of that age (par. 12); so it is not surprising that we do not learn any more about modernity in this book except what we can pick up by inference from the advance of its "moments" as "purposes" against the lost *Sittlichkeit*. We shall witness this in "Absolute Freedom" and the "Moral World-View" later.

Our task at the moment is to watch the moments evolve in their proper character as stages of the singular rational consciousness. Each of them in turn will be championed by a hero of the moral life; and the climax of their procession is the concept of individual virtue. Eventually Hegel will offer us half a paragraph comparing this with the "virtue" of substantial *Sittlichkeit* (par. 390). He cannot legitimately present the "shapes" of subjective morality as moments of the morally ethical Substance, because the concrete morality of the new world does not yet exist; and on the other hand the stages in the evolution of ancient virtue could not lead us logically to "the *consciousness* of the Substance" or to Reason's actual world of "Civil Society." So although he speaks here as if there were a choice to be made, there is really no choice at all.²⁵

What is most important in this paragraph is the clear assertion that *Moralität* is a higher *Gestalt* than *Sittlichkeit*. Writers on Hegel's ethics often talk as if he was a simple partisan of *Sittlichkeit*. But that is a mistake. Modern *Sittlichkeit* embodies *Moralität*; it is a double inversion of classical *Sittlichkeit*. The developed *Gestalt* of Conscience (with its community of "forgiveness") is the comprehensive concept

into which all the content of Hegel's own political theory fits. The Kantian shape of this Concept is the guise in which Virtue comes forth against the "*Sittlichkeit* that is lost"; and in that guise its destiny is to be reduced to absurdity already in this chapter. But its ultimate fate is to be incarnated in a new shape of concrete social Virtue.

What happened in the original making of the ethical substance, was that the natural impulses became cultured. Hesiod's Boeotia became the Athens of Pericles' Funeral Oration. The Faust of the "Fragment," on the other hand, only learned not to identify happiness with the gratification of his desires. It is essential to see that, whereas the natural self-consciousness *must* secure material prosperity before there can be any cultivation of Reason for its own sake, the rational self (as we observe it here) has already achieved economic liberation. Faust is choosing a new path of self-cultivation. The University career that lies behind him is important because it shows us how he has come to be in a position to do that. Stoicism, Scepticism, and the Christian pilgrimage are all behind him; and the natural and humane sciences of observation are all at his disposal. He knows that Aristotle said that the life of enjoyment is fit for human pigs (those poor Boeotians whose life horizons are so narrow they can imagine nothing better); and the Necessity that Faust encounters is not the hangover that follows a drunken orgy (which a proper Boeotian accepts as the conclusive evidence that he really did have a "good time").

Faust's lesson is about human relations. He has to learn from actual experience that his own rational self is constituted by its relations with others. The experience that is already behind him because he has achieved a theoretical mastery of it as abstract thought, must now become flesh of his flesh and bone of his bone again; and this time he will have a reflective awareness of what is happening. He will know that he, and only he, is the architect and agent of what happens. Socrates recognized that "the Laws" had made him into the individual who gave quite a new meaning to Apollo's injunction "Know thyself." Faust has gone through a social education which had the single object of teaching him that he was *nothing*. Now therefore he knows that his imperative is "Make thyself." What was wiped out in the penitential discipline of accepting the Unchangeable as his real Self was the substance and authority of custom. Henceforth the rational self will be what it makes itself by its actions, and what it accepts responsibility for by reflective choice.

All of the experience of the natural consciousness must be there, scientifically observed and classified in order that the action and choices may be fully rational. The story that begins with Faust will end with the "Law-testing Reason" of the sage of Königsberg. Autonomous Reason must begin by knowing everything and sublimating it as Faust did. We need not do what Faust did—indeed, if we are rational, we shall not, because like Ulysses talking to the ghost of Achilles, we have learned where that path leads. But we must know that those things *can* be done, and that age old customs and pieties are not adequate ground for not doing them. Eventually we shall come round to the Unhappy Consciousness again, and the recognition of our active rationality as "the knowledge of good and evil." Then we shall know that this possibility, this freedom, is itself "evil." But Faust is Adam who has emerged from the Garden of Nature. He is the first father of all who are (or

aspire to be) rationally responsible for themselves. We can never disown him. It is *his* freedom that Reason is responsible *for*.

Our science has the shape it has, only because our world stands where it does. We can see this by comparing the *Phenomenology* with Plato's *Republic* (and with the first three books of the *Laws*). In the *Republic* Thrasymachus poses the problem of rational self-consciousness; and the exposition of the Ethical Substance is the answer. Plato's "phenomenology of Reason" then runs back downwards to Thrasymachus from there; and in the first books of the *Laws* he sketches a "phenomenology of spirit" that advances to the ethical substance from more elementary shapes of social relations.

But these examples of the phenomenological road *to* the immediate Substance show that Hegel's procedure is not just *historically* necessary. Our position as the Faustian rational consciousness that stands *in the middle* (with a lost Substance behind it) is the one from which the evolution of experience can be comprehended and organized as a Science. The Ethical Substance supplies the *beginning*. We have to have achieved it and lost it, if we are to appreciate the proper relation of rational individuality to it. Hegel's ethics is not the ethics of natural *Sittlichkeit*, but the concrete ethics needed by Kantian *Moralität*; and his book is not a "lament for Hellas," but a demonstration of how and why the Greek tragedy was a fortunate fall. His ethics is here in this book (far more completely than anywhere else, if only we can discover how to put the pieces together). But his political philosophy is not here.

The missing objective side of the goals that subjective Reason sets for itself in chapter V B, will be supplied by the discussion of "Spirit in Self-Estrangement" (VI B). For the moment we are studying only the evolution of the singular rational self-consciousness. The Ethical Substance has vanished completely from the actual world; so it is not upon that rock that these subjective goals are wrecked. The goals themselves are social; they are images of the rational community as defined by subjective Reason. That community is taken to have no objective "selfhood," so the internal contradictions arise *subjectively* as conflicts involved in the attempt at rational universalization. The subjective goals collide with the objective social order; and that enforces a development of consciousness. The ethical substance will appear only when we are logically obliged to recollect it in its immediacy because Reason cannot reconstitute it by the direct universalization of subjective goals.

- 12./358. As the initial concept of Spirit, Self-Consciousness takes itself to be the essence as singular. It aims to realize and enjoy itself as such.

All through Reason as Observation we were observing the self-conscious observer. That self-consciousness is inevitably singular because it is embodied. From the psychologist onwards it has been wrestling with its own embodiment as a problem. Action in the world is the only solution to that problem. So now the agent comes before us as Rational Desire. The rational self has observational experience at its command, so it knows that it does not need to look beyond itself. It can realize itself and enjoy itself just as it likes. It knows what all the possibilities are. But it is

seeking the happiness of Reason. Reason is that “other self” which natural self-consciousness recognized to be the goal of desire; the goal will be reached only in the universal Self of the Ethical Substance.

- 13./359. Active Reason assumes that it must negate the way things are in order to realize its goal. Its initial goal is *immediate* self-recognition in the other; discovering where this leads gives it *universal* self-expression as its goal; and it then finds that the sacrifice of its own individual happiness is necessary. But this Virtue discovers that its goal is already achieved, that action is happiness, and that the world does not need to be changed.

Being a shape of Desire, the Active Reason believes that it must transform the world into a new ideal shape. It repeats the movement of the natural Self-Consciousness; but the moments are now rationally universal. What this means is that all of them (even the first) are forms of community. Otherwise there would be no distinction between natural Self-Consciousness and Active Reason, at the moment of origin; and there is, in fact, a very important difference. The desire of naïve Self-Consciousness is to be a *free* self; but the rational self already knows that all rational selves are free; so it looks for another rational self in order that their identity may be immediately apparent to one another. Each is to see the other in itself and itself in the other spontaneously. This is the definition of “love” as a reflective relationship (whereas the natural demand for recognition produces “war”).

The second moment (the corresponding contrast to the life and death struggle) is the universalization of this immediate identity into the alienated form of a law that is heard in all rational hearts, a law that tells us that we must *all* “love one another.” The attempt to follow this law is an insane crusade to bring the false Heart into subjection; this leads to the return of the first moment, united with the second in the negative form of the recognition that rational action is the “sacrifice of self.” Instead of Stoic *logic*, we have Stoic *ethics*.

The rational agent must be selfless or *virtuous*. He is the Stoic hero going forth to liberate the world instead of being content with freedom in thought. But the knight of virtue discovers that the world does not need to be liberated from subjection. It already satisfies the project of the virtuous crusade; it is just the way that it ought to be, and it does not *need* to be transformed into a Stoic Paradise. The Way of the World is already doing the virtuous thing, and achieving happiness. This Sceptical reconciliation is an inversion of the whole basic position. The objective world is not just a means to rational ends; it is the achieved thinghood of the self already, the complete actualization in which rational individuality can express itself without any resistance. We are all reasonable already, and all of us are part of a social system of mutual support.²⁶

In the whole movement of this section, nothing objective is changed at all. Only the attitude of the rational agent changes, as active Reason discovers what happiness is: “activity of soul in accordance with virtue.” The world, we finally discover, is “the place of soul-making.” Therefore the actual realization of heaven on earth would not be better than the situation that already exists.

We must understand that “Virtue” is not defeated, but *justified*. The virtuous individual simply comes to understand how the world *has* to be, in order that everyone may have the *opportunity* to be freely virtuous. Reason always has to deal with the world as it actually now is; and when we pass on to it, we shall have learned why the world must go on as it does. We shall continue to come up against “necessity” when we try to live only for and with *one* other (or with some face to face group); and there will always be the Utopian idealists who appeal to our hearts; while the great majority of us will remain “liberals” or “conservatives” disputing whether some small amendment in the way of the world is an improvement or not. We shall have to pass on, because we already know how much is left out. But all that Reason itself will discover when it finally turns to observe the world of its active self-realization is how empty and unnecessary its “seal of approval” is.

V B(a): Pleasure and Necessity

The result of the Observation of the Embodied Self was the direction of our attention to its living activity of self-expression. Hence (as Hegel said in par. 358) Self-Actualizing Reason embarks upon its new life as the singular self that is essential in its own eyes. But it is implicitly the Concept of Spirit (i.e. “the I that is We, and We that is I”—par. 177). So its self-actualization is a social experience. It follows its “liking” (Lust) only to come to grief upon the “necessity” that is its own objective rational context.

- 14./360. The self-consciousness that is reality for itself, takes the world as another self that is to be seen to be identical with it. Custom and theoretical Observation are all behind it. Its spirit is the Earth-Spirit for which only the being that is the actuality of singular consciousness counts as true actuality.

We have now reached the Self-Consciousness that is certain of “being all reality” *für sich* (i.e., actively), as opposed to “being all reality *an sich*” or contemplatively (as Rational Observation was). This self has the actualization of its own singular happiness as its object. This goal is still only a project. It does not yet subsist finitely anywhere in the world. Active Reason wants to fulfil its own being (*Sein*) in such a way that it can intuit itself—i.e. behold itself both physically and intellectually as another independent *Wesen*, another physical and intellectual being.

Its primitive goal is to be conscious of itself as *this* singular rational being in the other rational self-consciousness, or to make this other *into itself*. The other is not to stand there recognizing it (still less submitting to it) but to identify with it.²⁷

Having given this outline definition, Hegel specifies unmistakably that the concrete *Gestalt* which answers to it is the Faust of Goethe’s “Faust-Fragment.” The Fragment (published in 1790) was all that he had to go on, though he may very probably have listened to Goethe talking about the Faust-project.²⁸

The Faust-Fragment presents us with the learned doctor of all the faculties (Philosophy, Law, Medicine, Theology) deciding that his studies are a prison, and adjuring himself to escape into the wide world of “living nature.” He has then to choose between the spheres of Heaven and Earth; and he chooses the Earth from

which his own human body was made. The body, with its sensible and emotional experience, is Hegel's "being that is the actuality of the singular consciousness." The Earth-Spirit disdains Faust, but he does not abandon his choice. When we next meet him he is declaring to Mephisto that he means to enjoy in his inner self whatever falls to the lot of mankind as a whole. This is where he becomes explicitly the universal figure of active Reason. Instead of the self that knows everything, he wants to be the self who has done everything.

Hegel's first explicit echo of the text comes from the interview between Mephisto and the young student which takes place while Faust is away packing for the adventure of his new life. Mephisto is wearing the learned Doctor's gown, and Hegel takes him to be Faust's new "Spirit"—the "Earth-Spirit" (who, as we know from Dante's journey to the centre of the earth, is none other than Lucifer the fallen angel). Mephisto runs through the University curriculum again; and this time, the medieval faculties are forgotten. We are treated now to a lengthy satirization of Logic, and a brief but unforgettable attack on Chemistry; then comes "classification" and finally "metaphysics" (which echoes Phrenology for us, because it won't "fit into the human brain"). When Mephisto begins to help the student choose among the faculties, we have come round in a circle having covered the whole range of human learning from the standpoint both of the Unhappy Consciousness and of Observing Reason. Now Mephisto tells the student, "Gray, my dear friend, is all of Theory/ And green Life's golden Tree."²⁹

When Hegel echoes this—with his "observational knowledge and theory as a grey shadow on the point of disappearance behind it"—he means us to see the analogy between the whole of Mephisto's discourse with the student, and Reason as Observation. He expects us to catch the echo, because the following reference to the "Earth-Spirit," and finally the quotation from Mephisto's soliloquy (when he first puts the Professor's gown on) tell us where to look.

Mephisto makes fun of "Reason as Observation." That is his part as the agent of the *Erdgeist*. He is Faust's "spirit," so he can express the whole of Faust's experience as a spiritual *Gestalt*. That is what he does in the quotation—and it is there that the true estimate of the human quest for knowledge comes out. The quotation was either mangled in Hegel's memory, or more probably deliberately adapted to make Hegel's doctrine—and Goethe's too?—quite clear when compared with the text.³⁰ Faust "despises Understanding and Science/ Man's highest gifts" (Goethe wrote "highest power [*Kraft*!"] so he "must go to the ground." This should send us back to the substance of the paragraph where there is another echo of Goethe's text: "the heavenly seeming Spirit of the universality of knowing and acting" is not only precisely the Spirit that is appearing progressively in the *Phenomenology*, but also the Spirit of the macrocosm in Faust's first magical vision.³¹

At present it remains a riddle, what Faust's choice of the Earth-Spirit has to do with the desire of one rational self-consciousness to see itself precisely as *this* one in another one. But then it is a puzzle in Goethe's Fragment why such an awful preamble (raising Lucifer himself under the strange title of "Earth-Spirit," and then receiving him as travelling companion under yet another, more traditional, name)

is necessary for the story of how an intellectually gifted, middle-aged man seduces and abandons a young girl of some beauty (probably) and no brains (certainly). That is all—except for the Tavern and the Witch’s Kitchen—that there is in Goethe’s “Fragment.” Yet if he published it, he thought it made sense as it stood. Clearly Hegel thought so too. Perhaps the two riddles will help one another to a single solution.

- 15./361. Thus Faust hurls himself into life, not as a destiny to be made, but as there to be taken.

The story of Faust’s new life begins in Auerbach’s Cellar in Leipzig—with which the historic Faustus, a “magician” of Luther’s time, was by long tradition associated. This then is where our *Gestalt* of active Reason “hurls itself into life.” The first ripe fruit that Faust plucks is that of the grape. Mephistopheles has already identified himself for us, unmistakably, by giving to the student in writing³² the promise that the serpent made to Eve. We are once more in Eden. This gives us the solution to the riddle of how Goethe’s Fragment makes a balanced whole; and that is what makes the Fragment appropriate for Hegel’s purpose too. Self-Actualizing Reason makes a new beginning with an absolutely clean slate.

In Faust’s new Garden the patterns of the old story are reversed. Here it is the man who is tempted; and he is tempted with the fruit, not of Knowledge, but of Life. In Hegel’s reading of Greek tragedy it is Bacchus who is the “Earth-Spirit” (par. 723). But Hegel’s doctrine that “Truth is the Bacchanalian revel” connects also with the symbolism of Faust’s new life which begins among the carousing students of Goethe’s own University of Leipzig. Faust does take his new life “the way a fruit is plucked” as Hegel says to remind us of the apple in Eden. But the fruit of the grape must be *made* into wine. The enjoyment of “identity” with the Earth-Spirit is itself a product of Reason.

Faust himself objects to going to the Witch’s Kitchen. The Witch’s Kitchen belongs to the rebellious underworld that did not accept the unhappiness of consciousness (whereas Faust’s own alchemical magic belonged to the scientific tradition). But the receiving of “counsel from an old woman” is a necessary part of “despising of understanding and science”; so when Hegel insists on the point that “the shadows of science, laws and principles . . . disappear” (which would not be a new point, unless the “laws and principles” meant are “ethical”) I think he is actually giving us his interpretation of this scene in the Fragment. The witch does actually make “science” vanish in her final spell³³—and Faust protests again (as he should!) at that point. The setting aside of “laws and [ethical] principles” that is involved is too patent to need elaborating upon.³⁴

- 16./362. Active Reason acts desirously according to one moment only. It sublates the *representation* of the other as naturally or ethically independent, whereas the natural enjoyment of desire sublates actual being. Reason is conscious of its own actualization in a consciousness that appears to be independent. This is the enjoyment of pleasure (*Lust*). But the truth of pleasure is a union of *two* selves; so the agent’s singularity is sublated.

“Only according to one moment,” says Hegel, “is the action an action of *Desire*.” He expects us to understand that Active Reason begins as Rational Desire; but the repetition concerns only one of the moments of natural Desire. The first moment of Desire was the *consumption* of one element of living Nature by another. The inversion of this in the second moment was directed towards *mating* with the other sex (par. 175). This is the moment that becomes the effective structure for the embodiment of Reason’s goal. Here it is only the “form of the object’s otherness” that is to be changed. This other, being the object of love, is now the objectified selfhood of the agent. Hegel takes Love as the primitive shape of practical Reason. Reason is all reality because it is the Category that is indifferently satisfied by each and every observer; and what is categorically known to one observer is known (in principle) to all. In rational self-realization this “abstract” identity becomes concrete. Physical love is the identity of two singular subjects in the same act.³⁵ As observable living bodies, they are separate; but the experience of Desire sublates this, and the identification of two free selves is properly “rational.”

For theoretical Observation of them as *selves*—for “the Category” in its application to the “representations” of the senses—the lover and the beloved are quite separate. At the level of natural Self-Consciousness there can be mutual recognition. This recognition may be either a natural recognition (which uses statuses like parent, husband, wife, brother, sister, slave, cousin, neighbor, stranger); or a conventionally and legally established one that gives defined rights and duties to every status on the basis of recognized “equality before the law.” But all of this falls away to the irrelevant level of simple factual consciousness for the rational self-consciousness who has recognized her own self in the other.

So, for instance, after Romeo and Juliet have once seen each other, both the long history of enmity between the families (at the level of natural recognition) and the complex legal system of Verona which allows Father Capulet to betrothe his daughter legally to her cousin “County Paris,” are equally and utterly irrelevant to them. But they do still care about the rites of the Church; and in that respect they belong to the Unhappy Consciousness. They are not like Paolo and Francesca, and they are not like Faust and Gretchen, because Heaven and Hell matter to them. These two couples find their “Heaven” in one another. Active Reason would not damn Francesca as Dante does; but Gretchen’s fate, being all in this world, is a logical lesson for it.

In the Fragment it is already clear that although Gretchen is a model case of Juliet’s romantic identification, Faust is not going to be Romeo,³⁶ and since Faust and Gretchen are in love, whatever happens to one of them, must happen to both. Faust suffers because he makes Gretchen suffer.

The fact that Necessity appears in the shape of *Gretchen’s* fate makes the total *Gestalt* more satisfactory in Hegel’s eyes, and for his purposes. The end of the story is not in the Fragment, but Hegel knows how it must end. The actual climax of the story, when her despair causes Gretchen to lose her reason, and kill the baby to whom she is naturally bonded by the closest of all loving identifications, is not essential to Hegel’s argument. The Fragment as published ended with Gretchen in

the Cathedral tormented by an “Evil Spirit” while a Requiem is being sung. That the service is for her mother is not definitely indicated. But that empirical question is not important.³⁷ Gretchen is in mourning for her mother, who died because the sleeping potion Gretchen gave her was an overdose; and she is alone with the problem of her pregnancy. When he gave the Fragment to the public, Goethe clearly regarded this as a sufficient image of “the truth of the *Zweck*”. Obviously Hegel saw the point, and agreed that the Fragment is a complete image of Necessity. Otherwise he would not have used and cited it specifically as he does.

The “truth of the *Zweck*” is properly that “these twain are one flesh.” This is the *Aufhebung* of simple selfhood. Faust’s meditation in “Forest and Cave” shows this *Aufhebung* clearly. He has made the absolute choice of self-realization; but the realization can never be complete, and it must always involve pain, because the other who suffers is his own immediately and intuitively recognized self. He suffers because he knows he is responsible for her suffering. The action was his; that is why the contrast between Faust’s fully competent rationality and Gretchen’s naïve trust is essential to the image.³⁸ But the truth of the achieved *Zweck* belongs to them both. In the natural harmony of Reason and Nature they ought now to become a family. For they are, willy-nilly, a community, i.e. a realized universal. Faust has actively sublated his own rational singularity.

(c) *The Triumph of Necessity*

- 17./363. Self-recognizing pleasure reduces the agent self to a moment in a greater whole. Its achieved actuality is destroyed by the power of its own Concept, which has no actuality for it. This circle of contradiction is Spirit as the abstraction of Reason. But it is a mediated identity of self and thing, not the observed fact of the skull. There is a real objectification of the contradiction; the pleasure is shared (unity); the happiness turns to disaster (distinction); the responsibility is felt (connection). The cycle is moved by a Necessity that is inscrutable. So the singular rational individual plunging into life, encounters only death. Abstract Reason and Necessity are an empty identity.

In the analysis, I have tried not to go beyond what is unequivocally asserted in the text. I have given an experiential reading of Unity, Distinction, and Connection; but otherwise I have avoided the Faust-Fragment, and expressed the inscrutability of Necessity, about which Hegel is so insistent in his own words.

All the same, it is not hard to show in detail that Faust’s fate fits the pattern. The whole tragedy is clearly “Faust’s fault,” as we would all agree. And this is essential to the image both mythically (since Goethe wanted to invert the story of Adam and Eve) and philosophically (since Hegel wants to show how the primitive act of rational self-identification produces social responsibility). But it is equally obvious that a “necessity” that is out of their control must inevitably bring love’s happiness to grief; and I shall now show that the story of the Faust-Fragment both involves the inscrutability of Necessity and joins the logically empty connection of “oneness” (in love) and “distinction” (of fortune) with the sublated content inherited by Active Reason in a way that could hardly be improved upon.

Faust and Gretchen have their pleasure together. She gives herself to him. But this mutual enjoyment sublates them both into the ethical structure of their society. Their happiness is destroyed by a power that has no embodied actuality for them; this negative essence (of the natural and social world) is the Concept of what the two of them (as Active Reason) implicitly are. What happens is certainly poor in Spirit; and it is only abstractly rational. It is the category of Freedom as “accident” (natural and ethical) that is the rational element. This is about the emptiest shape that it can have—but contingency and unintended consequences are moments in the category of Actuality as analysed in Hegel’s *Logic*.

It is artistically certain that in the scene “At the Well” Gretchen already knows (or has solid grounds to believe) that she is pregnant. Otherwise the chatter about Bärbelchen’s disappearance and impending social disgrace would lose its point; and the point is precisely that pregnancy is not expected by girls in Gretchen’s situation. It need not happen; on the contrary the folk literature of our culture is full of women who could not make it happen when they longed for it. In the world of natural self-consciousness it belongs strictly to “God” (i.e. to the inscrutable necessity of fate) to decide whether it happens or not. To Gretchen it has happened. But she comforts herself as she goes home with the memory of that union of “pleasure” (she is confident, no doubt, that it will now become a union of lives): “Still—everything that drove me to it [my sin]/ Oh God! it was so good! It was so lovely!”³⁹

In that night of pleasure, Gretchen’s mother “overslept herself into damnation through you” (as the evil spirit tells her in the Cathedral). In this disappearance of Gretchen’s only natural support, we can again see the operation of blind fate (or “Necessity”)—for we cannot suppose that Faust deliberately supplied an overdose. It is these two accidents (pregnancy an accident of nature, and mother’s death an accident of understanding) that create the moment of “distinction” in the Fragment. Mephisto’s last word (describing Faust’s state of mind) is *verzweifelt*; and Gretchen’s last act is to fall in a faint. This is the “distinction” by which the transformation of love as pleasure into love as disaster is expressed.

The operation of fate in the Gretchen tragedy certainly comes very near to being a predictable (i.e. rationally foreseeable) result of the principal agent’s own actions. Faust knows the risks (of life in the one case, and death in the other). Gretchen certainly knows the risk of pregnancy (see the scene “At the Well”). But the very word “risk” logically implies that they do not, and cannot, control the outcome; and the pregnancy, being the natural end of copulation, alerts us to the repetition of the cycle of Desire, at the level of Reason. Natural desire “becomes objective to itself” in the child. “In the child,” as Hegel wrote in his Frankfurt theory of Love, “the union has become unseparated.” This has the consequence of reducing Desire to a moment of the family (as the naturally self-conscious whole). Faust has no intention of subordinating the pleasing of his free Reason, to the cycle of natural life. But he cannot escape the great natural and ethical cycle that his actions set in motion.

The triumph of Death over Happiness is not just witnessed by Reason (as it was in Phrenology); here the immediate “thinghood of Reason” is brought about by the

mediating action and self-assertion of the active rational consciousness. But this immediate transition from life (being-for-self) to death (being-in-self) is the most abstract (empty) form of Reason as the Category that is possible. In Active Reason it is mediated into a circle of three abstract moments. First there is the Unity of Life. As a Category of Reason, that must embrace Distinction (Mortality); and the Connection that unites them is one that has no transparent rationality, only an abstract logical necessity. Unity cannot be separated from Distinction. Life and Death are moments of the same Concept.⁴⁰

- 18./364. The transition is from the One to the Universal as abstractions (i.e. from Being-for-Self to Being-in-Self). This unity of opposites is actually experienced by consciousness as the contradiction in its essence. It appears as the grinding down of singularity on the continuum of actuality.

The first inversion of Reason as Pleasure (identity of self-enjoyment) is as direct and straightforward as it should be. It is a simple transition from life to death, because the active rational self has not yet acquired any content. In most tragic love stories the fate encountered does have some contingent historical content. Thus Romeo and Juliet are “star-crossed” because of the long-standing feud between their families. But for the lovers, this does not count. The Gretchen tragedy is an ideal model, because we can see clearly that a “logical necessity” is at work. The catastrophe is directly implied by the mutual identification. In the achievement of their night of love, Faust and Gretchen accidentally put Gretchen’s mother to sleep forever; and at the same time, they conceive a child without meaning to. Because of these “accidents” Paradise turns to Hell (for Faust, the rational man, a Cave; for Gretchen, the religious girl, a Requiem in Church). The “world of actuality” is just the world of natural life and self-conscious relations which is necessarily sublated in (and hence necessarily presupposed by) the existence of embodied active Reason. The universal category of selfhood cannot “die.” But the singular self must die; so the world of private happiness and togetherness turns into a world of shared suffering and personal aloneness. The truth of all singular love is that we must die, and that we must face that by ourselves. The *Individuum* constituted by the two lovers has indeed “gone to the ground”; that ground is their mortality.

Unlike the naturally free self, the rationally free one does not die by the logic of its own act, but by the blind necessity of Nature. Hence the unity of Pleasure with Necessity subsists for the active rational consciousness. Faust experiences the fact that “his goal and its actualization” is “the contradiction between what was the essence for him, and what the essence is in itself.” The essence of present Life—“the being that is the actuality of the singular consciousness” (par. 360)—is to die. This is the “infinite grief,” the identity of abstract opposites in the concept, which must be experienced by all as an incomprehensible Necessity. Faust encounters it in the death of Gretchen, just as we all do in the death of those we love.

- 19./365. The transition can be understood, but its rationality cannot be felt. Life, which ought to be pleasure, becomes an enigma when our actions end in death instead of what we were aiming at.

Paragraph 365, like paragraph 364, is an expansion upon paragraph 363; and it is fairly easy to follow. The only difficulty is to shake ourselves free from the standpoint of Observing Reason (which is only just behind us here, and in any case hard for the reader to avoid). As an observer, Faust knows perfectly well what has happened, and how it happened. Contemplatively he even knows that the Earth-Spirit is the “mediating term in which both sides are one.” For he begins his communing with the Earth-Spirit (in “Forest and Cave”) in a very calm, rationally observational, way: “You gave me all I asked, and you showed me how far I am from being your equal. So now I can feel how nothing can be perfect for humans. You gave me this wondrous experience, but you also gave me the spirit that degrades me, and I cannot go on without him.” So far, Faust is an observer just like us, and he knows—as we do—precisely what Hegel says the lover does not know. But this is not Faust the lover; for him, the observational stance is a falling away. It is not Faust, but Gretchen who will make the step *forward* that we are about to make.

We have to study Faust’s reaction, because Hegel has chosen him as the primitive *Gestalt* of Active Reason. But what Hegel is talking about now is how the romantic mutual identification of two soul-mates maintains itself as a stable *Gestalt* against its own dialectic. Since Faust is only “faithful” to Gretchen in a very peculiar way, his case is not a normal example. He claims that although he must abandon her he will never forget her. It is a case of “half and half” as Mephisto says. But Faust cannot blame this ambiguous response upon his “unlucky star.” It is only Gretchen who can blame the stars.⁴¹

Blaming the stars is the poetic form of the “inversion [or perversion, *Verkehrung*] that is not mediated by anything at all.” Juliet cries “Oh Romeo, Romeo, wherefore art thou Romeo?” and “What’s in a name?” And she has some right to complain of bad luck, because she is not active in the feud. But Romeo, having caused Mercutio’s death in trying to mediate the feud, kills Tybalt in the best feuding fashion. Yet he does not think the fault is in any way his. It is all just bad luck. To be with Juliet was all that he wanted. “Montague” and “Capulet,” however, are more than just the “names” that Juliet thinks they ought to be; and so the lovers are smashed against the harsh alien might of the laws of Verona, the “universality” that is not comprehended in their little world of perfect union.

20./366. Pleasure is lost in necessity. But Active Reason can recognize this alien necessity as its own essence. This second inversion gives us a new *Gestalt*.

Romeo and Juliet are no use to us here, because like the heroes of natural Self-Consciousness, they both die for their love. In their case the inversion of the earlier dialectic is plain, because they kill themselves not one another. Faust is no use to us for a different reason. He betrayed his love, and so he did not encounter the smashing of it as an “alien necessity.” It is Gretchen who illustrates the comprehensive inversion and the transition. She survives (rationally) just long enough to know she has been betrayed; and she is therefore forced to think about her faithfulness in a new way. We see her doing it on her way home from the conversation “At the Well.” Before she became involved in Faust’s “action,” her Reason was entirely made up

of the conventions that the educational psychologists taught her. She muses on how (after her experience) her own attitude towards girls “in trouble” has changed. Things are no longer “black and white” for her. The supposed sinner may be a true saint of love. She does not get so far as to say to herself that the harsh law of Necessity should be subjectified into a universal “law of love” so that these things cannot happen. But that is the path upon which she is moving. The Law of the Heart is the first appearance of the Spirit as “Charity.” For the present, it will suffer dialectical inversion into selfish megalomania in order to mediate the emergence of Virtue. But Gretchen’s path eventually leads us to the absolute truth of Spirit.

For us, of course, the transition is a simple matter of observation. The Fate that comes against Love must be comprehended as the same human nature that Love was selfishly trying to exclude. We might easily be tempted to make the resulting inversion too comprehensive, and so arrive immediately at the *Gestalt* of Jesus, the perfect “beautiful soul.” But it is the subjective attitude of an instinctively *active* Reason, that must be comprehensively inverted; also the inversion must sometimes occur logically in the experience of the consciousness that we are observing—because it is as much “Reason” as we are ourselves. This is one way in which the *Gestalten* of Reason are different from the shapes of “Consciousness” and “Self-Consciousness.” What happens to Reason need not be altogether “behind its back.”⁴² Active Reason cannot see all that we do; but what we can *see* to be necessary for it, it must be able to experience as logically necessary. We see this in Gretchen; and that is fortunate for us, because it helps us to avoid the error of jumping right to the end of our journey here.

V B(b): The Law of the Heart and the Frenzy of Self-Conceit

One of the worst difficulties posed by chapter V B is the fact that what confronts Active Reason is in every case the same thing. It is the social order with its universal structure of custom and law. But we have to see that subjectively the object is not the same. For the lovers it is simply an irrelevant system of “things” which breaks in and demonstrates its necessity. Now that the subject is itself a “universal law” it will be opposed by what it recognizes as a contrary law to which others are rationally committed. This therefore will be a conscious conflict of Reason with itself. The theoretical insanity of Phrenology, will now become practical madness—but this time it is a mad interpretation of the world to which we are all quite rationally prone.

(d) *The Savoyard Vicar*

- 21./367. The new *Gestalt* is a singular self that knows enjoyment to be the universal necessity. The conflict is reconciled and inverted into an inner *Law of the Heart*.

Romeo is sundered from Juliet by a decree of banishment. Similarly (when *Faust, Part I* appeared) Faust was cut off from Gretchen by his killing of her brother, Valentine. The Necessity that appears to lovers as arbitrary fate, is (in

general) either the order of nature, or that of social authority and custom. This is a constant, but it changes its aspect. Active Reason only changes *itself* (as a mode of consciousness). The objective reality of Spirit remains the same throughout the evolution of the present stage. The rational agent identifies with it only when we move on. But in our new *Gestalt* Active Reason has clearly identified it as an alien law. The encounter with it as an external necessity teaches Active Reason that it must have a subjective universality of its own. Death is inevitable; but we can think of all the other lives. So Active Reason becomes a better or higher form of law. The rational experience of Love only needs to be identified with the empty concept of Necessity that is its complement, and inverted into an *inner* law. The whole process remains internal to the active subject of self-consciousness, so what we have is the Law of the Heart.⁴³

Hegel writes “it is called the *law of the Heart*,” as if the phrase were already current. But I have not found it under this name elsewhere. Hyppolite directs us to Rousseau (and the “Creed of a Savoyard Vicar” in *Emile* is certainly relevant); also to *Werther* (whose attitude does not appear to me to be “lawlike” at all); and he follows Royce in suggesting Karl Moor—from Schiller’s *Robbers*—as the *Gestalt* for the “frenzy of self-conceit.”⁴⁴

Judith Shklar refers us to Jacobi and Schleiermacher.⁴⁵ Schleiermacher’s religion of feeling does not produce any “laws” that I am aware of; but Jacobi’s exaltation of “the heart” in an attack on the Kantian “law of Reason” comes as close as anything I have found to making the heart into a law.⁴⁶ Jacobi writes *To Fichte*: “So its [Reason’s] law can never become the *heart* of man either, and truly raise him above himself; it is only his heart then, that can truly raise man above himself—the heart which is the genuine faculty of those Ideas *that are not empty*.”⁴⁷

There is a serious problem about finding Jacobi and Schleiermacher here, because they are essentially “religious” thinkers. But Jacobi’s literary characters, Woldemar and Allwill (like Rousseau’s “Vicar”) can be accommodated within the world of “Reason.” “Reason” is “the certainty of being all reality”; and consistently with this fundamental characterization, Hegel will say later that Reason has no religion: “the immediate thereness of *Reason* . . . and the shapes that are proper to it have no Religion, because the self-consciousness of them knows or seeks *itself* in the *immediate* present [*Gegenwart*]” (par. 673).

We must, of course, be careful how we interpret this statement. There *was* something called by its proponents “the religion of Reason”; and Hegel deals with it as “the religion of the Enlightenment.” About that he says in the same review of his earlier argument: “In this religion, the supersensible beyond of the Understanding is reinstated, but in such a way that self-consciousness remains satisfied on this side; and there is neither cognition nor fear of the *empty* beyond, which it knows neither as a self nor as a power” (par. 675). Obviously, since the *Gestalten* of singular Reason must exist in a social world—a “spiritual” context—of some kind, they can avail themselves of this “religion” (and of its language, which is in fact all there is to it) at need. It is hard to see how a self-consciousness that wants to set its own law, the law which it possesses in the immediacy of its own feeling, against the

outer Necessity which has emerged for it as the law of this world, can avoid calling it the “law of God.”

For the feeling Heart to call its law the “law of Reason” would be to objectify it too much—that is the language proper to Virtue. Of course, I do not mean that that language is impossible either. But the fact that “Reason has no religion” does not mean that it cannot use religious language. The atheistic materialists were not the only representatives of Reason. The Unhappy Consciousness, with its “Beyond” full of imaginary pictures, is excluded on one side; and the spiritual religions, including even the Greek family cult of the shade in the Underworld, are excluded on the other. In the Science of Experience we are supposed to use the test of “experience,” to avoid being misled by the slippery ambiguities of the language that we all use for our very different “truths.”

The best way to see what the legitimate interpretation of the “Heart’s Law” can be, is to begin from the *Gestalt* of Faust. Faust has “gone over to the Earth-Spirit.” Hegel cites this specifically, so it is certainly proper to use it as a premiss. When we study what the Earth-Spirit says, and what Faust says to and about it, in the Fragment, it is clear that the Earth-Spirit is the immortal life-principle of nature as a whole. So it is not right to call Faust either a “materialist” or an “atheist” simply. If we are to use philosophical labels that are informative we must call him a “natural vitalist” or a “pantheist.” He explicitly identifies the necessity that he encounters, as the Earth-Spirit; and we have argued that the way he does this represents a falling back from the position of the lover, because he remains in possession of his own personal freedom of choice.

Faust says that he still loves Gretchen, and he suffers with her; but he wants to get over that. But “getting over” his love affair is not the logical mode of sublating it. Instead, the self-consciousness that has devoted itself to the Earth-Spirit in this way, and then finds its personal happiness wrecked incomprehensibly, must identify with the Earth-Spirit as the spirit of all natural life. The rational consciousness who has discovered that the external world is not just a placid kingdom of natural laws, which can be learned by observation and then used, but a system of social necessity that can bring all individual efforts at the “pursuit of happiness” to grief, must conclude that one can only “live happily according to Nature,” when *everyone* lives according to Nature. So instead of pursuing personal happiness, I must proclaim that law.

Once we identify the Earth-Spirit as the universal life of Nature, and follow the logical movement from there, with the clear understanding that we are now in the logical moment of “judgment” (so that as the Concept of the rational subject evolves consciously on one side, the concept of the real world as object evolves implicitly on the other) then it is clear that the embodied *Gestalt* of the “law of the heart” is Rousseau. Subjectively Faust is united with the spirit of Nature itself; objectively, the world-order of scientific Reason becomes the existing world of social relations.

The best formulation of the Law of the Heart that I have found in Rousseau is (as one might expect) in the “Creed of a Savoyard Vicar.” One must read the whole

of it; and one must accept as fundamental the propositions that “In my exposition you find nothing but natural religion” and that no revelation was necessary because “Had they listened only to what God says in the heart of man, there would have been but one religion upon earth.” Also one must set aside the orthodox interpretation of the good vicar’s talk of a future life “when *freed from the fetters of the body*, I shall be myself, at one with myself, no longer torn in two, when I myself shall suffice for my own happiness.”⁴⁸ The only “body” from whose fetters the Active Reason hopes to be freed, is the “body politic.” So we must stand firm by the earlier declaration: “Is the soul of man in its nature immortal? I know not . . . eternity eludes my grasp . . . how can I reason with regard to what I cannot conceive?” in order to keep the Vicar’s standpoint “within the bounds of Reason alone.”

When we confine it within the boundary of “this side” or “the immediate present,” the Vicar’s position fits the Law of the Heart quite neatly. He exalts “conscience” as the “divine instinct, immortal voice from heaven”; but what he means is a natural instinct, not something that already has Kant’s “law of Reason” sublated within it. “The decrees of conscience are not judgments but feelings”; and the rules of conduct are found “in the depths of my heart, traced by nature in characters which nothing can efface. I need only consult myself with regard to what I wish to do; what I feel to be right is right, and what I feel to be wrong is wrong.” We do wrong because “we listen to what she [nature] says to our senses, and we neglect what she says to our heart.”⁴⁹ Here, I think, is the genuine historical *Gestalt* of the Law of the Heart; and as I shall try to show in due course, Rousseau’s instinctive conscience is also the shape that inverts into the megalomania of “self-conceit.”

22./368. The law *of the heart* is a goal; we must see if it corresponds to its Concept when actualized.

23./368. Outside this ideal project, the real Concept is a world subject to a coercive law: suffering humanity accepts its subjection to this violence. This is the condition of “pleasure and necessity”; but the “law of the heart” does not know, as we do, that it has emerged from that.

The law of natural feeling is what the rational self-consciousness knows to be the truth. But it has only come to recognize this truth as a “law,” because it has already found itself faced by a world of Necessity. This necessity is actually the ordinary law and the substantial custom of society. The rational self-consciousness has not yet admitted that this substance has any ethical status. It has accepted it only as the empty concept of what is inevitable, i.e. as universally effective, but without any rationally justified content. From the objective world (the real Concept) it has accepted only the form of rational necessity for itself, i.e. the form of a universally valid law.

Paragraph 368 contains a typical form of the announcement that we are passing from the statement of the “Concept” to the “experience.” The Concept is a very simple one. It contains only the Pleasure of self-recognition universalized as a moral imperative. The operation of double negation is here almost formal. Pleasure is negated simply by Necessity; and the negation of “pleasure negated by necessity”

is “necessary (i.e. universal) pleasure,” i.e. the universal happiness of self-enjoyment in the other. In order to get this “result” Hegel has to keep the Necessity empty; it is only the inevitability of death. That is why he makes the transition to “experience” before mentioning what *we* have under our observation all the time: the actual world as the concept that Observing Reason has constructed.

The necessity upon which the singular pursuit of happiness comes to grief, is logically empty because it has only mortality as a necessary content. What is recognized and accepted by the rational agent is the abstract finitude of life. But the actuality that is already there, standing in the way of the Heart’s Law, is the actual Concept of Reason as achieved by Observing Reason. This Concept is the unity and wholeness of the natural and social world.

So “the Heart” is “something *other* than the Concept” in two senses; and when it clarifies the ambiguity by insisting on its own sense, and denying ours, we are faced by a Reason which has gone *mad*. Our concept of Reason is the standard of sanity. To insist in the name of a higher moral law that the actual Concept—the real social order—has no validity is *rational madness*. It sublates the possibility of law altogether.

The Law of the Heart confronts a world in which formal order is maintained by violence. There is the violence of the Montagues and the Capulets, restrained fitfully by the violence of the Duke and the City. Both of them together would have Juliet wedded to “County Paris”; so the world of Pleasure and Necessity *needs* the Heart and its Law. Like the Heart we can see that, but we can also see how the Heart’s Law was generated by that situation. For the Heart itself, its Law is its own immediate essence; it does not come from experience in the world, but from “within” (i.e. like Pleasure it comes from natural feeling). In order to distinguish it from Pleasure, we have to admit two kinds of natural feeling: the satisfaction (or dissatisfaction) of the “senses,” and that of the “Heart.”⁵⁰

- 24./370. The Heart-Law seeks to sublate the cruelty of necessity, being devoted to the “good of mankind.” Its pleasure is to love mankind, and that is its law for mankind. This is an immediate unity of individual and universal pleasure; and there is no mediation by individual action or by voluntary discipline.

The Heart brings with it the distinction between “carelessness” (*Leichtsinn*) and “serious concern” (*Ernsthaftigkeit*). The pleasure-seeking self is ready to let the rest of the world go to the devil, as long as it can get back to the Garden of Eden with that other self who is its happiness. But under the impact of necessity, the pursuit of pleasure only leads to pain and misery. To sublate that we must all devote ourselves to the happiness of mankind generally. This is the true “excellence” (*Vortrefflichkeit*) of human nature. For the “excellent” one (the Heart would call this excellence “virtue,” but we must not do that) it is this devotion to the general welfare (*Wohl*) that is true “pleasure,” i.e. true identity with self. There is an implicit problem here, since the joy of the agent is necessarily of a different kind from the enjoyment of welfare by those for whom it is sought. But this is ignored by the Heart. All natural impulses are regarded as immediately good in the same

way. One does not need to be disciplined (or to discipline oneself) in order to seek the general welfare; the feeling comes naturally.⁵¹ This is the “enlightened” view according to which humanity is naturally good. The long discipline of Christian self-culture is forgotten. That is why we must not call the excellence of the Heart “virtue” in Hegel’s own parlance. But the Heart’s *Law* is what is *excellent*, whereas the primary happiness of the natural self, the welfare that is produced by excellence, is only “good.”

Even the Heart is aware that the *excellent* impulse is natural in a different way from the primitively good ones. Rousseau speaks of “the senses” and “the heart.” Hegel avoids this language because all of the impulses of Reason are active initiatives of the self; and because the opposition of “senses” and “Reason” sets up an opposition of “wrong” and “right” (or “good” and “evil”) that does not exist for the Heart. The Heart takes all evil to be unnatural; it arises from the coercion of the still unconquered world of necessity.

Rousseau is aware that the impulses of the Heart (although they are just as spontaneous and natural as those of the senses) arise from reflection. The primitively “innate” feelings, he says,

are self-love, fear, pain, the dread of death, the desire for comfort. Again, if, as it is impossible to doubt, man is by nature sociable, or at least fitted to become sociable, he can only be so by means of other innate feelings, relative to his kind; for if only physical well-being were considered, men would certainly be scattered rather than brought together. But the motive power of conscience is derived from the moral system formed through this twofold relation to himself and to his fellow-men. To know good is not to love it; this knowledge is not innate in man; but as soon as his reason leads him to perceive it, his conscience impels him to love it; it is this feeling which is innate.⁵²

But Hegel cannot use the opposition between “nature” and “thought” either, since everything in the Heart is a natural feeling (as Rousseau is at pains to insist here). Hegel could have used his own distinction between Observing Reason and Active Reason to make the distinction that Rousseau means by “To know good is not to love it”; and since he does not bother to underline the fact that “excellence” is consciously distinguished from “pleasure” by the acquiring of the knowledge which stimulates the excellent feelings, we might even be tempted to think that he has some view even more “immediate” than that of the Savoyard Vicar in mind. But I shall show soon that the movement into moral madness cannot occur without the reflective awareness that “excellence” has of being superior. That superiority is what Hegel is insisting upon here. He is handicapped by the fact that he cannot use the resources of the natural language to the full (as the Heart, or specifically Rousseau, can). Hegel must not do that because at this birth-point of “morality” as feeling, none of the concepts of the moral life of Spirit is properly developed. In paragraph 365 he has made clear that the reversion to the standpoint of Observing Reason is possible. Probably he thinks we can safely be left to grasp the difference between Pleasure and Excellent Pleasure for ourselves. It is the identity that he sees

as needing to be underlined. In any case, the difference is there implicitly, and it will soon declare itself.

- 25./371. The people, by contrast, live under an alien positive law (divine and human), either crying out for the law of the heart like the Publican, or content in alienation like the Pharisee. But the law ought to be transgressed and abrogated. Sometimes it commands what is good, but only the heart in it makes it good. We must do our own will, not God's.

The World, meanwhile, is governed by a positive law (which although now recognized as *law* still has the irrational, external character of the fate that smashed love's happiness). For the Heart the world is a system of universal subjection to alien Lordship. The Heart understands the distinction between self-seeking and law-following; so it can make this distinction even about the world of oppression. There is both simple pleasure-seeking and law-abiding pleasure out there too. But the life of that world is really misery because it is unnatural. No simple pleasure seeker is happy; but on the other hand the pleasure of the lawabiding is not the true pleasure of rational self-enjoyment (or "excellence"), because the law that is obeyed is alien. The world's law is a *positive* law which must be overstepped by the Heart.⁵³

The alienated sense of goodness and loyalty that obeys the law automatically has to be destroyed, because the public law ought not to have the authority that it has. Deprived of its authority, it would lose its coercive power, and so its actual effectiveness. In part, it commands things that the Heart approves—murder, theft and false witness have to be forbidden as crimes against nature. But it is not so clear what the verdict of moral feeling is about adultery, as any reader of the autobiographies of Bertrand Russell and Dora Black can soon discover.⁵⁴ In any case, the Heart cannot be concerned about any accidental coincidences, any more than it can about the divergences. Only the sense of excellence—i.e. of its fulfilling *itself*—matters to it.

- 26./372. So the loving heart fulfils its law: Love and do what you will. But now whatever it proclaims is an imposition upon all hearts, a *command*; and therefore it is at war with the law that it has itself promulgated. Logically it is condemned out of its own mouth, for in proclaiming the law of the heart it alienates the law from the heart, and thus recognizes something above heart. The Heart contradicts itself.

In this paragraph it is the universality that logically belongs to law, which comes into contradiction with the singular uniqueness that belongs to spontaneous impulse (heart). The dialectic is internal to the Heart itself. Hegel is concerned only with the relation of the rational agent to her own law. "Excellence" consists in loving everyone, in desiring the happiness (or well-being) of all. But to act out of love is to act spontaneously, to do what *feels* right at each moment; so we cannot promulgate the "law of the Heart." Yet what distinguishes the Heart from Pleasure is its universal commitment, or the fact that everything it does is a proclamation of what everyone should always do. Following one's heart is to be the law, but it cannot be a law that is *made*.

As soon as one chooses a concrete form of the ideal, it becomes evident that one is promulgating a moral ideal that is actually felt by other hearts to be more oppressive than the existing state of things. Hegel's point here is that this could not happen, if I were not alienating my law from my own heart in principle, as soon as I commit myself to any objective ideal at all. I cannot logically commit myself to the "triumph of Communism" or to "the universal recognition of democratic human rights" without alienating myself from my "heart."⁵⁵ If I am sensitive to human suffering (and that sensitivity is what "the law of the heart" arises out of) my heart will "bleed" every day about the decisions I must make in pursuit of my ideal—just as much as it would if I was a feeling heart that had renounced its autonomy of decision in favor of alienated law-abidingness (or, for that matter, just as Faust's heart does bleed for Gretchen). The bleeding heart is part of the human lot.

There is no law that is not obeyed at a cost. The philanthropic soul is as much a prisoner of her ideal as the obedient citizen is of the actual order, or as Faust is of his own "resolution." What Faust does to Gretchen with bitter sorrow and regret, Ferdinand (in Schiller's *Kabale und Liebe*) does to Luise Miller with righteous wrath. This case is not a perfect example, because there is a jealousy like Othello's in it (and that is the most *immediate* shape of "necessity" coming against "pleasure"). But inasmuch as Ferdinand can be seen as a disappointed social idealist, his fury—and his remorseful suicide—are the "Frenzy of Self-Conceit" raging within the "individuality" (as Hegel defines it).⁵⁶ All Hearts entangle themselves in the "actual order" just by acting at all; and all of them equally admit that there has to be an actual order. The only person who does not breach the "law of the heart" is the one who is ready to be a Communist in the morning, is converted to "free enterprise" by reading Ayn Rand in the afternoon; and decides before nightfall that the only salvation for true human feeling is to be found in Transcendental Meditation. This self becomes a Beautiful Soul without ever acting at all. It never comes near the Faustian resolution that is the portal of Active Reason. Dante leaves this soul waiting forever in Hell's Antechamber.

Anyone who acts with rational intent (or to embody a law) posits a universal order of some kind, and so is "set free" or "purified" from singularity. But to be set apart from its singularity is exactly what the Heart does not want. So its struggle to avoid contradiction leads to an ever greater contradiction; and finally to a descent into irrationality which makes the moral feeling of the singular agent absolute. Already we can anticipate how this Law becomes stable for the singular individual who can harden her own heart and insist that just this Utopia is the one where all hearts will beat in harmony. The discordant cacophony of the many Utopias is what Hegel now goes on to examine.⁵⁷

(e) *Rational Madness (Karl Moor)*

- 27./373. The community which the individual sees himself as belonging to, is turned against him thus: What he does is *his pleasure*, what he proclaims is supposed to be *the law of all hearts*. Thus he gives the others ground to harden their hearts against him. The heart itself is a traitor.

The Heart that accepts the contradiction of becoming a contributor to the actual order, has blinded itself to the significance of this commitment. It is not yet a Hard Heart; but it finds itself living in a world of hard hearts. Whatever humanitarian cause I choose, the complaints against my arbitrary "Lordship" will resound all round me: "Why should *that* have priority? Who says that poverty, the Bomb, security against missile attack, equality for women, free abortion, the protection of the unborn, is what must come first? Only you—how can you be so set on that one, and so unfeeling about the others? You say that it is really the welfare of humanity that you care about; but so do we. And we can see that you are actually on the *wrong* side." Quite apart from explicitly contentious issues such as disarmament and defence, or abortion and the right to life, support of almost any humane cause is deleterious in some way to almost any other one.

I have deliberately switched from visions of a radically different world, to radical improvements of this one, because Hegel claims that the acceptance of the necessity for *some* objective order is an implicit acceptance of the existing order. But also it is only in this "entangled" phase that the advocates of different reforms have a common ground that makes serious argument possible. The committed Trotskyite will not waste time trying to argue with the Zen Buddhist. To see this is to appreciate why Hegel begins with the inner dialectic of a Utopian dream, and discusses the cacophony of rational voices only afterwards. The voices only begin to sound rational to one another, after the necessity (and hence the partial moral validity) of the existing order is accepted. But the discovery that all the other hearts are so hard and that all of them are depending equally on the existing social order (which the Heart has not itself consciously accepted) leads to a more radical rejection of the world.

- 28./374. Because of the immediacy of feeling, what happens is experienced as simple alienation. The Heart is faced by the law of God and man; and it finds that this is the law that every other heart recognizes as necessary; in this alienation every heart finds itself. It has found that without alienation there can be no law at all. But it cannot recognize *itself* in this.

Before we come to the categorical rejection of the world, we have two more paragraphs that simply clarify what we already know. The Heart does not recognize its own compromise with the actual order. But it does recognize the compromised status of all other hearts. The immediacy of all feeling prevents it from recognizing its own reflective status. It does not recognize that any actualization has a universal effective force in which singular spontaneity "goes under." One can see how important the Utopian character of its commitment is in this connection. Precisely because the desired order does not yet actually exist, its necessarily objective universal character *as* "law and order" can be overlooked. But all the other idealists of feeling, and most of all the great majority who are content with the actual order, have quite obviously put their hearts into the way things already are. The thesis that they are obedient, only in a passively coerced fashion, to an order that is just an external positive authority will not wash. Their hearts are in it. They mean it when

they say that this or that is God's law or the law of man (i.e. not just the Prince's will, but the will of the community).

The abortion dispute is a good example to illustrate this. I have put both sides under the "law of the Heart," because neither of them is satisfied with the law as it stands, and what both set against it is a deep *feeling*, a practical commitment that makes rational discussion impossible, and the show of it that is attempted visibly useless. Whatever the state of the public law is, one side will be "committed" to it, and the other set against it; or, of course, they may both be radically dissatisfied with it. But they want to make the law of their own hearts part of it.

This is the experience that the crusading Heart has with the supposedly passive and alienated majority of its fellows; and in that conflict the admission of sincerity comes easier because there is a large measure of agreement in the content of the opposed laws. What the opposition is committed to is the "divine and human order." In speaking thus Hegel is both looking forward to the advent of "True Spirit" in his book, and referring to its sublated presence as the alienated heritage of Reason.⁵⁸ But the Heart does not remember Antigone, and it does not need to. The abortion example shows clearly how the heritage of Antigone's world is present in the conflicts of the Heart with itself. What the Heart encounters, it is forced to recognize as a living substance "enlivened by the consciousness of all." To admit this would offer the chance of reconciliation. But what sort of reconciliation is possible about abortion (for example) without a compromise that must feel like a betrayal to both parties? A direct collision of feelings such as this shows why the dialectic of feeling is bound to proceed to the stage of social paranoia.

- 29./375. Thus *self-consciousness* encounters its own contradictoriness. Only in its own law can it recognize itself. But the public law is made by the Heart too. What it *must have* and what it is *set against* are equally essential. It is therefore "distraught."

The important thing is that the Heart does not recognize its contradictory condition objectively. It *feels* it because, being rational, it feels the sincerity of its opponents, and recognizes that their hearts are committed to the objective order. This is what is absurd for it, since it cannot recognize itself in any objective order; but the universality of hearts that is essential to itself it does recognize in the objective order. Everything that it does itself makes a contribution to that order. But it does not recognize that this is all that it *can* do; for if it admits that, then the final refuge of "self-conceit" will be closed off.⁵⁹ The rational Heart is "distraught" (*zerrüttet*) because it *cannot* recognize itself in an objective order; but the universal heart to which (as the actual subject) it appeals *does* undeniably recognize itself in the actual order. The essential form and the essential actuality of universality (i.e. of Reason) are in contradiction with one another.

- 30./376. Thus *self-consciousness* is *essentially deranged*: it necessarily is (and knows itself to be) what it is necessarily opposed to (and knows itself not to be). (*Ordinary* derangement is knowing something to be true, and holding that it is nevertheless not valid *for me*.)

Having developed itself into the simple opposition of Heart and Law, the Heart must now recognize the unity of itself as “good” with itself as “evil.” This is “madness” (*Wahnsinn*). Paragraph 376 is concerned with the distinction between this logical madness and ordinary empirical madness. The Law of the Heart is not an *idée fixe*. It is not a matter of one person being “crazy” about abortion rights, and another about the rights of the foetus or nuclear disarmament. The solid citizen who does the daily round and votes for a moderate party of the centre (or perhaps does not vote at all) might well say that both of them are “crazy.” But since what they are all concerned about is “being human,” the language of the critic is not philosophically justified. Nor is the Heart’s Law a matter of *delusion*, which leads someone to pretend that some objective feature of the world is not really there when everyone else knows that it is (or that something is there when we all know that it is not).

Hegel intends both of these conditions (the *idée fixe* and the delusion) to count as typical forms of ordinary empirical madness, though he only says explicitly that the second one (delusion) is “madness in general.” This second form is the one that approximates more closely to “heart-sickness.” For when the solid citizen says that the heart-sick campaigner is ignoring the right to life, or the right to equal freedom, or the *Realpolitik* of unilateral disarmament, the criticism appears to be valid. But the madness that we have to deal with now is not this ordinary form of heartsickness. It arises precisely because the Heart is *not* ignoring anything essential in the objective situation, and is distraught about the contradictory tension that this open-eyed honesty creates. The true love of humanity is impossible to express in the world. Yet this love is all that counts, and the world is where it counts. So it must be expressed.

- 31./377. This inward derangement therefore projects itself into the conspiracy theory of the world. The world is mad, and the madness is induced and sustained by the selfish interests of its rulers. The fault lies not with individuality as such, but with certain bad apples. Against the way things are, the Heart sets a subjective vision. But the contradiction between subjective whim and objective law shows that self-consciousness is itself mad.

The Heart which is both completely committed and perfectly honest, must conclude that “the world is mad.” For what it is trying to express is the deepest feelings and impulses, not of an animal organism, but of a rational self-consciousness. If this cry from the heart does not reach the hearts of all of its rational fellows; and if the Heart is forced in honesty to recognize that they are not unwilling sufferers or utilitarian calculators making the best bargain they can within an authoritarian structure that is opposed to their own deepest feelings, but that their own hearts are genuinely devoted to its maintenance, then the truth must be that their reason has somehow become alienated.⁶⁰ They have been rationally imposed upon by certain selfish leaders who have never achieved *rational* self-consciousness at all, but have remained at the level of the natural lust for power, and have used their socially developed reason in the service of that uncultured impulse.⁶¹

In my analysis I have ignored the repetition of the logical contradiction involved in making a spontaneous impulse into a law. That is what the Heart is now trying to ignore. It projects its own madness onto the world, which is presumed to have an insane structure. I make my Reason into the arbitrary authority—the Lord—which declares that the whole social system is a covert imposition of arbitrary Lordship. Somehow the honest and rational majority have become the victims and the dupes of a dishonest and irrational minority. What emerges here, for inversion into the starting point of the next phase, is the recognition that the individual heart, and the devices of the heart, are essentially evil not good. The Heart, of course, deceives itself about this, by pretending that it is only some hearts that are evil.

Thus the simple honesty and sincerity of the Heart, its readiness to grant that its opponents are honest and sincere too, leads it into radical dishonesty. The *Gestalt* of this Frenzy of Self-Conceit is Schiller's Karl Moor, who leads his own *Robbers* against the officially authorized conspiracy. But it is not just some people—specifically the first two Estates of the *Ancien Régime*, or the bourgeois capitalists, or the party politicians of our variant types of “democracy”—who are evil-minded power-seekers. *Everyone* wants their own way. It is *ego* (and not just humanitarian commitment) that pushes the banning of the Bomb to the top of the agenda, and makes the campaigner say that those who cannot grasp this priority have been blinded by some authority or other. Each side is blinded by its own self-involution, and not by personal craziness on one side, or by a monstrous social conspiracy on the other.

The pure Heart is not purely Good; it is purely Bad as well. It cries out for a universal justice that comes naturally, without the violation of feeling, and as a reign of perfect love. That would indeed be “the Good.” But the natural, spontaneous, unviolated Heart is itself wilful, arbitrary, changeable and hence rationally perverse (*verkehrt*). It ought to recognize this at once, when it sees that the Garden of Eden is not what actually exists. If the intuitive knowledge of the rational Heart that the natural self is “good” were the absolute truth, then Paradise ought to exist already. There is not (cannot be) any rational *ought* that does not validly refer to the world as it actually is.

Hegel found the conspiracy theory of history principally in the writings of Baron D'Holbach.⁶² D'Holbach's attack (see pars. 542–543) was directed at religion generally, but especially at the Catholic faith. So in concrete terms, it is the Unhappy Consciousness that here appears to the rational mind as the source of the perversion of Reason; and in reality, it is the sense of sin, the sense of the self as “nothingness,” that must be restored to Reason in order to make the transition to “Virtue.”

D'Holbach and LaMettrie are certainly not voices of the Heart's Law, even though the “natural goodness” of man was a commonplace of the Enlightenment generally, which they accepted. So the fact that we encounter the “conspiracy theory” here as the inverse form of the Heart's Law requires some commentary. As a “world-shape” (of Spirit) the common sense of the Enlightenment must have *all* the “shapes” of Reason in it. On the one hand, the belief in “natural goodness” is

only a “feeling” whoever expresses it, and no matter how far removed they may be in other ways from Rousseau’s Vicar; and on the other hand, the “conspiracy theory” is a natural hypothesis for the alienated utilitarian Reason to accept as soon as it is suggested because the cause of the irrationality of things has to be sought in the emotional, non-rational “matter” of human nature.

It is really from “the Heart” that the conviction of the *natural goodness* of humanity springs. If we simply accept the materialist view of the world, then we can never understand how this conviction arose in the first place; and then we could not justify the optimism of thinkers like D’Holbach and LaMettrie at all. So if we want to comprehend the “Age of Reason” in a rational perspective we must begin as Hegel does, with the possibility of universalizing an emotional identification;⁶³ and we must insist that, although D’Holbach and LaMettrie (and many others) are not conscious sentimentalists, they can only argue as they do because they have the sentimental shapes of Reason available to their “common sense.”

The place of the Conspiracy Theory in the dialectic of moral feeling must therefore be considered first. The whole movement from the Heart to Virtue is complicated by the fact that the evolution of Active Reason is purely subjective. Thus one might think that a normal “first inversion” was complete when the law of the Heart develops into the explicit admission that the heart is expressed in the actual social order. But from there the transition would be directly to the solid citizen who is at peace with his world. If we could represent this as a second inversion (and I think this could be done) then we could pass directly to the Individuality that is Real in and for itself to itself (for that is what solid citizenship is). But, supposing this were logically possible, the solid citizen’s makeup would lack the Faustian element of self-definition. The Real Individuals would all be the same, instead of being different animals in the spiritual kingdom of the animals. In order to preserve selfhood—which becomes boringly self-satisfied in that world, but which is the ground of modern subjective rationality all the same—the Heart must develop inwardly, in step with, and by means of, its concept of the world. So the proper inversion of the Heart does not take place until, in its insane self-conceit, it becomes “evil” instead of “good” (as it takes itself to be primitively).

Of course, it does not ever recognize itself to be evil. The transitions that we are now observing are psychological movements within singular rational consciousness. So they *can* occur in individual lives. We have seen that Gretchen moves from Pleasure towards Heart under the impact of Necessity (though Faust does not). But the Heart’s whole purpose in adopting the “evil conspiracy” conception of the actual world, is to protect itself from the need to give up its deepest conviction—the view that humanity is really “good at heart.” The bleeding Heart may be as *virtuous* as any disciple of Aristotle (or of Thomas à Kempis) in its own personal life. Discipline of the senses may have become second nature to it through long and arduous devotion. But it still puts all its trust in “natural feeling.” It never thinks that harsh discipline is what everyone needs (still less that the actual social order *must* impose it from outside!).

The committed Heart, which can voluntarily impose discipline upon itself, will

not lightly surrender the conviction that everyone would do the same if only the right feelings could be awakened. One of the most astounding things about those who really follow the law of the Heart is that they have no perception of themselves as “heroic.” The insane idea that everyone else is the victim of a conspiracy is a defence against the admission that ordinary people will never do what the committed humanitarians feel rationally driven to do. But out of this combination of true heroism and true humility springs what Hegel is quite right to designate as madness and evil. For there is nothing more irrational or more dangerous than *Reason* can give birth to than the belief that the actual social order is controlled and directed by villains, and not by ordinary people, who mostly love and suffer and do their best like their supposed victims.⁶⁴

- 32./378. But just as the heart *is* upside down, so the universal law is upside down too. All hearts defend the public law against any *one* rebellious heart; and they cling to it even when they complain about it. It is their living essence, but it is still upside down.

Hegel offers us here an interesting piece of dialectical logic. If it is true (as we have seen) that the Heart is essentially self-interested and self-willed—so that it cannot make itself into a law without becoming a tyrannical imposition upon all other Hearts—then all of those other Hearts must be self-interested and self-willed likewise when they devote themselves to the existing order. The thesis that they have been misled by priests and despots is a mad fantasy; but the claim that they are “inverted” is quite correct. The Heart cannot make itself into a law without producing a result opposite to what it intends because in its immediacy it is already the inversion of any universal law. But when it recognizes that the other hearts are actually committed to the maintenance of the existing order, it is quite right to insist that there is something perverse about that commitment.

We respond to a radical challenge to our customary order, by rallying to its defence. We may feel alienated from it and protest against it in our own “hearts” sometimes. But when it is seriously threatened, we realize that it is our “essence” and that if we lost it we would lose everything. That is when our hearts are properly engaged and committed. The indignantly *loving* Heart is obliged to recognize this. But its desperate attempt to explain it by projecting the pattern of its own contradictory imperialism onto the existing order does reveal the contradictory character of our commitment. It is self-love, not the universal love of humanity, that motivates us. This is the “Way of the World.” We defend the universal living Substance; but we do so only for the sake of the private life and happiness that it secures for us.

Thus, for instance, there was a lot of feeling in the northern States of the U.S.A. against the Fugitive Slave Law; but it is questionable how many of the highminded Bostonians who passed William Lloyd Garrison’s resolution in 1843 that “The compact which exists between the North and the South is a covenant with death and an agreement with hell” really meant to apply the words of Isaiah to the Constitution of the United States.⁶⁵ At the most they were only advocating the enforced secession of the states that belonged to Hell’s kingdom; and perhaps not even anything as radical as that.⁶⁶

Garrison's language clearly exhibits what Hegel calls *Eigendünkel*; but it also shows the conceptual advance involved in the recognition that the existing order is *not* "an unconscious, empty and dead necessity." The "covenant with death" is a covenant with eternal damnation, an agreement with a living evil. But Garrison must have been vividly conscious that if this upside down order were taken from him he would "lose everything" when an anti-abolitionist mob dragged him through the streets (in 1848) with a rope round his waist, and some loud talking about putting it round his neck.⁶⁷

- 33./379. For in fact this universal defence of public law is universally *selfish*. Everyone wants the law on his side; and everyone finds the rest against him. Life under the law is a war of all against all. Public order is just the "way of the world" produced by this struggle. It is the play of chance only.

What is true in the inverted vision of the insane conceit which condemns the existing order as an evil conspiracy is that the public order is not simply good or righteous either. It *is* based on self-interest (not on the primitive power hunger of a ruling class, but on the universal desire for selfish happiness). The slaves who did not run away, and who refused to involve themselves with John Brown at Harper's Ferry, were partly guided by a perfectly correct impression that life in the Northern city ghettos would be worse for them than the slave-existence of most plantations.

The hearts that support the established order have their own happiness as their goal; they do *not* bleed for humanity, and the order they support is a compromise of selfishnesses. Behind the public order there is a Hobbesian struggle of all against all; and the order that all hearts maintain only sets bounds to that struggle so that it will not become a war to the knife. This is the way things really are in the world. It is the *Weltlauf* (the "rat race" as we call it), in which everyone is out for themselves, and no one's heart is really given to anything beyond. The raging Heart (which is "mad" because it is denying its own essence) is really right. There is no unified essence out there in the world either.

Hegel was not in the least sympathetic to a class-struggle theory of social progress. D'Holbach's attack on the unholy alliance of throne and altar was a class-war theory. Hegel's view points to the fact that having some "estate" is essential to singular rationality. He was aware of how the dialectic of the division of labor was depriving the workers in the new factory economy of any estate in the world, and obliging them to sell their labor-power in a "free" market. He called this group a *Klasse* not a *Stand*.⁶⁸ The Individuality towards which we are moving, requires its own *place to stand* in the world. That is why I have underlined the fact that even plantation slaves had (for the most part) a real "estate" to lose. They could lose the agricultural life (which they understood, and in many aspects loved) and the climate; the "free" disposal of their own bodies in the labor market of a cold Northern city was (in general) a poor exchange for that. The *Klasse* of the dispossessed is a powerful revolutionary force. But the Marxian proletariat is not properly rational.

Its members are not Individuals. They have nothing left but their *hearts*; and, as we have seen, the Heart is essentially volatile.

(f) *The Weltlauf and Virtue*

- 34./380. Thus the universal order has two sides: its actuality and its inward essence. Its actual side (the individual Heart) inverts all values. But inner essence can only become actual by sublating the principle of “pursuing happiness”: Reason is therefore the pursuit of *Virtue*.

In paragraph 377 Hegel showed that the Heart itself goes mad when it asserts that the actual order supported by other hearts is morally perverse. But it is only projecting the recognized evil of being a singular heart with its own devices and desires, upon the public order. So in paragraphs 378 and 379 he showed that the public order is in fact guilty as charged. For although the existing order is indeed the law of all hearts, and is defended as such, it is only so defended because every heart hopes to fulfil its own devices and desires through the adroit manipulation of the public order. Honesty is adopted as the best “policy.” The law of all hearts is only “the way of the world”; it is the justice of the marketplace, where everyone struggles to get ahead as well as they can. So the second inversion of the Heart (which now ensues) is the transformation of this universal selfishness into virtuous unselfishness. The principle of individuality or of spontaneous self-expression, which was the principle of goodness for the Heart, is now recognized in the Way of the World, which is the triumph of *evil*. Instead of being the convinced opponent of the harsh oppressive law of society, therefore, the rational soul must now sublimate its own individuality, and sacrifice its own private happiness in order to make the universal side of the social order actual. Active Reason must display itself as *Virtue*, or as devotion to the public good.

Reason now recognizes itself as the guardian and repository of the true essence and intent of the public order, which everyone else is ignoring. “Virtue” is the inside of the public order, the good side; it ought not to be made the prey of individuals in their battle of universal selfishness. Selfishness is their universal essence. But the essence of law is not this restless universality of struggle but the peaceful universal of pure rationality.

When we interpret Virtue in this way we can see how it is a repetition, at the rationally internalized, morally autonomous level, of the stage of Lordship and Service. The world of the Heart was a *struggle* between two laws. Now there is only one. But there is a noble and a servile attitude towards it.⁶⁹ In the Law of the Heart the singular heart was the inner aspect, and the aspect of law remained obstinately objective and external. Now law is taken as the inside of rationality, and the devices and desires of the heart all belong to the external Way of the World. Like the objectification of the Heart, this is an impossible position; Virtue’s noble cause is a lost cause from the beginning. Luckily it is also a cause that needs no one to fight for it, since we already know that those who are supposed to be degrading it, actually maintain it.

V B(c): Virtue and the Way of the World

Hegel has already prepared us for this transition (in par. 380). The progression by “determinate negation” (i.e. a comprehensive inversion which reconciles the previous opposition and carries forward the result) is easy to see. But the virtuous consciousness does not itself remember this logical experience. We can see it because the transformation is in the public world. It is the recognition of Necessity as the Way of the World that gives rise to the standpoint of “Virtue.” Hegel makes this clear in the logical review with which he begins.

- 35./381. In Pleasure and Necessity, Individuality and Universality were simply opposed. In the Heart’s Law the duality was within the opposed sides in an opposite way (united in the Heart, opposed in the world). Now the two moments are both united and opposed on both sides; and Individuality is to be sublated on both sides. This must come about by self-discipline and self-sacrifice, for then the self-seeking of the *Weltlauf* will be done away too. The *Weltlauf* has only to be shown that its view of the public law as merely instrumental is mistaken.

When Active Reason exists for itself as “pure Individuality” it is recognizing itself as the concretely individuated Universal. Reason must, by definition, be consciously universal in some sense. In Faust, Self-Consciousness is aware of its whole potential. It is not blundering about in the dark like the blind impulse of self-assertion; it realizes its own rational individuality by identifying with the other that is naturally necessary to it as an individuated life. The rest of the world stands over against it as an empty universality. But in the conflict of “rational freedom” with “rational life” this supposedly abstract Universal asserts its real necessity; and (as a result) the realized Heart of the fulfilled individual accepts the empty universality as its “form.”

It becomes a law for the Heart that every individuality should be fulfilled; but the Heart finds that all the other individuals already accept a law which is opposed to its own ideal of individuality. The resolution of this conflict is the Way of the World—the civil society in which every individuality employs the universally accepted law as the means for its own private fulfilment. But the Virtuous consciousness sees the truth of Reason to be the inversion of this utilitarian position. All private hearts should be surrendered to the fulfilment of the law. Reason gives us the law and shows us how to discipline our hearts into submission to it. When we all discipline ourselves rightly the Way of the World will be liquidated.

Virtue is in difficulty, however, about how to produce this moral change of heart. It can only set the example, and encourage others to follow it. The example must be one of total dedication and complete unselfishness. The Way of the World is the way of selfishness; everyone is concerned to get lawfully what the heart desires, and the virtuous consciousness knows that this way is essentially unhappy. All of us are seeking happiness; but (as Plato said) in this democratic world of lawfully regulated desires we do what we wish, but we do not get what we want.⁷⁰ The example set by Virtue will uncover what everyone really wants, and in that way dissolve the illusion of the Way of the World; it will be able to see what it truly wants.

The “inward essence,” the “in-itself,” of the way of the world is *happiness*. But Aristotle taught us that “activity in accordance with virtue” is the only true happiness; and self-sacrifice reveals that “virtue is its own reward” (as the Stoics already said). Modern virtue remembers classical wisdom; but like the Stoics it has lost the “ethical substance.” Our moral virtue shows that self-surrender in the service of universal Reason is the only path of salvation, the only road upon which really human happiness is experienced. It is Reason that is distinctively human; so the human good is achieved in and through the impersonal realization of Reason.

There are two stages in the realization of Virtue. First one must develop one’s Reason, and bring all other natural powers and impulses under its sway. This is a mode of personal self-realization; even in the Law of the Heart there is actually room for this sort of discipline. The impulse of the Heart must be attended to and nurtured; and we must learn not to violate the Heart by following the impulses of the senses. But true discipline is the devotion of this trained and organized self to the public good; only in the service of the public good can the “personal consciousness” be offered up.

The fact that the two stages are necessarily *distinct* is what distinguishes Virtue from the Heart, and makes it logically more advanced. The distinction between the stages is possible because the objectivity of the “public good” is now recognized. Virtue is conservative. It sees the existing order as deserving to be *served*, not *used*. (This is the logical origin of the cultural attitude of the Noble consciousness.) The ideal of the Heart is to be spontaneous, to lose sight and consciousness of discipline altogether in the spontaneous overflow of emotional commitment. The Heart is radical; it is conscious of moral struggle and rational discipline only as its own share in the universal suffering created by “necessity.” Virtue distinguishes clearly between its own decision to climb the rocky road, and the hurts that it occasionally suffers on the road by accident. The Heart cannot make this distinction because, properly speaking, it does not make choices. Its *feelings* are as “necessary” as the necessities of the lower nature that faces it. The two necessities are different, but it does not attend to that. For Virtue the “necessity” of Duty is equally categorical; but it knows that this is because it has looked squarely at the alternative, and has made a choice.⁷¹ “Individuality” and “Universality” have become clear options for it.

When we put it like this, we can see that Virtue has created a false option for itself, just as the Heart created a contradiction for itself. But we must be clear about what Virtue wants to do to the *Weltlauf*, because Virtue’s false option will contribute a necessary element to the consciousness of the *Weltlauf*. The *Weltlauf* is not objectively changed by Virtue. Nothing is *done* any differently than it was before. But the consciousness with which it is done is changed. Virtue sees the *Weltlauf* as wrong-headed. Everyone is pursuing their *own* interest. Everyone (even the bleeding Heart) is putting her private concern *first*. They are all using and manipulating the public system of law, utility and welfare for the advancement of their personal happiness. “But,” says the virtuous consciousness, “that whole view of things is upside down. This system of reciprocal support and helpfulness that we all depend on, and which you are all treating as the means to your happiness, is not an “instrument” at

all. It is the real substance of our selfhood, and we must all act, all the time, in the consciousness of serving and preserving it *first*. This is what should come first for all of us, all the time, not a better job, or a rich marriage, or the establishment or abolition of abortion clinics, or even banning the Bomb. You have to see that the “common good” is here with us, and you have to put that first. In everything, you must be “public-spirited,” not selfish or partisan.

- 36./382. The *Weltlauf* is just the forms of selfishness we have passed through. There is Pleasure doing what is “necessary,” and the Heart trying to make a revolution but making chaos. Against both, the public Law prevails. But in both its true existence is perverted.

For the virtuous agent, the way of the world presents the two aspects that we have previously considered. On the one hand, there is the naïve pursuit of happiness through identification with another self. Hegel now describes the “downfall” (*Untergang*) of Pleasure in a new way. The “downfall satisfies the Universal. But this satisfaction . . . is an inverted shape and movement of the Universal.” This is a description of the life that Gretchen *might* have had (and so of how Pleasure and Necessity can become a stabilized *Gestalt*). The “downfall” of Pleasure is in the “preparation of their own death” by the parents as they educate the children who will take their place. It is this reconciliation of Pleasure with Necessity that produces “the established order.”⁷²

In the ordinary course of life, the mistakes and bad luck (which were so extreme in the case of Faust and Gretchen) are digested and learned from. We “get over” things and carry on. The Way of the World endures, because it is *happy enough* for most of us; that is exactly what the brokenhearted idealist discovers. As I pointed out earlier, it is perfectly possible for the rebellious Heart, after its discovery that most other hearts are genuinely committed to the maintenance of the order that exists, to be reconciled with the world, and to pass directly into the society of realized individuals. Virtue sees this “animal kingdom of the spirit” only in the distorted perspective of a simple triumph of selfishness; hence it is deservedly and necessarily a realm of universal misery, whether open or secret. The bleeding heart may not go to the extreme of positing a conspiracy theory of the existing order; but some hearts do harden in this way when they break; and the virtuous soul that has emerged from the reconciliation of this “mad” consciousness with its world, can recognize the bleeding Hearts as mistaken in a different way from the great majority who have settled for a selfish pursuit of happiness that will only produce the inward sense of something lacking. These obstinate hearts are themselves the natural conspirators against the established order. The virtuous eye picks them out as the ones who want to be a law unto themselves, “and in this delusion [or conceit] disturb the established order.”

This clause confirms the identity of the *Gestalt* of Self-Conceit: Goethe’s Faust is here succeeded by Schiller’s Karl Moor.⁷³ I identified Rousseau earlier as the theorist of the Heart, and claimed the Savoyard Vicar in *Emile* as its true *Gestalt*.⁷⁴ But thus far I have only identified the *thinker* who produced the conspiracy theory

for the Reason that goes mad in its own conceit: Baron D'Holbach.⁷⁵ D'Holbach himself was not a bleeding Heart—indeed, he had the rational conspirator's awareness that the Heart can be made to bleed for anything at all. The life-model of the Heart's conspiracy is Schiller's hero.

What the conspiracy theory does for Active Reason is precisely to validate a conspiratorial response. The step from the Heart to Self-Conceit is the step from protests and demonstrations, to civil disobedience and outright terrorism. The practical *Gestalt* of Self-Conceit is the idealistic bandit in *The Robbers*, who forms a conspiracy against the great social conspiracy. But, like Gretchen in the Faust-Fragment, he is an example of the type in transition. In his death-scene he is converted to the ideal of Virtue. He gives us Virtue's verdict on the unreconciled Heart and its "disturbance" of the social order: "Oh, fool that I was, to suppose that I could make the world a fairer place through terror, and uphold the cause of justice through lawlessness . . . I see now with weeping and gnashing of teeth, that *two men such as I would destroy the whole moral order of creation*."⁷⁶ In Hegel's language this becomes: "the universal law maintains itself, of course, against this Conceit, and no longer comes on stage as a dead Necessity, something opposed to Consciousness, and empty, but as Necessity within consciousness itself."

Empirically, Karl Moor's verdict would seem to have been falsified by events, for we have seen many idealistic conspirators since Schiller's play was first staged in 1781. But logically, "two men such as I" means "my spirit"—and it is not yet certain what the final potential of that is. Virtue, certainly, is as much afraid of the Heart's rebellion as the Real Individuals who are at home in their comfortable world. The upholding of law is fundamental for both of these *Gestalten*. But the "justice" of which the repentantly virtuous Karl Moor speaks is ambiguous. For the Real Individuals it means market justice; for Virtue it means an equal opportunity for everyone to develop and exercise her talents in the public service. This ambiguity will develop gradually, and at the level of finite Spirit, the resolution remains ambiguous. The "virtuous" idealist does become a member of the "universal class"—but not a very comfortable one.

- 37./383. Can the principle of selfishness be superseded when the self is the agent of the supersession? Virtue is the *faith* that it can. But what happens must logically depend on what the weapons are with which the struggle is fought.

As Judith Shklar has pointed out, Schiller's plays are full of patterns of Virtue. He idealized the Greeks; and he was also vividly conscious that the "Greek ideal" of the whole man was unachievable in the fragmented situation of modern society. What made the heroic struggle meaningful in his eyes was the Kantian conviction that practical Reason has its own noumenal world. That sort of self-consciousness lies far ahead of us. But if we put his heroes into their dramatic context as Renaissance humanists, yearning for the "ethical substance" and finding the meaning of life in the Stoic devotion to the public good, and the Stoic doctrine that "Virtue is its own reward," they become models of the Virtue that Hegel is talking about. The real difficulty is that they have the Unhappy Consciousness only just below the

surface of their Reason. That is the bond between them and the post-Kantian Schiller. They have a *religion* to which Hegel's Reason is not entitled; and for this reason their self-sacrifice is far more real than the "mirror-fight" and mock-sacrifice which is all that Virtuous Reason can achieve, with its certainty of finding itself everywhere (and so of not needing any Beyond). They also assert and realize themselves in a way that pure Virtue finds illegitimate.⁷⁷

Even Hegel's purely rational image of Virtue comes as close to a religious mode of consciousness as Reason properly can. Virtue "knows" that those who follow the way of the world only have to look at it the other way up, in order to see what true happiness is, and how it is to be found right here and now in this world. That is why Virtue is a form of the "certainty" of Reason. But the conviction that this inversion can happen is a *faith*. This rational faith is one aspect of the great battle between Faith and Enlightenment that we shall come to later. Any Protestant who believes in "justification by works" can easily adopt the concept that rational Virtue has of its *Bestimmung*; and the "rational faith" that projects virtuous happiness into a future life is a stabilized form of Virtue. The faith of Virtue is something that can and must be turned into "sight" (*Schauen*); for otherwise it could not belong to Reason at all.

To see virtue realized is the rational reward of virtue. But as Hegel sarcastically forecasts, Virtue will never enjoy this reward. It cannot do so, for the happily virtuous world would be one in which Virtue becomes impossible. The *actual* inverting of the Way of the World *is* Virtue. If the world were to be successfully inverted, so that everybody could at last see what happiness really is, the possibility of Virtue would have vanished. This problem will haunt us all the way to the portals of Religion. It is the nemesis of "Morality" even in its most highly developed syllogistic form. That is why Hegel can make the same points about the optimism of Fichte.⁷⁸

At present, we can easily see that Reason, with its immediate certainty of finding itself in "what is," is bound to be inverted by its encounter with the world. For its whole substance is in the Way of the World. What must concern us is to see what the useless and hopeless effort of Virtue does to the Way of the World, and how the World's Way differs, after a double inversion involving the incorporation of Virtue, from the way it first appeared when the Heart collapsed into it.

- 38./384. The Universal of Virtue's faith is *abstract*. It is the inner potential of both world and self. The good is an *ought* which is to be realized by the virtuous will in its relation with the world.

The true good of Reason is present in the virtuous soul in one way, and in the world in another. In the world it exists as the inward potential of all the energies that are at present misdirected towards selfish happiness, with the resulting universal dissatisfaction. In the virtuous soul it is the conscious purpose of realizing this potential. But it is an *abstraction* in both perspectives. It is not a power that can actualize itself. The worldly folk can see that it is only a utopian project in the virtuous mind. To say that it is abstract, is the same as to say that it exists as the unre-

alized term in a relationship. It is an abstract goal both for the agent and for the world in which it is to be realized.

- 39./385. Thus the Universal is *gifts* that can be used well or badly: passive instruments for the individual agent.

A Stoic of the pure observance is logically obliged to say that everything except Reason is “indifferent.” This is the position of rational Virtue. What is called “the good” is a repertory of *gifts* that can be used either well, or so badly that they bring disaster (as they did upon Faust and Gretchen in the Fragment). As natural gifts, they are the passive means or instruments of an agent who is free, and can set her own purpose.

From the standpoint of the virtuous purpose, the gifts are *misused* by naïve individuality (in the selfish struggle of the world); and they are only rightly used by Virtue, the rational individuality which knows that it must sublate its own self and become the mere instrument of Reason. Virtue differs from the Unhappy Consciousness in that it knows that the choice between the options depends upon it alone, and not upon the action of the Unchangeable Reason in the Beyond. Virtue’s active agency does not depend upon Grace; it is *rational* faith.

(g) *The “Knight of Virtue”*

- 40./386. This Universal is equally at the disposal of both sides. Only the faith that the potential is essentially good is Virtue’s secret weapon. This makes the struggle into a sham-fight, since it means that the good is self-actualizing, not merely passive. The mere potential can go to waste equally on both sides; but it is actualized by the struggle itself. In the struggle Virtue is the self-actualizing Good, but whatever it attacks is good in itself too. So the *Weltlauf* is actually invulnerable; and what Virtue wants to sacrifice on its own side is sacred too. *Nothing* must be sacrificed. The struggle is only to keep the weapons bright.

Because of the elimination of all transcendence from the perspective of Reason, the hopelessness of the virtuous crusade is evident from the start. The Universal Good (Reason itself) is at the disposal of the individual will. Virtue has only its own knowledge that it has discovered the secret of true happiness to use as an allied force posted in ambush: the Way of the World will be taken by surprise when the battle starts; and Virtue hopes to win the day with this secret weapon. It knows that when truly appreciated, the universal Good is not an instrument to be used by the active consciousness as an “other.” It realizes itself, because it is “in and for itself.”

Actually, however, this knowledge is what reduces Virtue’s own fight to a fencing practice in front of a mirror (*Spiegelfechterei*). The knowledge that the Universal is “the purpose” is just as *abstract* as the knowledge that it is an instrument *for use as we please* (cf. par. 384). Virtue can only set an example; it can show the world how to live happily. Its victory depends on the world’s being able to recognize itself in the mirror. The virtuous agent can say “This is what Reason *is*,” and she can also show

it. But what is thus shown looks just like what everyone does. Reason is the impersonally “common” good. Whenever the “knight of virtue”⁷⁹ begins to fight for something concrete—even for the cause of free self-government, to take the most obvious of virtuous causes—he must be conscious that whatever he injures is a *real* good that is useful for all (which therefore ought to be preserved).

On the other hand, it is precisely the necessity to take sides, and to fight for something as a matter of principle, that provides the discipline through which the natural soul becomes virtuous in the first place. The perception that the common good is threatened is what makes us unselfishly conscious that it must be preserved. So what Virtue’s example does is just to make us all aware that there is an unselfish side in our rational commitment to the pursuit of our own interest. First the heart had to be shown that it is governed by a selfish head. Now the selfish head learns that its private happiness has an unselfish side.

There are cowards and schemers in the battle too. But without the general struggle of life we should never find out who is rationally committed, and who is not. Virtue, which takes itself to be the inversion of the World’s Way, needs every aspect of that Way (including the selfish ones) for its own existence. This is the first inversion of Virtue. The Way of the World is not as selfish as it at first took itself to be. Reason is not just the servant of the passions, the eyes of impulse, and the instrument of the desires. As Virtue rightly sees, says, and shows, it is the universal Good under which everything else must be subsumed; so it is the *virtuous* Way of the World that is the actual good.

The virtuous knight finds himself everywhere faced by other citizens doing things that are “good-in-themselves”; he has no quarrel with these activities, and he must not injure them because every aspect of the way of the world is, indeed, “good in itself.” Everything is a potential good, needing only to be altruistically done, or produced with a devotion that is truly virtuous. When the knight does something unselfishly he must be rational enough to recognize that even the selfish doing of it produces the same “common good.” He can only make this universal aspect of all action plain to the agents who are ignoring it. This is his “mirror fight.” The ideal of life is to “play the game” (for the game’s sake, not to win). So Hegel says that Virtue fights only to keep its sword bright, and that it views all of life as a struggle organized to keep the craft of sword-makers and fencing masters going.

41./387. The enemy, however, is selfish, and can sacrifice *anything* to win. It would win even if Virtue were not inhibited from striking. Virtue must sacrifice nothing.

The world, on its side, can sink to any level. In the person of some of the despots, whom D’Holbach attacked and whom Schiller’s heroes sometimes face, it can sink into the naked urge of natural self-consciousness to have its own way even if the heavens fall.⁸⁰ For that is where individuality starts, and that is what Virtue wants to discipline out of existence in the name of Reason. The knight of virtue is necessarily opposed to those who are anti-rational. But he can never abandon his ideal of Reason. He must always “play by the rules.” He always wants to play better

than ever before (for that is what his happiness consists in). But “winning”—since it involves a comparison with someone else and a sense of pleasure in one’s own achievement—is an irrational goal. To win the battle with the world the knight must convince everyone that “winning” is not what life is about. It is playing well for God’s sake that matters.

What chance does Virtue have, therefore? The *virtó* of Machiavelli’s Prince will always keep the way of the world alive. Machiavelli’s *virtó* is what Hegel is describing when he speaks of “the negative principle, for which there is nothing established and absolutely sacred, but which can risk and endure the loss of everything and anything.” Here we have the spirit of Faust returning as the World-Spirit. Machiavelli is the thinker of the World’s Way. Thanks to the curious myth that the Age of Reason generated about the imprisonment and death of Don Carlos, Schiller was able to portray Philip II of Spain as the active *Gestalt* of this “negative principle.” Simply to gratify his own hatred (says the myth) Philip sacrificed his only son.⁸¹ No virtuous knight can prevail against such a one, if political power is what he sets his heart on. For this *virtó* everything, including the “virtuous knight,” is a rationally manageable resource.

But there is an ambiguity here. The princely *virtó* is “free from every moment”; it can “as readily sublimate any moment, as let it stand.” But does that necessarily mean that every moment is for it equally a mere resource? This interpretation of Machiavelli is the only one that Virtue can produce, and it is the natural one for the ordinary reader who makes no pretence of playing the game of life purely for the game’s sake. But it makes the great *patriotic* appeal at the end of the *Prince* into an irrational commitment of the Heart on the part of Machiavelli himself. Machiavelli, however, was not the voice of a Hobbesian struggle for selfish power, but of *virtó* as something worth dying for. He was not the voice of self-conscious Life, but of Reason. As soon as we pass on the *Discourses* we can see that his *virtó* aims to become the embodiment, the reincarnation, of classical Roman *virtus*. So the virtuous knight’s ideal of living (and dying) for the sake of Reason (as the human virtue) is not just a “resource” for Machiavelli; it is not just a tool to be used like any other. To be sure, the Prince is free; so he will use the bond, the control, given by that kind of virtuous commitment in any way that he needs to. But he is always mindful that this bond is just what he wants to strengthen; it is only a *moment* in his calculations, but it is one which has a very special destiny. For the genuinely Machiavellian Prince (which Philip of Spain was not) it is the subjective aspect of the *Ansich* (i.e. this *virtó* is not just a means, but also the end).

42./388. As for the ambush of faith, the *Weltlauf* is too wide-awake to be caught in that. It faces every way since it knows that every potential is for its use. Embodied as Virtue, the Good is only a sham-fight. In itself it is only useful resources. Represented as *Dasein*, it is still asleep or in limbo.

Machiavelli is the wide-awake consciousness of the World on its Way. As we shall see a bit later (par. 392) the World is not quite as wide awake as Hegel claims it is. On the one hand, it is actually better than it takes itself to be in its complacent

pursuit of happiness; and on the other hand (as we shall see in the Spiritual Animal Kingdom) it is not as good as it takes itself to be—after its triumph—in its virtuousness. This moralistic complacency shows very clearly when the Virtuous World reads Machiavelli. Faced with its own wide-awake self-consciousness—which is also *our* consciousness of it—the habitual way of the World itself is precisely a return to a hypocritical division between “Virtue” and the “Rat-race.”

But even if it cannot quite face Machiavelli’s *virtó*, the World certainly has nothing to fear from those who tell it to “play the game.” It knows all the games there are, and it wants to win all of them. It knows all about “potential,” and it can make a profit out of the virtuous potential, as readily as out of anything. War time—even the battle for *freedom*, which is Virtue’s only fully justifiable war—is when the armourers get rich. In peace time, Virtue may happen to be an obstacle or a nuisance. That is how the “sham-fight” of Virtue appears, because it wants to get “resources” used in a way that appears to worldly eyes to be “useless” or “wasteful.” This is how the “good *Ansich*” is present “for its enemy.” “In itself” it is simply the “Matter” of Universal Utility; and if we represent it as a *Dasein*, then we have the God of the Deists: “a sleeping consciousness, and one that stays back behind, no one knows where.”⁸²

- 43./389. Victory therefore goes to the *Weltlauf*, because actuality *is* the individuality that virtue sought to supersede. The real potential is not an abstraction, but being itself; and individuality is the principle of conversion into actuality. It converts *nothing* into *being*.

“Virtue is therefore vanquished by the Way of the World.” The *Weltlauf* can absorb Virtue and satisfy it with no more than a modulation of the universal rhetoric. We read Adam Smith, and we learn that by enriching ourselves we are enriching the Nation. We need the government to watch over us, and see that we make no secret covenants for the restraint of trade; but the enlightened self-interest of everyone individually will take care of the “common wealth.”⁸³ Virtue is not really necessary except as a mode of conscious self-congratulation which we all adopt. We all go on doing what we were doing before, but we now insist that our activity does indeed serve the public interest first. The Heart-campaigners, paradoxically, learn to use the language of enlightened self-interest in support of their causes (since the “public good” is what is rationally advantageous for everyone privately). Virtue takes its place in the public order itself as the “universal class”: the “public servants” who are supposed to administer the system as evenhandedly as possible, and to prevent abuses.

This inversion, like those that went before, is not as simple as it sounds. The World’s Way is the direct inversion of Virtue. Its victory over Virtue is the second inversion. This means that the triumphant Way of the World incorporates the first opposition in an inverted form. “Virtue has the abstract, non-actual *Wesen* as its goal.” It appeals to us to play the game of life, for the game’s sake. This it says is the liberation of our rationality. We should compare the discovery of free self-realization by the serf, when his arbitrary freedom of choice is taken from him by violence, and he has to follow orders as well as only he knows how. Rational virtue

wants to take this a stage further, by turning it into a Stoic self-discipline of free rational individuals in the service of Reason, the “service that is perfect freedom.” But this is still only self-realization, let Virtue say what it will. It is achieved by everyone capable of Reason—by the serf through fear, and by the free bourgeois through the pursuit of happiness.

The active self realizes itself out there in the world, for the enjoyment of itself, and for the use of others. No longer does the serf see his beasts change their names, as they are butchered and carried into his lord’s kitchen. But every achievement of the free rational agent (whether virtuous or selfish) changes its real status in that way. That is what “being real” involves. The “realization” of the virtuous purpose involves its “consumption.” The knight of virtue is a consumer of goods, like everyone else; and whatever he brings into “being”—no matter how selflessly—is there *for use*. The “in-itself” of Reason is a purpose to be realized. That is to say it is the using of something actual. Whenever and wherever it is successfully realized, it exists for use. The Knight of Virtue can insist forever, that what matters is the inwardness of the purpose, the rationality that is made visible in the process of realization, and which can only be perceived and enjoyed in the process; but the fact remains that the “end” of his virtue is both a means (not the only one, of course) and the end of rational utility. The “end” of Virtue is to display Reason “for its own sake.” But the “truth” of this display is that Reason is revealed as the means-ends continuum of the free activity of rational individuality. In the eyes of grace God became man by his own eternally mysterious volition; in the eyes of Reason, man makes God (the Unchangeable, the abiding Substance) become Man (the changeable, the self-individuating motion). Far from being evil, individuality is what is good; far from being false, it is what is true. But this is a goodness that embraces evil, a truth that involves falsity.

- 44./390. The victory is only a triumph over empty abstractions and idle moralizing (which shows forth only the swelled head of the virtuous one). Ancient virtue was founded on the substantial life of the *Volk* and its welfare, not on edifying rhetoric and inner feeling. Everyone sees through this bombast nowadays.

For Virtue it is the “essenceless abstraction” of Reason that is essential. Therefore the triumph of the World is only a triumph over a great cloud of empty rhetoric. It makes no difference to us whether the producers of our goods are “virtuous” or “misusing their gifts,” as long as they do produce the real goods. This is not to say that it makes no difference to us whether we are virtuous or not; if we *are*, it makes a world of difference—there is no other word for it. If we are not, it seems to make no difference, but there is one. Hegel seems to be saying here that it really makes no difference, and that Active Reason gives place to Real Individuality by simply dissolving into a cloud of words. But we know, *a priori*, that every “experience of consciousness” makes a difference, or it would not belong in the Science. So we must look carefully at the comparison with “ancient virtue” to see if we can discover why Hegel exaggerates the emptiness of “modern virtue” (as he clearly does in this paragraph).

"Ancient virtue . . . had its *foundation, full of content*, in the *substance* of the *Volk*." The Good that it served, and denied itself for the sake of, was one that "*actually existed already*." In that world, "virtue" itself was "the way." The philosophers, from Pythagoras to Aristotle, set up an opposition, between the "life of pleasure," the "life of honor," and the "life of virtue." But this was partly an educational device to help in the maintenance of the established way and its values; and partly a reflection of the incipient birth of "free individuality" as membership in the universal community of Reason. Before the philosophers got at it at all, "virtue" (*andreia, virtus*) was the *manly* consciousness of what the active agent owed to his community. The aspiration of the Homeric hero "always to be the best and to be outstanding above the others" is irrational in the eye of modern Virtue, because Reason distinguishes strictly between "honor" and "virtue." But for a world in which rational individuality did not yet exist, and natural individuality desperately needed to be disciplined, the pursuit of "honor" was the natural path to that real sacrifice of natural individuality which is natural "virtue."

Rational virtue is in a different situation. The substantial life of the natural (or face to face) community lies already in the past. It is lost beyond recall. The Real Individual who is journeying towards the recovery of her ethical substance knows herself as a rational agent, i.e. as a member of a truly universal community, which does not already exist. What does exist (and this is true for Active Reason at every stage) is an "inverted" or perverted world. Hegel's own theoretical excess against the empty rhetoric of edification—which is all that he allows modern "virtue" to consist of in the end—is touched off by his consciousness that Virtue is actually a very hard *Gestalt* to break into, and to overthrow. It makes its impregnable circle or fortress against the World by returning to the Heart for the "inward" meaning of all its phrases, and for the sight of its essential purpose, the enjoyment of rational consciousness that is Virtue's own reward. It still has, in full measure, the Heart's Conceit, the conviction of its own "rightness"; and (in its finite bourgeois way) it has suffered and disciplined itself in order to achieve and to justify this righteous conviction.

We can see how strong Virtue's fortress is, by considering how the Knight of Virtue would answer the Cynic who will overthrow the happy home of the Real Individuals. Diderot's Philosopher is the "worthy" consciousness of that world. He is reduced to dumbfounded silence and helplessness by the nephew of Rameau who points out that all the values of his world are inwardly and essentially *verkehrt*. But the young Rameau would get nowhere with the Knight of Virtue; for that is just what the Knight says himself. The Knight stands at the entrance to the happy home of Real Individuality, and young Rameau stands at the exit. They have quite opposite reactions to the inverted image that they see. For the young Rameau, the Knight of Virtue is the most comical of all the fools; for the virtuous knight, Rameau is the unhappiest of all the knaves. But neither can reach the other. Yet Rameau's "language of pure culture" is the most powerful of dialectical solvents, the *aqua regia* of the spirit. One might perhaps think that the Terror is more powerful. But that will only tell us whether the Knight's Virtue really is just verbal.

In fact the “virtue” of the reconciled knight whom Hegel had in mind was real enough. Once we have identified Machiavelli as the voice of the World, and of its wide-awake, all-seeing, ever ready *virtú*, the identity of the author of the “pompous talk about what is best in [or for] humanity, and about the oppression of humanity, about [self] sacrifice for the Good, and the misuse of gifts” is easy to detect. The most celebrated treatise against Machiavelli produced during the Enlightenment was the *Anti Machiavel* of Frederick the Great. The effect of an appallingly rigorous education upon his very sturdy physical and mental constitution was to make Frederick in good sooth a “knight of virtue”; and the discipline that was so “good for him,” and made him think there could be no happiness except in service, was also a very convenient social philosophy for an enlightened despot to preach.

Frederick’s dedication to his duty was real enough. But *his* duty (as a mature self) was to give the orders; and the subject’s duty was to obey. Thus his Virtue is the rational resurrection of Lordship and Service. Hegel, himself, is probably thinking of all kinds of moral sentimentalism and edification (for he condemns the Heart, as well as Virtue here); and his attack on the highminded self-righteousness of all champions of the “Ought” reflects the conviction of his own Heart that he is here facing a form of rational insight that is “evil.” But we should confine ourselves to the logical transformation of the World’s Way; and the reduction of rational action to the duty of obedience does empty the concept of Reason of all content, so that it becomes “the Nothing of abstraction.”⁸⁴ As we shall see, there is an important point in the reduction of Virtue to emptiness.

- 45./391. The result therefore is that this good-in-itself is cast off like a cloak. The *Weltlauf* is recognized as the actuality of the Universal, and the movement of individuality is its agent of conversion from abstraction to actuality.

Only the empty form of “duty” is accepted by the World from Virtue. The dialectic in this third moment of Self-Actualizing Reason is the mirror image of the dialectic of the first, where it was Pleasure which accepted only the form of “universality” from the experience of Necessity. Virtue has to recognize itself in the World; it has to recognize that all the seemingly unhappy rats in the race have the steady rational consciousness of doing their duty while they pursue their own happiness; and that this is the foundation of a rational happiness which they can enjoy even when their empirical quest appears to be a failure. There is no need to live always in the light of an abstract ideal of duty. The self-satisfaction and self-interest which seemed like a betrayal of the Ideal, and an inversion (*Verkehrung*) of the character of the Good, is actually just the inversion of its status from an ideal potential into a real actuality. Individual action (no matter how selfish its motivation may be) is the only source of universal goods.

- 46./392. The Way of the World has vanished too—for it is not as selfish as it took itself to be in this antithesis. It produces the common good without knowing it, and its confident egoism is merely self-deceptive.

It is when Hegel says that the World's Way has vanished (and has been vanquished) too that we can see clearly that Virtue has made a difference. The opponents in the world of the Heart did not think of themselves as doing their "duty." They were simply committing themselves in the ways that they wanted to. Hegel is *still* not ready to speak of "duty" here, but I do not know how else to speak. What I am already calling "duty" will change its shape several times before it becomes the voice of "Conscience" which finally decides for me the "duty" that is uniquely mine; and by then it will have come full circle back to the Heart. Frederick wanted all his subjects to be aware of doing their civic duty in their lawabiding obedience. What the solid citizens have, that the racing rats on the way of the world do not have until they absorb the rhetoric of Virtue, is the clear consciousness of producing the "goods" of the world. Their prosperity is the prosperity "of the Nation." The rats think that they are acting just for themselves; what Virtue correctly understands is that no one can act simply for herself. The solid citizens do understand that. They are quite complacent about their own "worth."

As far as their public duty is concerned, the solid citizens are the obedient subjects that Frederick the Great wanted. As I said earlier, they do not recognize themselves in Machiavelli's Faustian *virtó*; and Hegel does not portray the "spiritual animals" as political animals (though "political economy" is the ground of his picture). So if Frederick's cult of "virtue" is "the Nothing of abstraction" it is, after all, a very forceful and effective Nothing. Frederick's cult of "duty" was not mere rhetoric in fact, but the Nothing of the Concept.

The altruism of completely unselfish service *is* mere rhetoric. But the real truth that good citizens are performing a public service makes the language of pure self-seeking egoism, the mythology of "economic man," into mere rhetoric likewise. The concepts of the Universal and the Individual with which Virtue began have both been exploded. In their place we have *real* (i.e. "virtuous") *individuality*. Both the virtue *and* the individuality are empty, but they are not "abstract." Like the living embryo the rational individual is now a real process in motion.

- 47./393. Thus the process of individual self-realization is what emerges as the real end-in-and-for-itself.

Hegel simply sums up the logical result of our observations here. But for us this is a good opportunity to review the whole movement of this stage in rather more detail, because Hegel's argument has been misinterpreted and misunderstood in a number of ways. Some things that Hegel himself says have been lifted out of their dialectical context and treated as absolute assertions, so that the unstated implications of the context in which the statements are made have been overlooked.

To begin with, it is not correct that "the actualization of rational self-consciousness" involves or deals with specific "forms of individualism." This thesis is repeated in many books—among which Hyppolite's is still the best⁸⁵—but it only obscures what Hegel is doing. For example, it leads to the identification of what Hegel calls *Lust* with "Hedonism," whereas careful attention to the text (and to

his quotation and echoes from the Faust-Fragment) soon teach us that he is concerned with “being in love” (which is altogether different). Since he tells us specifically that *Lust* does not involve the “consumption” aspect of Desire, the “Hedonism” thesis is quite untenable. We might perhaps describe the evolution of the World’s Way as a progress from “hedonistic” to “ideal” utilitarianism. But this does not help us to follow the argument (which is about “Law”); and the doctrines of the Heart and of Virtue (which involve self-identification first with Life and then with Reason *universally*) are completely obscured by being classified as “forms of individualism.”

The section is about the formation of the consciousness *in* the rational individual that she is the “concrete universal.” The argument will be more easily grasped if we concentrate our attention on the evolution of the “universal” moment. The “happy world” of the lovers is smashed on a meaningless social “necessity.” This gives rise to an ideal world of “universal sympathy,” which is smashed in turn on the real world of “universal self-seeking.” From this arises an ideal of “universal service” which finally disappears (it is not smashed) into the world of “universally reciprocal utility.” Here at last the conceptual motion comes to rest, because the individual ideal and the social reality match perfectly. This is what Rational (i.e. universal) Self- (i.e. individual) Consciousness *is*. This is the world where Reason is the monarch, the world of Frederick the Great, and of Fichte’s “Closed Action State.” Since all that Frederick contributes is language, any well disciplined and intelligent person can take his place. Every individual citizen can recognize herself in this Universal. Reason has come down to earth, so no channel of access to the Beyond is needed. Reason has no religion; and the true measure of what Active Reason achieves, is contained in Hegel’s reference to the “Unchangeable” (par. 389). Active Reason does not *change* the Unchangeable; but it recognizes where (and what) it is. It is *here* (not in the Beyond); and this life is *happy* (not unhappy).

This leads to two reflections about the relation of Real Individuality (or the Virtuous Way of the World) to the earlier history of virtuous consciousness. First, we must consider the difference between Virtue and Stoicism. The Stoic is *free* but he is not active, because his freedom is only in thought. He knows that the actual world is the domain of fate. Virtue, by contrast, is not Free Thought, but Active Reason. It starts with the certainty that the world belongs to *it*, not to Fate. It does in the end reduce to obedience, but its obedience is not to Fate, but to Active Reason in the shape of the “divine and human order” of Civil Society. Beginning as action, it ends as a thought; like the Sage bowing to Fate in the shape of the Emperor, the virtuous subject is only formally different—different in her own thinking consciousness—from the serf obeying his master’s orders. The serf discovers and enjoys the same free self-realization that is inseparable from all action. The Stoic cannot properly have this self-realization, because only her inner will really belongs to her. But the serf enjoys self-realization secretly; the virtuous subject can take her pleasure openly.⁸⁶

Secondly, the fact that, once the liberation of Reason from external (or transcendent) authority is achieved, Virtue can only maintain its objectivity through

rational obedience, is an interesting sidelight on the resemblance between natural and rational virtue. Natural virtue obeys the laws of the City; the virtuous citizen cares nothing for the laws of any other City, still less for the supposedly universal law of "Reason." But as soon as Aristotle wants to define "ethical virtue" in general, he has to bring in the standard of the "practically wise man." Ethical virtue is "a state of character concerned with choice, lying in a mean . . . determined by *logos*, and as the *phronimos* would determine it."⁸⁷ Of course, the most that the citizen of good character needs is "advice," because he lives in perfect solidarity with his community, and there is no opposition for him between the "universal" and his own individuality. But when that substance has perished, and the great antithesis between the Unchangeable and the Changeable is set up, the advent of Reason makes the real participation of a "lawgiver" essential. His separateness is what gives the universal rational principle its objectivity. We ought not to think that the necessary dependence of universal ethical virtue on a separate wisdom is simply the result of the loss of ethical substance, and the mark of "estrangement." That is one side of the truth; but it is hardly the most serious one, for the Real Individuals can embody their *given* law almost without stopping to think. The important point is that the necessary collaboration of two separate rational agencies (or sources) in any virtuous decision is the immediate shape of "Spirit." Reconciled Virtue with its edifying speeches, the philosophical monarch with his attack on Machiavelli, are the harbingers of the free conscience in which the two sides will be reunited without losing their recognized separateness.

Finally, we should notice that although Machiavelli is silenced for the present, the spirit of *virtó* is only *dormant* in the reconciled obedience of Virtue. Faust, as the individual incarnation of what is universally incarnate in the World's Way as *virtó*, is the *spirit* of Active Reason. That Spirit will not stir again until we have left the Real Individuals in their "animal kingdom" behind, and have achieved the consciousness of "pure culture." But then we shall see the modern philosopher-king cast out of his kingdom. Another one of the same type (Robespierre) will show us Reason as *virtó* in action. Only after boredom has been exorcised by terror, shall we find out what modern moral virtue really is.

It is a plausible hypothesis that the rhetorical Knight of Virtue is Fichte—but we have to impose some important limitations. Chapter V begins with Fichte and it will end with Kant. The attack on "edification" in the Preface is certainly aimed at contemporary "edifying discourses" like those of Jacobi and Schleiermacher; and there is an attack on Fichte's moralism in *Faith and Knowledge* which deserves to be compared with paragraph 390.⁸⁸

But all of this *odium philosophicum* is directed against the "Beautiful Soul"; and because there is a visible *circle* that begins with the Law of the Heart and closes with the Beautiful Soul (compare par. 662) we should pay special attention to the fact that Hegel avoids speaking of the "Heart" in that context. He insists on the return of the Unhappy Consciousness instead (par. 658). He certainly wants to regard the rhetoric of the Beautiful Soul as a further development of the moralism that begins with the Heart and Virtue. But there are two connected reasons why

writers like Fichte, Jacobi, Schleiermacher and Novalis cannot properly be taken as the Knight of Virtue.

First, Hegel himself tells us that “The immediate mode of being of *Reason* . . . and its proper shapes, have no religion” (par. 673); but he goes on at once to record the “religion of Morality” among the emergent shapes of Religion that we have encountered (par. 676). So “the Moral World-View” does not belong among the “proper shapes” of Reason, even though Fichte’s Ego and Kant’s Categorical Imperative are the boundary shapes of its “Category.”

Secondly, this exclusion is confirmed by Hegel’s refusal to use the word “duty” in this section. The rhetoric of “Virtue” has to be full of appeals to “duty”—and no commentary on Hegel’s text can avoid talking about it. But Hegel does not use or mention “duty.” This is clearly because Self-Actualizing Reason does not properly have the concept of *moral* duty; it has only the “Universal Utility” of the Enlightenment. The rational concept of Duty (which True Spirit had in its natural shape) is reborn on the guillotine. There will be an unmistakable “Knight of Virtue” involved in that transition: Maximilien Robespierre. In Robespierre’s career the tables are turned between Virtue and the World’s Way—and the “Nothing of Abstraction” becomes the active “Nothing” of the Concept.⁸⁹

Notes

1. For the evolution of the recognition-relation in Reason and Spirit see L. Siep (1979, 97–131). We should note that “rational recognition” has consequences for our understanding of Faust. If he is the “shape” of Rational Pleasure, we can ascribe moral indifference to him, but not malicious *intent*. He commits perjury, and he is criminally negligent about the sleeping-draught for Gretchen’s mother. But crime and wilful harm do not *please* him (as we can see from his reaction to the perjury).

2. Thus the movement of this phase goes from individual to universal self-recognition, whereas Observation went from universality to individuality.

3. M. Greene (1972) writes correctly of cognition as “liberation from thinghood.” That is the movement of “consciousness.” But the actualization of free self-consciousness is a “return to thinghood.”

4. Even the serf or the devoutly Unhappy Consciousness has this “certainty” and this “knowledge.” But she has it not as serf or as Christian but as “English” or “French” (for example). It is the consciousness that a (presumably) illiterate peasant girl named Joan could express and call forth so powerfully, that she seriously disturbed the universal social order based on the *personal* relation to “the Lord” (real and spiritual). Active “Reason” involves the certainty of being recognized in (and by) the *universally human* order.

5. A simple letter (which belongs to the world of Self-Consciousness not that of Reason) could not have this significance if it were not for the existence of the “things” called the “Royal Society” and the “Linnaean Society” (and others like them). The controversy about the invention of the differential calculus—in which many participants said and did rather disgraceful, or at least irrational, things in “publications” of a more formal (hence outwardly *rational*) kind—illustrates the same point on the negative side (no sufficiently “universal” society existed).

6. I have pushed the parallelism much further than Labarrière wanted to (1968, 99–101). It is basically a parallel between the macrocosm and the microcosm. Consciousness moves outward towards the comprehension of the world as the Concept of “self-repulsive attraction.” Observing Reason moves inwards from the order of Nature to the embodied self as a “rational individual.”

7. This pattern is an inversion of the movement of Sense-Certainty where the third moment achieves the only stability that the essentially uncertain certainty of sense is capable of.

8. Compare Labarrière (1968, 105–106). But George Kline has made a serious attempt at a more detailed parallel (1970). (His attempt to bring in Reason as Observation should be set aside as irrelevant and mistaken; and perhaps some of his detailed points are a bit strained. But this sort of “interlocking” is what we ought to be looking for.) Compare also W. Becker, 1971, 101–105.

9. The only “struggle for recognition” that goes *to the death* inside the *polis* is a factional one. The battle of Eteocles and Polyneices precipitates a constitutional crisis. The “resting Concept” of the primitively political situation only breaks down where there is a struggle for the kingship; and when one of the warring parties is declared a political traitor, then the two sides of the City’s law (the one that properly belongs to Self-Consciousness as natural Desire and the one that belongs to Reason) come into conflict.

10. *Politics* I, ii, 15 (1253a). (The influence of Montesquieu was crucial in Hegel’s transposition of Aristotle’s political theory for the modern national *Volk*. See further the comparison offered by G. Planty-Bonjour [1974].)

11. Unluckily for this example, the “Valentine scene” was not in the Fragment of 1790. Antigone is, of course, the ever present model of ethical protest; but she illustrates the ambiguity of identifying with the “abstraction of universality.”

12. At the level of the “abstract” religious consciousness, when we reach it, we shall find the skull replaced by a statue that is solid stone. In the world of “Reason” this intuitive form of “absolute otherness” (par. 26) is lacking.

13. Hegel wrote “das negative Meiner selbst” which the editors sensibly advise us to read as “das Negative meiner selbst.” But the English rendering “the negative Myself” (though not grammatically accurate) gives us an echo of the Unhappy Consciousness (which fulfilled Self-Consciousness by giving it to God alone). This is what Hegel wants us to remember.

14. The experience of Phrenology is preserved in a sublated way by this view of Greek citizenship. The natural self dies to itself in order to rise as the devoted citizen.

15. *Politics* I, 2 (1252 a 28–30). R. G. McRae (1985, 44, n. 48) remarks that there is no sign of alienation in the description of labor here. That is because only the labor of free citizens is being considered (not that of slaves). On the other hand, the *First Philosophy of Spirit* (to which McRae also refers) is concerned with modern “wage-slavery”—which has left “True Spirit” behind.

16. Possibly it is a mistake on my part to bring war and sacrifice in at all, because Hegel speaks only of the “thinghood” of Reason in economic life, and in universal obedience to the laws. Active Reason is a phenomenon of “civil society.” It does not have to deal with death except as a Hobbesian “schooling of experience.” But voluntary death is where the “certainty” of Reason is shown to be “truth.” “Life in the *Volk*” is just what modern Reason has lost; so I think it is right to emphasize it at this preliminary stage.

17. Our situation is not Aristotle’s; and our society is not the *polis*. We are only forced to recollect the *polis* here, because it was the actuality of the ideal of Reason. The Science of

Experience needs both Physiognomy and Phrenology as moments in the mature *return* of Reason.

18. Diogenes Laertius, VIII, 16; compare also Kant, *Perpetual Peace*, *Akad.* VIII, 366. (Xenophilus of Chalcidice is placed among the “last of the Pythagoreans, whom Aristoxenus in his time saw . . . who were pupils of Philolaus and Eurytus of Tarentum,” Diogenes Laertius VIII, 46. Aristoxenus was a direct pupil of Aristotle. It is reasonable to infer that Xenophilus was not much—if at all—older than Aristotle.

19. *Republic* X, 600ab; compare Letter VII, 339de, 328cd. (Socrates in the *Crito* is one of the clearest voices of the doctrine that the actual is rational. He distinguishes between the Laws, which are actually rational, and the disposition of his own case, which is not.)

20. When Hegel says at the beginning of chapter IV that Self-Consciousness is the “realm where truth is at home,” and that “In Self-Consciousness as the Concept of Spirit, Consciousness has for the first time its turning point . . . and steps forth from the empty night of the supersensible Beyond into the daylight of the present” (pars. 167, 177) he is not referring to the natural self, but to *our* rational Self-Consciousness. The turning-point that he speaks of is in 1806 at the point where his first readers are standing. The standpoint from which we comprehend “Self-Consciousness” is already beyond the whole “experience” of it. We are always in “the present.”

21. D.-K. 68, B 247. The quotation is found only in John of Stobi, and I suppose Hegel did not know it. But I do not think that the doubts of various scholars about its authenticity would have troubled him. What makes Diels say “die Form bei Dem. ist banal” I cannot imagine. I infer that he was himself so much a child of *his* time that he could not recognize the enormity of the revolution that had produced it. Of course, any Pythagorean refugee, or self-exiled Sophist, might have said it, but only in Aristotle’s world is it valid against the “wisdom” of Xenophilus.

22. According to my interpretation the evolution of the Universal Church begins even earlier (with Zarathustra). But the identification of that beginning is slightly problematic; and certainly it is not as decisively fixed as the first performance of the *Antigone* in Periclean Athens.

23. I have deliberately tried to restrict myself to assertions that *must* be true about the historical Socrates (and about the way that his solidly virtuous fellow citizens saw him). We need to accept this much if we are to account for the actual fate of Socrates, and for the record that has come down to us, without the hypothesis of deliberate and conscious fraud. Hegel—whose whole account of the “ethical substance” is couched in terms of literary images (for reasons which we shall have to discuss later)—would certainly not give a fig for historical accuracy at this level. But I have to take account of the fact that (thanks largely to Hegel) my time takes its history more seriously than Hegel’s did. Aristophanes and Xenophon are almost as important to me as Plato. Aristophanes was addressing the *solid* social consciousness, and Xenophon was expressing it. (In the *Philosophy of History* lectures Hegel called Socrates “the inventor of *Moralität*” (*T.W.-A.* 12, 328–329; Sibree 269).

24. If I may be permitted a Hegelian *jeu d’esprit* at this point, it seems plausible to suppose that something like the reflective conservatism of Socrates in the *Crito* lies behind all of the satires of Aristophanes against the war and the war-leaders. The *Crito* entitles us to reject indignantly the insinuation that for Socrates the “laws and customs” of his City were “just a thought without absolute essentiality, an abstract theory without actuality.” Yet that is exactly what *is* true about the “Socrates” of the *Clouds*. Hegel’s argument in this paragraph shows us how, because the City was involved in a war of which both Aristophanes and

Socrates saw the folly and the tragic import, the solid trust that both of them had in the substantiality of the “laws and customs” was betrayed, and they came into a conflict of reflection that forms a sort of involuntary analogue to the completely solid and wilful tragedy of Creon and Antigone. Unlike the two mythical agents they were not fighting for different versions of the City, but for the same one. The tragedy of their conflict arose precisely from the fact that they were fighting for a lost dream, and they were (although they did not know this) already beyond it.

25. The note of *apologia* cannot be sincere; for where would the “necessity” of the Science be if we had any *logical* choice about how to go forward; the fact that we can always stand still if we want to, has caused enough confusion about the “necessity” of the Science already.

The movement of *Sittlichkeit* into *Moralität* is well described by P. Rupli (1987). A good account of the moral aspect of modern *Sittlichkeit* is given by L. Siep (1983). Compare also A. T. Peperzak (1982) and R. B. Pippin (1991b). For an exhaustive discussion of Hegel’s theory of *Moralität* see A. Wildt (1982, part 1).

W. H. Walsh (1989, 150) asks “In what community does *Sittlichkeit* prevail?” and answers “Prussia.” But the question is a foolish one. He understands that Hegel’s concept of developed modern *Sittlichkeit* incorporates Kant’s rational formalism, but says it is “not obvious” (1989, 145) how this is legitimate. E. E. Harris, in his response (1989, 154), puts his finger on the driving principle of the answer. Kant’s principle of “respect for humanity” leads us to the contradictoriness of Conscience and so to “Religion.”

26. The achievement of individual happiness in Civil Society is not the goal of Reason; it is only the resolution of the unequal recognition in the Lordship/Bondage relation. So the cycle is repeated directly (not as a contrasting inversion) in chapter VI. Hence, in Absolute Freedom and Terror we shall see the Frenzy of Self-Conceit, the extreme from which we turn back to the path of Virtue, *realized*.

27. The parallel is with the immediate Concept of the Self as Desire—see paragraph 173. Not even with the aid of Aristotle or Spinoza (who do supply suitably rationalized definitions of *hedone* and *laetitia*) can the definition of the “object” of *Lust* be made to fit any traditional concept of “hedonism.” Kainz (1976, 120, 156) has the merit of recognizing something odd here; but he glosses over it, preferring (like most professional philosophers) to look for a verbal continuity of the traditional sort instead of using the experience as the guide to what the Concept means. That is what we ought to do. The *Phenomenology* must be interpreted from within. In order to understand *Lust* we should go first back to the stipulated aspect of *Begierde* (like Labarrière, 1968, 105) and then turn to the “Faust-Fragment” (because we are explicitly told that this *Gestalt* has done what Faust did).

Even Findlay (who finds this episode “sibylline”) has grasped the point that it is about interpersonal bonds (1958, 110). Flay (who prefers conceptual abstractions to concrete “experiences” in spite of his “praxical” concerns) castigates Findlay for this (1984, 332, n. 4). But if one thinks “generalization” is the proper business of the student interpreting a “system,” then Findlay’s way of generalizing “Pleasure and Necessity” is one of the best.

L. P. Hinchman (1991, 33) also adopts the mistaken view that this section is about “hedonistic utilitarianism.” But his article has the merit of referring us to others—A. S. Walton (1983b), A. T. Peperzak (1983)—which show clearly why that theory is incapable of any but a negative treatment in the context of Hegel’s “Science.” Every *simple* desire is equal, so no rational organization is possible. The “natural” desire of the *Genus* provides the first organizing principle for a rational life of the Spirit.

Solomon (1983, 498–505) deserves mention as the one who tries hard to make the “hedonism” interpretation work. But he begins by remarking that there is no intelligible context for it; and his results are a marvellous illustration of how Hegel’s dialectic can be made to mean *anything*, when the contextual sequence is ignored.

28. Goethe was working on *Faust: The Tragedy, Part I* during the years when Hegel was at Jena; and he published it in the year after Hegel’s own book appeared.

Kaufmann (1966, 122) wrote:

Now the question remains whether Hegel’s “sketch,” as Royce calls it, is intended as a portrait of Goethe’s Faust at all, and the answer is surely: No. What seems to have misled Royce is that on the first page of this section there are three allusions to *Faust*; but they do not establish that the next four pages are intended as a portrait of Faust.

This seems to me to be one of his most absurd pronouncements. I have tried to show that Royce is essentially right. (T. Pinkard [1994] recognizes the Faust reference but fails to distinguish between the Fragment and Part I.)

Of course, if one takes “Pleasure and Necessity” to be about a simple-minded “greedy hedonism” as Judith Shklar does (1976, 103), then it is right to insist that Faust’s greed for experience was something quite different. Shklar gives a vivid summary of the “sketch,” but she never seems to notice that Faust and Gretchen are not seeking “pleasure” in a completely general sense.

29. Lines 517–518; for my own earlier references see lines 61, 65, and 249–250.

30. Hegel quotes the first and last couplets of the soliloquy (lines 330–331 and 345–346). But where Goethe wrote “*And even if it had not given itself over to the devil . . .*” Hegel puts “It has surrendered itself to the devil . . .” Even if this is a fault of memory it makes an appropriate transition from the language of Unhappy Consciousness to that of Reason. For Reason, there is no *devil* to give oneself to. But the ceremonial bargain is superfluous. In the eyes of Reason, giving oneself over to the devil is simply doing what Faust does—despising the “universal heavenly spirit” and choosing the Spirit of the singular embodied existence on earth as one’s own.

31. Action is not excluded from this first vision: “How everything weaves itself into the whole! / Each in the other works and lives!” (lines 94–95). This is the vision of “Virtue”; and Faust is right that it is “Only a stage-play” (line 101), until the validity of the Earth-Spirit’s life and activity is recognized within it. Then it becomes the *Weltlauf*.

32. Writing is the reflectively permanent and universal “thinghood” of Reason, replacing the transient singularity of speech.

33. Lines 816–819 and 1030–1035: “The high *Kraft* / of *Wissenschaft* / Buried from the sight of all the world! / And he who takes no thought / To him it comes as a present / He has it without need to care.” (Or, in other words, the “science of life” is a matter of the old woman’s intuition, rather than of the disciplined study of the scholar.)

34. Hegel himself was interested in the witch-cult historically. So he would not be automatically inclined to pass over Goethe’s evocation of it as a mere literary frill. See the “Fragments of Historical Studies” (1798–1800?)—Rosenkranz, 521; *T.W.-A.* I, 437–438; *Clio* 7, 1977, 126.

35. Hyppolite (1946, 273; 1974, 283) rightly says that “Individuality knows itself here in the Biblical sense”; and Heinrichs (1974, 234) is right to recall Hegel’s pun on *Gattung* and *Begattung* in the *Encyclopedia* section 369.

36. The terms of his pact with Mephisto are not yet specified, but we do have the scene called “Forest and Cave” in which Faust first communes with himself about the immense range of natural life, and the inevitable imperfection of all human experience; and then he is tormented by his evil spirit, because he does not want to desert Gretchen, although the life that he has chosen with Mephisto requires it. (W. Becker [1971, 104] cheats by citing the Pact Scene to show that Hegel changes “the tragical character of the Faustian path.” I think he is mistaken *anyway*—even about the complete *Part I*. But, of course, the question of what *Goethe* intended will always be subject to dispute.)

37. In the *UrFaust* the service is for her mother’s funeral. But Goethe did *not* specify this in the “Fragment”; and he left us wondering still in the *Tragedy*, Part I.

38. This inequality is not essential to the *Gestalt* of Reason. It is only appropriate to the love-relation as a point of logical origin. In principle, the rational partners must remain equal; and there is no reason why they cannot be equal as rational observers (as in the “marriage” of G. H. Lewes and George Eliot which is the most completely successful *Gestalt* of Pleasure that I can think of). Schelling and Caroline, or Friedrich Schlegel and Dorothea, are models of the balance of Reason and Nature in their perfect harmony; and William and Mary Wollstonecraft Godwin are a model of rational reciprocity, as well as of natural fulfillment. The alienation of “unequal recognition” simply cannot be introduced into the immediate identity of “*Lust*.” What makes Gretchen a perfect *Gestalt* (in spite of her intellectual inadequacy) is that she is *destroyed* by the conflict between her own conventional Reason and Faust’s Active Reason.

39. “Faust. Ein Fragment,” lines 1887–1888. The interpretation of *Lust* in Freudian terms (which we find in Kainz, 1976, 156, n. 12) has the advantage of a derivation from *Begierde* in its favor. Consequently it can pass over without strain to the *Gesetz des Herzens*. But there are two things to remember. First the Freudian concepts belong to the level of natural Self-Consciousness not Reason (only the “Superego” has a “rational” reference—and even that is of a decidedly alienated kind). Secondly, the Freudian concepts apply to a far wider range of experience than the formation of “rational individuality” with which Hegel is concerned.

Flay (1984, 138) makes a glancing reference to the “pleasure” and “reality” principle, but says he means only to notice “the functional parallel” (332, note 3). This is too trite to be interesting—but cf. 141–142 which are not so “innocent.” The reference of Kainz to the *id* as “Necessity” ignores the fact that *Lust* encounters *Notwendigkeit* in the *world*. It is only in the *Gesetz des Herzens*—and especially in the *Wahnsinn des Eigendünkels*—that we encounter anything truly reminiscent of Freud. At that stage the conflict between wilfulness and “necessity” has been internalized.

40. The essay of N. Chronis (1983) depends upon Hegel’s difficult assertion that “Necessity is empty”; but he does not explain it. (His title, and some of his discussion, are not *à propos*.)

41. “Faust. Ein Fragment,” line 2003. Faust will only come to the “true” half of his claim at the end of his long life, and through the symbolic agency of Gretchen—in his salvation scene at the end of *The Tragedy: Part II*.

42. In a conversion experience (like that of Augustine) the motion is not altogether “behind the back of consciousness.” But in any pre-rational situation, what happens has quite a different significance for the observed consciousness than it does for us.

43. A. Cutrofello (1993) presents the movement of this section as Hegel’s response by anticipation to Foucault’s accusation that he seeks to dissolve alterity away altogether.

44. Hyppolite (1946, 275, 278; 1974, 285, 288); Royce (1919, 194). Almost everyone agrees with Royce. Loewenberg (1965, 158) goes all the way with Hyppolite. Judith Shklar points to the Kingdom preached by the Jesus of the *Spirit of Christianity*. I have already commented that that is an unduly comprehensive “inversion.” An unpublished essay will not solve our problem in any case. (See also Fink [1977, 322]. Fink goes a bit too far here when he says that “it is not a matter of setting feelings against Reason.” It is precisely because its “feeling” must become a “law” that the Heart is inwardly torn and goes mad.)

45. J. N. Shklar (1976), 105–113. Jacobi’s “Allwill” is *named* perfectly; but it seems to me that there is nothing *active* enough in Jacobi and Schleiermacher to be dialectically transformed into the “Frenzy of Self-Conceit.” All the same, we should remember that Hegel accused Jacobi of “despising the *Sitten*” in *Faith and Knowledge* (and this provoked an indignant denial in the Postscript to Köppen’s tract against the Identity Philosophy). So in view of the coincidences of language cited in the text, we can safely assume that Hegel expected his readers to think of Jacobi. Cf. *G.W.* IV, 382 (Cerf and Harris, 145–146); Köppen (1803), 211ff; and K. R. Westphal (1989).

46. See the “Letter to Fichte” in *Werke* III, 37–38. It seems likely that the expression “Gesetz des Herzens” was current in the Pietist tradition; it would be used to refer to the Augustinian dictum: *Ama, et fac quod vis* (“Love, and do what you will”). That dictum is itself a misquotation. The nearest thing to it in Augustine’s works is: *Dilige, et quod vis fac* (*Treatise on the Epistle of John*, VII, 8: “Have charity, and do what you will”). The degeneration illustrates the difference between where we are *now* and the point that we have to reach.

47. *Werke* III, 41. (But if we think of Jacobi as having Kant *behind* him, he is the *Gestalt* of “Conscience” rather than of “the Heart.” “The Heart” is confronted by an alien law not by Reason.) Compare, however, the following passage from *Woldemar*—to which G. di Giovanni (1993, 793, n. 19) has drawn attention:

... “Absolutely not!” Woldemar replied. “Only doing away with the exercise of conscience is pernicious . . . The letter of reason, of religion, of civil and state law, are all alike; they are all equally capable of little. No man has ever obeyed a law simply as law, but always only the authority that flows from it and accompanies it, always only the vitality that drive, inclination, and habit give to it. Only man’s *heart* says directly to him what is *good*; only his heart, his drive, tell him directly that to love the good is his life . . . (*Woldemar*, *Werke* V, 114–115).

48. *Emile*, Everyman, 259 and 257. The “longing” for this future time comes after the Vicar has ceased to be “deceived by the senses” and by the illusion of “the empty show of happiness . . . where it is not.”

49. *Emile*, 246 and 249. The statement about the origin of wrongdoing fits Hegel’s conceptual analysis perfectly. The loving heart of “pleasure” unites with empty “Necessity”—instead of with the finite beloved—and so inverts it into the loving voice of *universal Nature* speaking in the heart.

50. This distinction is *not* made explicitly in Hegel’s text. But the *need* for some distinction becomes explicit in the next paragraph. So we will start with this one, which is made by the Savoyard Vicar, and consider whether any better one can be found later on.

51. W. Becker (1971, 107) rightly says that Hegel implies that “world-improvement projects are always the results of subjective idiosyncrasies.” He protests that “the Marxian Utopia” must not “be interpreted as the expression of Marx’ inwardness.” But we deceive

ourselves if we think that our grounds for joining a socialist party are purely “objective” (just as we are guilty of “humbug” if we pretend that our commitment to the maintenance of the status quo is purely public-spirited). Marx himself understood the appeal to “the Heart” very well; and he used it to the full. But more than “the Heart” is involved in any determinate project. Marx would have known that his “scientific” utopia is not directly attacked here. The attack on objective social ideals of that kind comes much later on (in the critique of “Enlightenment”). The “effort of distinction,” which Becker says Hegel does not make, is one that he must learn to make himself. The foundation stone of intelligent interpretation is to understand that *no* position is attacked except with respect to its pretention to absolute validity. Beyond that, it is precisely “the Law of the Heart” that *Becker* does not follow here. In order to understand Hegel one must read him with unfailing good will.

52. *Emile*, Everyman, 253.

53. In Jacobi it is the law of Kant’s and Fichte’s autonomous moral Reason that must be transgressed or breached by the Heart. This is the uniqueness of the rationally developed “Conscience”; so in spite of the close resemblance of language, this belongs much further on in the evolution of *Moralität*. There is a *circle* here; for we shall see that Hegel uses the “law of the Heart” in his analysis of the Beautiful Soul. But here at the beginning of the circle, we should assume as little as possible. Hegel’s own recognition about 1798 that the analogy between Kant and Moses holds, because Kantian morality is an *internalized* form of “positivity,” should not blind us to the difference between natural and rational “positivity,” to which he gives so much importance in 1807.

54. See B.A.W. Russell, *Autobiography*, volume II, New York, Atlantic Little-Brown, 1968; and Dora Russell, *The Tamarisk Tree*, New York, Putnam, 1975. As far as my memory serves Bertrand Russell and Dora Black began by sharing the ethics of the Heart completely in their personal relations—though perhaps their position is partially that of “Conscience” because of the inescapable presence of Kant. Certainly the complete absence of “God” gives their brilliant and incisive presentations of the view the authentic ring of the Enlightenment. The Bloomsbury Group, and all who were influenced by Moore’s *Principia Ethica* provide many other excellent examples. But all of them have advanced beyond the primitive antithesis of “nature” and “convention” because of the influence of Kant and Hegel. Russell and Black offer an especially good case for our purposes, because both of them broke out of highly conventional social backgrounds, in pursuit of self-affirmation through “Pleasure” (i.e. the freedom of loving self-recognition). This was what took them back closer to “the law of the Heart” than moderns can usually come. Also both of them were outstandingly rational; and their rational humanism is what makes the conflict of their “hearts” so evidently *tragic*.

55. James Marsh (1974) examines several “shapes” of “radicalism” in the *Phenomenology* (including Virtue which is not properly radical at all—except about national freedom, where it is *ethical* in Hegel’s sense to be extreme). He finds a common characteristic in “the necessary indeterminacy of radical freedom.” But as far as the Law of the Heart is concerned it is misleading to say “The radical is unwilling to incarnate his ideals in a definite, rational, concrete, structure.” Hegel’s point is that the Heart logically *cannot* “incarnate its ideal in a definite structure” although that is what it does indeed *will* to do. The Heart can will a determinate negation—that is how the “Frenzy” arises. Thus both the wholehearted “abortion rights,” and the wholehearted “right to life” campaigners, know *exactly* what concrete “law” they want. But for those of us who are not wholehearted “radicals” on this issue, it is a blessing that the Heart is cloven about it.

56. The example was found by Judith Shklar (1976, 113).

57. The right response to W. Becker's claim that Hegel argues in this section that "proposals to make the world better are always the result of subjective idiosyncrasies" (1971, 107) is complex. On the one hand, when Hegel says (in the *Philosophy of World History*, Rauch 26) that "nothing great has been accomplished without passion," he is certainly saying that no great social reform can occur without an "appeal to the Heart"; but it must be one that is *heard*—i.e. it necessarily transcends the level of "subjective idiosyncrasy." On the other hand, in the immediate context of the formation of *individual* Reason we are heading towards the (bourgeois) community of "civil society," which is by definition "satisfied with itself." This community regards "heartsickness" as an essentially *adolescent* disease, an "idiosyncrasy" of youth. My own examples (abortion, the Bomb, etc.) are designed to show that "the Heart" makes more social difference than the "kingdom of spiritual animals" wants to believe. (The American Civil War is the best case I can think of, because it arose from a *conflict* of "appeals to the heart" which gradually overwhelmed the good sense of all the "solid citizens." Lincoln counts *now* as a hero of the Heart. But he *abominated* it.)

58. This much is obvious; it is less obvious that "the universal individuality" here is meant to remind us of the Earth (cf. par. 294). But when we consider that the spirit of Pleasure gives itself to the Earth-Spirit (which is thus logically the "object" again for the Law of the Heart) this becomes plausible; and the essentially economic character of the world of the Real Individuals confirms our hypothesis. The social order from which Active Reason is alienated is the system of the needs of Life. (That is why everyone is bound to have their heart in it, and why Virtue cannot prevail against the Way of the World.)

59. At least Conceit cannot then present itself as a "rational" option; it would only be a reversion to the simple self-assertion of the natural self-consciousness. Campaigners for some finite cause, such as "abortion reform," are not usually "pure Hearts" who cannot recognize themselves in *any* social order. So their commitments do not usually drive them into paranoid interpretations of the existing order. It is only when the cause is "infinite" (or when action is seriously impeded, so that the cause appears to be "lost") that paranoia takes over. Of course, the paranoid interpretation of opposition is always apt to be rhetorically effective. That is one good ground for recognizing it as a mode of "Reason."

60. There can be no doubt that the social background of "Reason" is the world of "Spirit in Self-Estrangement"—as Heinrichs (1974, 235), for instance, has argued. The "Frenzy of Self-Conceit" becomes a moment of "Spirit" in the Terror. That is the element of truth in E. Fink's insistence that Hegel's critique is aimed at Rousseau's theory of the *volonté générale* (1977, 326). Unfortunately, Fink's commentary did not go far enough for us to see what he would say about the fact that Hegel treats the "*volonté générale*" as a "*volonté de tous*."

61. Since the conspiracy theory of history is a logically necessary form of madness, I ought to analyse the state of mind of the supposed conspirators in the terms that the mad consciousness would use. But it is difficult to do that without misusing the language of philosophy. As we have already seen, it is difficult to express accurately the distinctions that the "law of the Heart" needs. The Heart will not use the concepts of "culture" and "discipline." But it will speak of *virtue* and *vice* (which properly speaking presuppose culture and discipline). For the Heart we must say that the villains of its "conspiracy" are leaders whose hearts have somehow atrophied, so that they have become prisoners of "the passions" or of "the impulses of sense." I have preferred to give what I take to be the proper Hegelian analysis of a tyrannical or conspiratorial self-consciousness. My analysis of power-hunger here is Hobbesian, not Faustian; and I am claiming that upon the Hobbesian path one cannot arrive at Reason at all. The culture of self-conscious Reason properly begins with the experience of

loving identification with another self. (The fundamental weakness of Kojève's interpretation of Hegel is that his conception of active Reason is founded upon Hobbes and not upon Faust.)

62. The Critical Editors supply the following references for the discussion below in paragraph 542: *Le Christianisme dévoilé* (London, 1767), 4–5, 56–57, 156–163, 188–190; *System der Natur* (German translation, Frankfurt/Leipzig, 1791, 269–287; and *Système social*, vol. I (London, 1773), IV–V, 198 with vol. II (London, 1773), 102. (I have found to my surprise that there are no conveniently available English translations of D'Holbach *in extenso*.)

63. When Lauer says “to speak of a ‘law of the heart’ is equivalent to speaking of a square circle” (1976, 158) only such rationalists as D'Holbach and LaMettrie will agree with him. It is not enough for him to concede that “the kind of universal law the heart seeks to establish” is “a moment along the path to adequate rationality.” “Reason” in Hegel is always at least as close to the Heart as it is to Law (which belongs properly to Understanding). We shall see, eventually, that the only absolute law of practical Reason is a “law of the heart”; and even the *theoretical* “law of Reason” has a lot to do with the transition from squares to circles.

64. We have now seen, however, that believers in a “conspiracy theory” can get control of the social order and reduce it to a “conspiracy” in the fulfilment of their supposed vengeance. The “Frenzy of Self-Conceit” is in many ways the most terrifying of the “shapes” of experience, because it is precisely the “Conceit of Reason.”

65. Resolution adopted by the Massachusetts Anti-Slavery Society, 27 Jan. 1843. The text in Isaiah 28:15 (“We have made a covenant with death, and with Hell are we at agreement”) expresses the prophet's view of the rulers of Israel. The principal sin condemned in that context is drunkenness. But the “covenant with death” has come about through the breaking of the word of the Lord into separate precepts: “precept upon precept; line upon line . . . here a little and there a little; that they might go, and fall backward, and be broken, and snared, and taken” (verse 13). Isaiah speaks, of course, in the name of a *positive* divine law; and he threatens a special vengeance. But he is much closer to the rational Law of the Heart than the founder of the Shakers (Mother Ann Lee) who applied his text to the consummation of *marriage* many years before Garrison made it famous in the slavery context. *Hers* was the authentic voice of the Unhappy Consciousness.

66. The negotiation of an *agreed* separation was openly advocated in public bodies of this sort ten years later (and in the secessionist societies which by then existed on the other side).

67. See J. C. Furnas, *The Americans*, New York, Putnam, 1969, 521.

68. See especially *G.W.* VIII, 270, line 8; Rauch, 166. What Hegel looks forward to as the only post-Revolutionary social order that can possibly be stable is a community of independent proprietors—see further H. S. Harris (1983e).

69. The noble and servile attitudes are an inversion of their natural analogues. (Virtue is “ethically obedient” to the Common Good, and the Worldling is “Lord” of it.) Perhaps the worst difficulty in making a parallel with the evolution of the natural Self-Consciousness is caused by the anticipatory effect of rational internalization. The “knight of virtue” looks (and is) more like a Stoic than a natural Serf. (It is quite probable that he will consciously think of himself as a Stoic). But the *logical repetition* of the Stoic stage begins only when Virtue is completely reconciled with the Way of the World. The developed repetition does not (and should not) directly look like the original. So the fact that Virtue has a “Stoic look” is actually an argument against there being an intended parallel between them as dialectical stages.

70. *Gorgias* 466d, ff. (Hegel shares the classical debts of “modern” Virtue, but he seeks to interpret them in a more “ancient” way—see the commentary on par. 390.)

71. Hegel does not use the word “duty” yet, because “moral duty” involves far more than the upholding of law for its own sake—which is all that Virtue has to guide it. But there is no other language which Virtue itself can use. So I use it too (with this warning: that it is still only an abstraction).

Virtue is not a religious attitude. Hence R. C. Solomon (1983, 511) is mistaken in following MacIntyre’s suggestion that this *Gestalt* represents Port Royal Jansenism (we may notice that it is neither gloomy nor pessimistic). Solomon’s own suggestion of a connection with Lutheran Pietism is similarly misguided.

72. The way that Hegel continues after the passage quoted indicates that he only intends to sum up the movement described in his text; but it is helpful to regard Faust and Gretchen as a revelation of the *unhappiness* of the “pursuit of happiness.” It is the pursuit of happiness generally, that is the “universal content” of the way of the world. But it is not easy to recognize a genuine *Untergang* or an “action without content” in the normal course of married life in which contented acceptance of the world takes the place of “Paradise.” (See *G.W.* VI, 303, lines 12–13; Harris and Knox, 233.)

73. The first to point this out was Royce (1919, 194); but it was Hyppolite who persuaded most of us to accept it (1946, 275, 277–278; 1974, 285, 287–288). He did not explain his thesis very carefully, however, and he wrote as if the positions of the Heart and of Conceit were the same, whereas in fact they are only a dialectical identity. Most bleeding Hearts do not become bomb-throwing nihilists.

74. That identification is appropriate because the Vicar is not just a thinker; he lives the philosophy that he speaks. He is visibly very different from Jean-Jacques, that notable citizen of Geneva, whose personal life verified the worst suspicions of Virtue about the Heart and the Way of the World. (T. Pinkard [1994, 102–108] offers several interesting but not convincing identifications for these two sections.)

75. No doubt there were others, for the attack on the unholy alliance of throne and altar was a favorite hobby horse of the “enlighteners” in their attempt to raise the “Unhappy Consciousness” to “Reason.” But D’Holbach was certainly the most articulate of them and the one who was most widely read.

76. Schiller, *The Robbers* and *Wallenstein* (trans. by F. J. Lomport, Harmondsworth, Penguin, 1979), 159. The reconciliation with his father symbolizes Karl’s return to God (i.e. Reason) as the source of *justice*; and the enforced killing of his beloved, Amalia, symbolizes the nihilistic result of his rebellion. The plot as a whole, and especially the character and fate of Karl’s brother Franz, shows that the conversion to “justice” does not signify simple acceptance and support of the “existing order,” but rather the adoption of a “virtuous” attitude and standards in the struggle for its salvation.

77. Shklar, 1976, 114–119. But I do not agree with Flay’s view that Shklar must be wrong because “the virtuous individual is not here such a positive moment of the dialectic” (1984, 334 note 12). The Virtue that collapses into the Way of the World is neither positive nor political. But that is the self-*inversion* of the primitive position of Virtue. Virtue certainly aims to be *positive* at the beginning; and since I agree with Shklar that the implicit contrast is with Machiavelli’s *virtó* (cf. 1976, 115), I think we must take the initial position to be political also. Hegel would be pleased, I think, by the attribution to him of the view “that the liberation of the Netherlands could not be achieved by men such as the fine-phrased Posa, but only by the notoriously silent William of Orange” (Shklar, 1976, 118). “Liberation” appears to me to be the only cause to which Virtue can spontaneously devote itself

without any egoistic scruples. So Marquis Posa (in *Don Carlos*) is probably the best *Gestalt* of Virtue's primary position.

Royce's example of Byron's lines "To Augusta" for the transition from "Pleasure" to "the Heart" (1919, 192–193) is actually a transition directly from Pleasure to Virtue. (Or perhaps we should say that it goes from Pleasure and the Heart in union to Virtue—because Byron's relation with Augusta certainly involves setting the Heart's Law against the Law of the World.) Royce's view of Byron's transition here was first advanced by Goethe (in the image of Euphorion, *Faust* Part II, Act III). Royce may perhaps have been mindful of that when he looked to Byron for his poetic example.

78. See especially *Faith and Knowledge*, *G.W.* IV, 406–407; Cerf and Harris, 179–180. Fichte's own moral doctrine is at the level of Conscience, but his critical attitude is the very one that is adopted by Virtue in refusing to move to the level of Real Individuality. The implicit presence of Fichte here should be compared with his presence at the portal of Self-Consciousness, and again at the portal of Reason's Certainty. He belongs at the *beginning* of all aspects of the development of idealism, because although his idealism is *formally* perfect (or "speculative") it is *materially* quite undeveloped (or "immediate"). Formally he is far beyond the naïve stance of Virtue. But materially his ethics is close to Virtue's final position. This is because his ideal of society is *mechanical*. Virtue collapses into the Way of the World, because it has to be *mechanical* in order not to be self-assertive.

79. R. T. Eldridge (1989, 38) cites this passage and claims that Hegel is saying that specific personality and its living bonds must have primacy over moral principles. It cannot be said too often, or too emphatically, that the Knight of Virtue is *not* Don Quixote. The title *Ritter der Tugend* caused Royce to lose his balance momentarily, and to say in an early lecture that the figure of "Virtue" is "a sort of Don Quixote seeking in adventurous contest with the world his self-possession" (1919, 163). When he came to expound "Virtue" more fully, his lively literary imagination must have alerted him to the fact that that is not what Cervantes' hero was seeking at all, for he now said:

Here, as is obvious, Hegel is dealing with that type whose dialectic Cervantes had long since rendered classic. It is necessary for Hegel, however, to incorporate a representative of this type into his own series; and he does so very briefly, but effectively. The hero of knightly virtues here depicted is no longer a medieval figure, and the portrait is not directly that of Don Quixote. The illusions in question take only such forms as belong to Hegel's own age. In essence, the attitude depicted is that of the ideally minded youthful altruist whose knightly quest is directed against the lawless selfishness which, in his opinion, infests the social order, while the knightly character itself takes pride, not indeed like the foregoing type, in mere chance enthusiasms, but in its steadily loyal attitude of self-sacrifice for its chivalrous purpose. It defines its ideal as virtue in the abstract, as nobility of character. All of its natural powers are to be disciplined, not for the sake of enforcing the law of the heart, but for the sake of overcoming the wicked ways of the world where selfishness reigns (1919, 195).

But the damage was done. Hyppolite (1946, 279; 1974, 290), followed by a host of others, has canonized Don Quixote as the "knight of virtue" (for instance, Lauer, 1976, 162; Taylor, 1975, 167; Marsh, 1974, 192; Labarrière, 1968, 106; Pinkard, 1994, 109). R. C. Solomon (1983, 506) is to be applauded for declaring that the parallel is "wholly fanciful."

Actually Cervantes' hero is a fascinating portrait of "faith"; and as such he is an enemy of "Reason" in all its "shapes." All that he shares with "Reason" is the confidence that God's

Will *can* be done here on earth. All of his values come from the aristocratic/peasant world of the Unhappy Consciousness, not from the bourgeois world of Reason. As an *individual* the Don fits “the Heart” better than “Virtue.” Compare what Hegel says in his *Aesthetics* (Knox, 591–592 etc.—the index is good, and almost all references are relevant).

80. The right answer to Judith Shklar’s complaint that Hegel does not discuss figures like Schiller’s Philip II (1976, 118) is *first* that this sort of character contributes to the *science* of the “experience of consciousness” only at the primitive level of the self-assertion of Freedom against Life; and secondly, that the completed Science shows why these figures are *not* proper and necessary figures of Reason. The Revolution does away with them. If they nevertheless persist as a fact of experience there is nothing further that *philosophic* reason can do about them. *Preaching* against them (however rationally, like D’Holbach) is virtuous edification not philosophy (supposing that they are themselves irrationally rational enough to tolerate it). Both Marquis Posa and Machiavelli’s Prince *belong* to “the way of the world” and we shall not ever see the end of them, until we reach the end of all things. Someone like the *real* Philip II (who was fanatically religious, and whose truly monstrous son was a grave trial for his faith) might yet bring the end of all things upon us. But it is rational to think that (as an effective authority) we can put him behind us. We shall not ever put tyranny as such behind us, because the root of it is in “Self-Consciousness,” i.e. in the “nature” of Reason. There is “ambiguity” in life itself; but there is no “ambiguity in Hegel’s silence.”

81. The myth itself is an interesting aspect of the way Virtue sees things. Virtue recognizes *only* implicitly rational individuals. The monarch who wilfully causes the death of his one and only son, cannot therefore be *anything* but a limit case of vice and insanity. Only the Machiavellian model of a Prince can be applied to him. Virtue cannot even think in terms of conspiracies. That Don Carlos himself was insane (hatred of his father being part of that); and that Philip was motivated both by fear of how more rational conspirators could play upon his son’s hatred, and by a deeply pious conviction that Carlos could never become “His most Catholic Majesty,” is a hypothesis that would not satisfy Reason. But it is a more plausible account of Philip’s unhappy consciousness. (For Hegel’s own image of Machiavelli see O. Pöggeler, 1978).

82. The second half of Hegel’s chapter VI (from VI B II, “The Enlightenment,” onwards) can be regarded as the dialectical development of this paragraph. It is the echo of the divided shape of the “Truth of Enlightenment” that provides the essential clue for my interpretation of the final very obscure clause.

83. The best study of the influence of Adam Smith on Hegel is N. Waszek (1988).

84. One might object that if Hegel himself had either Machiavelli or Frederick in mind, he would have given us some unmistakable hint. I am willing to grant the force of this criticism. The sceptic should regard my commentary as a consistent development and illustration of Hegel’s argument. As the title of my chapter indicates, it is Fichte’s bourgeois moralism that is a cloud of superfluous rhetoric. But that rhetoric has a *religious* aspect that is just beyond the boundary of Reason proper.

85. Hyppolite, 1946, 270; 1974, 280. It is much to his credit that Hyppolite (*ibid.*, 272 [282]) does say that in Pleasure “what Hegel has in mind is primarily sensuous love.” Contrast Flay, 1984, 137–139. Lauer (1976, 156–157) prefers the words “pleasure-seeking” and “selfishness,” but his treatment is interesting because he cites one of the very texts that proves him wrong, as a building block for his own thesis. When the text is contradicting *him*, he thinks that Pleasure is contradicting, or sublating, *itself*. Instead it is only defining itself as *rational*—but the idea that just two rational beings can be a *universe* does not occur to Lauer.

86. When we get to True Spirit I shall not be able to use my generic “her.” Hegel himself makes the point that it is the *male* citizen who takes his “pleasure” in his private life (par. 461). (Stoicism logically ought to be sex-blind. But I am not sure how far actual Stoics were so.)

87. *Nicomachean Ethics*, II, 6 (1106b 36–1007a 2).

88. *G.W.* IV, 402–407; Cerf and Harris, 173–180. F. Andolfi (1991, 220) has also noticed the similarity to *Kantian* virtue.

89. This modern “Virtue” can be very effective negatively. It is the Jacobin principle that cleans the social slate in the Terror. Cf. *Philosophy of World History* (Lasson IV, 929; Sibree, 450–451).

Chapter 2

The Way We Live Now

C. Individuality That is Real in and for Itself unto Itself

When Virtue recognizes its own abstractness, and becomes the conscious rational justification of the Way of the World, we arrive at Real Individuality. Reason actualizes itself by recognizing itself in its own Thinghood—its embodied activity in the World. This is the beginning of the final movement of Reason as an individual shape of consciousness. As we might expect, Real Individuality is the last singular shape of Consciousness. We are already observing the shape of a world; but it is the world of Civil Society which has lost its substantial identity as a spiritual community.

What we have before us now is the “living category” of Reason: the self-conscious biological individual who knows that she belongs to, and must always think and work to make a contribution to, the universal community of Life on earth. This is the community upon which her humanity depends; so the rational being must not simply be concerned with the natural preservation of self and family.

*We knew this about Reason in the first pages of Hegel’s fifth chapter. The *Vorstellung* of it was presented to us by the self-consciousness that came forth from the confessional shriven and at peace with God. Now that self “has the Category as its object”; but we have moved on too. We know that before there can be individuated rational “categories,” which are singularly embodied and self-consciously engaged in defining what is rational “for themselves,” there must be a substantial living community that is immediately rational—i.e. it rests on an intuitive consensus about what is rational, and it is unified by a felt identity of Life. We shall see that a community of “singular rational categories” cannot define their substantial community into existence; and that they cannot freely define themselves or anything else without it. In this third phase of chapter V, Reason as Category will come to have our consciousness of itself as Substance; and when we come to observe the evolution of the Substance our advantage over it will consist in the knowledge that we have of what rational Subjectivity is.*

(a) Self-Conscious Idealism

- 1./394. Self-Conscious Reason is now *conscious* idealism [cf. par. 233]. Ideal goals [such as “love” and “virtue”] have vanished and the category [unity of universal and particular in singular consciousness—cf. par. 236] is now the object of consciousness.

Thinking and actuality are no longer opposed. Certainty [of existence] and Truth [of essence] are now interchangeable [cf. par. 84].

The first three paragraphs of this third part of Hegel's fifth chapter offer us a bird's eye view of where we have been and where we are now. Hegel recapitulates briefly the logic of the movement by which we have arrived at this point. Chapter V began with a statement of the standpoint of "Idealism," which was recognizably a Hegelian reconstruction of Fichte's interpretation of Kant. Neither Observing Reason nor Self-Actualizing Reason was in conscious possession of that standpoint. Observing Reason was discovering why it could not simply be theoretically assumed. We saw there that the rational self is a free self-positing activity (just as Fichte claimed). Having ourselves acquired an adequate concept of the free self that can posit itself as the "Category," we then watched individual Reason "posit itself" through three successive identity-stages. First came the Faustian identification of individual Reason with the "Earth-Spirit," i.e. with the universality of natural Life; then came the direct identification of Reason with Love; and finally the identification with Virtue, i.e. with a disciplined rational struggle *against* the Earth-Spirit. That struggle collapsed into self-recognition. So what has happened overall is that the immediate impulse of naturally self-preserving singular life has been mediated into the universal identity of Reason with Life; but this life is only natural. It is not yet "life in the *Volk*."

Hegel's announcement at the outset that the Self-Consciousness we are now observing *has now grasped* the Concept we had of it as the rational certainty of being all reality, tells us that we are now in the world of Fichte's "individuals." For "Reason as Idealism" was unmistakably Fichte's conception of the Ego as the actual Category. Fichte's Ego is the concrete individuality of Kant's formal "I think" (or of the "transcendental unity of apperception"). Hegel is now claiming that this rational individuality is identical with the virtuous individual who knows she is realizing (or serving) "the Universal" by following the "Way of the World," and filling a place in the world properly. In doing what expresses and realizes *this* self, the individual does what realizes and expresses every self. The Universal (as we know from its evolution all through the previous section) means the *Law*. In Active Reason it first emerged as a Necessity opposed to the individual's pursuit of happiness, and then returned into a developed identity with it. We have not reached Fichte's concept of the Moral Law.

It is with the principle of Rational Utility that we are beginning now. So instead of "Law" we must speak of the "common good" and "the good of the individual." These have coincided in such a way that the individual can be virtuous, and think only of what she is doing for the common good, while following the way of the world. There is certainly a kind of hypocrisy in this position; but we must be careful not to overlook its genuineness. Every one of us is the "real individual" here (except when we are in love, or campaigning for some cause that makes us despise everyone who "does not care"); and we know that it does make a difference that we want to do our jobs properly (whatever they are). The world we are in, is the world

in which we are all doing what we are supposed to do, and are proud of doing it well. We are using our talents and capacities to produce some “general good.”

This sort of individuality is actually more widespread in our world than it was in Hegel's. A public employee could have this sense of self in Hegel's world; and so could the solid citizens who ran their own businesses. But most people employed by those solid citizens, were subject to summary dismissal. Hence they stood in a *personal* relationship, and were not properly part of the universal (or rational structure) of the society that creates and shares the “common good.” It is the sense of having a legally defined and legally defensible place in the social whole which constitutes the grasp that rational self-consciousness now has upon our concept of it. This is the difference between the virtuous consciousness of the free individual and the fearful consciousness of the serf. The individual who has this virtuous consciousness may still campaign for “causes”; but she will not be tempted by conspiracies, and will agree with Rosalind's verdict that “men have died from time to time,/ and worms have eaten them,/ but not for love.”¹

The actualization of Reason (End) and the potential of the world (Being-in-Itself) have the *same* purpose—to satisfy the needs of the community (Being-for-Other). This is true whether we identify the End with the subjective moment of self-actualization (my project) or with the objective moment (the social system). “Truth” and “Certainty” coincide no matter which is taken as project and which as actuality. This is a very stable world indeed; and the self-satisfaction of the individuals in it will not easily be disturbed. Hegel can indulge his irony freely at the expense of a Virtue that risks very little (par. 390). But the solid citizen who has been virtuously educated is just as righteously secure in the world where others are paid to do the fighting, as she ever was in the world where fighting was a primary duty of every male citizen (and the best philosophical consciousness wanted to lay it upon females equally). What is gone is the substantial identity involved in that absolute duty of self-sacrifice. That is why devotion to the “common good” in this modern world is, in the end, a “humbug” (*Betrug*).

- 2./395. Because Self-Consciousness is now the self-conscious Category, its world has here a new beginning. All of its prior shapes return into it. They separate only as the moments of a moving process.

In the first phase of Reason, the scientific observer was the universal Category. Reason as universal sought to find itself in its theoretical comprehension of all the singular data. But the more important the data were, and the closer Observing Reason came to itself as a concrete phenomenon, the less did it comprehend; until finally it came face to face with the unintelligibility of its own singular (and mortal) existence as a brain inside a skull. This is the singular being that somehow *is* all science; but there is no science of it as singular.

Then in the second phase this concrete singularity of Reason as the Category unfolded actively out of its unobservable singularity back to the concrete universality of Reason as the common good. As a result, the Category is now realized as the Individual—the identity of abstract universal and concrete singular agent. The

community of Real Individuals is a concrete universal that knows itself to be that. It does not have to make itself; it is real “in itself” as the common good, and “for itself” as the agent that creates and consumes that good. The system of individual self-realization is all there. I know that it makes me, and I make it, reciprocally—each statement is inseparable from the other, and neither is true in isolation.

What Hegel says about the relation of the world of Real Individuals to the previous shapes of consciousness, is not as “transparent” for us as he says the shapes themselves are: “Its account with its former shapes is closed; they lie behind it in oblivion, they do not confront it as the world it finds, but are developed only within the sphere of Reason as transparent moments.” Every *Gestalt* is *forgetful*; so what the “closing of accounts” means is that Rational Individuality is justified in its forgetfulness; there is nothing that its concept does not take care of, nothing from the past to stumble over, so that one is forced to think again. It is the world of “daylight everywhere,” as Hegel will say in the next paragraph.

We need not be concerned about the shapes of simple Consciousness, because they are never really forgotten in any actually self-conscious *Gestalt*. Even Hegel’s peasant wife has her “understanding” of the world (as we saw). But Hegel’s remark about “daylight everywhere” takes us back to the “daylight of the present” at the dawn of self-conscious Spirit (par. 177). This is the “general daylight” of Reason; and we must ask how all the shapes of natural Self-Consciousness, though forgotten, are “developed as transparent moments” within Reason. We have the answer as soon as we consider the very first of them: the life and death struggle. Reason has its fighting men; but the only thing men will fight for in a rational world is free and equal recognition. Reason does not fight wars of dynastic interest or even of national imperialism. It is the people’s war of the French Republic that is the “life and death” struggle of Reason. Bastille Day is the boundary between the night of memory and the “daylight of the present.”

In the world of Reason there are still masters and servants; but everyone is a *citizen*. Frau Bauer’s husband is not a serf. He votes, and (in principle at any rate) his children can go to school. The independence of Reason, which the Stoics recognized formally, is a *secure* constitutional reality for the whole community of equal citizens. Scepticism looms over this world of abstract “freedom and equality” in the shape of the Terror. It teaches us that the acceptance of our empirically certain sensible and perceptible differences is necessary. Even the Church, to which Frau Bauer and the children still go faithfully (receiving there the only education that is truly universal) has been rationally incorporated into Reason’s world of universal utility and civil happiness. As far as natural Self-Consciousness is concerned, Napoleon is the *Gestalt* of Reason in which everything *has become* transparent.²

Knowing this, I do not need to know all about natural and social science, or about personal loves, universal causes or altruistic service. It is right for me to see the Heart’s Law only in a literary model of death-bed repentance; and to have moralizing windbags as my images of the virtuous heroes of the struggle for national freedom. I am consciously part of a closed system that is complete, self-maintaining, and self-satisfying. I may be a pure scientist of some sort, I may love man,

woman or the baby seals more than anything else, but I have my job to do in the world, and I do that first. Scientific research or the seals may even be my job, but the virtuousness of it is different from the selfishness of it (including the selfishness of partisan commitment). So this is a new beginning in which everything can be forgotten. The abstract moments of Universality and Singularity are still present; they can still “move,” and they will. But the identity of the world and the self is the “genus,” within which every movement of those moments is embraced.

The moments will fall apart in the unmasking of the “deceit” upon which this stable world depends; and we shall see how the subjective Category is unable to put them together into an effective whole. That will bring us to the comprehension that the communal Substance of Reason is a necessary presupposition of the world of Real Individuals. But even when it is shown that the certainty of Reason is not identical with its truth, consciousness will still have the identity of the rational self with its world as a certainty to carry it forward.

- 3./396. Individuality expressing itself in action is what the world of experience is. Action changes nothing and opposes nothing. It simply makes the real self visible.

It was only in the Revolution that “the Category” really engulfed the whole world, so that nothing confronted Reason as a world of “tradition,” a world that was just “found there.” But of course the bourgeois society whose values were universalized in the upheaval of 1789 evolved in the world of the *Ancien Régime*. Reason came to be the universal Category by applying itself initially (and with a fair amount of consciously hypocritical pretence) to a world of traditional structures and values. It was born in the Reform of Luther, the utilitarian scientific vision of Bacon, and above all in the rational theology of Descartes. The cycle of rational existence: birth, being cared for, education, working, marrying, caring for and educating children, then dying as the new individuals take over—all this is what is embraced under the word *Tun* (action, or doing) in Hegel’s vocabulary. Sometimes I am the active agent, sometimes the other. But we all do what our place in the whole requires. Later on we shall see how this cycle of natural action gives birth to moral choice, in the world where substantial identity requires individual sacrifice of life. But for the moment we comprehend this cooperative cycle of action and reaction as all there is. There is no substance here to be smashed. The circle—both of individual lives and of the community’s activity—expands and contracts.³ There is no darkness, no hidden private world. Everything is out in the open, because “action” is precisely the movement of bringing a rational purpose out into the open. I realize objectively as an “achievement,” what I have formulated in my thought as a “project”; and my projects and achievements are, by definition, rational. I am not a brigand, I cannot even be the idealist Karl Moor.

The reconciliation of Virtue with the World’s Way, eliminates the distinctness and potential opposition of politics and economics. We are in a world of universal utilities; administrators and soldiers are part of our general economy, part of our “civil society.” “Liberty” and “the pursuit of happiness” coincide. There is no opposition between private and public life, so the family world is not a “darkness”

over which the women preside—though it is true enough that the domestic sphere is where they actually are in this world order. Hegel's Napoleonic world is one in which woman's destiny is kirk, kitchen and kids; and he has no expectation that this will change. But he does think that the meaning of the kirk has already changed in a way that logically implies equality of educational opportunity.⁴ "Enlightenment" does not properly admit of sexual discrimination; so the "transparency" of the moments of the Category is a logical admission that in the world of real individuals there is no conceptual reason why the action of anyone should be restricted by anything natural, except the process of childbearing itself. Sex is not relevant in the animal kingdom of the spirit.

V C(a): *The Spiritual Animal Kingdom and Deceit, or the Thing Itself*

Rational Individuality comes in many varieties. Indeed every Real Individual is a unique species (like the angels of Aquinas). So Hegel needs now to present us with the Gestalt of a Genus that is indefinitely multipliable in its species.⁵ The intellectual model is provided by the Monadology of Leibniz. But for the embodiment of the Gestalt Hegel uses the metaphor of the "animal kingdom."⁶ Therefore, we should study how he conceived that (see especially pars. 284–286, but also 245–247). In my attempt to translate the metaphor, I have tried to keep as close as possible to a "common sense" reading—so the strictly monadic implications of "Real Individuality" will only emerge gradually. This has the advantage of highlighting what Hegel did not accept from Leibniz—far from being "windowless" his monadic "individuals" are essentially processes of communication.

(b) *The Monadology of Reason*

- 4./397. This self-consciously real individuality is an *abstract*, empty Category. We shall see what this means.

The rational self-consciousness that has recognized itself as universal reality is singular and determinate. So its knowledge of being "all reality"—which is identically the same for all the differently determined selves—is an abstract one (like the theoretical knowledge of the Baconian observer or the Cartesian rational self). The Real Individual is not substantially identical with her world, so whereas the movement of "self-actualization" was a movement back towards concreteness, the movement of actualized Reason (like that of theoretical Reason) is a movement towards abstraction again.

The destiny of Real Individuality is to know itself as the concretely autonomous principle of Kant's Practical Reason. It does not come to defeat or destructive self-contradiction (like theoretical observation when it seeks to observe itself). Nor does it go beyond this world. It is not the autonomous principle of moral Reason as envisaged by Kant; for it does not involve any postulates, or any "faith." It is the actuality of which Stoicism offered a formal concept. Unlike Stoic freedom of

thought it is actual in the world; it is not withdrawn from the world, like the Stoic free will (which is “free” because it logically admits that it controls nothing except itself). It is the *abstract* universal, but it is a practical reality, not a Concept of external reflection like the God of Stoicism (who is only the Fate which, as a rational spark of his Fire, I am supposed to love).

This rational freedom is freedom of action. Instead of facing an external positive authority, it embodies the actually effective legal system of its world. *How* it does this is the problem that it cannot solve. How does the universal category of self-determination determine the rationality of anything specific? It seems to do it by the spontaneous motion of desire. But as soon as desires conflict an insoluble problem emerges.

- 5./398. Initially the concept is a *result* [the way of worldly virtue]. In the individual as free project, the negative aspect is its finite determinacy. This individual has a *certain range* of active capacities; but he requires perfect freedom of expression, just as living species are all expressions of one universal life.

We start with the result that we reached in the self-actualization of Reason; and we leave out the story of the actual formation of the individual because Real Individuality belongs to mature individuals for whom educational formation has become an object of their “Observing Reason” only. Virtue had to accept everything that was done and produced in the world according to its law-governed way, as a rational (or common) good; and the world had to accept that in its pursuit of singular happiness it was, in fact, producing the whole system of rational (i.e. common) goods. To say that something is a realized good is conversely to say that it is a potential for rational action (i.e. for rational self-actualization). So our result is the recognized cycle of individual rational existence. We have to recognize the whole cycle as what is real, because whatever we say about any moment of it, we shall find that we have to say the opposite as well.

“Goods” are what belong to the common stock of Reason; but what belongs to the common stock, is just what has to be consumed selfishly in order for its goodness to be actualized; and what is produced through this actualization by consumption is more goods for others to use (since they would not be “goods” if they were not used up by others likewise). The reconciled unity of this contradiction—the “concrete universal” within which this second inversion of Virtue and the World’s Way (taken together in their opposition) is comprehended—is the Real Individual. The Real Individual arises by determinate negation from the *simple* result of the conflict between Virtue and the World’s Way. The simple result was that Virtue’s rational good is necessarily enjoyed privately, while the World’s pursuit of happiness necessarily produces rational goods.

On her instrumental side, the Real Individual is a determinate potential to contribute to the universal system of good-production. As the proverb says, you cannot make a silk purse from a sow’s ear; but it might make a pigskin wallet, or go towards a range of other goods. The rational individuality that gives the production/consumption cycle of these material goods its rationality, is like that; but being actively

rational, it *shows* what it is good for. No external agent has to experiment with it, to find that out. The Individual is its own project for that; its activity is free. It is concerned with its own self-realization (or in Hegel's terminology it is a "perfected connecting of itself with itself"). This kind of rational freedom begins when the serf enjoys his own active control of the stock and crops he looks after; but it cannot be called *vollendetes* ("complete," i.e., self-sufficient), as long as there is the fear of losing one's livelihood—not to speak of an immediate threat to life, like that which the serf lives under.

The provision in Magna Carta that an artisan's tools may not be seized for debt is a foundation stone of the spiritual animal kingdom, because these tools *are* the "body" of the "spiritual animal" that we are now talking about. An apprentice, not yet licensed as a journeyman, is not a member of the world of "free individuals." The guilds of the free artisans constitute the first world of individuals who are aware of themselves as "real in and for themselves." The reality of this independence is precisely the property in which it is necessarily embodied. Even for a scholar (like Dr. Johnson making his *Dictionary* which was an obvious "common good" of the sort meant here) this is true. Deprived of his tools he becomes a Stoic, not a Real Individual. Personal servants are Real Individuals only when (like Figaro) they have a well-founded confidence that they could find other employment if they were suddenly sacked "without a character." All the same, the world of spiritual animals offers some surprising species. We can hardly question that the Blue Gown Beggar, Edie Ochiltree (in Scott's novel *The Antiquary*) belongs to it⁷—though the indigent and most of the laboring poor in Hegel's time do not.

This is an example that Hegel became familiar with some time later (for the novel was not published till 1816).⁸ Edie Ochiltree is certainly an idealized case, and we may well doubt whether professional begging—even with the King's license on the basis of military service—could actually be the foundation of a rationally independent and useful life of the kind that Hegel stipulates. But I hope that this limit case (even if it is imaginary, like Sherlock Holmes) illuminates the concept—at least for the audience that still reads Walter Scott. The norm is provided by the ordinary skilled artisan, especially in a world organized into guilds. A licensed craftsman fits Hegel's requirements perfectly. He is not obliged to do anything he does not want to do; but his range of activity is defined by his guild membership and status, like the fish in the sea or his cousin in the river, the birds of the air, and the animals on the mountains and plains or in the woods and the trees.

The conception of "spiritual individuality," as Hegel defines it, has an inwardly determined freedom, which cannot fail to remind us of the monad of Leibniz. But in the *Monadology* every individual is not only completely self-determining, but unique. This is the logical limit which the psychological observer faces and defines, and which the phrenologist tries to reach. Hegel's "spiritual animal" is a *species* of the "rational animal," and there is no difficulty in recognizing the "spiritual animal kingdom" as the classification system of the Real Individuals according to what they do, or the goods they produce.

Edie Ochiltree belongs to this world, partly because of what he *has* done, for the Blue Gowns were respected as ex-soldiers; but he is also valued for the “wisdom” that he produces (and he has his own very proper sense of this value). He is a good model of the Aristotelian *phronimos*, and hence of what Virtue contributes to the World’s Way; and it is clear that Scott, at least, did not believe he was *unique* among the Blue Gowns. Not all Blue Gowns had Edie’s securely balanced wisdom of experience certainly; but neither are all squirrels perfect examples of their species. Given that Reason is the “original nature” of all the animals in this kingdom (an assumption which has the status of immediate certainty here, but is still far from being comprehended in its “truth”) Scott’s beggar is a marvellous example of natural Reason fully developed and expressed in action.

- 6./399. Individuality seeks to express its *nature* self-consciously, as an animal does spontaneously. This nature is a limit which is no barrier, being only visible in what it does.

The assumption of the Real Individuals is that God (or Nature) made them as they are. They have been educated to develop God’s (or Nature’s) gifts; and as free adults they are continuing to work on this. But their Aristotelian “characters” are now formed; that is where the *virtue*, which is one of their most notable shared characteristics, comes from. Their individuality is their adult freedom of self-determination; and their activity is consciously aimed at self-realization (not just at keeping self and family alive, which would be a kind of servitude, even when there is no present human Lord in view).

Everyone has special talents; as psychological observers, we can speak of “aptitudes” and so on. We are bound to be interested in the bent and the natural limitations of a given individual. But if that individual is following her bent, and knows what she can do, then the psychological perspective of the Platonic educator is no longer hers. What she knows she can do is just her tinting of the very element of rational freedom.⁹ We are not yet concerned with the artist, striving infinitely for an ideal goal that is always beyond any actual achievement. Our model is the cabinetmaker who says: “A tallboy for that corner? Certainly, ma’am,” and goes happily to his workshop with his sheet of measurements. In this example, the consumer is present, but the freedom of the producer is untrammelled. As soon as Hegel distinguishes the moments of action (in the next paragraph) the implicit problems begin to emerge.

- 7./400. Action splits the simple nature of individuality into the act and the consciousness of it. It is the project that finds a “means” for realizing itself as an “end.” Initial project, action as means, and realized end are all to be conceived as *End in process*.

Action necessarily has two aspects: there is the doing, and the consciousness of what is being done. The agent is the singular source of the doing, but everyone shares the consciousness of what is done as soon as the action is in some measure complete. The agent, however, is the only one who is bound to have the consciousness of the end as a project. The distinction of the two aspects of action as

consciousness is primitively present for the active individual; she alone knows and can say what the relation is between what was intended and what is achieved. Everyone can see the act in progress and the end-result; but only the agent knows definitely what was aimed at. This self-containment of free activity—the fact that individuality is the comprehended unity of a cycle of contradictory aspects, which are universally visible only on one side—means that contradictions can arise in the interaction of one rational individual with the others.

Hegel does not speak of this yet. He says only that there is a distinction which *accrues* (*zukommt*) to the “consciousness” of action. I have deliberately made the distinction between the agent’s role and awareness, and the observer’s role and awareness explicit. This is obviously going to be important, because Hegel does list all the identities that must hold if the concept of Real Individuality is to maintain itself; and we shall soon learn what the cost of that is.

The Real Individual knows that it is the Category of real being.¹⁰ So there is nothing “real” outside it; it is a logical truth that if we want to speak truthfully about what *absolutely is* we cannot distinguish between “individuality” and “being in general.” There must not be any distinction, therefore, between the project and the rational nature expressed in the project (neither of which is accessible to the general observer).

Again, there must be no distinction between the project and the “means” in which the action embodies itself (this last is observable). No one is actually watching me as I write, but if someone were looking over my shoulder, they might catch my misspellings (or omitted words, dittographies and so on). That sort of correction would help me maintain my Real Individuality and would not be the sort of breach in my “identity” that Hegel means. The breach would only begin if the observer wanted me to rewrite my sentences completely. That happens sometimes (in an unwelcome way) to those who submit essays to instructors, or articles to journal editors and referees; and one must sometimes stand up for one’s own “reality.” But it is the “realized end” that matters, so a prudent author will often compromise at this level; and a freely accepted compromise preserves the identity that is here referred to.

It is the “realized end” that properly establishes the reality of the individual agent. So in sum the crucial requirement for free, rational action is that no distinction should be introduced between either the End, the means, or the individual’s potential, and what the agent actually achieves. We must not permit the positing of any absolute end that could generate any of these distinctions. The habit of distinguishing between the absolute end and the “means” was what the Jesuits were always taxed with. But since they were not (then) proper denizens of the rational world of the Real Individuals, we should perhaps use the censorship that must surely have existed in the Prussia of the anti-Machiavellian Frederick the Great as an example of illegitimate distinction.¹¹

8./401. This end in process is just the realization of my nature as rational, my *special* contribution. Action is just the actualizing of a potential. The rational monad does what it

does, in order to know what it is. But it must also know what it is doing—the End must be conscious. The seemingly insoluble problem is, in fact, a means-end continuum; in self-expression one knows what one wants to do, because one does it. All moments are resolved in this continuity.

So far we have been observing the process of Self-realization objectively as the *specification* of the World's Virtuous Way: the individual is a particular kind of rational activity. Now we have noticed that it is only the self-realizing Real Individual who is properly conscious of the whole that is "real." Action divides the "original nature" into what is there as real for general consciousness and what is there as real for the agent consciousness; and the latter's view is the comprehensive view. So obviously we must adopt the individual's standpoint ourselves. This is where the inversion of the World's Virtuous Way into Real Individuality properly occurs; and the logical consequence is that the moments of Universality and Individuality become consciously identical. The identity is the self-definition of the rational individual as a unique instantiation of Reason—a rational monad. When we adopt the standpoint of the Real Individual itself its "specific function" in society (as a *kind* of "spiritual animal") disappears into its self-experienced uniqueness. What I can rationally make out of my nature, the "peculiar tincture" of my rationality, is all there is to my Real Individuality.

Individuality is the inwardly (or concretely) comprehended unity of Reason and its world: Reason as the self-realizing End. The "individuality that is unto itself real in and for itself" is the "Concrete Universal." Plato's standpoint, when he defined the justice of the individual soul as "minding one's own business and not meddling," was the right one. But for Plato it was the community (as Substance) that was the Real End. For Real Individuality the community is not a substance, but only the reservoir of common goods or *means*. Once we have made this necessary inversion of the Platonic perspective, Plato's emphasis on self-realization, gives us just the thought context that we need.

Rational Individuality is the "end" of the whole social process. It exists first as an identifiable set of talents and capacities; but anyone who has come at the problem from Plato's side knows that the talents etc. are only identifiable because the community has a place for them. Reason takes itself to be the community of God (or Nature) without any limits; it pays no attention to the fact that the vocational structure of the actual community is a historically determined given with nothing absolutely rational about it. But it is a fact that this "original nature" of rational individuality does exist in its actual aspect as the vocational structure of society.

Before Reason comes on the scene, the problem of self-realization is a fairly easy one because there is an immediate or natural solution. One does what one is born to. The transformation of this immediate (or "natural") solution into the rational one of the "career open to the talents" began properly with the French Revolution, and we are still struggling to realize it. The actual problem for rational individuals is always to choose between the available social options; and in the operating system of the Real Individuals that problem is solved. We know what every "good" is good *for*; and

one has a certain social function, because one has shown that one can perform it.

Let us express this problem and its solution in the internal language of Individuality. I know what I want to do, so I can recognize my means and my raw material when I see it. I am my own project, which is always “self-expression”; and the realization of my “self” in some external material is the publication of what I am to others. Action (*Handeln*—even the wave of a hand, for example) “is precisely the coming to be of the spirit *as consciousness*” (i.e. as an external fact of some kind). The little girl, of whom I once heard in a philosophy class, who asked “How can I know what I think, until I see what I say?” had her feet set firmly on the path towards a Real Individuality that will not deceive itself at least. But, of course, we could ask her how she knew what she was saying if she did not formulate it to herself before she said it.

The circle of individuality refuses to collapse directly into the moment of the realized End (even if the joy of achievement frequently has an aspect of delighted *discovery* about it). It is only philosophers who get hung up about the paradox here; Real Individuals get right on with the job. Individuals in action may be either delighted or disappointed with the results they achieve, but if they get stuck anywhere, it is usually with the formulation of the project. As far as Hegel is concerned the phenomenological beginning is the sparking of “interest” by the observed circumstances and situation—as if, to use Aristotle’s favorite paradigm, the stone suggests the statue to the sculptor, or (to use my own earlier case) as if the sight of Edie Ochiltree’s blue gown prompts someone to give him the broken oatcake that was left at breakfast time.¹²

It is only at the opposite extremes of “virtue” and “art” that the question of a beginning arises; a cobbler knows where to begin, unless his economic situation is so bad that his real individuality is threatened. He has his talent and his tools and leather all ready. These are just the opposite aspects (inner and outer) of the “actual means.” I have to have the talent (and training); and the observable things have to have the “interesting” meaning for me of being the tools for the active expression of my skill. Then the movement can start in the external world; and this external movement is not something different from my known talent and interested observation. It is what “knowing” about the talent, and being “interested” by the observation means. It is the real self that is the object of the knowledge and the interest. Using his skill and his tools and leather to make (let us say) a pair of work boots for some neighbor is “being a cobbler.”

- 9./402. What is expressed exists as work done. But that only matters for the observing consciousness which can classify active consciousness into *types* according to its products. [403.] All expression, being positive, is good. Comparison is external, and individual expressions are really unique; the “good” and “bad” [of *Bildung*, 491ff] has no place here. Every monad is perfect on its own account.¹³

Once the boots are there finished on the table, however, the situation changes. The cobbler himself can say whether this pair is well or badly made. But, as Aristo-

tle remarked, it is the wearer who knows best whether they fit. Everyone can have an opinion about who makes the best boots. The spiritual animals now begin to be classified, and their capacities as members of their class begin to be compared.

This is where the Leibnizian implications of the concept of Real Individuality declare themselves. We can only make these comparisons by returning to the standpoint of external observation; and to do that is to abandon the standard of concrete individual self-realization. If our cobbler really was putting his rational self into the making of those boots, that is the end of the matter. The language of Real Individuality suggests that the animals are of different species; but if Real Individuality is the comprehensive end that gives meaning to the whole cycle, then the truth is that every rational individual, like the angels of Aquinas, is a species unto itself. This is the doctrine of the *Monadology*. The Real Individual knows herself according to our concept of the certainty of Reason, when she meets herself in the philosophy of the “best of all possible worlds.”

We do speak of cobblers as “good” or “bad”—or, at least, Socrates would have done. But this comparison of one cobbler with another has nothing to do with the expression of the rational self in its work.¹⁴ It seemed when we began as if the question of who is a Real Individual was a serious one; and I put some effort into arguing that Edie Ochiltree is one, even though most beggars are not. But it turns out that, according to the Concept, it is as easy to be a Real Individual as it is to be a Stoic (and the difference between them turns only on the way they talk). This will be the destructive lesson of experience with the concept of Real Individuality. We are all “expressing ourselves” as perfectly as possible all the time. Or at least we are doing so, if (and for as long as) we want to think so; if we stop thinking so it will simply be because we have fallen back out of this world. We can voluntarily fall back all the way to the Unhappy Consciousness; and, on the other hand, we can maintain the consciousness of Real Individuality even if we are forcibly reduced to serfdom. (We can also go forward; and that will be our actual concern.)

- 10./404. Thus even to be uplifted or depressed about one's own performance is out of place here. Every monad's expression is the simple unfolding of its nature. The difference of inner and outer is mere show. Individual existence is self-enjoyment.

The last nail in the coffin of Real Individuality as the standard of truth, is driven when we realize that the Real Individual cannot even consistently make comparative judgments upon herself. I said earlier that the cobbler would know whether the boots were well-made, but only the wearer would know whether they fitted. By insisting that the wearer's judgment is external and irrelevant, Hegel has already reduced the effective employment of the concept of rational self-expression to a context like that of the ideal art class in a universal education system. Here the object is to get everyone to express themselves freely, and hence not to compare their products either with those of others, or with some preappointed subject or model. But it is still essential to build the sense of confidence in oneself, and hence of pleasure in one's own performance; and this is impossible without the compari-

son of one's own performances with one another, and of one's performance with one's inward project in each case. One must be able to say "This time, it really came off!" or "Today was a complete flop compared with last week."

But now Hegel insists that the identity of project and performance, the identity of the Real End with what is actually done, is so fundamental, so essential, that even the most spontaneous feelings of success (*Erhebung*) or failure and regret (*Klage, Reue*) are illegitimate. Not even the agent is allowed to compare the project with the performance, because the certainty of Reason that it is all reality implies that the whole "inner consciousness" of the agent is an illusory fiction. It is not "true"; it is like a scaffolding (or a mathematical "construction") erected solely for the purpose of realizing what has actually been realized. What comes forth may surprise the agent in any of the directions mentioned (exaltation, complaint, repentance); but it is her real self nevertheless. By this criterion, Mrs. Langer's story of the little girl was exactly right: none of us can ever *really* know what we think, until we see what we say.¹⁵

It seems obvious now that this Concept has no effective application. No one has ever had this concept of herself; and however vain or mistaken our feelings of delight, dissatisfaction, or regret may sometimes be, we cannot dismiss them categorically as false or worthless by definition. We are bound to ask, therefore, what Hegel meant when he asserted at the outset that "Self-Consciousness has now grasped the Concept of itself which, to begin with, was only our Concept of it." That Concept has turned out to be the "monad" of Leibniz. No one except Leibniz (and disciples of Leibniz) ever had it before us. For them it followed necessarily from the Cartesian certainty that the rational self is a finite thinking substance created by an infinite Will that necessarily wills only what is "best." But why should this peculiarly academic consciousness—which logically invalidates all of our judgments of what is "good" or "bad," whether economically or morally—be ascribed to the World-Spirit in its climactic manifestation as Reason? One would have thought that the World-Spirit speaks rather with the voice of Voltaire's *Candide*. No one (not even Leibniz), we might protest, ever had this consciousness of her own action and career, in the public world. The little girl's insight is, indeed, philosophically interesting; but it is emphatically not absolute or comprehensive.

This time it is the "experience" that will prove *us* wrong. Usually we can calmly watch the object-consciousness discovering that its Concept will not work; in this case we are already so vividly aware of why it will not work, that our normal complacency during the "experience" is now disturbed by the sense that no active consciousness could stably maintain itself within this Concept. Yet every *Gestalt* does maintain itself; and this one looked viable enough until we went inside it—as our method obliged us to. Hegel's most important achievement, in the analysis of the "experience" that now ensues, is to show us how well the theological optimism of Leibniz and Wolff expressed the *self*-consciousness of the world whose Universities and journals promulgated it. We shall also see what empty pomp the doubly-inverted Virtue was, that coincided with the Way of the World.

(c) *The Dialectic of the Werk*

- 11./405. The reality is in the expression as *Werk*. This expresses what the individual is for everyone, not just for himself. But it does not express him forever; as soon as it is done, he is done with it, and as an observer himself he is beyond it. All observers perceive it thus negatively. It is just there for interpretation. Everyone is concerned with what it means to them. That is what interests them in it. Hence its proper meaning for the agent is turned into something else.

The translation of the word *Werk* is a problem. It is only in compounds like “master-work,” “life-work,” that the English “work” securely keeps the right sense and aura. Being a verb as well as a noun, and having an abstract scientific use (which the Shorter Oxford Dictionary defines as “the operation of a force in producing movement”) our word leads the mind down many mistaken paths. But if we keep “the works of God” in mind (to which the same dictionary gives proper precedence) we shall never go wrong, since God cannot labor or “work” in any misleading sense.¹⁶

According to the concept we are to test, we are known by our “works.” We ourselves find out what we are by seeing what we do. But our works do not remain ours; and we do not stand by them. I can rewrite the commentary on this paragraph next year if I want to—though I doubt if I shall, since the argument is so straightforward here. But the point is that once my sentences are written, I am as much a part of the “universal” consciousness that reads them as anyone else. The thing is done now. Projects, half-formed thoughts, means, etc., have all vanished, and the written words are what is there; and they are not irrevocably mine any longer. They can become as strange to me as to anyone, and I may find myself saying (at least about some other paragraph) “I do not know what I meant by that.”

In any case, what my words mean is a matter of interpretation, and I am not in a privileged position on that question. I have concentrated attention on the case of my own written work here, because Hegel defined the *Handeln* of Real Individuality as “the coming to be of the Spirit *as consciousness*.” The simplest possible object of consciousness in which “Spirit comes to be” is a spoken word. Words are the very stuff of all non-sensory—i.e. all properly “spiritual”—consciousness. The seemingly paradoxical insistence that action is “the pure translation of [the individual’s] *own self* out of the night of possibility into the daylight of the present” (par. 404, compare pars. 396 and 177) and that it only removes the *semblance* (*Schein*) of an antithesis between inner project and outer performance, loses its counter-intuitive aspect, if we remember that the primary act of “self-expression,” the basic spiritual *realization* of individuality, is the expression of one’s own thoughts in speech. This is the realization of Reason in which we all participate, giving it only our own “tincture.” The paradoxical aspect of the little girl’s question springs from the fact that (for the most part) we adults “think” by talking to ourselves. In this perspective the action of “self-expression” is only the raising of a curtain, or the abolition of a mere *Schein*, by saying aloud what we have already thought over.

But the spoken words have meaning for others only in their own interpretation of them (here is the “truth” of the most counter-intuitive of all Leibniz’ doctrines, the claim that “the monads have no windows”). In the ebb and flow of a conversational dispute, what someone actually said at a crucial point, is soon lost and forgotten forever. We need to consider something written down in order to have a *Wirklichkeit* that has “disappeared out of the Concept and is only an alien actuality *found out there*.” By the time we are alienated in this same way from a spoken expression, it cannot be securely “found,” and we typically find ourselves arguing not only about what was meant (“the Concept” or the “Real Individuality” that was expressed) but about what words were actually uttered.

With written expressions (especially if we let them get “stale” like the written formula “Now it is Night” with which Sense-Certainty began) the whole process that Hegel describes here can be clearly observed. Thus Hegel wrote this description of the “spiritual animal kingdom.” It has certainly “vanished from the Concept,” and we dispute endlessly about what he meant. Each of us has some “interest,” some nature, to express, which determines for us what the words mean. If my interpretation of this section is accepted, if most of the rational monads come to share a window onto this text that describes them, they will see that what this text says (among other things) is that the *Phenomenology of Spirit*, as a whole, can never be universally accepted as the simple utterance of the project that the Real Individual called “Hegel” formulated. There will always be those who either cannot grasp the project formally at all, or having grasped it in some sense, decide that it is theoretically inconsistent or practically impossible. They may then become interested in the further questions of what was actually achieved in the Realized End, or what the “original nature” was that prompted the undertaking of an impossible project. Respect for the actual insight displayed in the Realized End has even prompted the hypothesis that the announced project is a consciously concocted *Schein*, a mere pretence.

Thus my interpretation of this paragraph leads me to anticipate that, regardless of anything that I (and others like me, who think the book has the proper transparency of “action” so that one can see the “original nature” in the Realized End perfectly clearly if one wishes) can do or say, other books will continue (successfully) to invite readers to “hitch the highway of despair”¹⁷ or to listen with a sympathetic ear to a “lament for Hellas.”¹⁸ What validates these radical displacements of Hegel’s end—for nothing could be further from his ideal of a scientific journey to science than hitchhiking with the consciousness that there is nowhere to go; and in spite of his morose countenance as a lecturer nothing was more alien to the “original nature” of this true child of the Enlightenment than lamenting for a lost past—is the conviction that “Dialectic and absoluteness are ultimately at loggerheads.”¹⁹ Hence the Realized End degenerates from a circle of concepts into an endless dialogue (which is how the life of Real Individuality is envisaged in this present paragraph); or “dialectic” is conceived not as a method but as an imaginative *technique*, and Hegel’s “science” becomes a poetic art.²⁰

To become indignant, or passionately polemical about any of these transforma-

tive reactions would only be to express my own real individuality. The lesson of the present section is that the Thing Itself can care for itself; so I shall borrow the great classical scholar Richard Bentley's defence of one of his adventurous emendations, and say "*Nobis et ratio et res ipsa centum codicibus potiores sunt.*"²¹ Reason and the Thing Itself are worth more than another hundred books, especially when the thing concerned is not just one line of Latin verse, but a great work of systematic thought constructed upon a non-argumentative method and prefaced by a memorable polemic against argumentation this way and that. That the book must always be part of the bad infinite life of argument, it demonstrates itself at this point in its course. But its own argument from here to the end can be relied on to demonstrate that it *also* has a destiny of its own far above this level. Unlike the spoken word, or the putative lost reading of the text that Bentley was emending, it is *not* "something transitory that is extinguished by the counter-play of other forces and interests."

- 12./406. Thus the pure activity which the individual is *universally*, conflicts with what it does to express what it *determinately* is. We can call either of them the concept, and the other the reality; the two poles remain in conflict. The *Werk* is the point of contradiction.

Of course, once the *Phenomenology* was written, Hegel himself was beyond it (just as I am at this moment passing beyond my justification of its higher destiny). Even in the case of a systematic philosopher who has produced a work of "Science," his universal activity of thinking goes on. Hegel is not his book, even if the book proves to be more important than anything he does afterwards.²² His putative "original nature" is not exhausted by it, and his "action," as the motion of bringing that "nature" to light, must go on. That history will continue, is one of the theorems of Hegel's science of experience (in which "history" is scientifically comprehended); and hence it is a misunderstanding of the "absoluteness" of the "system of science" to suppose that Hegel needed (or would have been deeply troubled by) the little sermon about the philosophy that a future age will need, which Croce made a Neapolitan visitor impose on him during the last months of his life.²³

It is in the *Werk*, says Hegel, that consciousness comes to be for itself what it truly is. In his view it is the "empty concept" of Real Individuality that disappears as a result. The *Werk* is what survives; and it survives as belonging to everyone. So the immediate identity of thought and speech (which is what validates the "empty concept") must give way to actions that leave a *record* of self-realization. Even the cobbler's "work"—being intended essentially for consumption—is not an adequate result of "action" to carry the dialectic forward to the next stage.

It is important to realize that the "pure action which is the self-identical form" is the thinking and speaking that is carried on by the community.²⁴ The agent becomes a simple member of that community again, as soon as her *Werk* is completed; but no one remains in the speaking community forever. Every determinate agent dies; the "original nature," that is not exhausted in the *Werk*, exhausts itself by nature. There is an essential conflict between it and the self-identical form. The *Werk*, on the other hand, precisely because it is the result of action (the result of "publication," we might say, in order to designate precisely the only activity that

completely satisfies the stipulated definition of action as a simple transition from darkness to daylight), can become a permanent moment in the “pure action that is the self-identical form.”

- 13./407. Thus the real monad is a contradiction. The whole process of its realization is accidental because it only accidentally understands its potential, defines its highest actualization, or chooses the right means (all the same thing). Also what happens to a good or a bad choice is a matter of chance.

The first “experience” of Real Individuality is the discovery that it is not the agent and the process that is “real.” What is real is the result, the product. And this discovery forces itself upon the agent who is certain of her own reality, because all of the moments that come together perfectly for the agent when she recognizes that spiritual self-expression (as the direct transition of thought into speech or writing) is the realization of her rational individuality, fall apart again in the independent career that the *Werk* actually enjoys. Everything that we say and do is always misunderstood; the “cunning of Reason”—which makes its first explicit appearance here, though it is not named—shows itself, for an author, in the fact that the book she writes is interpreted in unexpected ways. The terms of action as a process turn out now to have a reversed relationship. It is the author’s expression that was (and is) the Concept and the End; but it is the *Werk* which is the Reality and the “original essentiality.” It is now everyone’s “original nature,” since each must interpret it for herself. If someone gets the author’s meaning out of it, that is an accident; if some reader sympathizes with the author’s aim, that is an accident too.

Perhaps the reader never has a fair chance, because she never grasps the intended meaning of some crucial term which the author has chosen as the “means” for the expression of the Conceptual End. Consider, for example, the extraordinary difficulty of grasping Hegel’s definition of “action,” when he suddenly sprang it on us. We had a foretaste of the difficulty when he laid it down in paragraph 396 that “Action changes nothing and goes against nothing.” But that was in the preamble; so we left the problem in abeyance, and went ahead with a commonsensical interpretation of the self-realization of the real individuals through their life-activities. This seemed to be the only sensible course because the very first stipulation was that the “Real Individuals” shared *our* concept of them.

But when the statement of the Concept reached its climax, it was plain that no rational agent ever accepts such an absolute identity of her real self with the ordinary activities of her life as the text claimed (par. 404). The spontaneous feelings of satisfaction, disappointment, and regret that are bound to accompany all the ordinary activities of life were ruled out. So we had to look for some self-expressive activity of the ordinary rational consciousness where these feelings either do not come to consciousness at all, or are typically laughed off and dismissed as irrelevant or inappropriate when they do.

At this point the repeated insistence that the Real Individual “can have only the consciousness of the pure translation of *his own self* out of the night of possibility into the daylight of the present” alerted us to the fact that the primordial method of

self-expression is to speak out loud in the very language in which we formulate our projects and aims for ourselves. This agreed logically with the first appearance of the Concept of Spirit (which the echo-phrase *Tag der Gegenwart* was meant to recall to our minds). So we knew we were on the right road, and we could now accept the Leibnizian *monad* as the Concept which we shared with the consciousness that we were observing. Up to that point we would have said that there was a contrast between the *specific* character of the denizens of the spiritual animal kingdom, and the uniqueness of every individual in the rational kingdom of Leibniz.

In this way we came, finally, to a logically harmonious interpretation of the terms *Tun, Handeln, Handlung* in Hegel's text; and we shall soon see that we were right to let the discordant note struck in paragraph 396 (and sounded again in par. 400) come to its resolution gradually. But (if you grant that we are now right about Hegel's "intention") behold how easy it would be to go wrong! "It is accidental that the End has genuinely true essence, or that the In-itself is made into the End" because "it is accidental that the End-expressing Means is chosen." "The action of the individual [whether mine, the reader's or Hegel's] is accidental vis à vis actuality generally. Luck decides just as often in favor of a badly determined End and badly chosen Means, as against them." Many readers of these paragraphs must have felt, when they faced such counterintuitive statements about "action" as the last sentences in paragraph 396 or the first in paragraph 404, that Hegel's "means" was badly-chosen (and they may have doubted or despaired about the end). I can only hope that they will here find the "fortunate" decision that the author was bound to hope for.

This example clearly displays the *difference* between the Leibnizian Concept and the one that we share with the Real Individuals whom we are observing. Leibniz formulated an unshakably stable concept of Real Individuality. It was axiomatic for him that the thinking individual is a substance. Hence he had to hold that every individual is a self-enclosed world; so he argued that what appears to all of us as a "common" world is just the "pre-established harmony" of our separate substantial realities. At the moment when we saw that the hope of our philosophical little girl was vain—that she would not finally know what she thought when she saw what she said, because she would only be starting a potentially endless discussion about it—at that moment we recognized what is not acceptable in the Leibnizian doctrine. Our little girl could have her wish only if she sealed herself off from what everyone else saw in what she said. But that would be an absurd procedure in principle, because "saying something" is expressing it "for everyone."

The resolution of the problem must do proper justice to common sense. We must surrender the Leibnizian substantiality (and closed self-sufficiency) of the subject in favor of an actively constructed "harmony" about the object. Speech is so essentially evanescent that we do not recognize this transition from the reality of the subject to that of the *Werk* in ordinary discourse. If someone (for example, our little girl) says something that is misunderstood, then—now that she does "know what she thinks"—she will say something else in an effort to correct the misapprehension; and the discussion will (or can) continue until everyone is satisfied that no

misunderstanding exists. We still believe, at the end, that we, the active participants, are real, and that the words spoken are only the expression of our real individualities. But no one ever participates in a conversation on the Leibnizian assumption that she is Lewis Carroll's Red King, and that the harmony she is constructing is between her and the "others" in her own substantial "dream world."

What the "self-identical form of pure action" really constructs is the harmony that Leibniz had to ascribe to God's pre-establishment at the moment of Creation. By arriving at a harmonious interpretation of what the little girl thinks and says, we are constructing a "public fact"; and we all know and agree that the world of public facts (to which we have just added one) subsists independently of any one of us. Some of the public facts do not last as long as their active creators. What the little girl (and why shouldn't she be "Alice," since the Red King has now arrived to take the part of the Leibnizian monad?) sees when she says it, may be forgotten by everyone next week, or next year. But it is the world of public facts, not the separate worlds of individual agents, that is "substantial" nevertheless; and that is what Lewis Carroll made explicit when he put the idle fancy of a summer's day onto paper as the conversation of Alice with Tweedledum and Tweedledee about the slumbering Red King.²⁵

- 14./408. All this contingency is necessarily involved in the concept of action. Actualization of purpose is the concept of action. The work must disappear again in the continuum of action, because the *whole concept* involves the disappearance as much as the doing.

Real Individuality experiences this transition only gradually. As long as we stick to the sphere of oral speech, we are not conscious of the transition at all; and if we adopt the standpoint of "the pure action that is the self-identical form" we can successfully subsume all activity that produces useful goods under Real Individuality as the universal process. The adoption of this standpoint of "pure action" is the recognition of the subjective Thing Itself (*die Sache selbst*). We shall see, as we go, why my examples of the resolved dialectic of Hegel-interpretation, or of the "recorded" story of Alice's conversation with the brothers Tweedledum and Tweedledee, are premature. We must follow the course of the dialectic methodically.

The inversion of the roles and values of agency itself in the *Werk* is simple and direct. The Real End becomes once more a subjective project (which is only accidentally expressed in the work); and the achieved work becomes the "original essentiality" (which only accidentally corresponds to the projected End). This is the *simple* inversion of the immediate action of self-expression. But the active self now makes another inversion equally spontaneously. For even in the experience of how accidental my success in self-expression is, I am aware that it is the unity of intention and expression that is necessary and essential. Misunderstanding is only something that *happens* to what I say. The accident is accidental. Our little Alice, when she sees what she says, can defend what she "thinks" if she needs to. In this way the "unity and necessity" envelops (*übergreift*) the contingent fate of the first naïve act of self-expression. The continuing activity of self-expression does away

with the misunderstanding. What looks like the inevitability of failure, is just the necessary accident that keeps “action” going.

But a great transformation has occurred in this new inversion which is so automatic, spontaneous and transparent that it seems like an example of double negation in the formal sense. Alice says “p”; Tweedledum says: “I take it you mean, ‘not-p’”; and Alice says: “I meant what I said, not ‘not-p,’ but ‘p.’” The need, in ordinary conversation, to *reassert* *p* in company with the assertion of $\sim p$ is the signal that what Hegel calls “determinate negation” has occurred and a *new object* has been produced.²⁶ The motive of Alice’s first statement, since it was, *ex hypothesi*, a simple case of self-expression, was the personal “interest” she felt in the topic (whatever it is). The motive of her second statement is to establish the “truth” about what she said initially. And this motive will enter into the “interest” of both parties in any further discussion that the case turns out to need. Alice’s original, self-expressive ‘p’ and Tweedledum’s expression of the thought ‘not-p’ which happened in *his* self-expressive world, both disappear from now on. This is the proper “first inversion” of the Concept of “Real Individuality.” The quest for “truth” replaces “self-expression.”

If the monads were windowless, their different expressions would cancel out, and only the contradiction would remain. This would be the persistence of “vanishing.” According to the concept, each agent “vanishes” in her own *Werk* (par. 406).²⁷ But the experience of their mutual contradiction is, in fact, the “vanishing of vanishing.” Instead of becoming invisible to one another as a result of their contradiction, they become, for the first time, truly visible to each other in a *Werk* which belongs to neither of them personally, and “expresses” neither of them, but only itself. It is the *Werk* of “truth,” or the Fact Itself, *die Sache selbst*. We have reached the spiritual “perception” of Reason as a Thing.

(d) *The Sache selbst*

- 15./409. The work vanishes back into the process of action that vanished first into it. Thus the objectivity of experience itself is shown to be a vanishing moment. The *structure* of my interaction with objective being is the Thing Itself. This is what necessarily endures in the contingency of action.

The action vanishes in the *Werk*; and now the *Werk* vanishes back into the vanishing action; in this reciprocal process “vanishing vanishes.” For the “objective actuality” of the *Werk* is only a “vanishing moment” of the actuality that is truly objective. The transition that is made in the argument of this paragraph is from the ordinary sense of “objectivity” (where the object is that which is independent of the subjective awareness of it) to the Kantian sense (where what is objective is what is valid for all subjects). A standard of objectivity is established for the action of the Real Self, which inverts the Concept with which we began.

Objective “reality” (ordinary objectivity) is simply one moment in the cycle of action—the final one where the End is realized. According to the initial concept of action, this is the only moment that counts, and all the others exist for the sake of

it, and collapse into it. But the only action for which this concept can be successfully maintained is the expression of our thoughts in our speech; and there the project itself is a motion, so that the “realized End” is an evanescent phenomenon. The fate of that phenomenon is to vanish again into the thought-processes of ourselves and others.

It is not logically necessary to bring in any reference to empirical outsiders here (though Tweedledum and Tweedledee with their penchant for saying “Nohow” and “Contrariwise” are very helpful in making the dialectic explicit). What Hegel wants to emphasize is that I am my own other, I am always beyond what I say; I can react to it myself, and it is always perfectly obvious to me that this self-expression, this “realization,” is only a functional moment in the continuing activity of my thinking (which is the inward project or *subjective* End). But it is very useful to have the reaction of another self (especially someone who says “Nohow” or “Contrariwise”) if I am to become conscious that when I reformulate what I said the first time, my self-critical activity is controlled by an “objective” standard. I want to put something “right” that was “not right” before. “Feelings of lamentation and repentance” are not out of place now; and when I feel that I have got it right finally, the feeling may even be one of “exaltation” (contrast par. 404).

It is important that these reinstated feelings are logically independent of any outside reaction: I can have the feeling of regret myself, even though others are pleased with my action; and I can have the sensation of triumph and exaltation without having to satisfy anyone else. I only need to have the sense of a *standard* that I am applying to what I say; and the same is true about everything else that I do. Thus, the arising of the *Sache selbst*, this objective standard against which I judge every attempt that I make to express myself, is a comprehensive inversion of the concept of self-realization. It is not now the case that my thinking (the inward project) matters more than what I first said (which would be another “simple” inversion). No moment matters more than any other. None of them matter in themselves. It is my consciousness of the whole process that matters, for that is what I measure by the standard of the *Sache selbst*.

It is I as a rational critic who decides how the standard is to be applied to what I say or do. For this reason, all of the activities that could not satisfy the simple definition of self-realization—the initial concept that the Real Individual has of herself as “real in and for self”—can be comfortably accommodated under the aegis of the *Sache selbst*; and because I alone decide what the required standard is, this new kind of objectivity has no “real objectivity” of the primitive kind at all. The standard of the *Sache selbst* is essentially “public”; that is what makes it a rational standard. But because I define the whole that it is to be applied to, no one else can ever successfully invoke it against me. Whenever they disagree with my estimate, they will find that they have simply been deceived about the right way to apply it. Obviously, therefore, this new kind of objectivity is essentially slippery and ambiguous; and until it is reliably integrated somehow with the ordinary or primitive standard of objectivity (according to which what is objective is the Realized End as an outwardly observable fact or deed) this ambiguity will continue.

The *Sache selbst* (as my own rational standard of achievement) is the *Category*. As the self-conscious critic of what I do under every aspect, I identify finally with “the self-identical form of pure action.” I am conscious of myself objectively as the “individuality” of the whole cycle, and I identify subjectively with the universal standpoint of Reason, for which the cycle stably persists. Every *Werk* is subject to criticism. But then it is not me, and I can criticize it with the best; it is only a vanishing moment of my truly objective reality.

- 16./410. The Thing Itself is the dynamic unity of the action as a whole. It is the unity of category and case—the unity of *my* purpose and *my* means with the public fact. It is the Category for which the thing of sense-certainty and perception exists. But it is now the object of rational consciousness, and it will go through a dialectic like that of the sensible thing.

The Thing Itself is my rational Self as the identity of Reason with the world. We have already seen that this identity is more than the moment of publicly visible achievement. The Real Individual is not the collapsing of all activity into that moment, but the universal awareness of the objective permanence of the whole cycle in which that moment of externally visible objectivity is simply the one that is immediately available to universal observation. Through my transparent activity of speech I can make every other aspect of the cycle public as needed; in this way the Thing Itself, “the spiritual essentiality in which all these moments [project, means, and Realized End] are sublated as valid on their own account” can be made universally visible or public. I can explain everything that is not visible: the project, the rationale for the choice of the means, and so on. Speech is now visible as the universal Category, because everything can be expressed in speech; and every particular act is just a singular case or instance of it. “What is the case” is a function of its status as a concrete embodiment of the Category. The *Sache selbst* is the identity of the “pure” act (or universal Reason, the Category of Reality) with *my* act (as a Real Individual). But it is precisely my prerogative, as the Real Category, to say how that identity is to be interpreted. In other words, the Thing Itself is the absolute Law-Giving.

This “Thing Itself” is the Category for which the world of Sense-Certainty exists, or the self-certain Cartesian “existence” of the Kantian “I think.” We saw it assert its “real individuality” for the first time in the Protagorean moment of Sense-Certainty (pars. 100–102). Now it will go through a dialectical cycle analogous to that of Sense-Certainty and Perception. In its first immediate manifestation it will show itself to be as elusive as the “Now” that is Night turning into Day and back again.

- 17./411. Thus the true Concept of consciousness, the consciousness of its Substance, has come into being for it. But it is only an immediate awareness of its substance, and the spiritual essence has not yet grown into a real substance. Every moment is accidental for it, and none is essential; and yet at the same time, the essence is equally present in every moment, so that the essence can be predicated of every moment [just as every moment of Time is “Now”].

The rational consciousness that we are observing shares our concept of it. It knows itself to be the substantial (or objective) Concept of Reason. It is the real Category of "reality" in the ordinary sense. The world in which I consciously live and move is "mine." But we are merely observing subjects, and so is this rational self likewise. It knows that what it is observing is a substance—the Thing Itself, the eternal objectivity of Reason, or that which "truly is" at all times and in all places. But it has only a subjective, immediate or formal, consciousness of this substantiality of Reason. In the same way, sensory consciousness is certain that its object is a substantial Being, but its actual awareness is a flux of non-Being. "Now" is Day *or* Night, but never the substantial totality. The rational individual (conversely) knows that the (F)Act Itself is the whole cycle of moments, but it is itself always on the move from one moment to another. On the subjective side, every moment of action can be said to be *my* total (F)Act, although none of them is the essential one, and any moment can be dispensed with if necessary. The moments of action are the *species* of the (F)Act Itself; but like the moments of time, none of the species exemplifies the Genus better than the others. So the Category is equally free and indifferent with respect to all of them.

What we have reached here is the Kantian critical standpoint. My rational consciousness supplies the *form* of my experience. I am the categorical structure of the whole world in which I live and move. But now, instead of abstracting the form for the purposes of a formal theory of knowledge (in which there is no really universal subject of scientific knowledge, but any singular observer can satisfy, or fill out, the form) we are going to take seriously the fact that every observer is (in common-sense terms) an independent agent and interpreter in her own world of experience. This is the practical point of view of Protagoras; and the Protagorean political theory depended on the fact that my ownership of "my world" is not secure. I can only have a world, for as long as I am *alive*. (Hence the "common *logos*" of my community can always prevail over "mine.")

In the position that we have reached, that fact has been long forgotten; it is taken for granted, now, that we are all equally rational beings, and that our common Reason "owns" its world. (I use "ownership" to express the means-end relation upon which rational utility is based.) But it is obvious that only a really universal (or substantial) subject can truthfully say "This world is mine"—and so constitute a genuine *Sache selbst*. This identity of self and world is not *private* "ownership." For the first experience of consciousness was that a complete alienation of what is supposedly "owned" is a contradiction (death); and the second was that the voluntary alienation that is possible (serfdom) is contrary to Reason. Our problem, therefore, is to find out how we can constitute a rational community which can truthfully say "This world is ours" in a sense that confirms, and satisfyingly validates the primitive natural certainty of every rational agent that "the world is mine." We shall find that we cannot do this by a simple rational recognition (i.e. by a rational agreement or convention). The rational self, which grows like its own natural body, must grow from the Kantian "spiritual essence," that it has now become, into a "truly real Substance"; and it can only do that, by comprehending

that its present formal independence grew out of a self-conscious “substance” in the first place.

- 18./412. The consciousness that has achieved the standpoint of this formal idealism is *honorable*; for it cannot fail to preserve its own honor. If the Thing Itself is found to be lacking in some one moment of the present case of action, it will certainly be found adequately in another.

The “achievement of this idealism” is a familiar fact of ordinary life, and does not depend upon the study of Kant in the schoolroom. Anyone who is conscious that she is generally recognized as entitled to have and to express her own point of view, has achieved it; and as the naïve consciousness of the *Sache selbst*, Real Individuality is the perfectly reconciled or Happy Consciousness. Its own ideal standard always applies to its action in some way or other. The action always deserves to be “honored” by everyone, once the agent has presented it in the right light; the monads do not have to be windowless, in order to be completely autonomous. The Concept of the Real Individual, does have an application that is familiar after all (and even unchallengeable, as we shall see when we get to Conscience).

The concept of “honor” here is the classical concept of *tīmē*. But the classical concept has been comprehensively inverted, since *tīmē* was what a hero received from his equals or inferiors in recognition of deeds performed in public. *Honor* is now what one claims for oneself (and what one can self-sufficiently accord to oneself) on the basis of explanations of aim and motive etc.

- 19./413. We can say: “Anyway I tried.” Or: “I was the one who started things”; “I lost, but it was fun”; “There was nothing I could do.” Or: “I deserve my good luck”; or even “I really was on the right side (though I only read about it).”
- 20./414. The “honor” of this consciousness arises from its not putting its thoughts together. Anything said, done, thought or just luckily found can be made into the *Sache selbst*.

The concept of “honor” carries with it a new emphasis that arises necessarily in the Fichtean idealism of the “Thing Itself.” The original object of the Real Individual was simply to express and display *its own* reality. But the Thing Itself is essentially a *public* Thing; and when one claims “honor” for one’s action, one is claiming that it served the public in some way. One justifies one’s action, by revealing the honorable aspect of it in speech, i.e., one shows that it was a contribution to the public good. *All* of our activities come within the scope of the Thing Itself, as long as we can give them an “honorable” aspect in this way. Hegel’s naughty boys who rejoice to be punished are achieving self-realization by revising their concept of what “self-realization” is, and raising it to a higher conceptual level.

The story attached to the nursery rhyme of Jack Horner claims that “Jack Horner” stole the reward that he received, while at the same time congratulating himself, and expecting to be congratulated upon the honor of it. He was an agent for the Abbot of Glastonbury in his dealings with Henry VIII and Thomas Cromwell

during the “dissolution of the monasteries” in England, and he kept for himself the title-deeds of a manor intended for the King. In this story Squire Horner did do something to earn congratulations; but at the bottom of Hegel’s list we find the country squire who sat at home, hearing and talking about King Henry’s dissolution of the monasteries, and congratulated himself for his loyal support of the King, because (once it was all over) he approved of it.²⁸ In this “null case” Hegel lets the judgment “bad” force its way back into the monadically closed Concept (contrast par. 403). This gives the opening for the backlash of Common Sense which will begin in paragraph 415.

As Hegel says in paragraph 414, the “honorableness” of this rational consciousness depends on its never bringing all the moments together. The Thing Itself is essentially *my* Thing in any case, because it is I who am the pure agent, and my pure activity transcends any and every actual *Werk* that I may bring forth. The whole Thing always remains mine, because it is the real “me.” I can identify it as the mere formulating of a project (“the empty End”); or as something that happens without my doing anything (like the country squire toasting the King’s success in dissolving the monasteries).

Hegel himself speaks of “the idealism of the *Sache selbst*” (par. 412); and since the *Sache selbst* is the Category, this is the idealism of Fichte.²⁹ It may seem outrageous for Hegel to parody Fichte like this, and still more so for me to put a universally derided rascal whose self-congratulation became a byword of the nursery, into the sheep’s clothing of the supremely moral Ego. But Hegel labors the point at what may well seem to be a tedious length. We can only understand this, if we remember the *Atheismsstreit*. The intensely religious, and almost frighteningly high-minded Fichte was turned out of his professorship at Jena in 1798, for identifying “God” with the “moral world-order.” In effect, he was denying that God was an “object” in the way that other people and things are “objects.” God is identical with the philosophical *Sache selbst*—the higher, autonomous objectivity of Reason.

Hegel wants to make us see that the pious folk who regarded Fichte’s view as tantamount to the denial that God is really “there” at all, were not so bigoted, or so obviously wrong, as we, who live in a world where the positive authority of an external divine power is accepted only by sectarian minorities, are easily tempted to believe. If the high moral tone of Fichte means that his piety ought not to be challenged, then that same tone can put “Jack” Horner beyond challenge likewise. Either God’s law is there, and the public facts can be judged by it; or we must leave the autonomous self alone to face its *inner* God, and allow its honorable statement of the case to stand as the conclusive definition of the only public fact that can properly concern us. By denying that Reason has any religion Hegel does justice to the common sense that called Fichte’s doctrine “atheism.” In the end, God will be present as a Spirit who is as much inward as outward. But he will not be a God of “moral order” or of “honorable justification.”

20./415. The honor is dishonorable. For we cannot help knowing that it is our own Thing that is at stake; and that our own Thing is equally the Thing Itself. Just being concerned is

not enough. "Concern" makes the Thing mine and not objective any more; but *my* Thing remains a public Thing.

Fichte was an activist who never hesitated to sacrifice personal advantage in the cause of the "Thing Itself." So the commonsense reaction that begins here is only doing justice to his real moral position.³⁰

The honorableness of "Jack" Horner or of the squire is dishonorable, because even in the comprehensive inversion of the original concept of Real Individuality, the moment of ordinary "reality" ought to keep its proper place. The pure act of categorical embodiment is my project; and my project is a definite performance, which is properly what is there to be evaluated. The actual achievement is as much my project as it is instantiated category; my project is the embodiment of the universal category in actuality. These three moments form a Hegelian syllogism. The honorable agent affects to be concerned only with doing the right thing; but the expectation of being honored for it, reveals the agent's equal concern with the project as her own project. It also shows, however, why being "concerned" in some way is not enough. The integrity of the action in this subjective perspective is a Thing that is the agent's own; but it is also supposed to be a matter of general concern, a public good. When I become concerned about it as my Thing, I have forgotten about the objective "truth" and returned to my original consciousness of the *Werk* as the "abiding actuality" that is my self-expression.

Hegel is now embarking on the dissolution, the logical destruction, of the subjective *Sache selbst*. Before we follow in his footsteps, we should consider what an honorable resolution of the dialectic that lets insincerity break in so easily, would be like. Just as Leibniz is the philosopher of Real Individuality, so Lessing is easily recognized as the outstanding representative of the *Sache selbst*. We can see the true ideal of this form of Idealism in his celebrated revision of the choice of Heracles as a choice between two supreme goods: the possession of truth and the devoted quest for it. He identifies the totality of action as the *Sache selbst*; and consequently he surrenders the possession of the truth, for the sake of the quest. His formulation of the choice deserves to be quoted at length:

It is not the truth which a man possesses, or believes that he possesses, but the earnest effort which he puts forth to reach the truth, which constitutes the worth of a man. For it is not by the possession, but by the search after truth that he enlarges his power, wherein alone consists his ever-increasing perfection. Possession makes one content, indolent, proud—

If God held enclosed in His right hand all truth, and in His left hand the ever-active striving after truth, although with the condition that I must forever err, and said to me: choose! I would humbly fall before His left hand and say: Father give! The pure truth is for Thee alone.³¹

We ought to remember at this point that in the first paragraph of the Introduction Hegel defines the *Sache selbst* of the philosopher as "the actual cognition of that which in truth is" (par. 73); and further that in the Preface he is careful to

show just how error must be involved in the philosophical concept of truth (pars. 38–39). There, too, we find a clear echo of Lessing. Here in the main body of Hegel's discussion, the *Sache selbst* is the first, or immediate, form of Reason as a self-conscious Substance. How utterly trivial, how "formal," this awareness of the "Substance" can become, we have already seen; and it will be demonstrated again. But Hegel's theory of the *Sache selbst* in its empty abstract form offers his proof that the choice which Lessing makes is not an open option, but a logical necessity; and all that happens between this point in the book and the achievement of absolute knowledge is the concrete demonstration that what is in God's left hand is identical with the "pure truth" in his right.

(e) *The Dialectic of Humbug*³²

22./416. In paragraph 415 the Thing Itself and its moments appear as content. They are just as necessary as forms, since they are the sides of the reflective self-consciousness of the Category. As such they are conceptual objects that can be presented to others. I can exhibit either side, and switch back and forth; the concrete whole can *only* be presented as a sequence of the sides. So a play of individualities arises in which the others are always deceived.

I have been using the things people say to illustrate the inner dialectic of the *abstract* Thing Itself. But so far Hegel has only been considering the way in which the agent consciousness can relate to the Thing Itself in its private thoughts. So my examples should be taken only as referring to how we talk to ourselves. (Jack Horner does, in fact, talk to *himself* in the nursery rhyme.) In paragraph 414, however, Hegel accused the agent consciousness of hypocrisy in its attempt to preserve its "honor" in its own eyes; and as I have pointed out, "honor" is essentially a relation between the self and others, even when it takes the form of secret self-congratulation.

Hegel now considers the way in which the hypocritical, or dishonorable, aspect of self-congratulation is revealed in public life. The private self-congratulation of the individual for personal success in meeting the standard of the Thing Itself is the breaking point of Real Individuality, because the Thing Itself is essentially a public standard. The relation of the agent with other observers reveals the hypocrisy of self-congratulation, by exhibiting it as a "humbug" (Royce's word for Hegel's *Betrug*)³³ practised with the formal concepts of "unity" and "publicity," the inward and the outward, what you see and what only I can see properly. This is where the *Sache selbst* and the cycle of its moments repeat the dialectic of the *Ding* and its "qualities."

In my self-justifying or self-congratulatory reflection upon my action, I only need to consider the *content* of the different moments: "This is what I planned, that is how I went about it, and there is what happened; but I meant well, I did not realize the approach would not work, and I could not control how things came out." In my relations with others, however, it is the double *form* of the act (the inward unity

known concretely only to me, and the moments that can be presented to others) which is crucial. The problem that arose in paragraph 415 was that the agent can present the honorable aspect of the action for public approval; but the community can always see the self-realizing aspect of it; and the agent cannot deny that that aspect is also essential.

The ambiguity of the sides is already clear. The action is my self-realization; but on the other hand, it is the achievement of a common good; it is the universal Thing Itself, a realization of the True or the Good. Both of these sides are essential to it; and I cannot make the identity explicit for others, because it is not properly explicit for me. I am only reflectively conscious of the sides, and the sides are all that I can show to others. I know that both sides are equally essential (like the “unity” and the “properties” of the sensible thing); but the unity of the sides is present only in the abstract shape of the “common good” which is one of them. We have already seen that no one can affect my sense of failure. Hegel is more interested in the ambiguity of successful activity. We can all collaborate in achieving a truly public objective; but only I can achieve my own self-realization. In the concept of the *Sache selbst* there is a complete “interfusion” (*Durchdringung*) of these two “Things.” So my situation is an impossible one; misunderstanding and the general consciousness of hypocrisy must ensue. Hegel calls this situation *Betrug*. This is just where the accusation of “hypocrisy” is raised in ordinary life. What will be called *hypocrisy* later in the *Phenomenology* is a very refined relative of this familiar condition.³⁴

- 23./417. I undertake something. Everyone assumes that I care about the Thing Itself. So they say “Look, it is already done,” or “Let’s all do it.” But I really wanted to be the one who does it. (“He doesn’t care *really*,” they say—but they wanted to be the *doers* too.) Then if they stick to their own Thing, I call out “Look, you are not doing it right,” or “That’s all wrong” or “*That’s* right” (see how *supportive* I am). They complain, but they wanted their activity to be noticed. Everyone acts for an audience, and “realizes himself” for a community.

What we are up against here is the recurrence of the paradox raised by the Comte d’Argenson conversing with the Abbé Desfontaines at the level of rational self-expression. We can all smile at the wit, when the Comte retorts that he sees no “necessity” for the Abbé’s continuing to exist; for we understand that kind of material necessity well enough. But how can I show “rationally” that *my* self-realization is “necessary”? Why should I ever be the one who has to do anything? If others want to do it, surely they have the same right (if there is a rational right here at all). And if they don’t want to do it, it would seem that they can always argue that there is no rational ground for doing it, and that nothing but the satisfaction of my vanity is involved. Yet the real Category of Reason is necessarily the expression of singular self-conscious free agency.

The fact that the “unity” of the Thing Itself remains private shows us how the primitive concept of Real Individuality is preserved in its comprehensive inversion into the *Sache selbst*. But now we can see, too, why the essential drive for publicity

and recognition makes the inversion necessary. Self-expression is not self-sufficient. It needs and demands to be recognized. This need is the source of the ambiguity. That the Thing Itself is objective and public, does not mean that it is not also essentially *my* Thing; it is the standard by which my action is to be judged, the unity in terms of which the whole cycle of my activity is to be interpreted. For active Reason, the agency of the singular self-consciousness is always the foundation stone upon which everything else rests. To convince oneself that only the objectivity of the Thing Itself matters (in both senses of “objectivity”) is the worst pitch of hypocrisy that the Real Individual can reach. For as soon as one says: “Oh well, it does not matter who does it, as long as it gets done right,” one is acting like the country squire who sits in his armchair and does not do anything.

Thus, when others complain that my interest in some undertaking is not really rational and objective after all, because I insist on being the one to do it, they are deceiving themselves as much as I am deceiving them. They would not complain if they did not want to be the ones to do it likewise. Humbug arises from the fact that the *Sache selbst* is taken to be purely “objective” by all parties. Each of us finds it realized in the judgment and interpretation of her own actions. We recognize its objectivity, but we do not yet recognize our own subjectivity as essential to it. The deception involved is essentially *self*-deception. When we charge someone with hypocrisy (meaning the deceitful concealment of her real motive for doing something) we always have to recognize that, because everyone must necessarily have a personal point of view that defines what the situation really is for her, it is possible that what we take to be deception on the other side is self-deception on our own part. It will still follow that the agent is not quite the individual that we thought she was; but we shall then be logically obliged to forgive this. The Thing Itself is a world in which we must all share, and in which we must respect the general need to share, because we recognize that for each of us the Thing Itself must necessarily be our own Thing also.

- 24./418. We must not deceive *ourselves*. Self-realization and public service are both essential to the Thing Itself. Thus we learn that the *Sache selbst* is the individuated unity of both moments, and they are not the “species” of it (as Genus). The *Sache selbst* is the action of each and all, the *spiritual* essence of all. None of the moments of action is the subject, all are dissolved in the *Sache selbst*. The *Sache selbst* is the individual subject, not a predicate. This is how we all know ourselves as the Category.

The paragraph begins by recapitulating paragraph 417. The individual who is concerned with “self-realization” deceives herself when she claims to be concerned with the public good. Yet “self-realization” is serious; it is not play. No one is satisfied unless what they achieve is a public good. So the problems of rivalry, jealousy and competition in public service cannot be eliminated.³⁵

The Reason that we are observing can go on spinning round from moment to moment between “Yes, I want to do this for the good of everyone,” and “No, leave me alone, I want to do it by myself.” But it is at the same level as we are. Hence

either philosophical consciousness or the actual exigencies of an existing situation may push a rational individual into the posture of “true identity” with the *Sache selbst*, to which we are ourselves now ready to move. Thus, in a committee that is stalled by interpersonal rivalry, someone who is not personally involved may begin trying to give *procedural* advice for the whole group which resolves or avoids the deadlock. Such a one is identifying with the *Sache selbst* as the simple *unity* of the two sides, and assuming the standpoint of a “lawgiver.” But, of course, she does so only for the moment; her fundamental concern is to make the “spiritual animal kingdom” work. We ourselves must now pass on to consider the “Wise (wo)man” as a stable posture of Reason on its own account.

In the formulation of laws and precepts that everyone can follow, we have a *harmonious* identity of individuality with the Category. We no longer have to switch back and forth between “self-realization” and “public service” as if they were species of the Category. We have finally found the species of “rational action” that is identical with the Genus. With the wise (wo)man enthroned in their midst, embodying the *Sache selbst* simply, the great community of self-realization can be at peace (but only if individual Reason can fulfil the definition Aristotle gave as the goal of a good judge: “the judge wants to be, as it were, justice ensouled”).³⁶

When we identify with the task of Reason in organizing and running the community in this way, the conflict between self-realization and producing a public good falls away. We do not retreat into the complacent uselessness of the Squire toasting his King, or the mischief done actively by Hegel’s schoolboys who are pleased to receive the notice of corporal punishment (par. 413). We shall not even be satisfied with the “achieved end”—for “justice must not only be done, it must be seen to be done.” Like “being-for-self” and “being-for-the-other” (i.e. self-realization and service) these moments are all dissolved in the universal *Sache selbst*; and the *Sache selbst* “loses the relationship of the predicate, and the determinacy of lifeless abstract universality”—i.e. we have “justice ensouled.”

Aristotle’s *dikastes* is an ordinary citizen; and we all have some practice in assuming this posture. For the world of active self-realization would not function (not to speak of the world of economic competition) if we did not all comprehend it. Whenever we attempt it (or whenever we recognize the success of someone else’s attempt) we are at that moment concretely identical with the “Category” simply. We are the *Sache selbst*.

In theoretical observation we only have to recognize the “order of Nature” in order to be the “Category.” We only have to conceptualize the experience in a way that is “universally valid”—i.e. “objective” in the Kantian sense.³⁷ But now, the “observation” of individual legislative Reason has a harder task. It has to *make* the law for the case.

One can only identify successfully with the *Sache selbst* by becoming an observer. This is where Reason is fulfilled as a *whole* through the return into its first observational stance. The question that remains is whether individual Reason can maintain itself successfully in this posture of an active movement that realizes itself purely as a universal *Sache*. Can individual Reason produce “universal laws”—and

if it cannot, what can it do *universally* as the self-realization of a singular consciousness? That is what we now have to discover.

Before we go forward into Reason's world of "pure concepts," let us briefly review the logical movement of this section. The world of the "Real Individuals" has the following moments: first position (or Concept), Self-expression; first inversion (or Judgment), expression of the Thing Itself, with the resulting antithesis of Self-Realization and Public Good; second inversion (or syllogistic mediation), the Self as the Simple Category, or the Thing Itself as the legislative subject. The initial inversion of the agent into the *Werk* is the "antithetic" moment of the Concept itself. It is only when we are reflectively trying to say what the *Werk* "means," that we reach the level of self-expression as a shape of *truth*.³⁸

We should notice also, before we go on, that although the world of Reason is certainly that of "Civil Society" we have not been concerned anywhere with *economic* rationality. The "necessity" of Abbé Desfontaines belongs to the sphere of the natural Self-Consciousness, and Reason has done all that is necessary in that direction when it liberates serfs and bondservants, and recognizes them as free rational beings with their own contribution to make to the public good. Reason is concerned with the evolution of "morality" (not of economic life) and with the discovery that the Moral Law can only become *substantial* when Reason recognizes itself as the *subjectivity* of an "ethical" tradition.

In so far as it must take the economic sphere into account, we may notice that Reason can operate as Understanding (just as it did in the "observation of the inorganic"). No ambiguities are possible about market honesty and market justice. No one can pretend to be "public-spirited" when he is convicted of cheating. Jack Horner cannot pretend to be a pillar of the community if there is enough evidence to put him on trial.³⁹ Also "family interest" is a legitimate ground for doubting whether some spiritual animals really have honorable motives; but as we shall see, the *historian* ought not to worry about our being imposed upon. She reverts to the simple standpoint of the *Werk* (and the endless discussion of its significance!).

V C(b): Law-Giving Reason

The transition from the last section to this one is easy to understand, but not so easy to interpret. Formally, the Sache selbst is inverted first (simply or abstractly) into "Betrug"; and then the comprehensive inversion of this antithesis produces the concrete individuality of Reason. "The Sache selbst loses . . . the relationship of predicate and the determinacy of lifeless abstract universality." The moral individual identifies, so it would seem, with the social substance, and thus the whole problem of singular self-realization is sublated. "The originally-determinate nature of the individual has lost its positive significance," as Hegel says in the first paragraph of the new section.

The significance of this is that in the new Gestalt the citizen ceases to act in the private sphere, and begins to legislate in the public sphere. But what exactly does that entail? We are not yet dealing with a legislature, but with a singular rational consciousness. We are now observing the ethical wisdom of "common sense." "Reason as Law-

giver" is like "Sense-Certainty." It is a "Gestalt" that never changes—and at every stage of our spiritual evolution it remains inadequate in the same way. The kind of ethical identification, the actual embodiment of the moral reason of the "Spiritual animal kingdom" that occurs here, can happen in any social situation. Rational law-giving belongs equally to the culture that has not yet achieved the "Ethical Substance," and to our world in which the Ethical Substance has come and gone; while the *phronimos* of Aristotle's Ethics provides a good image of this Gestalt in the world of the Ethical Substance itself. Aristotle gives us ethical precepts, but not laws; and he is well aware that only a "good citizen" who understands the limits of ethical science can use his theory properly. The Law-Testing critics—in Aristotle's world, the Sophists—will make mince-meat of anyone who thinks that his treatise is a "law book." Yet everyone who has used Aristotle's Ethics, or the Bible—or Defoe's Robinson Crusoe, like the amusingly instructive Sergeant Cluff in the Moonstone⁴⁰—as a "philosophical guide of life," has proved that "Law-Giving Reason" is a stably self-maintaining Gestalt.

(f) *The Common Sense of the Absolute*

- 25./419. The individual is now a universal *self*, not just a determinate nature. He is now the self-consciousness that identifies with pure Reason. He thinks for the community of which as agent he is only a member.

This paragraph simply explains the formal advance that we have made; and since we have still one step to make, before we reach "True Spirit" we must interpret this section primarily in its modern perspective. The *Gestalt* of "Law-Testing Reason" that we shall face in the last step, is not a sceptical Sophist but the supremely moral figure of Kant. Just beyond him, however, as soon as the concept of "True Spirit" has been stated, we shall meet Antigone who proclaims an "immediate" Law of Reason of the sub-political kind that we encounter here. For that reason the pre-political situation is almost as important to us at this stage as the post-political situation to which the developed shape of Reason belongs.

In the motion of Real Individuality there are three moments. Initially, the Real Individual is an *active* self, a monad whose activity of realization constitutes its world. But through the recognition of the Thing Itself as the necessary rational standard of its activity (in the second, dialectical, moment) the Real Individual becomes the self-conscious rational Category. We have now reached the third moment, in which the dialectic tensions are resolved. The Real Individual is now a universal self; and the monadic self that aimed to express its own inward nature or substance, has been reduced to the active *moment* of this universal self. But that self-expressive monad is recognized and accepted as the concrete content which the abstract form of the *Sache selbst* (as the objective of all rational activity) must have. The rational selves are now seeking to express not just themselves as individuals, but the laws by which the self-expression of all of them have to be bounded.

- 26./420. What the Self has to do is to lay down the law for itself and everyone else. It is ethical consciousness of the ethical substance. This identity of self and object is the *Absolute*,

so the rational self cannot transcend it (and does not want to). It divides itself into Masses which are the determinate laws of the absolute essence. But this distinction of masses does not affect the unity of the moments (of Being, or pure consciousness, and Self, or singular self-consciousness).

The essential task of Reason as the self-conscious Category is to define itself—that is to say, to establish the public standards by which everyone’s activities are to be judged and evaluated. But the structure must be all form and no content, because the subjective decisions of individuals are to provide all of the concrete content. This separation is an impossible task, and we already know why. At the beginning of “the actualization of Self-Consciousness through Itself” Hegel warned us that “It is in the life of a *Volk* that the concept of self-conscious Reason’s actualization . . . has its fulfilled reality” (par. 350).

He had to make this clear at that point because the proper thinghood of Reason had to be pointed out in order for the speculative meaning of Reason’s attempt to observe itself in the skull to be understood. The singular active Reason has been in quest of that spiritual thinghood from the first. The subjectively embodied *Sache selbst* encounters this *Gegenstand* at once. The life of the *Volk* is for Reason, what the infinite Life of the cosmos was for the Understanding. Just as that cosmic process was the supersensible Thing of which the Understanding was the duplicated awareness, so the substantial life of the *Volk* is the Real Thing for which the subjective *Sache selbst* is the rationally active self-awareness.

“Self-Actualizing Reason” was portrayed for us as the rational consciousness that had *lost* this objective reality. The distinction between the rational consciousness that still has to create this substantial being, and the one that once had it, but has now lost it, is now deliberately cancelled in Hegel’s presentation of the “Individuality that is Real for itself In and For Itself.” Reason “in itself” has the task of creating this substantial reality; while Reason “for itself” has broken out of it, and can remember it; so the Reason that is “in and for itself” must be displayed in both perspectives. This is what Hegel’s two “examples” achieve.

The overt dialectical movement of this section is excessively simple. It is almost a piece of formal logic. This reduction is possible, because we are here dealing with a subjective Reason that knows itself to be immediately identical with the objective *Sache selbst*. But there is a much more interesting implicit dialectic that is masked by this formal immediacy; and I believe this is one of the places that Hegel was thinking of when he apologized in his letter to Schelling for the uneven working out of his design.⁴¹

Except for the summing up of the reconciliation of the “spiritual animal kingdom” with the “Thing Itself” there is no statement of the new Concept. The Concept and its immediate inversion are simply presented to us *in medias res*, as they find themselves after the “experience” starts. This is *not* because the Concept can be found without effort in an obvious source. It is certainly clear enough that the climactic development of Reason is the Critical Philosophy. But the *Gestalt* of “legislative Reason” is not Kantian.⁴² Kant’s “pure practical Reason” we shall meet in

the “result” of this present stage; for Kant was faithful to his “critical” conception of the *Sache selbst*. Pure Reason is for him a formal standard against which actions (of all kinds, and at all levels, including “legislation”) can be measured. Pure Reason does not supply what Kant called the “maxims” of action; it only tells us whether our actual maxims are rationally acceptable.⁴³ But the project of Legislative Reason (according to its concept) is to supply maxims for all actions.

The obvious case of a thinker who sought to employ “pure practical Reason” in this legislative way is Fichte. Hegel had already spilled some vitriolic ink upon his efforts (in the *Difference* essay). He wants to show us, now, just why Fichte’s procedure is unjustified. Fichte claims to be “deducing” a social structure by the use of Pure Reason. But, in fact, he presupposes the structure of the “Spiritual Animal Kingdom.”⁴⁴ So his Utopian fantasy only illustrates how Rational Individuality can circle back upon itself and make itself impregnable against critical attack. The problem is to go forward, and to see what Pure Reason really *can* supply without the illegitimate reinstatement of a standpoint that has been sublated.

The Utopian example of Fichte does at least show us where to look for the permanently valid subsistence of this *Gestalt*. Just as Hegel began his discussion of “practical Reason” by giving us the Ethical Substance as our touchstone, so we should approach “Law-Giving Reason” with the memory of the Athenian Law-giver in our minds. Solon has the *true* substance of Spirit as the real content of his categorical consciousness; and he is a Wise Man so he can express this ethical substance in a definition of what is “right and good.” The justification for the move from the very contemporary, and often hypocritical, self-righteousness of the formal *Sache selbst*, to the consciousness that has the “absolute *Sache*” as its content, lies in the one word “immediacy.” Reason can exist *immediately* as an actual Category only in the consciousness of a Wise Man like Solon. Solon was a great traveler. His wisdom was recognized everywhere. It exists immediately as the “sound sense” that is *truly* “sound”; its “way of being” (*Dasein*) must have the sort of actuality that is not afflicted by the antitheses of “certainty and truth,” “universal and singular,” “projected End and realized End”; otherwise it may turn into the “sound sense” of the solid citizen applauding something she reads in the morning paper. The Reason that can be taken seriously when it “gives laws” (universally) has to have *true* categorical solidity behind it.

The difficulty of working out a subjective phenomenological transition once this “Absolute” has arisen is obvious—for “Self-Consciousness cannot go beyond this object, and it no longer wants to.” The one remaining movement is, on the one hand, too slight, and on the other hand, too enormous, to be readily articulated. It is slight because of the immediacy of the identity that we have already reached; it is enormous because it embraces not only the recollected ethical substance of the past, but the universal community that the appearing of the Spirit has created since it began.

The ambiguity of “substantiality” is present even in the present paragraph. For although it may seem obvious (to those who have read the first section of chapter VI) that we should identify the “ethical substance” with Solon’s Athens, the “Law-

Giving Reason” with Solon’s proverbial “wisdom,” and the “masses” with the *public* and *private* aspects of the City’s life—governed by “human” and “divine” law respectively (see par. 495)—this interpretation can be shown to be mistaken.⁴⁵ The *Volk* of the Ethical Substance is, in fact (not the Athenians or the Spartans but) the “Hellenes.” This *Nation* is the “ethical substance” that we have lost; and the *Cities* were its “masses.” Only of the Nation can it be said that “Self-Consciousness cannot and does not want to go beyond this object.”⁴⁶ The whole “phenomenology of Spirit” is the story of how self-consciousness has “gone beyond” the spiritual substance in that unselfconscious form where the singular consciousness identifies with the immediate community of the *polis*.

The modern national community will only be truly absolute when it becomes as much “subject” as it is “substance.” The community for which that proposition is true will actually exist when Hegel’s work is comprehended. He believed the time was ripe for it in 1805; but, as the subsequent fate of his book shows, the “ripeness of time” is a very elastic conception.

The differentiation of the Hellenic *Volk* into City-masses caused every City-mass to have two aspects. There was universal religious custom (the Divine Law) and a specific City custom and constitution (the Human Law). So the City-mass was itself subdivided naturally into two masses (the men and the women) by an immediately felt, and culturally reinforced, identification of each sex with one of these two laws. The “mass-structure” of a modern *Volk* is less clear; we shall come to that later.⁴⁷

27./421. These laws are “laws of Nature.” They need no warrant.

The “laws or masses” that are “immediately recognized” in the world of natural consciousness are easy to point out. Men identify with Hellenic “freedom” (the free self-determination of their City); and women with Hellenic “nature” (the continuum of their own family with the universal family of the *Volk*). It is clear that Hegel held that the differentiation of the rational community into “masses” was necessary in the modern “rationalized” *Volk* (cf. pars. 492 and 593); but his reading of the Enlightenment and the Revolution shows that no specifically differentiated “shape” is logically inevitable (cf. par. 594). That is why “Law-Giving Reason” is time-bound (and not universally valid as it supposes itself to be). Rational “law-giving” is the expression of an intuitive sense of the whole social situation. If we reexamine the analogy drawn in paragraph 492 with Hegel’s own *Philosophy of Right* in mind, we can plausibly infer that the masses that have to be immediately recognized in the *morally* rational world of the Substance that is Subject are the triad of family, civil society and State; and finally the spiritually unified *universal* community of the Church.⁴⁸

We can easily see that the Ethical Substance of the Greek *polis* is not fully adequate to the formal requirements laid down in this paragraph. Self-Consciousness is here said to be the *Fürsichsein* of the ethical substance. This substance faces it as its *Ansichsein*. Formally speaking, that is the *first inversion*. It is not “the active self-

differentiating individuality” that fulfils the *Sache selbst* in the *polis* (as claimed in par. 419). In actuality, it is the custom. The substantial identity appears to be achieved without stress because every member of the *polis* is trained to do virtuous acts until she is spontaneously virtuous. But in this generation of the ethical Substance as the “result” (the *Anundfürsichsein*) the antithesis of “certainty” and “truth” is reborn. Neither Antigone nor Creon is “the Category.” Each is only one side of it.

If Hegel had been challenged to explain why this present section and the next one are not developed methodically, he would probably have said that the proper methodical development of this section is the whole of chapter VI (and perhaps that the methodical development of the next section is in chapters VII and VIII). For both Antigone and Creon are “lawgivers”; and we shall see what comes of the conflict of their respective “laws.”

28./422. Individual self-consciousness just knows what is right. The *laws* are there.

It is evident that instead of going through the dialectic of the Ethical Substance as *Ansichsein* (*Sittlichkeit*), *Fürsichsein* (Moral Autonomy), *Anundfürsichsein* (Substance as Subject), Hegel is anxious to make a painless and direct transition to *Sittlichkeit*. Once we get to that, the dialectic concealed in its seemingly perfect immediate harmony and stability will unfold necessarily; and no one will be surprised to find that the “immediate knowledge” of Reason is as slippery as that of Understanding, and absolutely tragic in its direct consequences. But the examples of Reason’s immediate knowledge that Hegel considers in the following paragraphs are a sufficient indication that the immediate rational identity of subjective Reason with the determinate content of the “fulfilled *Sache selbst*” is not yet the proper identity of “certainty” and “truth.” This *immediacy* is exactly what is characteristic of the “knowledge” of Antigone and Creon. They are “Law-Giving Reason” in its internal “antithesis” (or “judgment”).

29./423. This immediate certainty must be taken immediately (as in sense-certainty). Pure being, or the immediate masses of ethical substance, must be *instanced*.

The return to the logical level of “Sense-Certainty” (just when we had reached an “understanding” grip upon the *form* of the *Sache selbst*) is a clear indication that the immediate certainty of Law-Giving Reason is not yet its Truth. The examples that Hegel chooses, show that we have to consider modern Reason; and we can plausibly infer what the *modern* “masses” are. For these examples require a culturally limited interpretation, if they are to be regarded as “laws” of the two “masses” of the Ethical Substance of True Spirit, and to illustrate how its “being” is constituted.⁴⁹

I shall try to show that these examples both express and characterize the “masses” of the “true [Absolute] that is not substance but equally subject” (par. 17)—the community of “Absolute Knowledge.” But they also serve very well to mark the beginning and the end of the whole process of the realization of Spirit as

“the Absolute” (or as the negated Substance that is equally Subject). Hegel’s aim here is to show us how far beyond the next actual link in the chain of *Gestalten* the “resolution” of the dialectic of Reason with its “Absolute Thing” actually extends.

- 30./424. “Tell the truth.” This has to be relativized by adding “according to best knowledge and conviction.” The commandment did not say this, so the *law lied*. But in its subjective form it is accidental whether it produces the truth [cf. par. 413]. It unites a universal form, with a contingent content. If we ought to know the truth first, then the immediacy of the law is transcended.

Cephalus gives “telling the truth and paying one’s debts” as the very first definition of Justice in the *Republic*; and of course, Kant uses it as the paradigm of a Categorical Imperative. But neither for Plato, nor for Kant is this positive formula sufficient. As soon as Polemarchus takes over the argument from his father we discover that we need not tell the truth to the enemies of the City; and not even Kant maintains that we must always actually tell it.

Hegel treats the precept as if it were a “principle” of modern common sense, without any “ethical substance” to depend on. But the “modern” (Kantian) commandment is the critical imperative: “Do not tell lies.” Hegel cannot accuse that of “not speaking the truth” (an accusation which is the first, or direct, inversion of “Tell the truth”). Nor can he get from it the conclusion that our duty as humans is to “know the truth.” This is the “second inversion” which he makes of the simple commandment; it resolves the tension between “Tell the truth” and “You need not tell what you do not know.” It both refers us to the commandment of the Oracle at Delphi “Know thyself,” and gives the theoretical imperative of the philosophical (or “scientific”) community, the community of Absolute Knowledge. Only that community can “tell the truth” without being trapped by the false perspective that is implicit in all finite truth. The double perspective is important.

But when we grasp this ultimate resolution of the simple commandment, we can see that one reason that Hegel had for turning it into an example of the merely formal *Sache selbst* (which we have already transcended), is that, as the simple or immediate expression of Reason’s ultimate goal, the commandment exists already for the naïvely rational self-consciousness which has not yet achieved the Ethical Substance at all.⁵⁰

- 31./425. “Love thy neighbor.” Again I have to know what is good for him. But as for doing what is good for him, I cannot do anything compared with what the State does, and I cannot act either ethically or effectively against the proper activity of the State. My good deeds are accidents and affect accidental circumstances; and their effect is chancy. A commandment is a regulative ideal, not a law.

The second example characterizes the universal community of substantial subjectivity. The commandment is not unknown to Solon and his world—but one’s “neighbor” is one’s fellow-citizen, one’s guest friend, or (at the limit) a suppliant who speaks Greek. The “lawgiver” of Reason as a universal philosophical Church

is Jesus.⁵¹ The chapter on Spirit, which begins with the downfall of the Ethical Substance, carries the concept through “self-estrangement” and finally back to the absolute reconciliation of “evil and forgiveness.” The spirit of absolute forgiveness which is “God manifested in the midst of those who know themselves in the form of pure knowledge” (par. 671) is unmistakably “Christ risen in me” to use the Pauline expression which defines the “third relationship” of the Unhappy Consciousness (the experience of salvation).

At this point, therefore, we hear the voice of the “Shaped Unchangeable” in its simple earthly existence; and Hegel’s comment is interesting. There is nothing *eristic* in his approach to this maxim as there was in the case of “Tell the truth.” He is only concerned with the question of *how* it can be fulfilled. In the first place, it presupposes self-knowledge as the human good, which Hegel has already derived as Reason’s goal from the duty of truth-telling. Implicit in the making of this connection we have the speculative justification for the downfall of the Ethical Substance in the tragedy of its divided certainty of truth. The gospel of the crucified Lawgiver of the Spiritual Kingdom can only be received by a world in which all are estranged; for it is only in this world that the rational tie of common humanity can become paramount over all the natural ties of blood and life in common. Thus it is the determination to fulfil Apollo’s command⁵² that brings to pass the downfall of the Ethical Substance.

The “experience” of the Christian commandment has first to be inverted into the recognition that only the State can really fulfil it properly. A direct attempt on the part of the rational individual to carry it out would take us straight back to the Law of the Heart, and to the criminal excess of Karl Moor in the Frenzy of Self-Conceit. Only the State can create and maintain the conditions for the achievement of the good life (as Aristotle would have said). The new Gospel was non-violent, but it spoke especially to those whose lives were far from good. It could only become “the belief of the world” after it had itself become decisively “other-worldly.” Charitable activity in this world, being based on the direct perception of another person’s rational need, becomes completely contingent both in its impact and in its actual consequences.

Here again, the defeat of the project of doing active good throws us back to the dialectic of Real Individuality (par. 413); and this time Hegel’s insistence that the result of the contradiction is a simple nullification of the individual effort is nearer to being the whole truth than it was in the case of truth-telling. The climax of the effort to “know ourselves” in one another individually is the recognition that we must forgive one another for the inevitability of our failure to act with universal unselfishness. This is what we absolutely know about our efforts to “love one another.” So the imperatives of self-knowledge and brotherly love do finally both “vanish” in the experience of forgiveness. This “vanishing,” however, is like the “vanishing” of project and result into one another in the experience of self-realization. It is a vanishing of human rational knowledge and action together into the higher concept of *divine* knowledge and action. Finite spirit “vanishes” and Absolute Spirit dawns.

Thus the second inversion of active brotherly love in mutual forgiveness has a positive consequence of just the sort that we should expect. But all that is visible immediately is the simple vanishing of Reason's activity in direct self-contradiction. The "laws" of legislative Reason are infinite commandments of God. They cannot be fulfilled. Practical Reason returns us to the Unhappy Consciousness.

- 32./426. It is a logical fact that we cannot go immediately from the universal to the singular. We can only produce formal universals (non-contradictions).

Hegel's present object is to make the transition to the simple "ethical substance" in which there is no independent singular consciousness. The demonstration that Reason cannot legislate the universal duty of rational individuals without being reduced to contradiction, leads to the reconciliation (or second inversion) that Reason is immediately identical with the Substance which it was seeking to express as a subjective universal "law." "Tell the truth that you know" and "Love the neighbors that you have, through your absolute commitment to the shared way of life" are expressions of "immediate ethical being." They are part of Antigone's "unwritten Law."

But the "unwritten law" is terrifyingly ambiguous and slippery in its interpretation. At the moment of action, all that pure Reason can do, is to tell us whether the law that we have *chosen* to set up for ourselves, is *formally* a law of Reason, or not. Individual Reason has only the standard of logical identity (or self-consistency) to express its own relation to the universal substance of Pure Reason. The "laws" of Reason do not turn out to be real laws; but as "commandments" they express this formal principle; so it is this that emerges as the "result."⁵³

- 33./427. So we are left with a logical form (non-contradiction) as the form of law.

We have now arrived at the Kantian conception of Critical Reason. It is important to recognize the ambiguity of the *form*. The "tautology" is not like the " $A = A$ " of Reinhold and Bardili. The Reason that commands us to "love our neighbors" is not as helpless as that. It can tell us, for example, that our neighbors are not "property"; and this interpretation (as distinct from the policy of Solon, who abolished debt-bondage, but not war-bondage) has the non-formal second formulation of the Categorical Imperative implicit in it. Hegel uses the words "self-identity," "formal" and "contradiction" in a way that is far from "formal logic." So the "critical Reason" that emerges here is not as empty as his language makes it seem. The Categorical Imperative cannot tell us whether to have property or not; but it can tell us what can be "property." The community of True Spirit violated it unambiguously on that point.

Since I must give some example I have deliberately anticipated the problem of "property" which Hegel uses to demonstrate the helplessness of Reason conceived as moral logic. We shall see why he chose this example when we get to it. What matters at the moment is to realize that the speculative or dynamic "identity" of Reason

is implicit in the static “form.” Reason really does issue the “commandments” (of “God”); and it really is the critical exercise of Reason which, in the millennial movement that comes to a climax in the Enlightenment, will sweep away not only “true Spirit” but even serfdom and benevolent despotism at last. The closure of Reason as a *Gestalt*—made possible by the “immediacy” of its presence as the *Sache selbst* here—should not cause us to forget that even in his discussion of “logical laws” Hegel made clear that it is the speculative sense of identity that matters. The stability and harmony of the Substance we have lost is “identical” with that which we are just now in the process of regaining. Neither Antigone nor Jesus is formally a Kantian. But the piety of both requires us to “respect humanity as an end.”

34./428. The ethical essence is just a standard for *testing* what can be a law.

It should hardly be necessary now to point out that the transition made here to the Kantian conception of Reason could not take place while the Ethical Substance of True Spirit was in full vigor.⁵⁴ “Law-giving” is a necessary function of the Ethical Substance. The “testing” of laws began in the critical activity of the Sophists, and was seen by those who participated in True Spirit as the operation of a merely “external” reflection, engaged in only by aliens who should be banished, and traitors who should be put to death. For True Spirit the law is simply there; it is to be accepted as it stands, because it is the law. Some of it was proposed by a lawgiver and approved by the community in general (male) assembly. But all of what is thus approved is the voice of Athena, the wise daughter of Zeus who established the first assembly of the fathers; and there are some laws which *all* Greeks, not just our City, know to be the decrees of Zeus himself. For a citizen to look critically at the laws of the City, or for a Greek to hold himself justified in transgressing the decrees of Zeus, would be absurd. Socrates (who was held by his fellow citizens to be a critic of the laws) affirms, on the contrary, that the critical posture of a subject towards the City’s Laws can never be just.

V C(c): Law-Testing Reason

In the process of our observation of Law-Giving we have recognized the established custom and law of the community as the real Thing Itself. Only our own observing stance remains (with its logical laws and standards) as the formal essence of Subjective Reason. This must now set itself aside as an objective Shape. We must recognize that Universal Reason does not come into existence as a subjective critical form; it has to exist first as a Substance. (We have made a circle back to the Self-Observation of Reason.)

(g) Critical and Speculative Observation

35./429. Practical Reason as ethical substance has shown itself to be a formal universal. But as the active universal that tests laws it seems to be identical with what we do. Now, however, we are observing it; and the difference is that one term of *our* comparing has

vanished. We are not testing commandments against ethical substance, but watching the testing of them for formal acceptability.

When an individual Reason seeks to distinguish itself within the whole that is rationally autonomous and self-sufficient, its activity becomes entirely a matter of chance. What it does depends on what it knows, what its circumstances are, and what it devises (this last is what Hegel calls “the contingency of the acting”). We have already contrasted this contingency with the reliable stability and self-sufficiency of the community’s activity. What is present for our observation, now, is simply the formal *Sache selbst* that arose initially as the internal standard of the Real Individual’s self-expression.

Hegel’s summing up makes the dialectic of “Law-Giving Reason” clear; we have discovered that the Pure Reason of the agent is a comparative and critical activity exactly like our own. The individual Reason stands apart from all the determinate content of its experience. It cannot make laws, but only produces precepts which its changing circumstances reveal to be dialectical, i.e., they sublimate themselves, and move away from the level of application at which they were first given. This capacity for critical evaluation, this “sublating” power is what abides. The subjective Thing Itself has gone through all its paces, and now stands revealed as the *critical* power of Reason. Our object of observation now, is the very capacity that we are using. But *we* knew from the beginning that we must not criticize; we are only allowed to watch the observed consciousness criticizing itself.

The difference between what we are doing, and what Kant claims Reason can do, is that we are now observing the *Sache selbst* as a formal Universal which has set itself up as the measuring rod of the realized universal authority of the community. In this comparison of Universals made by the formal Universal itself, the predicate of authority must inevitably belong to the real moment. Our posture is not that of testing either the Concept or the experience. We only watch how they “test” one another. It is true that we were the “testing Reason” that found the subjective legislation of Reason wanting; and it is very proper for Hegel to admit that our contribution was a bit more than simple “observation” in this case. But now it is our own testing attitude that has resulted (by determinate negation) from that last test; so we are now the simple observers of that same attitude in the observed consciousness; and we are watching that theoretical attitude go up against the ethical authority which we saw to be the Substance that both determines how moral precepts are to be applied, and reduces all singular moral action to a merely incidental status.

All that this critical Reason wants to do is what we have been doing, and what we shall continue to do when it loses. The very fact that we can go on as before shows that although that testing attitude surrenders to the real universal at this point, the defeat is not total and final. It arises, in fact, from the formal character of the universal standard that Law-Testing Reason wants to apply to the legislation of the real *Sache selbst*. The standard that we use is a Reason that continually reconciles contradictions in the new identity of a higher, more comprehensive, Concept. We began by accepting “experience”; we shall now see that the practical testing of “command-

ments” has to accept an organized world of experience. After that we can watch how the law-testing capacity of Reason emerges and becomes autonomous in its organized world. When we asked what we should accept as *our* beginning, the answer was obvious enough; we began where consciousness finds itself. In the same way, the critical Reason that cannot generate its own system of maxims, must begin with the natural social system in which Reason itself came to consciousness.

- 36./430. Testing contingently given maxims is futile. Should there be property categorically? Yes there *may*, but also no, there need not be, says our test. There must be property according to need. But we can’t rationally wait till the need happens to arise. Reason requires that we ask what property-system everyone needs; and we find that there is a conflict between satisfying need, and giving everyone fair and equal shares.

Just as law-giving Reason brought its own futility to light by evolving from the duty of telling the truth into that of knowing the truth, and then coming to the absolute knowledge that it must forgive and be forgiven for ignorance and impotence, so Law-Testing Reason discovers in experience that it cannot test the Substance effectively. The particular example that Hegel chooses, for the exemplification of how all the cows are black in this “naïveté of the void in cognition” (par. 16), is the institution of *property*. This is by no means an accident, because the two commandments that we are carrying forward within the “result” of Law-Giving Reason give us opposite answers.

The duty of “truthtelling” embraces “paying one’s debts”—which presupposes private property. The ideal of “justice” here is that of “giving to each his due.” What is due to each is what she earns and deserves. That is the right measure of her share in the consumption of the common good—which would not be “good” at all, if it were not distributed for individual consumption. In this perspective the privacy of property appears as the absolute presupposition of “justice” and “goodness.”

On the other hand, the ideal of brotherly love demands the sublation of the concept of property altogether; and this is not a mere “law of the heart,” but is just as much a necessary presupposition of natural justice. The ideal of Reason is that every individual should realize her rational potential as fully as possible, so everyone should have what she *needs* in order to be able to contribute all that she can to the communal life (the complete fulfilment of the common good). In this perspective, all material resources must be regarded as being always at the free disposal of Reason; and this perspective is more comprehensive, since it uses the criterion of the “common life.”

Unluckily for this ideal, however, the implicit assumption that every rational life requires and deserves absolute moral respect can only be made explicit in a world in which there is recognized private property. For it is only in the world in which property is recognized, that the recognition that persons are not property can be achieved and enforced; and without that achievement, the standard of justice as “from each according to ability, to each according to need” can never be more than a “law of the heart.” Lovers will achieve the Christian ideal, with what they chance

to possess (and for as long as they happen to be in love). Beyond that level “property” is a “fate”—as Hegel recognized already by 1798/9.⁵⁵

This internal dialectic of the concept of justice is much more important than the fact that different standards of justice are justifiable in terms of their abstract rationality. Hegel begins from the extreme communism of brotherly love. If we attempt to obey the precept “Take no thought, saying, What shall we eat? or What shall we drink? or, Wherewithal shall we be clothed?” (Matthew 6, 31) we shall contradict the essence of rational individuality, which begins with personal responsibility. The downfall of True Spirit, and the long struggle towards the community of brotherly love, will show us how absolute the rational imperative for the realization of this “conscious essence” is. Hegel makes explicit here just why the personal control of one’s own means of livelihood is fundamental to the actuality of Reason.

There could, of course, be a communist society which respects this imperative of rational individuality. But the imperative of distributive justice is abstract equality: everyone should have an equal share; while the imperative of concrete community says that everyone should have what she needs. The dialectic of particular (distributive) justice and general justice necessarily exists in a socialist society, just as it does in the natural society based on family property and inheritance. We shall never have a “rational” society (in the Fichtean sense) because “justice” is a dialectical concept.

- 37./431. Non-property appears to be contradictory. But so is property. Property is *real*; but also it is for consumption. My property right is admitted; but the thing is useful to everyone, so why should I have it? Real property is a thing, and will not be mine forever. (Why should we expect consistency to tell us what is *right*, when it cannot tell us what is *true*?)

I hope this analysis makes the abstractness of Hegel’s argument, a bit more concrete; it has the structure of a Kantian antinomy. Each view is overturned by showing that the other is just as reasonable, and that both are “necessary.” Some system of distributive justice is necessary; and neither the universal continuity of Reason nor the singular assertive impulse of Nature can be granted a categorical validity. As soon as we allow the concepts of communal ownership and private property to develop a rationale based on the concept of rational action (which is the basis of this whole phase of Reason) they must either become arbitrary and irrational (in the fixity of what is actually recognized); or they contradict themselves (if we allow critical reason to consider why general recognition is accorded). But the formal canon of logical self-consistency applies equally well to any fixed state of things; it is no help at all in deciding how the motion of the concept should be fixed. (The moving concept here is Utility; “property” is just one side of it.)

At the end of the paragraph, Hegel refers to Kant’s own insistence that formal logical consistency cannot provide us with any material “truth.”⁵⁶ Why should it provide us with any material knowledge of what is “good,” he asks. I do not suppose Kant (or any Kantian) needs to have this pointed out. But, of course, what it means is that formal practical Reason needs a given content, just as the concept

requires the intuition in theoretical knowledge. Hegel is using the logic of Kant's *critical* stance to help us make the next step. It is a mistake to suppose that he is criticizing Kant; he is simply observing the motion of the Concept of Reason.⁵⁷

- 38./432. Thus both moments of the fulfilment of the empty spiritual essence have sublated themselves. But the ethical substance needs both. Their sublation means only that they are moments that cannot stand alone. Their emergence and disappearance has the formal significance that this is how Substance displays itself as consciousness.

This is the most important paragraph in the last two sections of the chapter. For Hegel here acknowledges that the negative dialectic which reduces both Law-Giving and Law-Testing to nullity operates only because (and in so far as) each of them is taken in its subjective immediacy (i.e. as a function of the "common sense" of the singular agent). After we have passed through "the experience of Spirit" the whole situation of self-conscious Reason will be transformed. We ought to understand this already, for we have seen that the chapter on "Spirit" will actually contain the Law-Giving of Reason; and we have recognized that our own procedure as speculative observers is the real operation of Law-Testing Reason. The Ethical Substance has to contain the "distinction" of the rational individual self-consciousness which is aware not just of its identity with and dependence on the Substance (like Socrates), but of its Kantian moral independence and autonomy. The otherworldly experience of God's love for every one of his children, and of the salvation of the "immortal soul" in Him, is the essential foundation for this moment of subjective autonomy.

Our own law-testing procedure is a *moment* in the greater cycle of logical comprehension; and it has always known itself to be that. It is not formal in the way in which Stoicism is formal; we saw at the beginning why error and ignorance are necessary in the comprehensive cycle. Those who complain that "dialectic and absoluteness are *ultimately* at loggerheads," or that Hegel seeks to "close the gates of truth,"⁵⁸ are merely expressing the Sceptic's absolute knowledge regarding the folly of Stoic pretensions. It is precisely the proper justification of *their own* critical Reason that Hegel wants to offer. If he can succeed, then perhaps what their intuitions demand (continuing dialectic and "open gates") can be secured, without any simple or direct contradiction of the logical "absoluteness" of Absolute Knowing. For *we, too*, are using critical Reason.

Of course, one part of the reason why *we* can go forward in our own law-testing posture is precisely that we do not claim to *do* the testing. We shall *watch* the Concept of the Ethical Substance test itself, shatter under the impact of individual self-assertion, and reform itself as a whole that incorporates active rational autonomy. It is the achievement of this whole that makes *our* kind of observation possible. It is clear that Hegel thought Kant's Critique was the birth of a "logic of experience" that is *not* merely formal; and his Science of Experience is built upon the Kantian foundation.⁵⁹ So his criticism of Law-Testing Reason is only dialectical; it is meant to bring home to us the fact that a long historical experience is required for the laying down of the substantial foundation that gives law-testing the sort of range and validity it can and does have.

- 39./433. These two Shapes are forms of *honorableness* seeking content for the Thing Itself in “healthy Reason” and “understanding insight.”

As moments of the formal *Sache selbst* Law-Giving and Law-Testing are phenomena of the moment when the *Phenomenology* was being written.⁶⁰ In the form of “commandments of Reason” (or of the absolute “Ought”) the community of rational freedom was “exhibiting itself as consciousness” because it had completed its great cycle of historical gestation. Utopian fantasies such as “Perpetual Peace” are moments of the real *Sache selbst*; they represent the turning back of the *Gestalt* of Real Individuality upon itself to form a closed circle for which the merely subjective *Sache selbst* forms the centre. Those who write these fantasies can have the comfortable consciousness of having “made their contribution,” “taken the first step” and so on. They stood up for what is “honorable.” But their contribution will turn out to be just a moment in a cycle that closes “dishonorably” by their standards. Young Rameau will demonstrate that their honor is identical with his dishonor. Hegel goes on, now, to give a very mild foretaste of that radical critique. Fichte (the legislator) and Kant (the tester) are setting themselves up as the enlightened despot of Reason (or its conceited Heart).

- 40./434. It is only the sense of honor that gives these rational ideals their substantial status. The legislation and the testing are essentially capricious. The singular consciousness cannot legislate despotically; and the laws that are genuinely absolute cannot be rejected as tyrannical decrees lacking conscientious authority.

Like Shakespeare’s Brutus, those who produce rational Utopias are “honorable men.” If they were not sincerely devoted (like Lavater) to the advance of “the knowledge of men and brotherly love,” their merely subjective fantasies would have no rational validity at all. The “laws” of an individual legislator are accidental and arbitrary expressions of personal feeling and capricious priorities. It is as if a cobbler were to decide what shoes each customer *ought* to wear without regard to the measure each of us carries in her own foot. This arbitrariness is exactly what is objectionable in a tyranny; but an ordinary tyrant would not try to make spontaneous ethical customs obedient to his whims (as Fichte, for example, wanted the duelling fraternities at Jena dissolved, because they offended his conception of the human vocation).

This is not how the legislator functioned in the concrete politics of Greek cities. Solon, for example, was a recognized and trusted leader at Athens, and an acknowledged “wise man”—i.e. someone who understood what the established customs were, and how the constitution actually worked. He was chosen by the parties in conflict because all sides felt that he would try to be impartial, and would propose an acceptable compromise solution for actual conflicts; and when he had done his best, his proposals were put to the Assembly for confirmation. He was not asked to use his own rational insight to produce a blueprint; and nothing became law on the basis of his personal interpretation of what was right and good.⁶¹

When Hegel says that the law-testing attitude “argues itself to be free from the absolute laws, and takes them for a caprice that is alien to it,”⁶² the “absoluteness” clearly belongs to the laws as God-given. Antigone’s appeal to the eternity of the law that she obeys, and the transcendent, humanly incomprehensible, character of its authority (see par. 437) is the first “shape” of identification with one’s own rational Substance.

- 41./435. These forms are the immediate negative subjective consciousness of ethical substance. With their supersession we arrive at positive awareness of being in the ethical substance.

Legislative Reason and Law-Testing Reason are both critical (and hence negative) in their relation to the “Substance or the real spiritual essence.” They are modes of subjectivity that have not yet assimilated or embodied the substance in themselves. Hegel’s “not yet” indicates that he is thinking especially of contemporary Utopian moral rationalism (especially Kant and Fichte).⁶³ The content of these *subjective* forms of the *Sache selbst* is a personal standard of behavior or of rationality. In its universal aspect it is merely a Utopian fantasy, a *Sollen*.

The dialectic of formal self-contradiction establishes that “Law-Testing” vanishes into the immediacy of the Ethical Substance: the “antithesis” disappears. We might want to argue that Socrates is as much a critical or testing spirit as Kant; but he presumes only to interpret the “Laws” (and to criticize the interpretations of others). He regards the Laws as the source from which he has derived the rational views that he has, and never pretends either to be able to derive them from his own Reason, or to be in a position to criticize them. His own critical activity is valid for him only as a sublated moment within the unity of the Ethical Substance; and his last words in the *Apology* (before the enigmatic farewell) are a request addressed to those who have voted against him on the jury, that they should apply his method of criticism to his own children if they appear to need it.⁶⁴ This is how Law-Testing Reason is present as a “sublated moment” in the simply substantial ethical substance. We must never forget that the Ethical Substance, even in its most perfect immediacy, is made up of singular self-conscious *subjects*; and their points of view and differences of interpretation are as manifold and as different in the Ethical Substance as they will be in the consciences of free modern Individuals.⁶⁵ They make “the spiritual essence actual, fulfilled, and self-conscious” by “knowing themselves” as “sublated moments” of that essence. Their subjective views of the essence are as different as the view of Meletus is from that of Socrates, or that of the jurors who voted for death from that of those who voted for acquittal; and away in domestic obscurity, not allowed to speak and vote in the light of day, there are the women who can differ as much as Antigone does from Ismene.⁶⁶

- 42./436. For self-conscious Reason, the law exists first as what is *in itself*. We do not claim to establish it, or presume to test it. It is the immediately existing will of all. It is the Category, the world, the Ego of the community. It is not an alien power, but *my* will. I do not *believe* in it (as the Unhappy Consciousness believes in God’s Will).

All of the “sublated moments” (whether legally present or legally excluded from Socrates’ trial) are *Athena’s* children. We ought not to name this religious *Gestalt* of their spiritual being yet; but it is the best way to express their consciousness of their “spiritual essence.” Athena (and her father Zeus) is the source of their law. The Athenians could name individuals (Solon and Cleisthenes seem to have been the most important) who had designed and proposed their fundamental laws. But it is Aeschylus who expresses for us how they regarded the instituted modes of procedure that made this human process of designing and reforming the Laws possible. Athena herself decides between Apollo and the Furies when Orestes comes before the Areopagus for judgment. The verdict of the court is Athena’s own wisdom. This is what it means to say that it is the “absolute pure will of all.”

The “will of all” is Rousseau’s term for the “sum” of individual wills, where each counts equally as one, and we are not allowed to inquire about the motivation of the individual votes. So Rousseau’s “will of all” is bound to involve a division, and it is hardly likely to be “pure” (i.e. determined by universal rational motives alone). Hegel wants to draw attention to the fact that the citizens of an effective *polis* had an attitude towards the maintenance of their “Constitution” which was both “pure” and unanimous. Thus, the initial verdict of “guilty,” in Socrates’ case, was reportedly reached by a majority of less than sixty in a jury of five hundred.⁶⁷ But the verdict became the “General Will” in virtue of the “pure will of all” that the verdict should be arrived at by majority vote.

When the “will of all” is “pure”—i.e. when the motive of all the voters is the general good—then Rousseau calls it the “General Will.” But Hegel’s “pure will of all” is clearly something different. This expression refers to the logically prior will of *every* voter to accept and maintain the result of the vote (even if he himself is in the minority who voted for acquittal). This “pure” motive can sometimes affect an actual vote. We are told that, in Socrates’ case, the final vote for the death penalty was larger than the vote for the “guilty” verdict. The only plausible explanation for this is that some who voted for acquittal felt that Socrates’ response to the verdict showed that he did not accept it, as he constitutionally ought to. He was not part of the “pure will of all”; and since it was “absolute,” or given by Athena herself, he was thereby proved to be guilty of “impiety” as charged.

The jurors who changed their minds could reasonably regard Socrates as guilty of “contempt of court” (as we would say) because he suggested that the appropriate penalty for his “offence” was to be fêted and maintained at public expense like an Olympic victor; after saying that, he offered to pay the small amount that he had of his own (plus a fairly large sum that his friends were willing to raise for him). But his contempt for the charge and the verdict was quite plain; and since it was Athena’s verdict, it was the “absolute” will of God. In spite of his eloquent defence of his acceptance of the death penalty in the *Crito*, we have to say that Plato’s Socrates was a proto-Kantian (or better a proto-Hegelian) “tester of the Laws,” because he used his God-given opportunity to propose a compromise, to tell the jury that their verdict was mistaken and ought to be rescinded.

Socrates presumed still to speak for the Goddess after her decision was given;

and he went on to *prophecy* the vengeance of Law-Testing Reason after the verdict for the death-penalty was given. At this point, he stands not with the Machiavellian *Gestalt* of the individual rational agent who survives the downfall of the Ethical Substance, but rather with *us*, who are “recollectively observing” the disaster after it has occurred.⁶⁸

At present, however, the prophetic right of Socrates is not our concern; what we have to comprehend is Athena’s right. She is the “universal Ego of the category” here, because it is respect for her that every juror expresses in his will to uphold the verdict, and his expectation that Socrates will accept it humbly (and not carry on with his “philosophizing” in Athena’s very court when he has just learned that it *is* in fact impiety against her). The world of Athena is just the actuality of this sense of awe. Athena is not the presence of a universal Intelligence on a mountainside to the prophet who will be His lawgiver to the people He has chosen; nor yet is she the Stoic universal presence that Lessing’s Nathan has taught his daughter to reverence, so that she can say confidently: “Wherever Moses stood, it was before God.”⁶⁹

Athena goes with the loyal Athenian everywhere, but only as the knowledge that he must return to the land where he was born. The Goddess is nowhere *beyond*; her existence is not a matter of “faith” (either religious or rational).⁷⁰ She is present in the City (rather than in her temple-image, for instance, which is an “abstract” object that simply *points* to her “real presence”). Hence an Athenian cannot have the sort of strictly personal encounter with her that the penitent can have with Christ as she kneels before the Crucifix. The consciousness of Athena starts with the community of Athens and returns to that. The singular consciousness, with the self-assertive and self-preservative urge that pertains naturally to every living organism, has been completely sublated. Socrates, in the *Crito*, produces the ideal (logical or philosophical) expression of this, when he grants the claim of “the Laws” that they are his real parents. He regards his education as his *spiritual* conception, gestation and birth as self-consciousness; and he distinguishes between that and his natural birth as a living organism. Plato turns this rational—and hence implicitly critical—consciousness back into the mythical form that is appropriate and proper for the immediate Ethical Substance in the “noble lie” of the *Republic*.⁷¹

(h) *The Transition to “Spirit”*

The “presence” of Athena to the good Athenian is the paradigm case of True Spirit. It would not be technically correct to call Athena the “Absolute Spirit” because the Absolute Spirit of the naïve Ethical Substance is the presence of *Zeus*—and implicitly of the other Olympians—to the virtuous *Greek*. But Athena, as personifying what the good Athenian knows that she must live and die for, is the “Truth.” So Athena’s “presence,” the sense that *my* true *identity* is that I am an *Athenian*, is the best case by which to test and interpret all of the statements about Hegel’s “spirit” being a “more-than-individual consciousness” (Lauer) or a “supra-personal consciousness” (Taylor);⁷² and to see what answer should be given

to those who object that “a superhuman spirit” is “intrusive” into the “biography of human spirit” (Loewenberg).⁷³

Athena is a good case because (for everyone except Thomas Taylor the Platonist) she survived only as an *aesthetic* “presence” in Hegel’s time. Yet she is True Spirit. This tells us something vital. True Spirit is not an independent object in the same sense that the Other against which the natural Self-Consciousness pits itself in the life and death struggle is “objective.” Athena is now as “dead” as Yorick. Her spiritual existence is exactly *like* Yorick’s. But what is the difference between her survival as an aesthetic spirit, and her *living* existence? The answer is simple. Those who knew her when she was “alive,” experienced her in a different way than we do, just as Hamlet had previously experienced Yorick in a different way than we do. But also they experienced her in a different way than that in which Hamlet experienced Yorick (or they experienced one another). They knew her as their “substance,” the *content* of their formal rational capacity, and the living spirit that gave each of them their individual identity.

Aesthetically, of course, one aspect of their experience was the lump of stone that was so offensive to the God of Moses. But *we* can experience that still; and the fact that (unlike Moses, the early Christians or Cromwell’s soldiers) we do not have *any* “religious” experience of “the idol”—not even a *negative* one—helps us to see that the physical object was only the external focus point through which the sense that a mass of subjective experiences (cognitive and volitional) were shared in common, could be expressed. The spiritual “identity” took different shapes in different individuals and in different situations. It was different for Solon the lawgiver, and for Socrates the lawtester; but Socrates went on campaign, and fought bravely; and we need not doubt that Solon did, or would have done, the same.⁷⁴ The feeling of this identity does not make one a hero; it only makes one as brave as one is capable of being. That follows definitionally from the claim that the identity is “truly” felt. The wife with small children who sent her husband out to fight as well provisioned as she could make him, and with the best psychological support she could manage to give, expressed the same identity; and when the dead were taken up for burial it was the “identity with Athena” that comforted the widow and enabled her neighbors and friends to support her.

This sense of “identity with God” as my *true* selfhood is quite easy to illustrate and appreciate in the Greek experience, because their religion was so political. Is it correct to call that with which I feel identical “supra-personal”? I believe it is, because what makes it rational for the soldier to go out to die is the consciousness that this “ethical substance” is what his personality *depends on*. The person that he is, he could only create because this substance was available to him for his self-realization; and when he dies (as he must in the course of nature) it is this living community for which his personality will retain whatever significance he has managed to create in his life and death.

Is it “more-than-individual”? If this means anything other than the interpretation I have already given for “supra-personal,” then I think the rational (Hegelian) answer is “No.” To be individuated is the perfect *fulfilment* of this Substance.

A rational individual can exist only within the life-sphere of a substantial community of essentially similar individuals. Within that community "Spirit" is the identical self-structure that they all share; and the structure is not just rationally-formal but recollectively-material. A sub-linguistic sense of the identity (a sense of common "substance") may be the most important form of it (as when the widow is comforted after the battle). But in terms of discursive conceptual cognition, the minimum shape of it occurs when two users of a common language are united in the awareness of having "truly" communicated. This oneness of a selfhood that is necessarily reciprocally "other" to itself is just what rational individuality (the *Sache selbst*) is; and Spirit (whether finite or absolute) has no other experienceable being than this "oneness." Spirit *is* individuality; and one of its poles must always be a living mortal flesh and blood individual. Without that it would cease to be an "objective experience" altogether. Abraham's God is an object of our experience either because some living human was Abraham, or because some other human (or group of humans) invented "Abraham" and his experiences (just as Shakespeare invented both Hamlet and Yorick); and Abraham, or his inventor(s), belonged to a community of True Spirit.

We can, of course, ascribe self-consciousness to "spirits" of all kinds. This is what the Athenians themselves did with Athena; and they imagined plenty of experiences for her. But Athena is as dead as her worshippers (and as alive as her poets—so far as our cultural tradition has preserved them for us). All who live in the world of Hegel's Reason are agreed that there are no truly immortal self-conscious spirits like Athena. But that is not a matter of logic.⁷⁵ On the other hand, to suppose that there is a singular eternal Spirit (like Abraham's "God" taken as the absolutely independent Self with whom Abraham—or his inventors—assumed that he was communicating) is to suppose what Hegel's whole logic of "self-conscious Spirit" has already shown to be *impossible*. The impossibility is a conceptual one: in other words, when we speak about *this* Absolute Spirit we do not (and we cannot) know what we are talking about; and we cannot give any determinable meaning to what we say.

What it means to affirm the existence of Hegel's "Spirit" is exactly what the affirmation that they were "Athena's children" meant to the Athenians. It means that certain experiences of a deeper or higher identity that every individual has, or can have, reveal the true meaning of what it is to be rational (or human). This is affirmed even though (and indeed, partly because) these experiences appear to be in stark conflict with all of our ordinary discourse and assumptions about individual life as a struggle against the mortality to which we all fall victim. To say that the substantiality of Reason is "ethical" or that the "element" of rational existence is "Spirit," is to say that if we want to comprehend what distinguishes us, as human, from the rest of animal life, we must begin from the experiences in which we know that we are "members one of another." We must begin from the fact that Yorick and Hamlet are alive "for us"—even though they never lived for themselves in the ordinary sense at all—and not from the fact that we do not want to die, and that nothing will be "for us" in the way that it is now once we are dead.

The Hegelian doctrine is that these experiences of communal identity and spiritual life are where the rational comprehension of human individuality must start. We must begin with Reason as the objective *Sache selbst* (in both senses of “objective”). Reason is in the public world as a set of institutions that are on the one hand publicly identifiable, and on the other hand valid for all who can identify them. In True Spirit, the rational individual identifies her own rational humanity directly with this objective complex.

If we identify this reading of Hegel as what Loewenberg calls “the humanistic interpretation,” then the probability is that we shall ourselves be guilty of failing to invert the common-sense view of what it means to be human as we should; and it is quite certain that others will misunderstand us, and that we shall be partly to blame for that. To be a “human spirit” involves being a human animal. But Spirit is not *founded* upon Nature; the animal existence is only a moment in the *self*-founding of Spirit. The crucial distinction is that the humanity of the spirit is founded in, and begins from, the clear consciousness of being identically (or “substantially”) an ingredient in the great community of the living and the dead who make up the total fabric of Reason.

The ordinary consciousness of being human is founded in our animal life, with all of the overbearing needs that must be satisfied if human spiritual existence is to be possible at all. We ought not to permit any reduction of the rhetoric of “Spirit” to a rhetoric of “humanism” because humanity has these two necessary sides, and it is the “human animal” side that is *naturally* fundamental. For the “human animal” to go to the death in a struggle is (functionally) irrational; but that is not necessarily the case for a “human spirit.” We have to insist on the *spiritual* language in order to make clear that “rational individuality” is objective in quite another sense than that in which “natural individuality” is objective.

We are spirits in a different way from that in which we are animals; and it is as spirits that we are *essentially* rational. So in order to comprehend our rationality we have to turn the whole structure of our natural experience upside down. But we do not have to go outside our experience, except as a transitional step that we must make in order to perform the inversion (like the “construction” made in proving a theorem in geometry). I have chosen to take my stand on the case of Athena here at the very portal of True Spirit because we can all see that her “more-than-individual” personality is a “necessary construction” of Athenian “ethical life” and nothing more.

But I must finally come to grips with the only criticism of Hegel’s concept of Spirit that appeals to the *experience* of something “more-than-individual.” Fackenheim’s claim about Hegel’s True Spirit is that he is not entitled to say what he does about it because:

According to it, Spirit can be and is complete or infinite, and this assertion is thus far unjustified and indeed unintelligible. For it must thus far on the contrary seem that Spirit can *be* a bond between substance and self, if at all, only if it is eternally *fragmentary*.⁷⁶

Hegel, of course, is not making categorical assertions about what True Spirit is, but only about how it is experienced by those who are conscious of themselves “in it.” He fully agrees that the experience of “True Spirit” turns out to be “fragmentary.” Like Faust, the Greek Spirit, as an immediate identity, was wrecked upon the alien “necessity” of the life-world that it excluded. But even as a *particular* Spirit it was necessarily experienced as a “whole.” It had to be so experienced, because it is the true *identity* of the rational self that is conscious of “substantial being” in it.

The obvious objection—the one that is virtually explicit in Fackenheim’s failure to understand how Hegel can say what he says at all—is that all religious experience is “fragmentary” because it is the experience of a Spirit that “passes our comprehension.” Hegel himself took this awareness of Spirit as *sublime* to be typically Jewish;⁷⁷ and from the first he was looking for a way of sublating this sublimity of God.

The Greeks seem to be almost unique in experiencing the “bad infinity” of the Absolute only as an *alien* necessity or “Fate.” But that is why their “Spirit” is *true*. When we look for the phenomenal origin of this necessary “fragmentariness” (or finitude) of Spirit we find it—most obviously—in the bad infinity of non-human nature. Hegel will show (and in part he has already shown) that “the moral law within” brings us back to True Spirit; but apart from the abstract righteousness which Hegel’s argument bids us set aside in favor of Athena’s “wisdom,” the infinity of the Absolute is the “starry heavens” and the abysses of natural time. These fill the mind of the Psalmist.

According to Hegel’s theory of experience we must adopt a Hellenic-Christian view of that endless greatness. About the “starry heavens” Pascal says: “By space, the Universe comprehends and engulfs me like a point. But by thought I comprehend it.”⁷⁸

This is Hegel’s view exactly. He himself says of the infinite “life force” that fills the abysses of time, that it is “indifferent to what kind of mills it drives” (par. 285). That an exact contemporary of Wordsworth and Hölderlin (and a close personal friend of the latter) should see and say this, fills *me* with intellectual wonder. For it seems to be exactly what we ought to say about the “creative evolution” that gave the dinosaurs such a long run, before throwing up the mammal that is both Pascal’s “thinking reed” and the author of Auschwitz, the Dresden firestorm, and Nagasaki.

Whether we look outside or inside ourselves, the bad infinite, or the “more-than-individual,” is no suitable object of religious reverence. We must maintain Hegel’s “spiritual” terminology because his language clarifies the religious language of tradition in a rational way. Those who use it become functionally liberated from the bad infinite or Sublime; for even as “believers” they are bound to agree with Thomas Aquinas that what they are talking about is not humanly comprehensible in its “sublime” aspect; and they will be morally rational in the sense that they will not try to impose their religious faith upon others by the use of force (which would contradict its *spiritual* essence). There is no need to quarrel with the critically and morally “faithful.” The real enemy of the Hegelian theory is the purely “philosophical” interpreter like Taylor who ascribes to Hegel a theory which he says himself that no rational person of our time could hold.⁷⁹

I do not know quite what to say about Taylor's thesis because I cannot discover what his "self-positing Spirit" is. I suspect that he is ascribing to Hegel something that no clearheaded person could have held at any time because it is logically inconsistent. But it is also possible that what he calls "self-positing Spirit" is only the upside-down (or "mystified") view that enlightened common sense is bound to have of the rational concept of "substantial subjectivity" which Hegel expounds in the *Phenomenology*. So let us review that briefly in an anticipatory way.⁸⁰

Spirit is the self-consciousness of a community; and rational individuality has now been shown to be the self-consciousness of a community. So the *social* character of Spirit does not imply that it is a "more-than-individual" self-consciousness. We have discovered that in order to be rational individuals we must embody the way of life of a free community as our "Substance." In "True Spirit" the identification of Individual with Universal is simple and direct. There is a deep ambiguity in it, created by the opposed foundations of our natural and our rational individuality; but every rational individual identifies simply with the whole substance. Solon is the universally recognized "wisdom" of the community.

When the harmony of Nature and Reason is ruptured, Spirit goes into "self-estrangement." Now it has a *ruptured* self-consciousness like that which is shared between Lord and Serf. We were able to express Lordship and Bondage as a unity, but to express Self-Estranged Spirit is more difficult, because it has contradictory sides that must be expressed separately. When this Spirit comes to perfect self-possession, however, it is completely expressed by the rationally individuated self-consciousness of Rameau's Nephew. The crucial point is that this shattered community which expresses itself first as verbal contradiction, and then as universal utility (the material contradiction of the "end" that identifies itself only as a "means"), and finally as Rational Terror, is already the universal community of Reason. We can successfully express each of its shattered moments as an individuated shape of Self-Consciousness.

Finally Rational Morality constructs itself out of the shattered fragments of this self-alienated substance through a wrestling match with its projected absolute self-knowledge (the God of Reason postulated as comprehending the world of finite experience); and with Conscience we reach the solid earth of self-conscious common sense at last.

But what does "self-consciousness" mean at that mature stage? How can one rational individual claim to be the "self" of all these highly complex historical worlds? Anyone's knowledge of the world must be "fragmentary." The solution is that anyone who knows enough about the Substance to bring its "Spirit" to life, knows enough to comprehend its structure from within. Solon did not know everything about Athenian life. No doubt he had many discussions, and some heated arguments in preparing his constitutional reform. I shall argue soon that Hegel does not properly know what Sophocles expressed in the *Antigone*. In that aspect spiritual knowledge is an endless self-critical debate. It is what Oakeshott (followed by Rorty) called "the conversation of mankind."⁸¹ The effective existence of that conversation itself implies that the relevant "whole" has been comprehended. It

makes sense for me to criticize Hegel's view of Antigone, because he was right in recognizing the self-image of Athena's shattered wisdom in Antigone's confrontation with Creon. He saw the concrete social logic of the *polis* in the (completely imaginary) facts. What was required for that was only "lingering with the Thing Itself." In the aesthetic realm of recollection, the "Spirit" is only what Dante called "il lungo studio e il grand' amore." Years of devotion can give only "fragmentary" insight; but the fragment contains everything essential.

It would be "impious" for anyone to claim to speak with Athena's voice. Yet Aeschylus brought her on stage, and let her speak for herself. Moses came from the mountain and spoke God's words; and a long line of prophets followed his example. Hegel called Napoleon "this world-soul," and no one thinks he was mistaken. What saved Aeschylus from prosecution, or the prophets from being stoned, is the same Spirit that made Napoleon a "world-soul": the Spirit that enabled their audience to recognize that they were expressing the *substance* of real life. There is no independent higher Self behind or above these speakers (whatever they may all believe, and *need* to believe). There is only the spirit of Reason sustaining them, "proceeding between" them and their audience, and returning to them in confirmation of its substantial being as "what truly is." It sustains them (they are "*in it*") because it arises for them out of the cultural heritage that each of them shares with his fellows. What Hegel saw was that these uses of language (like Napoleon's faith in himself) expressed the real nature of human Reason (and Unreason) and of human social solidarity (so far as that solidarity is truly human—i.e. rational).

So Hegel does not deserve to be greeted—like the last of the Jewish prophets—by the incredulous cries of Meredy and Hardith, "Is not this the civil servant's son, from Stuttgart, etc."⁸² All that Hegel, the observer, does is to talk to us *about* the ways in which our poets and prophets have spoken, and to show us several necessary truths that we are not usually conscious of. First, he proves that the way they spoke was necessary for the advent of morally autonomous Reason; and then he makes us see how these modes of speech form a pattern that forces us to admit that *all* rational speech (not just that of the poets and prophets) is the utterance of a different "self" than the one who is fighting a losing battle to stay alive encased in a human skin. We all know this perfectly well. But never, until Hegel wrote, did we know how to put our rational and our natural knowledge together without speaking in ways that are not humanly interpretable and testable. A critic who accuses Hegel of speaking not as the poets and prophets speak, but in some highly peculiar *philosophically* prophetic way of his own, is committing the ultimate rational injustice of obscuring his supreme achievement. Taylor's theory of a "self-positing Spirit" that is somehow "transcendent" is itself "the sin against Hegel's Spirit."

43./437. The distinctions within the law are not accidental. They are *masses* articulated by the communal life as the immortal Gods. If I presume to ask "Who made them?" I have gone outside them. They *are*.

The last paragraph of the chapter presents only one serious problem for the interpreter. Having established the “completely transparent” unity of the “Ethical Substance” (for which the best gloss I can find is the conversation of Socrates with “the Laws” in the *Crito*) Hegel now speaks once more of the “*distinctions in the essence*” that are not “accidental determinacies.” Single living citizens such as Socrates are only accidental determinacies in the essence. The “distinctions” that Hegel means are “the masses of its articulation into members (*ihrer Gliederung*)” which are “permeated by its life.” These masses do not introduce any “inequality” into the “unity of the essence with Self-Consciousness.” They are “unsundered spirits which are clear to themselves, immaculate heavenly shapes that maintain in their distinctions the inviolate innocence and concord of their essence.” There cannot be any question that these “immaculate heavenly shapes” are the twelve Olympians; what we have to understand is the relation between “the mortals” and “the Immortals.”

The “unity of essence with self-consciousness,” for which I have been using Athens and Athena as a model, is actually the unity of the Greek cities in their conscious cultural distinction from the “barbarians” who do not recognize Father Zeus and join in celebrating his Games at Olympia. The description of the relations of the cities as “inviolable innocence and concord” is certainly ironic. Hegel’s *Einmüthigkeit* translates the Greek *homonoia*. But as soon as we turn to the myths and literary sources—and especially to Homer—we can see that even the “immaculate heavenly shapes” do not live “innocently” or “in concord.” That is only how they appear in the fixity of sculpture. At this moment, when the Ethical Substance is making its first appearance for us, the sculptural perspective is the right one. The “immaculate heavenly shape” corresponds to the “Concept at rest”; and this is what is pictured in the deliberately idealized sketch of the harmony of life inside one of the “masses” with which Hegel’s detailed account of True Spirit will begin.

The claim that the “Ethical Substance” is the whole *world* of the Greek cities raises the difficulty that it was not Hellas but Athens, Sparta, Thebes etc. with which the singular consciousness identified. Much of the hostility and warfare of the cities (including enmities that were traditional and deeprooted) reflects this fact. The conflicts of the immortal Gods were (as Hegel will later insist) ironic and not serious. The Gods could not literally *kill* one another; but it is not true that they could not *harm* one another. Hephaestus was lamed by the might of Zeus and so on. When they are interpreted philosophically the myths can only express what is “primordially” true; but such primordial truths as the lameness of Hephaestus and the jealousy of Hera have their historic analogues in the permanent enslavement of Messenia by the Spartans, and the absolutely inveterate hostility between Sparta and Argos.

Still, the cities did unite in harmony (almost) to repel the Great King of Persia twice; and one moral of the story of Eteocles and Polyneices is precisely that the *polis* was *not* really self-sufficient and independent.⁸³ Polyneices was able to raise an army in which six of the seven champions came from elsewhere; and when Creon polluted the altars of the other cities by forbidding the burial of the defeated dead,

it was those other cities who were “the Fury” that forced him to reverse his edict. So once the motion of the Concept begins, we shall have to admit that we are not just observing one of the masses, but “one of the masses moving within the Ethical Substance”; and it is precisely the fact that the human communities were not “unsundered,” “clear to themselves,” “immaculate,” “innocent,” or (above all) “of one mind” that brings the whole world that centred upon Delphi and Olympus to grief. Still, it is this unanimous substance of the national (linguistic and cultural) community that the Spirit aims to recover through the sublation of the *estranged* (supra-national) regime of servitude and alienation.

The fact that within the immediate Substance, singular consciousness identifies itself as Athenian, Spartan, Theban and so on, is just what the disappearance of critical Reason serves to explain. True Spirit is the invisibility of the *Suche selbst*, in the “disappearance of disappearance.” The Gods whom the loyal Athenian worshipped were the Gods *of the Greeks*. All of the cities had temples of Athena, and (as Plato insisted) the citizen-soldier was usually fighting his “brothers” when he went to war. This fact was visible in religion, but not in the daylight rational discourse of politics. Antigone, coming from the dark privacy of the family home, and caring only for the family cult that was maintained there, really does see what is invisible to Creon until it is too late—the paramount authority of Zeus. But the lines that Hegel quotes express perfectly both the immediate “absoluteness” of the law for both of them, and the lack of any context in which a critical consciousness can operate. It is the lack of that individually comprehensive context that makes the encounter between Creon and Antigone tragic.

The example of the “deposit” (which Hegel offers in his final contrast between critical Reason and True Spirit) comes from Kant, of course, but also from the first book of the *Republic*.⁸⁴ Again, we should note that the right of property is taken to be fundamental. Just as I can give away what I wish to, so (in the “state of nature”) I can take whatever I wish, and only the “law of the stronger” can compel me to give it up.⁸⁵ This is the primitive rationality of natural self-consciousness, and there is nothing illogical in it. It only becomes illogical if I belong to a community that has an “absolute” right, and that community recognizes me as the rightful owner of some goods, and my neighbor as the owner of others. The “love of my neighbor” may lead me to withhold his sword from him, if he comes to me raving. But then I shall try to call other neighbors to witness that I am not trying to steal the sword from him. That is how the naïve “ethical” consciousness works. There is no need to “test” the maxim that I should restore what is left with me for safe-keeping. Thus Hegel closes the chapter by giving True Spirit’s answer to the question “whether there should be property of not?” (while reinforcing the point that “pure Reason” cannot decide this).

The *truth* of Law-Testing Reason is that it begins by taking itself to be the “empty” Category that receives from “experience” all the content for which it “legislates *a priori*”; but it ends by recognizing that all the categorical structure is and must be already present in the ethical world that it was initially presuming to “test.” From “testing” it is reduced to *observing*, so nothing goes forward from

“Reason” except our own “Observing Reason.” The chapter on Reason closes into a perfect circle. It begins and ends in “Observation”; and the Observing Reason that goes forward is *comprehensive*. It does not just observe Nature as an external or found “objectivity”; it observes the Ethical Substance—the total unity or identity of Nature and Spirit as a harmony that has *made itself*. It is the Ethical Substance, seen clearly as the source of self-conscious individual Reason, that becomes the subject of the new experience. In this chapter (of our commentary) the “thinghood” of Reason has emerged as its (simple) “self.” True Spirit is the self-realizing consciousness that takes its own self-making to be the direct expression of nature. What True Spirit lacks is the awareness that Spirit must make itself in the radical sense of expressing a freedom that is *opposed* to Nature. True Spirit does not know that it must “create itself from nothing.”

This “nothing” is the speculative observing consciousness that we are carrying forward from Hegel’s fifth chapter.⁸⁶ After its disruptive presence in True Spirit has become apparent, we shall watch it go through the whole of its evolution (as already elaborated in chapters IV and V). What has happened in Hegel’s fifth chapter has been the transformation of “Reason” from a passive observer into an active self-positing “force”; this is apparent in the “inner circle” completed between “Self-Observation” (Logic and Psychology) and “Law-Giving Reason.” But the chapter as a whole makes its circle upon *our* own position of Observation; that is why the movement of Law-Giving and Law-Testing Reason has to be essentially a self-annihilation.

The first position of “Law-Giving Reason” is the resolution of the dialectical problem of the *Sache selbst*. But the experience of “Law-Giving Reason” is that all that individual Reason can produce, when it does successfully identify with and incarnate the *Sache selbst*, is “commandments” which the individual rational self cannot fulfil. The comprehensive inversion of this second position is the adoption of the critical posture that admits that all the ethical content of morality must come from “experience,” and claims to be the formal “category” by which all ethical intuitions must be “determined.”

The “experience” of that “moral category” is then to discover that it determines nothing; it is identical with the principle of “respect.” The comprehensive inversion of the resulting “infinite judgment” (the Category that should determine everything and can determine nothing) is “disappearance” back into a purely theoretical observation. Practical Reason must accept imperatives that come from a “heteronomous” source; looking back to chapter IV, we can say that Reason must initially accept the imperatives of Life. This natural life can be described indifferently as “subrational” or “suprarational” depending on whether we look at it in a “finite” or an “infinite” context. The naïve *ethical* consciousness must of course take it in its “infinite” context. But although the “unwritten and unshaking *Recht* of the Gods” is “suprarational” in the sense that it transcends the critical Reason of individuals, it is not “supernatural”; it belongs to “experience.” Reason, which came to a tragic-comic impasse when it looked for itself in the skull, has now found the “thinghood” in which it recognizes itself—and the occasion for its real tragedy.

On the side of Consciousness, all pretence of a “difference” between itself and its object can now be dropped. What I observe and recognize as the foundation of all judgment and testing is my own rational “nature”; my object is the Substance of which I am an accident. When “difference” is reborn (as it immediately will be) it is because the Object itself (the *Sache selbst* as a communal self-consciousness) cannot maintain itself as a living object—a “mass” within the “essence”—without an essential differentiation. The “mass” divides at once into two identical “masses,” the natural community and the self-conscious one—two masses that are quite “different” in spite of their real identity. The *polis* is both a natural mass of families, and a constitutional mass (*politeia*), or *Sache selbst* (*res publica*). Out of this *antithesis* Law-Testing Reason will eventually be reborn. But at the moment it has come to self-expressive identity with the *Sache selbst* that it merely observes.⁸⁷

Notes

1. Shakespeare, *As You Like It*, IV, 1, 96–98.

2. Everyone who has read Kojève (or even a disciple of his like Barry Cooper [1984]) will know that I am here agreeing with, and confirming, one of his principal theses. I am also disagreeing with one of his minor ones, because he thinks that it is only *intellectual* action that “changes nothing and goes against nothing” (1946, 90). Kojève does not see that (because Hegel is not a materialist) moving matter about in ways useful to the community does not change anything in “Reason.” Hegel’s contrast is between utilitarian action and the action of Antigone (or between the productive labor of the proletariat, and their political “action”).

In connection with the “Napoleonic” thesis, however, we must note that Kojève’s Hero of Reason (like his Sage) can never transcend the world of “real individuals” and become the “world-soul” that Hegel took him for. Hegel does not think that the “man of destiny” (to use a familiar name for him that is neutral) could ever have arisen just from the *Hobbesian* struggle in which “rational utility” is born. His genesis was among the loyal servants of the Gods who sacrificed themselves in the struggle and never thought (like Hobbesian rational individuals) of submission. The universal “Spirit” that is *appearing* in Hegel’s book has no intelligible place in Kojève’s world at all. It began to appear in a man who died voluntarily without fighting to show that we all belong to a “Kingdom *not of* this World.” Hegel wants to show how that Kingdom comes to be “*in* this world” by comprehending its real relation *to* this world. Kojève admits the spiritual possibility of the “sage” who *has* this knowledge; but not of the philosopher who *expresses* the universal consciousness of the whole community as *its* “self-consciousness.” (In defence of Kojève we must admit that Hegel has, so far, remained a “Sage”; but there are still some of us who think—with Plato and Hegel, and against Hobbes and Kojève—that “philosophy” can belong to “the people.”)

3. It is the *Monadology* of Leibniz that expresses Reason’s consciousness of itself at this stage. The Real Individuals are Monads expressing what they are “in themselves” both for themselves and for everyone else. They are not “windowless,” but all live and move freely in the universal daylight of Reason. (Conceptually, Frau Bauer’s sphere is the smallest, and that of Leibniz the largest; but socially even the rational world of Leibniz is narrowly hemmed in by subrational tradition; it is Napoleon who is the shape of the *real* Category.)

4. For a somewhat more “progressive” view (and for the possible influence of T. G. von Hippel) see D. Macgregor (1992) chapter 5.

5. Once we take seriously the claim that Reason now engulfs all the previous shapes—"that its account with them is closed"—it is clear that we must not look for the "spiritual kingdom of animals" in a restricted compass (such as the University, the "learned world," or the world of art). The "spiritual animal kingdom" is as *universal* as its "natural" counterpart. The "learned world" is a useful *model* (partly because language is the only fully "transparent" mode for self-expression and the expression of "truth"—the *Sache selbst*). So we can forgive those—for instance R. C. Solomon (1983, 517; 1993, 206)—who use this *example*. I should like to forgive Royce, who begins from a broader concept (1919, 196–198); but he originated the "art for art's sake" heresy which is unforgivable. Kojève (1946, 90) flatly says "Cette individualité—c'est l'Intellectuel." For the right interpretation of the text he cites in support see note 3 and the Commentary (here and below—pars. 400–404).

Findlay (1958, 113) and Lauer (1976, 171) are fairly innocent of offence. But Bréhier (1926, II, 742ff) and Loewenberg (1965, 170–171) bring in the artists (whose *Werk* belongs to "Spirit" and will not fit in here). Hyppolite (1946, 287; 1974, 297) explicitly agrees with Bréhier; as far as I can see Flay (1984, 336 n. 17) is wrong in saying that Hyppolite criticizes Royce. They are all following Royce. G. Shapiro (1978/1979) gives a good overview of the "intellectual world" readings. He avoids the excess of including "artists"; and he rightly sees that *economic competition* is not involved.

6. The *geistige Tierreich* is more accurately identified as "Civil Society" than as "the academic community." R. C. Solomon (1983, 515) is on the right track when he points to the class structure of the 1805/1806 *Philosophy of Spirit*. The academic community is properly the *self-dissolution of all spiritual specification*. Even at its worst moments, the learned world (and especially the community of philosophers) realizes the negative *Gestalt* of "Absolute Culture"—a world of failing communication, but a rationally unified community nonetheless. (W. Desmond, 1989, provides a paradigm of how far the mistaken view of the academic community can go. But of course he is only one of many.)

7. At the other end of the social spectrum (and nearer to the beginning of this rational world) Queen Elizabeth—whose position and power were actually defined by tradition—showed her consciousness of being a Real Individual when she boasted that "I thank God that I am endued with such qualities that if I were turned out of the Realm in my petticoat I were able to live in any place in Christome" (Chamberlin, *Sayings of Queen Elizabeth*, 142; but I cite it from the *Oxford Book of Quotations*).

8. For Hegel's knowledge of *The Antiquary* see N. Waszek (1984).

9. This is the clearest way of expressing what Hegel means about the "determinacy" of the "original nature" here. Flay's commonsensical comment that "The capacities and talents which form the individual's actions are such that they are not only his, but are also appropriate to and belong in the world in which he acts. His purposes, ends, and means are also shared with others in that world," (1984, 144) follows from the fact that nothing is a "talent" unless it is perceived as a tinting of Reason. Flay's point that the same "tints" occur in others, or that talents are *shared*, is important to the concept of "natural Reason" as an "animal kingdom."

10. Far from being a *name* for a unity that is "unattainable" (as W. Becker says [1971, 110]), the unity of the Category is achieved (as more than a legal fiction) in every lawabiding citizen or group. There is a *contradiction* implicit in it; between its finite and infinite aspects as "objective Spirit." So Becker is right that it is *logically* unattainable in the objective shape of a perfectly stable social system for a finite community (such as Plato's Republic). But eventually this logical difficulty will be resolved in the absolute community of *forgiveness*; and at

all times (except for moments like 1793) the unity maintains itself more stably than any of Becker's games with "names" (or abstract concepts) can ever do. (The brief overview of Aristotle and Kant in Flay [1984, 171–175] will be found very helpful.)

11. It is worthy of note that Machiavelli himself does not need to make hypocritical distinctions between the policy of the Prince and the national *virtù* that is his goal.

12. These examples are in the spirit of Hyppolite's interpretation (1946, I, 293; 1974, 303). But it should be noted that they are *limit* cases. In the main, the answer is that the routine of life is set by the responsibilities the individual has chosen to take on. The presupposition of "Real Individuality" is "the career open to the talents"; and Hegel is considering, as always, the typical, fully mature, *Gestalt*. Thus the proper solution of the problem is that given in the next paragraph.

13. Lasson mistakenly divided this paragraph in two in his editing; and the division survived in Hoffmeister's edition (and hence in Miller's translation and his numbering).

14. This is why the identification of the *Sache selbst* as "commodity" or "money" is mistaken. A detailed reading based on this interpretation of the "hidden" meaning is given by W. Kaminski (1976, chapter VIII—see also 1977/1978). He understands *die Sache selbst* as "a synonym for the concept of commodity." But this is far removed from what "consciousness" takes it for (and even from what "we" can observe). André Kaan (1971) gives a more accurate account of that. With his help the ordinary reader may be able to understand the peculiar language of Howard Kainz (1976, 126–127 and notes). See also A. Hofstadter (1975).

15. To the best of my recollection it *was* Suzanne Langer who gave the example of the little girl in a class that I attended in my student days. But this is an inward consciousness, which may possibly be illusory according to the standard of "fact." Some writers (J. L. Navickas, 1976, 193 for example—with Flay's approval [1984, 336–337, n. 20]) use this seemingly romantic doctrine of self-expression as evidence of Hegel's "existential" distance from the "essentialism" of Plato. But it appears to me that the dialectic of "Individuality" and the *Sache selbst* is a picture of the Republic running itself without needing "Guardians."

16. Lauer (1976, 167–169) has a good discussion of the ambiguities of "action," *Werk*, and the *Sache selbst*. His translation of *Sache selbst* as "what really matters" is quite a good expression for what it means as it makes its first appearance. "What really matters" at this stage is "self-realization; but a realization has to be *generally* valuable. So the ambiguity soon develops. Ultimately Reason itself (as the real but universal "Category") is the *Sache selbst*.

17. See R. C. Solomon (1983).

18. The probable origin of this view is in Rudolf Haym (1857, 160; cited by Kaufmann [1965, 104] and Kainz [1976, 160]). But see especially J. N. Shklar (1976). Like Solomon, Shklar was persuaded by Kaufmann to regard Hegel's "logical science" as a mere *Schein*. But she remains much closer to the scientific spirit of Hegel's interpretation of human affairs than Solomon in spite of that. The inversion of perspective in her book arises from the elementary failure to appreciate the logical function of the "science of experience" within the "system of science."

19. J. Loewenberg (1965), 371. The view that Hegel's "method" and his "system" are at odds goes back to Marx; and the claim that the concept of philosophy as "absolute knowledge" involves an absurd attempt "to close the gates of truth" was made by Croce. But both Marx and Croce remained committed to the ideals of "Science" and "system." I have therefore chosen Loewenberg as the standard-bearer for the *existential* interpretation of Hegel. In

the first place his actual contribution to the understanding of Hegel's text is more solid and significant than Kaufmann's; and in the second place his inspiration came from Royce (who belongs to my own cultural tradition) rather than from Nietzsche (who does not).

20. See D. P. Verene (1985). Verene recognizes that Hegel's work aims to be a logical as well as an imaginative whole. But I have a strong suspicion that his frank admission that his interpretation is not meant to coincide with Hegel's both cloaks and arises from a conviction that Hegel is attempting the impossible. (If that suspicion is mistaken then Verene's book does not belong in this gallery, because he is not violating the integral unity of Hegel's project and achievement simply by focussing on *one* aspect of it.)

21. The saying sticks in my memory from the Horace lectures of T. E. Wright. Compare R. J. White, *Dr. Bentley* (London, Eyre and Spottiswoode, 1965, 221).

22. This is not a position that I myself hold. I would be prepared to maintain, however, that the *Phenomenology* and the *Science of Logic* (1812–1816) are more important than anything Hegel achieved in the Berlin years of his world-historical prominence.

23. See B. Croce (1966, 178–190). Within the perspective of Real Individuality Croce's complaints that "Philosophy of Nature" and "Philosophy of History" are pseudo-sciences cannot be refuted; and the grounding of "Sanseverino's" general standpoint here is plain—cf: "it is the destiny of the exceptional man to come into the world with a task to perform, knowing however that the labors of human thought extend to infinity so that, accomplishing his task, he must resign himself to a transference of the torch into other hands" (183).

24. If we want to be formally correct we can say that it is "philosophical logic"; but nothing is *logic* until the philosophically "interested" community recognizes itself therein.

25. *Through the Looking Glass*, chapter 4 (*Complete Works*, Modern Library, n.d., 188–190).

26. No effective conversation would have the *pure* form that I have suggested. A more adequate formulation might be: *Alice*: "p." *Timeedledum*: "I take it that you mean 'q.'"
Alice: "No, not 'q,' but 'p₁.'" (Here "p₁" represents some reformulation of "p" which Alice hopes will prove more understandable.) But I have stuck to the pure form of double negation in order to represent clearly Hegel's doctrine that "positive and negative disappear together."

27. Peace has often been kept for a time (and the more violent forms of conflict are sometimes successfully avoided), by "treaties" and "agreements" to which the contracting parties attach different interpretations. Thus "vanishing" *can* persist.

28. The Horner who prospered at the time of the Dissolution was Thomas Horner, Steward to the Abbot of Glastonbury. He served on the jury that condemned the Abbot; and shortly afterwards, we find him established as the Squire of Mells. How he got the title to this Manor, we do not know. The story that he stole it from a pie containing twelve title-deeds sent to the King by the Abbot is not found before the Victorian period (see I. and P. Opie, *Dictionary of Nursery Rhymes*, Oxford, Clarendon, 1952). I have deliberately chosen a political example, where "honorable" does not seem to be the naïvely objective epithet either for "Jack" Horner or for the King and his ministers. Squire Horner can get in because his dishonesty is only imputed, not publicly recognized. So can Findlay's "business executive"—if he is concerned with the firm's "bottom line" and not just with his own salary. But Findlay's "disinterestedly frightful Nazi" (1958, 113) is a problematic case. Hegel would certainly agree that the Jerusalem court treated Eichmann as a "real Individual" in rejecting his defence; but his argument was at the level of Conscience. Himmler, who was a model bourgeois in his personal life, might perhaps satisfy the Concept.

29. J. N. Shklar is right on this point (1976, 120–121) and her references to other places where Hegel criticizes Fichte are worth examining. She also gets the primitive shape of honorable concern with the *Sache selbst* right (125–126); and she shows how by taking *Beauty* as the *Sache selbst* the concept of this section can be applied to artists. But anyone who examines her interpretation in terms of Kant's aesthetic theory will see that Hegel himself does *not* mean to produce “a serious discussion of aesthetic theory” (129). (Compare especially the first two sentences—three sentences in Miller's translation—of Hegel's summing up in par. 418.)

30. In view of his utopian projects in social philosophy we can fairly regard Fichte as a good model of “Law-Giving Reason.” He does not really belong to the level of the simple *Sache selbst*.

31. *Werke*, ed. Rilla, VIII, 27; cf. H. E. Allison (1966) 135.

32. R. B. Pippin (1993b) discusses several crucial transitions in an interesting way; but perhaps his most valuable pages (73–77) are devoted to this section.

33. Royce (1919) 199; silently adopted by Findlay (1958, 112); and restored to Royce by Loewenberg (1965, 168).

34. That refined relative is not what is called “hypocrisy” in ordinary parlance at all. See the commentary on paragraph 666. But this is the moment to quote R. C. Solomon (1983, 517) who says with amusing irony:

Consider a scholar laboring for years on a study of a philosopher who has been dead for 150 years; on the one hand, no task could be more disinterested and free from suggestion of personal gain; on the other hand, no enterprise would be more personally cautious since, for the scholar—as Hegel indelicately puts it—“the most important thing is his own vanity.” But, of course, this is merely a hypothetical example.

(par. 665 will provide the only response that either of us need.)

35. The disagreements of parliamentary parties about what the “public good” actually *is*, belong to a higher level than these problems of “individual Reason.” But the “leadership contests” of a particular party often provide good examples of the “Humbug” problem.

36. *Nicomachean Ethics*, V, 4 (1132a 20–21). This is as far as Kojève's interpretation of Hegel can take us. His “Sage” is “Law-Giving Reason”; and the *ideal* of the “universal homogeneous State” would be to have a Sage at its centre. Kojève's “State” is the Civil Society of individual Reason (i.e. of “Real Individuality”). His commitments to Marxian materialism, and to the “existential ontology” of *Sein und Zeit*, make any “identity of thought and thing” impossible, except the identity of the rational individual with her body. Hegel's “Spirit” is necessarily a “myth.” Kojève can employ it usefully only as the conceptual instrument (of a nominalist logic) for organizing communal “ideologies.”

37. There are different *levels* of observational “objectivity,” but it begins already with the transition from Sense-Certainty to Perception; and this transition may not be easy, as anyone who remembers the first “observations” she made with a microscope will know.

38. We first saw this kind of subordinate internal motion in the Law of the Heart.

39. Self-realization cannot be separated from “self-interest”; but one ceases to be a “Real Individual” if one sets one's course with the simple object of getting rich. Thus Ernst Bloch goes rather too far when he says that “the ‘Spiritual kingdom of animals’ means the capitalist society” (1952, 67). But the dialectic of self-realization and social utility does presuppose

the world of free enterprise. Bloch is certainly closer to the truth than Kojève (or anyone else) who thinks that Hegel means to set up a contrast between “intellectual” and “real” *Werke*.

40. See Wilkie Collins, *The Moonstone*, *passim*. It is important that the wisdom should be rational; hence the Bible is a rather ambiguous example. Calvin conceived the Bible as a “law-book”; and there is no doubt that much of the “reason” that went into his use of it was his own. But the community that was obliged to burn Michael Servetus was no more “rational” than the one that burned Bruno (perhaps less so, because Servetus argued only for the *Sache selbst*, whereas in Bruno’s case the *Gegensatz* between the *Sache selbst* and his own *Sache* is clearly visible). There have been many Christians of all denominations, however, who have used the wisdom of their holy Book in a perfectly rational spirit. Its divine origin only serves in such cases to conceal, excuse, or explain the inevitable inadequacies, imperfections and outright contradictions of *Gesetzgebende Vernunft*. Those who, like Sergeant Cluff, adopt a book of *human* wisdom as their guide, simply prefer to be open-eyed about this problem, and not to have faith that there is a higher wisdom in which all imperfections and conflicts are mended and reconciled. (A. Cutrofello [1995, 155–156] has grasped this transition correctly in his identification of J. Rawls as the “*liberal lawgiver*.”)

41. Letter 95 (1 May, 1807), Hoffmeister, I, 161; Butler and Seiler, 80: “I need not mention—for you will find it out for yourself all too easily—that some sections still need groundwork [*Unterarbeitung*] in many directions in order to be subdued [to the plan].”

42. For a more carefully nuanced discussion of this question see D. C. Hoy (1989). As W. H. Walsh (1969, 26) pointed out, some respected Kant-interpreters have taken Kant to be a moral intuitionist. But even if this is a mistake, there are many others (for instance, Bishop Butler and the Moral Sense school) who have held that “sound Reason knows immediately what is right and good.” Nor does Hegel want to claim simply that they are mistaken. It is important for his Science that each *Gestalt* is a perpetual partner in the ring-dance of Truth.

43. Hegel is often careless in ascribing views to thinkers. But he would never be as careless as Lauer makes out (1976, 172). Lauer’s puzzle about the “inadequacy” of Hegel’s account arises from his own overhasty assumption.

44. *G.W.* IV, 54–62; Harris and Cerf, 144–154. In “Law-Testing Reason” the Critical theory of Practical Reason does reach back and *envelop* both of the preceding phases—but within a new concept of a higher order. We can get our legislative *maxims* from our education (and from those whom we recognize to be “wiser” than we are in some relevant sense). But everyone must critically evaluate both the “content” of their situation, and the “form” of their maxims for themselves.

45. The evidence for this claim is in the last paragraph of the chapter (par. 437), and we shall discuss it when we reach that point. In view of the ambiguity of this present paragraph, “mistaken” may be too strong a word. But the criticism of the first example would be different as applied to the *City*’s masses; civically one owes the “truth” to friends and not to enemies. Also, if we take the *Cities* as the “law-giving individuals” they each gave “different” laws. It seems clear that Hegel’s *Gestalt* of “Law-Giving” is meant to be both “pre-political” and “post-political,” but not “Greek political.” The culminating moment of chapter V is at the point of closure for chapter VI. Antigone and Conscience are both of them intuitive shapes of the Categorical Imperative. (R. C. Solomon (1983, 523–525) says that Hegel’s “glib dismissal” of Kant is “scandalous”; and that this passage about “masses” is “an unforgettably obscure rendition of Kant.” He ought to have seen, rather, that it is not an account of Kant’s theory at all.)

46. It is no longer clear that this is true. A structure of international institutions is taking shape which partially replaces the “judgment of God” (in warfare); and in view of what the “judgment of God” now means, it is clear that we must rationally *want* to replace it. This imperative is already implicit in the concept of the “Absolute Religion.” What “Self-Consciousness *can* do” remains to be seen; but since the “phenomenology of the Spirit” does not end with chapter VI, there is no reason to believe that this change of historical perspective requires any *logical* revision of the “science of experience.” (The *Philosophy of Right* is quite a different matter. But the historical inadequacy of that was already obvious a hundred years before Hiroshima.)

47. In paragraph 492 Hegel speaks as if there are necessarily *three* “spiritual” masses in modern society. But we shall see that there are really *four*. See chapter 5.

48. Hegel (and his world) saw the family and the State as the identical masses that are “given” to Reason in its naïvely “ethical” substantiality. But we do not have to accept them in that naturally determined form. Hegel himself would agree that the spiritual unity of the *universal* human family is the only ultimate standard for Reason. But he would also insist that the subjective application of this “standard”—even in a “critical” sense—is completely void of any practical validity or authority in the “substantial” community. It is only the actual structure of the community which we manage to establish that can have the practical authority of Reason (because we know that our rational lives would be impossible without it). We shall see why this is inevitable in “Law-Testing Reason.”

49. When we look for the two laws of Legislative Reason in the Sphere of True Spirit we can see that the “masses” of Reason are the civil community (of our Nation) and the religious community (of humanity living and dead). “Telling the truth” is the first precept of “Justice”; and “loving your (most immediate) neighbor” is the first precept of Antigone’s “Religion.”

50. Herodotus (I, 137) reports that the Medes taught their sons three things: to ride, to shoot, and to tell the truth.

51. This “law” (“Love thy neighbor”) was discussed by Kant (*Foundations of the Metaphysics of Morals*, trans. L. W. Beck, 1959, 399).

52. In the *Protagoras* (343b) Plato ascribes the saying “Know thyself” to the Seven Wise Men in council. Hegel certainly understood that at Delphi it meant “Know thyself, that thou art a mortal, not a God.” The conceptual context of “Love thy neighbor,” on the other hand, is the dictum of John (I John, 4:8): “He that loveth not, knoweth not God, for God is love.”

53. Finite Reason is about to close upon itself as the circle that began with the Observation of individual reasoning in “logical laws.” This is how Reason makes itself into an abiding *Gestalt*.

54. When Kant’s moral theory is interpreted without reference to the “postulates” that define the Moral World-View Hegel’s own theory can be seen as a first cousin of it. See especially R. B. Pippin (1991). (N. Rotenstreich [1987, 99–100] has used this paragraph to show why there cannot be a “religion of Reason.” But that is too easy a way of dealing with the problem. He goes deeper later on [103–105].)

55. On the dialectic of Justice compare S. B. Smith (1989, 201). For Hegel’s view of property see the fragment *welchem Zwecke denn* (*Hegel-Studien* 17, 1982, 20–23; Knox, 308); and “The Spirit of Christianity” (*TW-A. I*, 333–334; Knox, 221). Judith Shklar rightly points out that in criticizing Kant Hegel has the *Metaphysik der Sitten* in mind (1976, 137, n. 114). Hegel made a thorough study of this in 1798 (Rosenkranz, 87). (In Hegel’s own theory it

becomes a communal responsibility to see that individuals have the private property holding necessary for autonomous action. See especially M. Westphal (1987). For a good account of Hegel's own theory of property, see P. G. Stillman (1980, 1980b and 1977). The view of R. Teichgraber [1977] is flawed by misunderstandings.)

56. The reference is to two passages in the *Critique of Pure Reason* (K.R. V B 84, 189–193). For a good discussion of Kant's moral doctrine see K. Herb and B. Ludwig (1993).

57. Charles Taylor has written two valuable pages on the relation of Hegel and Kant here; and also on the relation of *Sittlichkeit* to concrete *Moralität* (1975, 168–170).

58. See the references to Loewenberg and Croce in notes 19 and 23 above. (Of course, this complaint is found everywhere. I have chosen only the most trenchant formulations of it, in writers whose respect for Hegel is genuine, and who do not have the sceptical consciousness of superiority to system-making, and triumph over illusion.)

59. Many interpreters who want to convince themselves that the *Phenomenology* is not essential to the system are simply trying to close their eyes to this problem of justifying the “certainty” of Reason. It is incumbent upon those who believe that Hegel's “system” is somehow valid without the Science of Experience, to explain both *what* the Hegelian logic is, and how we come to be able to *do* it at all (if it is anything more than the “neo-Platonic fantasy” that Michael Rosen calls it). My conception of Hegel's “logic of experience” as the transcendental logic of the historical evolution of human rational community answers both questions; and I do not know any other “answers” that will not fall victim to Michael Rosen's attack.

60. The formal *Sache selbst* is represented by what we might call “Stoicism reborn” in such Utopian forms as Kant's *Perpetual Peace*, or Fichte's *Closed Action State*.

61. This summary is based on the accounts in Diogenes Laertius (I, 45–62), Plutarch, and Aristotle's *Politics*, which were the sources available to Hegel; but nothing that I say conflicts with the more reliable account in Aristotle's *Constitution of Athens* (which he did not have).

62. I am not sure where this “argument” is to be found. I take it that Hegel regards it as generally *assumed*; so I have not looked for a place where it is *explicit*.

63. About the ancient Sophists it would be more appropriate to say that the substance has its reality in them *no longer*. The use of “not yet” with reference to the present indicates a change of temporal perspective in this third phase of Hegel's fifth chapter. In “Self-Actualization” we thought of the Ethical Substance as what was *lost*. *Now* we are thinking of its coming restoration in a fully rational form. But it is only the “lost” Substance that belongs to *experience*; so we shall return at once to the standpoint of *recollection*. (Hegel's own example of the commandment that is “not actual,” establishes that Jesus is included here, even if Lessing's *Nathan* and Jacobi's emotional appeals to the Gospel are more immediately prominent in his mind.)

64. *Apology* 41e–42a.

65. In the “Religion” chapter we shall discover that before there was an Ethical Substance there was a “first substantiality in which the subject simply disappears.” This was the “divine life” of *Nature*. Recognition of “individuality” (both “equal” and “unequal”) is the distinctive characteristic of *Sittlichkeit* in the proper sense.

66. For Hegel it was the slave-population that made the great difference between the classical ethical substance and the *moralized Sittlichkeit* that is “not yet.” For us it is the women-folk as well. But the embodiment of Kant's Categorical Imperative makes an enormous difference in any case.

67. The size of the majority can be inferred from “Socrates” statement that “if thirty votes had gone the other way, I should have been acquitted” (*Apology* 36a). The total size of the jury can be inferred from this comment, together with Diogenes Laertius II, 41 (but the reliability of the tradition is uncertain).

68. The possibility of this sort of “logical” prophecy shows that Hegel’s later doctrine that philosophy is not concerned with the future needs a cautious (and dialectical) interpretation. It is both true and not true. But we must leave that problem unexamined for the present.

69. *Nathan the Wise*, Act II, scene 2 (Everyman ed., 158). There is, of course, an ambiguity here, since wherever an Athenian went Athena was with him, and this was true of Moses in a similar sense as one of the *chosen* people. But what Recha means is clearly that we all walk in the sight of the same God always. The case on which my claim about Athena is based is actually *Spartan*—see Hegel’s interpretation of the conversation of Spartias and Bulis with the Great King (Herodotus, VII, 134–136) in *Faith and Knowledge* (*G.W.* IV, 381–382; Cerf and Harris, 145–146). But Hegel could have cited Socrates’ attitude to banishment, if he had not been concerned at that point with *Jacobi*’s misinterpretation of Greek *Sittlichkeit*.

70. Hegel’s definition of “faith” here seems to refer to the Unhappy Consciousness (and it is certainly meant to *include* the Unhappy Consciousness): “for faith intuitively [the essence] too, of course, but it is an alien essence . . . faith begins from the singular consciousness, it is the movement of that consciousness, always going towards this unity, *without reaching the presence* of its essence.” As *distinct* from the Unhappy Consciousness, Faith proper seems to be the perfect *species* of this genus (the one that *does* imaginatively come into the “presence of its essence”).

71. *Crito* 50e; *Republic* III, 414b–e. The designation “noble lie” is the verdict of “Law-Testing Reason” in this instance. What follows about the four metals and the guardianship of the City (415a–c) is, of course, peculiar to Plato’s ideal City. But the beginning of his “Phoenician tale” simply spells out the argument of the *Crito* as the real meaning of the myth of Cadmus. The Athenians did not need the colorful myth of the “Sown men.” They thought that they were the *original* children of their soil.

Terry Pinkard (1991) has made an interesting attempt to insert the whole dialectic of chapter IV A between chapters V and VI. Some insights result, but the effort is unpersuasive because *rational* individuals (of a proto-Kantian kind) simply could not get into a “life and death struggle” about their “absolute freedom.” (I agree with Pinkard’s contention that Hegel wanted to reject the metaphysical basis of recognition, and substitute a non-metaphysical theory of social ethics; but I do not find that his essay shows how that change is achieved.)

72. Q. Lauer (1976, 177); C. Taylor (1975, 167) (and a host of other places). For a good critique of Taylor’s view, see T. Pinkard (1994, 8–17).

73. J. Loewenberg (1965, 298). Loewenberg makes this objection only later when we come to chapter VII. But Athena is there too. If she is not “intrusive” in chapter VI, then it is plausible to suppose that her more strictly “absolute” companions are not “intrusive” in chapter VII either (or to put it another way, the “non-intrusive” interpretation that we find for her should logically be the one adopted for them too. This is clearly Loewenberg’s own view, but the required non-intrusive interpretation eludes him [see 1965, 301–302].)

74. There is no direct testimony that Solon fought in a campaign. But for his willingness (and his confidence of ability) see Diogenes Laertius I, 49. (For Socrates, the best testimony is the speech of Alcibiades in the *Symposium*.)

75. J.M.E. McTaggart thought that a community of “immortals” was what Hegel’s theory *does* assert; and it is at least debateable whether his view violates Hegel’s Logic (though it certainly violates my neo-Kantian interpretation, in which the “Science of experience” is fundamental). All the other Anglo-Hegelians were sure that McTaggart was wrong about Hegel, and (although he was not as wrong as some of them about the “personality” of the Absolute) I have no hesitation in agreeing with them.

76. E. Fackenheim, 1967, 47. Fackenheim understands very clearly that “True Spirit” is “fragmentary” in Hegel’s own view, and that the completion of Spirit involves the comprehending of its history. But (as the word “eternally” shows in this quotation) he thinks that completion is not *logically* possible (because history is never complete). We have to concede that there must always be a “tension” between finite and absolute Spirit. Fackenheim infers that the comprehension of the Absolute by the finite spirit must always be “fragmentary.”

The inference is correct in its empirical aspect, but mistaken in its logical aspect. Fackenheim’s problem is the same as Loewenberg’s. Loewenberg is an agnostic and Fackenheim a believer; but both of them think (like Lauer) that the “Providence” of the World-History lectures is a real “being,” (not a *Vorstellung*, or the “outwardly” objective presentation of what is properly “inward”—i.e. a *logical* object. So they suppose that there has to be an actually comprehensive knowing (by the “Absolute Spirit”); and *this* knowledge we (logically) cannot have.

Hegel’s theory, on the other hand, is that we have to project the *Vorstellung* of the “Absolute Knower” into “outward” objectivity, in order to objectify for ourselves the formally Absolute Knowledge that we do (implicitly) have. When we have (by this means) made our absolute knowledge explicit for ourselves, that knowledge itself will show us *that* there is not (and *why*, as far as we are concerned, there cannot be) any “absolute knowing” of the material type projected in the *Vorstellung*.

All three authors know that Hegel claims for us only a “formally” Absolute Knowledge. But they do not see how he can possibly validate it, once the existence of the materially absolute Knower has been admitted; and if the admission were categorical, scepticism on that point would be logically sound. No finite spirit can (with rational self-certainty) have anything that deserves to be called “God’s knowledge,” if we mean by that a material knowledge that is “outside of time.” What we know (materially) about the “future” cannot be like what we know (materially) about the past; and there is not (there *cannot* be) a knowledge for which no difference between future and past exists. This comprehension of “absolute teleology” is a very important aspect of our actual philosophical (or “absolute”) knowledge.

77. As soon as we look beyond the phenomenology of the Christian experience of the Spirit, we are bound to recognize that this sublime or bad infinite consciousness has an important place in all living “universal” religious traditions. Hegel recognized this in his Berlin lectures.

78. *Pensées* (ed. L. Brunschvicg, 1914) VI, 348. A. M. Olson (1992) has now given us a theological interpretation of Hegel’s “Absolute Spirit” in terms of the *Umgreifende* of Karl Jaspers. He appears to accept an interpretation of “the Comprehensive” that is functionally harmless. (Cf. also N. Rotenstreich [1980]; and for a quotation that supports Olson’s view see J. Yerkes [1983, 270].)

79. C. Taylor (1975, 538) (and other places). In *that* passage it seems clear that Taylor is ascribing to Hegel the “Identity theory” of Schelling in an interpretation very like the one which Jacobi gives in the “Introduction” (1815) to his “Collected Philosophical Writings” (*Werke* II, 47–58, and 77–93; Di Giovanni, 1994,). It is a consistent interpretation of Hegel’s

“speculative *religion*”; but it is only a *Vorstellung*, not the “Science” that Hegel set out to found in 1806 at all. It is clear that Jacobi agrees with Taylor that no one can seriously hold what these “speculative” idealists are supposed to be asserting.

I am not sure that that is a just verdict, because I do not think that “romantic pantheism” is by any means dead. But no whole-hearted Hegelian, such as myself, holds anything of the kind. We want to have done with “faith.” (Analogical inferences about “superhuman” cognition, are like analogical inferences about “subhuman” feelings. Some may find them valuable—and indeed indispensable—for the satisfactory organization of their own lives. But the one thing which, by definition, they are not and cannot become, is “absolute knowledge.” So Hegel certainly does not subscribe to any Aristotelian analogical argument for the “existence of God.”)

A very good summing up of Hegel’s concept of Spirit—one that is inspired by Taylor, and arrives at a highly plausible summing up of Taylor’s position—can be found in M. Hardimon (1994, 43–52). The summing up is at the level of *religious* consciousness. Hardimon’s account has made me aware that the real issue between Taylor and a would-be “scientific” Hegelian like myself concerns the final overcoming of the *Vorstellung* of “the Absolute Spirit” in Philosophy. The *contradictoriness* of the *Vorstellung* becomes completely patent in Hardimon. This *mystical* religious view is the *content* of Absolute Knowing. But it can only be “knowledge” when its contradictory character is resolved.

The whole argument about “Self-Positing Spirit” is very abstract. Taylor’s dissatisfaction with the position he ascribes to Hegel, does not prevent him from applying the Hegelian concept of Spirit in his own philosophy of action in a way that seems to me admirable. See for instance C. Taylor (1978 and 1983).

80. Charles Taylor’s way of interpreting Hegel has an eminently respectable ancestry among the theologians. The “pantheist” interpretation of the Identity philosophy began as a line of critical attack (notably in the essays of F. H. Jacobi); but it was taken up positively by D. F. Strauss as the truth of speculative experience. W. Dilthey and W. Lütgert carried on this tradition—see W. Pannenberg (1969) for a review of the story. But compare also K. Barth (1959, 285, 286).

What Taylor fails to recognize is that when the theological mode of expression is rejected as completely implausible (or, more logically, as vague to the point of meaninglessness) Hegel’s post-Kantian “system of experience” has not been dealt with. There is a way of reading what Hegel says that does not require any “act of faith,” but only a close attention to the concepts that we all use, and to the ways in which they interact and fit together. Of course, this strictly immanent way of reading Hegel will not satisfy those whose religious experience impels them into “faith”; and some of them may find “faith” in Hegel’s Absolute Spirit satisfying (or debate about it rewarding). See, for example, K. Schmitz (1973). But the Hegelian *philosophy* is a logical account of why the *concept* of “faith” (*including* scepticism or unbelief) is *necessary* in the human thought-world, and a demonstration of how it works.

81. Compare *Philosophy and the Mirror of Nature* (1979), 389. Oakeshott’s essay appeared first as a small book (Cambridge, 1959). It is reprinted in his *Rationalism and Politics* (1962, 1991). The image is older; it may have originated with Hölderlin.

There is an important sense in which Hegel’s concept of Spirit has its logical origin in the Averroist theory of the Active Intellect; and the beginnings of the “history of consciousness” can be found in Ibn Tufail’s philosophical romance *Hayy ibn Yakzan* (compare E. Behler, 1972, 190–197). But Taylor does not mean to ascribe metaphysical Averroism to Hegel. (In my own view, it would be correct to say that Hegel has provided a theory of how

human social consciousness constructs itself step by step pragmatically and logically so as to satisfy the Averroist imperative. But Hegel was conscious of the traditional problem in its Christian neo-Platonic, rather than its Arabic Aristotelian shape.)

82. Compare Matthew 13:54–58 with Loewenberg (1965) 301–302. J. Habermas (1973) has claimed that there are *two* models of *Geist* in Hegel's texts (and the controversies in the tradition certainly seem to support this view). There is an intersubjective model (in which *Geist* is a medium of communication); and an "idealist" model in which the "absolute Spirit" is an achievement of reflection. M. Theunissen (1970) agrees that both models are present in Hegel's Berlin writings. Only the first model is conceptually present in the *Phenomenology*. The second is shown to be a necessary *Vorstellung* of the religious standpoint. In my view, that is how it should be regarded in the Berlin lectures. (I agree with R. R. Williams' critique of the supposed "alternative"—see especially 1987, 14–18. R. D. Winfield's commentary on Williams seems to me to be based on another version of the false alternative.)

83. Plato's doctrine that the Greek cities ought not to enslave other Greeks shows a deeper insight than Aristotle's definition of the *polis*.

84. See *Critique of Practical Reason*, section 4, Remark (*Akad.* V, 27–28; Beck, L.L.A., 26–27); and *Republic* I, 331c. (It is certainly the naïve *ethical* view, that I ought to "love my brother" and "be his keeper"—but only in the restricted sense of "doing good to friends" which Polemarchus offers in place of the first definition of "justice" offered by Cephalus. The dialectic between "truth-telling" and "loving thy neighbor" begins at once in the *Republic*.)

85. Judith Shklar (1976, 139–140) is mistaken in thinking that Hegel is criticizing Kant's *ethics* here. It is essential to his argument that the ethics of dignity and respect is sound (otherwise he could not validly make his transition to "True Spirit"). But Kant's belief that one's ethical duty can be demonstrated by "moral Reason" is mistaken. Kant is *unethical*, when he begins to think that it needs or ought to be so demonstrated.

86. Our "Observing Reason" goes forward from one stage to the next, all the time. But it is important to remark upon it here, because the proper integration of *our* critical Law-Testing attitude into the "substance" is the problem that now remains; the substance itself must evolve into a structural image of Critical Reason, before that can happen. This is the theme of Hegel's chapter VI.

87. The approach of J. E. Russon (1993) is rather different from the one that I have adopted. But his "Conclusion" shows clearly what has to be integrated in the resulting Concept of Spirit.

Chapter 3

The Eden of the Spirit

VI. Spirit

We have now completed the phenomenology of the individuated shapes of Consciousness. From this point onwards we shall be dealing with the evolution of the rational social order in its logically necessary shapes. Hegel's sixth chapter is best regarded as a "phenomenology of law." Beginning with Ethical Law (or Custom) we move through Positive (Roman) Law to Natural Law and arrive finally at Moral Law. At that stage we shall have completed a circle because the last shape of singular Reason was the Law-Testing Reason of Kant's Categorical Imperative.

Hegel begins the new chapter, as usual, with a brief survey of the previous chapter, in order for us to see where we are, and how we have arrived here. He is concerned with the advance from the subjective moral Reason of a Kantian consciousness to the substantial ethical way of life of True Spirit. We should notice that this advance—which requires a new chapter—involves a movement back to the "life of the Volk" from which Active Reason began (par. 350); and we should take note that Hegel did not use the Kantian language of morality and conscience in chapter V, and he does not use it now. Morality and Conscience are modes of "Spirit" at which we shall arrive in the last part of this chapter. Only the formal category of a rational autonomy that takes itself to be able to make "laws of freedom" spontaneously, is transcended in the move from "the Category" to Antigone's "unwritten law." Concrete moral autonomy is an essential moment of the fully developed Objective Spirit. There are slaves in the Sophoclean world, but not in ours.¹

Historically, the transition at the beginning of this chapter is a great leap backwards. From Kant's Categorical Imperative we go back to a world of custom where there was no critical Reason at all. We should always remember that the standpoint of Law-Testing Reason is also our own standpoint as the speculative observers who are constructing the Science of Experience. It is our function to recognize how the concept of Truth is tested in experience, and so to achieve the "actual cognition of what is in truth" which is the Sache selbst in philosophy (par. 73). At the end of Hegel's fifth chapter we reached the formal Category, or the subjective shape of that Sache selbst. We had to construct that standpoint out of the experiences of our own culture, and the self-conscious doctrines of the Age of Reason, together with those elements of the earlier culture which that standpoint presupposes and embodies as an achieved formation of singular rational consciousness, before we could embark on the comprehension of our communal life. We shall now

see that the whole standpoint (and argument) of chapter V belongs within the social context of the "Truth of Enlightenment" in chapter VI.²

The "advance" from the world of Fichte to the world of Sophocles is a logical development. The formal category requires concrete content. The Categorical Imperative cannot give itself its own content (or even choose rationally between alternative social possibilities). The logical advance does not imply that Sophocles was more rational than Kant. On the contrary, Sophocles did not have the standards of what we call "critical Reason" at all. He was a superbly rational observer of his world and its life; but he was not a rational individual in the way that Kant and Fichte are. He presents the world that he lives in to itself (and mediately to us) in its truest guise. In that world no one was rational in the way in which Kant and Fichte are rational. Thus Sophocles, for example, certainly agrees with the Antigone Chorus that the Theban Shepherd is a "good man, for a slave"; but he takes the slave-status to be proper to the shepherd by nature.

It is not Sophocles, or even Plato, who are "more advanced" than Kant. It is rather we who, because we stand upon Kant's shoulders, can see and say why the Hellenism of Schiller and Hölderlin is an advance over Kant. Kant knew more than anyone had ever known before him. But he knew it all "falsely" (as Hegel puts it in the Preface [par. 39]), because he did not grasp that a rational order must uncritically be, before anyone can critically "have" Reason at all. This is what Hegel showed us by his critique of the formal *Sache selbst*, the standard or criterion that the subject of a singular rational consciousness has to realize internally.

As we saw in the world of the Real Individuals, the standard is needed in the first place, for the evaluation of our own rational activity of self-expression. And in that world it really does exist as the "law of nature"—the unwritten law that "lives eternally, not just today and yesterday," which Antigone recognizes in and behind the proclamations of Zeus or the Dike of the underworld (par. 437). Hegel fastened on these two lines of Sophocles as the primitive intuition of the "Categorical Imperative." This intuition of Reason as the world-sustaining Category is a double inversion of the critical Reason of the "law-testing observer." The ethical law is simply there; it is not to be tested, but only obeyed. That is the simple inversion. In Antigone's willing and devoted obedience, however, it becomes her law, the law of her Reason. This is a second inversion, because the law is dominantly united with the mind that recognizes it. Antigone does not posit it; on the contrary, it is her "substance." The critical attitude of "testing" the law is sublated completely. To "observe" this law as Reason, is to accept it as categorical, and obey it. The law itself becomes actual as Antigone's obedient subjectivity. This is the "comprehensive inversion" of the "testing" attitude; for Antigone must still interpret the law freely in order to posit (not the law but) herself as its actuality.

(a) Spirit as Substance

- 1./438. Spirit is the realized *truth* of Reason's certainty. It is its own world, and the world is itself. As Observation Reason finds itself; the "thing" it finds is not its body, but its activity as self. This too is one-sided; as the actual category, Reason is finally *in and for itself*. To begin with, this *Sache selbst* is only an abstract essence, an arbitrary self-

knowledge that makes laws arbitrarily, and has no consciousness of its substantiality. The self-conscious Substance is Spirit.

The first paragraph of Hegel's new chapter is simply a review of the stages by which *our* rational consciousness arrived at this intuition of its own "substantial" existence as Spirit.³ We can understand it only if we have followed the argument of Hegel's fifth chapter. To comment upon it is virtually useless, so I shall simply fill out the analysis that I have already given, and advise anyone who does not know what the analysis means to reexamine the detailed discussion of "Reason" with the summary in mind.

For Observing Reason the identity of itself and the world is evident first as the "laws of Nature." Then, in organic life, we discover that Nature's laws are not directly observable at all; and when we observe our own rational behavior, the absurdity of expecting to observe Reason as "natural law" in this direct mode becomes patent. Reason only *is* what it is for itself, i.e. it is what it *does*. But, as we are shown in Section B of chapter V, this truth is one-sided too. Reason has to be both "in itself" (i.e., it has to be found by observation) and "for itself" (i.e., it has to be a law that makes itself—like that living law of the organism which we cannot observe). This identity of "what is" with "what acts" arrives on the scene as the *Sache selbst*, the standard that Reason applies in doing what it does. But it is only an abstract standard that is reached in the evolution of singular self-expression; and the claim that Reason can *give* laws is rapidly exposed as a dialectical illusion since Reason contradicts itself in its "law-giving." Even the claim that it can test or assess laws is a mere opinion. When this opinion is put aside Reason finds itself as "Spirit." That is to say that Reason recognizes itself as the immediate presence of an absolute Law in the actual consciousness. What we realize, when we discover that any proposed law can meet our "test," is that we would never have set out to be law-testers, if we were not already conscious of an actual law in our experience that is quite beyond all testing. This experience was the necessary presupposition of our own "testing" posture from the first. Once we realize this, we can recognize where and when in our tradition that experience was, for the first time, self-consciously expressed.⁴

This last step is the only novelty. The subjective pretension that we can test laws for their rationality has to be looked at "from the side of the Substance"—i.e. from the side of the rational community of which we are members. We have to reflect on what we already know, when we claim to be necessarily able to do something which experience clearly shows that (as single individuals) we actually cannot do. This unarticulated knowledge is the consciousness that we are united with a "Substance" of whose full development our *critical* Reason is the climactic moment. We must now observe how that unity itself developed, in order to comprehend our own critical faculty.

"Communal recognition" was the standard of truth that became visible to us in the last chapter as the *Sache selbst*, or as the proper (Kantian) sense in which Truth is objective. But the primitive (natural) sense of "objectivity" is "existing in and for itself" (in such a way that no one can *have* or *possess* or *use* it). "Spirit" is the

coincidence of these two senses of “objectivity.” Thus the *immediately true* mode of Spirit exists where there is a spontaneous recognition by a human community of a standard for rational action that is absolute or “divine,” i.e. beyond all possibility of criticism because it is “objective” in both senses. Like the law of gravity, the law that Antigone recognizes is simply there.

Antigone (and all the other characters in Sophocles’ play, especially the Chorus) is “true Spirit.” The spiritual essence of Reason—its categorical objectivity as “law”—is “actual as consciousness” in Antigone’s mind. The custom that she follows is directly known to her as her own substance. She cannot live with herself if she does not follow it, because her natural existence as a living organism is not her “self.” She identifies her very selfhood with the way of life of this actual community to which she belongs. In the play she is about to become an adult member in it, by passing from the status of unmarried girl to that of wife and mother.

This substance is true spirit, because it is both “in itself” as law and “for itself” as action. It is a law of freedom, because it mediates the free existence of a community that gives itself its own particular laws. The “in and for itself subsisting essence portrays itself to itself (*sich sich selbst vorstellt*)” in all the ceremonial ways that are immemorially prescribed for its members to act, but especially in the religious ceremonies that are both common and peculiar to its members. When Antigone buries Polyneices in defiance of Creon’s edict, she is identifying both herself and him with the “law of Zeus,” i.e. with the universal customary way of the Greeks, not with that of Thebes in particular.⁵ True Spirit is the *Greek* spirit. That is to say, it is the universal spirit of a national community of free particular communities.⁶

- 2./439. Reason’s true essence is the ethical substance that is actual as Spirit. This actuality is the conscious identity of the self and its world (which are conscious opposites). As *substance* it is the common ground on which everyone stands; and its maintenance is also the goal that everyone strives for. It is the *work* that everyone helps to produce. Everyone gets his living from it, and it makes self-expression possible for all. This surrender for the self-expression of its members is its own life.

This paragraph consists of the simplest common sense truths about the ethical substance. But Hegel has organized them so that the paradoxical aspect of obvious common sense truth is made clear. We can overcome the apparent contradiction by giving the “sides” the different names that the Understanding would give them. Hegel himself sets us on our path by distinguishing Substance as the *essence*, and Spirit as the *actuality* of the ethical order. As actuality—i.e. as what “works,” and moves to “realize” itself—spirit is the “self” of the general consciousness.

In order to understand why simple common sense needs to be made into paradoxes, we have only to consider the ethical substance that is not yet a spirit, not yet “dissolved in the self.” Antigone says confidently that the “unwritten law lives forever, and no man knows from whence it appeared.” For her personally it is the decree of Zeus and *Dike*; but really the “unwritten law” is older than they are. We shall meet it in chapter VII as the universal Light-Essence for which everything

else is accidental and phenomenal. In the universal light there are no selves, so it is not a “spirit” and has no selfhood of its own—no proper name like the “Zeus” of Antigone.

“True Spirit,” on the other hand, is the immediate unity of substance and subject. So it is necessarily a self-consciousness. Hegel is deliberately echoing the beginning of chapter IV (pars. 167–168) when he says that “the Spirit steps forth over against the Self of actual consciousness,” but then adds that it is rather the case that “the Self steps forth over against itself as objective actual world.” Logically, the change of subject enables him to insist on the identity of the whole, and it is this preservation of self-identity that is important. The Spirit is the Self of actual consciousness; but it does also “confront the Self as an other” (Antigone’s immemorial *law*). This confrontation (with its imperative “otherness”) is also the typical shape of abstract moral Reason. The *absolute* otherness of Nature’s law is pre-spiritual; what is distinctive about the consciousness of Spirit proper is that the law-giving voice is known to be one’s own true self. So the true Spirit of the “ethical world” can only be adequately expressed by starting not from the Spirit but from “the Self”; it is the true Self of the whole community that encounters itself as “the objective, actual world.”

This objectivity is of the naïve, common-sense kind typified by the stone statue of Zeus or Athena. The lump of stone is a holy thing that must not be profaned or violated, precisely because the objectivity of God’s law in my spiritual world does not have the ordinary meaning of merely instrumental usefulness (or hindrance) to my rational purposes. This cultural order is my true self; and I am a moment of this substance. As Sophocles, I am an “Athenian,” one of the children of Athena; but I can express the truth of my situation by dramatizing a myth about Thebes long ago, because Athena herself is a child of Zeus. Properly speaking, my ethical substance is that of the Hellenes. In my true identity, I am a *Greek*; it is the Greek cultural world that is my true self.

As actual consciousness, the Spirit is truly the self of this substance. In its independent (or truth-knowing) aspect the rational self is not, as Descartes thought, a “thinking substance”; but neither is it simply the Aristotelian “soul”—the form of one mortal living body. It is the consciousness of a Spirit that has a truly substantial body—the Earth. In its immediate truth, Spirit is the consciousness of belonging to this particular community on earth. But the immediate truth of this consciousness is ambiguous. My community is a “universal” for me, only when it particularizes itself. I am a Greek, because I am an Athenian (or a Theban). As we approach the string of logical concepts through which Hegel characterizes Spirit as Substance, we should note first that I am a “Greek” because that word designates the community with whom I can immediately communicate both as a thinker, and as a rational agent. The essentially evanescent process of using a common language is Spirit as the universal Self; the whole string of “substantial” concepts depends upon it, and exist within it.

Hence Hegel can say that “Spirit, being the *substance* and the universal, self-identical, abiding essence, is the undisturbed and undissolved *Grund* and *starting-*

point for the action of all—and their *purpose* and *goal*, as the thought-of *in-itself* of all Self-Consciousness.” It seems paradoxical that what is necessarily there as the presupposition of everything I do, is also the purpose and goal of my life, that the “in-itself” is what has still to be actualized by my own self-realization as its abiding self-consciousness. But this was the simple common sense of Greek political life, and precisely because the “essence” did not in fact abide, we can see clearly why the circle was necessary. What the Greeks of the mainland and the islands achieved against the Persians, they could not maintain against Alexander, the conqueror who arose among themselves. What it *meant* to be a “Greek” changed at that point. The whole Mediterranean world was “Hellenized”; but the “Hellenistic world” was quite different from the narrower world of the free Hellenes. In Alexander’s world there was an “essence” still, but no “substance” any more. The Substance endured only as long as the Hellenes were effectively able to maintain it as their “purpose and goal.”

This *substance* was alive. The “unwavering and just *self-identity*” of the “law of Zeus and *Dike*” to which Antigone appeals, exists in the consciousness of a people divided into a number of self-maintaining “masses.” All of them take their living from the soil and the waters of Hellas; they depend upon the constant cycle in the sky above and the earth beneath. Zeus in the sky is not only their Father (in nature) but their King (in ethics). His thunderbolt is the arm of divine Justice; and *Dike*, who dwells with the Harvest Goddess and the Lord of Death beneath the Earth, is also an *ethical*, not just a natural, power. She is the personification of “custom” (especially the way of the Gods or of nature) and of social order. Her name is the root of *dikaos* (meaning “just” or “upright”) and of *dikaosyne*, the virtue that we translate as “justice.”

When Zeus and *Dike* prevail, all the children of Hellas can enjoy the fruits of Mother Earth (and of the sea) though they must work hard to get enough. But it is the cultural activity of their hard-earned leisure that is the momentum of the universal “self,” the spinning of the substance on its axis. This movement, this living soul of the natural “Infinite” of Understanding (par. 162) is *bewirkte*; it is produced by the human will, following the divinely and naturally appointed way that *Dike* has defined. If that willing obedience fails, then the *substantial* universal Self will vanish, for the “true Self” is nothing but the self-awareness *of* that willing obedience (compare par. 351). When it does disappear, the being of the *Sache selbst* will be dissolved in quite a different self—and “dissolved” in a more radical way.

Let us consider now the “tearing-up” of this universal substance. As “being-for-self” the substance exists in the independent lives of the Hellenes. It articulates itself into “masses” (par. 437) which are the different *poleis*; and the singular selves who make up these “masses” tear the substance up into separate lives. They “dissolve” it and “singularize” it into the living fabric of their own domestic existence.

What Hegel says requires us to concentrate on the spiritual aspect of this “tearing it up and taking one’s share for oneself.” The physical problem of getting a living for the singular natural self (and the family units) was there before the “true Spirit” came, and continues more or less unchanged when that Spirit is gone. It is

not in the daily round of material labor that the “being-for-self” of the singular consciousness is the self-conscious “moment of the action and self of all.” This economic “dissolution and singularizing of the essence” into private utilities is not where the “essence” is “actual and alive,” but rather where it is “dead.” We are “tearing up the living essence, and taking our share of it,” when we go to the Assembly or to the Temple; and above all, when we go to the drama festivals—for it is then that we are all dissolved as separate beings in one “Self,” women as well as men, slaves as well as free citizens.

This brings us to the final problem at the heart of the paragraph. When Hegel says that the ethical substance is the “universal *work* that produces itself through the action of each and every one as their unity and equality” it is natural and easy to think of the *polis*, its constitution and institutions, as this *Werk*. But the City is only the *particular* aspect of the universal culture that gives itself so benevolently to be torn up into our self-enjoyment. In the world of the “Real Individuals” we were gradually driven to accept the linguistic expression of the self—and objectively of the “true” and the “just”—as the universal *Werk* of Reason. Now we must remember what Protagoras said when he was asked “Who teaches virtue?”: “You might as well ask who teaches Greek?”⁷ It is the virtue shaped by one’s general education that is the *Werk* which is identical with “being-for-self,” and with the activity of self-expression. This is the inverted disciplinary shape under which the whole account of rational self-expression in chapter V C is carried forward into True Spirit.

- 3./440. The previous *Gestalten* are abstract moments of this living whole. They subsist as permanent *Gestalten* only within it. They advance out of it, and retreat back again. Spirit contains the moments of consciousness as an objective substance; and the moments of self-consciousness as an independent self. As the unity of the two it is consciousness that *has* Reason (as a pre-Kantian mode of awareness). When it is aware of Reason as existing (not just as *belonging* to it) it is Spirit in and for itself.

All of the previous shapes of consciousness are “abstractions” from this “self-maintaining absolutely real essence.” So we must try to see how they are present in the culture of the Greek cities. There is no problem about the “shapes” of “Consciousness.” Every culture has Sense-Certainty, Perception and Understanding; and “Understanding” belongs to the Greeks, in a strong sense, because they were the actual inventors of the “Infinite” which Hegel has reinstated for our culture as the climax of the conceptual development of the Understanding.

It is with Self-Consciousness that the difficulties begin. I believe I have adequately demonstrated in my first volume that the whole concept of Life and Desire is Greek;⁸ and that the Struggle for Recognition, Lordship and Serfdom, are Hellenic phenomena needs no demonstration. Stoicism and Scepticism are obviously Hellenic too; but there is a problem about how they can be “vanishing quantities” in the communal substance.⁹ The Unhappy Consciousness poses a big problem; but let us leave it aside for the moment and return to it after examining the Hellenic shapes of Reason.

For the *Gestalten* of Reason in the Ethical Substance, Hegel himself gives us a complete review later on (par. 461). This survey is interesting in several ways; and when we understand the point of view from which it is composed we shall comprehend the relation between chapter V and chapter VI better. In effect, Hegel returns to the moment where "Observing Reason" had to confess that it had failed to "find itself." At that point he had to tell us what it was that the singular observer had failed to find. Reason was not to be found in the world of observables, because it is the communal substance of the rational way of life that makes "observation" possible. The substance is now found. True Spirit observes itself as "the *Volk*" (pars. 349–352, compare par. 461).

But Reason is not "found" in the scientific sense; or, to be more exact, when it is scientifically observed, it is already passing away. "What observation knew as something *just found there*, in which the self had no part, is here a custom just found there, but an actuality which is at the same time the deed and work of him who finds it." So says Hegel; and this reminds us of Aristotle claiming that the *polis* is natural "but the man who first constructed such a community was none the less the greatest of benefactors."¹⁰ When one can formulate the paradox like that, one is not expressing the immediate *self-consciousness* of the *polis*. Aristotle is a Macedonian observer, looking at the *polis* in the scientific way from outside. But Reason finds itself intuitively from inside. The rational human consciousness discovers its own nature *as nature*. It knows that it had to make what it is discovering; and it even knows that there had to be a first maker-discoverer. This paradox of a *nature that is made* is expressed in the image of a hero-founder who was half-God and half-man.

The Reason that discovers itself as a self-making, is an active Reason that must make its own self-consciousness as an image of itself. Active Reason in chapter V was "outside the Substance." The Substance was either ahead of it, or behind it (par. 357). "The man who is outside the *polis*," said Aristotle (stating "the pure theory without actuality" [par. 355]) "must be either a beast or a God."¹¹ He, the self-sufficient philosopher, is a God (or at least, as like one as he can be); the pre-political barbarians are "beasts." But the Active Reason that makes the substance must "in itself" be *both* divine and bestial; for the moment of singular Reason that is vanishing into the Substance (par. 355) the founder who made the political community was "divine"; and the consciousness that leaves the *polis* behind will become bestial. We saw this latter piece of intuitive knowledge confirmed in the career of Faust, the master of all the sciences.

But in fact, Active Reason is not simply a vanishing moment in the Substance after all. It becomes substantial in the family. From the point of view of all members, family-consciousness is a consciousness of *transience*, or of vanishing and mortality. But the rational member identifies both with his family and his community; hence his transient enjoyment of life becomes "universal life" in the transition from "pleasure" to "virtue." "The singular [individual] seeking the pleasure of the enjoyment of his singularity, finds it in the family, and the necessity in which the pleasure perishes is his own self-consciousness as citizen of his people;—or it is his knowing the *law of his heart* as the law of all hearts, knowing the consciousness of

the *self* as the recognized universal order;—it is the *virtue*, that enjoys the fruits of its sacrifice” (par. 461).¹² Hegel speaks only of the male citizen. But everything he says is true for Antigone; and in the play itself *she* is the consciousness for whom the whole cycle is “true.”

“And finally, the consciousness of *the Thing itself* is satisfied in the real Substance that contains and maintains the abstract moments of the empty category in a positive way” (par. 461). Hegel has demonstrated this in par. 439: the spiritual substance is “ground and starting-point,” “purpose and goal,” and *Werk* (as action in process). The law-giving of the *Sache selbst* is the custom, actually effective in all minds and hearts; and its content is the unwritten law of the *Volk* universally, and the public law of this Greek community in particular. The “originally determinate nature” (par. 398) of the Real Individuals—which was found to be nothing but the indefinitely plastic freedom of universal rationality—is now properly determined by nature (par. 459) since the two sexes allot themselves automatically to the consciousness of the *Sache selbst* on its two sides.

These two sides of the *Sache selbst* are “the ethical *Mächte* in which it has a genuine content that has taken the place of those commands without substance that sound Reason wanted to give and to know” (par. 461). What is interesting here is that *custom* is clearly declared to be Law-Giving Reason. The only “lawgiver” in sight is the mythical hero who was both divine and human. This is odd because the Greek political tradition is full of “lawgivers” who were quite historical. Several of the “Seven Wise Men”—who belong to the earliest traditions of *philosophy*—were recognized “lawgivers”; and the professional philosophers who came later, regarded “law-giving” as a proper part of their function. Thus, Protagoras served on the constitutional commission for the founding of the colony at Thurii; and Plato’s Academy sent expert advisers on constitutional reform to several cities where the need for it was felt. None of this rational law-giving properly belongs to “True Spirit.”¹³

“By this means [i.e. through the genuine content] it [the conscious *Sache selbst*] has a standard that is full of content and determinate in itself, for the testing not of the laws, but rather of what is done” (par. 461). Like rational law-giving, rational testing disappears completely. The standard is “the *unwritten and unwavering Recht* . . . that lives forever, and none knows from whence it appeared” (par. 437); and Antigone does not “test” Creon’s proclamation as a “law,” but as “something done” here and now, at this specific juncture in the life of the City. Her attitude is radically different from that of Socrates, who accepted the “absolute right” of the Laws, but said that he would never give up the pursuit of philosophy. Socrates is Aristotle’s divine outsider. He is a Real Individual who is prepared to “test the laws” by the standard of his own Reason. He is not an “outside observer” like Aristotle or Protagoras; he knows that the *Volk* (Athena’s *Volk*) is his substance. But Aristophanes can quite legitimately portray him (in the *Clouds*) as spiritually *identical* with Protagoras.¹⁴

Thus, there were singular *Gestalten* of “Lawtesting Reason” in the world of the Ethical Substance, just as there were “Lawgivers.” There were also “Real

Individuals” of the most immediate type. Families moved to other cities, to practise crafts that were in demand. They might remain indefinitely but they did not (in the ordinary course of events) acquire citizenship where they settled. Cephalus (in the *Republic*) is a good example. But in the perspective of True Spirit, these *metics*, like the peripatetic Sophists and bards, belong already to the “Condition of Right.” Their existence—like that of Socrates, the actual moment of transition—is a visible sign of the implicit contradiction in “spiritual thinghood.”

Now we can come back to Self-Consciousness; and having studied how Hegel himself interprets the *Gestalten* of Reason as “vanishing quantities” in True Spirit, we realize that the problem posed by the moments of the final “syllogism” (of chapter IV) is a difficult one. The exposition of “Desire” as the primitive *Gestalt* of singular selfhood fits directly into the theory of the family as a self-liquidating educational institution for the *polis*; and although Lordship and Bondage achieves world-historical objectivity as the basic institutional structure of the Feudal System, it is easily recognized as a “vanishing quantity” in the *polis*. Slaves were “property.” The City itself owned slaves; and like all other private property, the whole slave population was at its disposal through the ethical commitment of its citizens. Hegel’s distinction between “Independence and Dependence of Consciousness” is mirrored in Aristotle’s distinction between the City’s “members” and its “necessary conditions.”¹⁵

The syllogism of Stoicism, Scepticism and Unhappy Consciousness is only plainly recognizable in the *downfall* of the True Spirit. Hegel himself says that Stoicism becomes substantial, it becomes the “shape of a world” in the “Condition of Right” (pars. 479–480); and at that stage it is no “moment or vanishing quantity that dances forth and goes back into its ground and essence.” But we can distinguish here between Greek Stoicism and Roman Stoicism—just as we have distinguished between *political* servitude and *feudal* servitude or between the essentially Real Individuality of the City-Constitution, and the marginally Real Individuality of resident aliens (*metics*) or of “strangers” like the peripatetic Sophists. In fact, those very Sophists belong to the “shape” of Scepticism as it dances out of the Substance and goes back again.

This seems hardly good enough. For the City does not *need* those resident aliens and strangers in the way in which it *must* have slaves.¹⁶ Aristophanes can make everyone laugh at the Sophists. But his message is precisely that far from being “necessary” they are dangerous; and his “Socrates” is a portent of doom.

Plato’s Socrates is the solution of our problem. For he is both Stoic and Sceptic; and in his willing devotion to the City, the two tendencies are visibly displayed as “vanishing moments” essential to the Substance. The *polis* “comes into existence for the sake of life, and continues in existence for the sake of the good life,” says Aristotle.¹⁷ As the proper climax of the “good life” philosophy is necessary to the *polis*. The extremes represented by “Stoicism” and “Scepticism” are the dialectical poles of the Socratic “care of the soul”; and the harmonized soul is possible only in the perfectly harmonious society. Thus the Platonic image of the “City in the Heavens,” and the Aristotelian theory of politics as the supreme practical science

adds the final touch of perfection to True Spirit: the intellectual intuition of “life in the *Volk*.”

But just as the comic poet saw doom in Socrates, so Aristotle the political theorist *is* doom as the tutor of Alexander. With Alexander’s armies the Stoic vision of a *universal* “city in the Heavens” went forth into the world; and Scepticism went forth with it as the truth of the actual world. The political substance of Virtue broke up into the antithesis of Virtue and the Way of the World. The natural self-consciousness was now fully formed into a universal spirit. What Hegel says at the beginning of chapter IV became the truth absolutely known to Reason as its own truth: “Consciousness is for itself what is true” (par. 166).

Thus we come, finally, to the Unhappy Consciousness. The complete *Gestalt* of the Unhappy Consciousness, as a singular shape, cannot possibly occur within the essentially “happy” consciousness of the Olympian world. In its substantial aspect the Unhappy Consciousness is precisely the *fate* of the Ethical Substance. Its “advance and retreat” is the movement of Spirit as a whole, and we must say of it that, in the “shape” of the Roman Empire and the Roman Universal Church it “advances out of the downfall of the ethical substance” in order to return to its “ground and essence” in the “morally subjectified ethical substance” (i.e., the rational Lutheranism which is finally sublated by “Absolute Knowledge”).

But as a moment of the singular consciousness the Unhappy Consciousness is not “substantial.” When we finally get to Religion (which is *absolutely* “substantial”) Hegel tells us: “The Self-Consciousness that has its fulfilment in the shape of the *unhappy* Consciousness was only the *suffering* [*Schmerz*] of the Spirit wrestling itself ever again towards objectivity but never reaching it” (par. 673).

This is the right clue for the identification of the Unhappy Consciousness as a vanishing moment inside the closed circle of “True Spirit.” This “wrestling” of the natural self-consciousness “towards objectivity” is the main topic of the two great trilogies that have come down to us from ancient tragedy.

In the *Oresteia* we see how the “happy consciousness” of true identity with the spiritual substance reconciles the unhappy consciousness of the natural self that must deny and sacrifice itself in order to achieve this “identity,” yet must not lose its own identity in the process. The critical moment comes in the *Eumenides*. Orestes is wrestling—as hopelessly as any believer in “original sin”—with the Furies called up by the murder of his mother. His sin against the happy integrity of natural life, in the interest of the self-conscious freedom of political kingship, is as “absolute” as it can be. But the divine powers of the spiritual order (Apollo and Athena) appear to us and save him. Athena reconciles the Furies with Apollo within the overall kingship of Zeus. Orestes returns to Argos confirmed in his kingship.

The story of Oedipus suggests the hope of a higher reconciliation. Oedipus is led by Apollo (as Orestes was). But unlike Orestes he is led unwittingly. He does not know what Apollo has caused him to do until Apollo reveals it afterwards. So he is unreconciled; he puts the blame firmly on Apollo for what he has done. If he died when Jocasta dies, Scepticism would be triumphant. There is no justice in his world at that point. But at Colonus he is reconciled; miraculously his death will be

a blessing to the city in which he dies. He dies happy, not in Thebes, but in the newborn Athens where Theseus speaks for Zeus.

Only in the *Antigone* does the Unhappy Consciousness emerge triumphant. Antigone (like Clytaemnestra) violates her proper spiritual status; and Creon's edict violates the wisdom of Athena's settlement with the Furies. Both of them lose the happy destiny that belongs to the finite natural self within that settlement. Antigone never gets the husband and child that she was just about to have; and Creon loses the wife and child that he has had. Antigone dies and Creon lives. The "shape" of unhappiness is *complete*; and even the natural pattern of the *Schmerz* of mortality is inverted: *ethically* it ought to be the man who dies and the woman who lives to mourn.

The *Antigone* is the rational premonition that the truth of Spirit will perish in the universal triumph of this moment which we have so far observed only as a *Gestalt* of the singular consciousness. In the triumph of the Roman Legions, the "Unhappiness" of the World-Spirit begins. But the fragility of True Spirit was evident long before that. Stoicism emerged (as a moment that does not any longer "retreat into its ground and essence") in the time of Alexander; and the "unhappiness" of the World-Spirit comes with the advent of the Emperor as an alien "judge." That is also when the story of God's incarnation as a human mediator has its origin. By then True Spirit is long gone.

It was in the astounding success of the mainland Greeks (and the islands) in their resistance to the Great King that the Ethical Substance existed, acted and moved harmoniously. During the manhood of Aeschylus (and the childhood of Sophocles) Hellas existed briefly and for the very first time as a Nation strong and united enough to overcome "unhappiness." This moment was the beginning of the motion of Spirit from Substance to Subject; and the process in which "truth" gives way to "unhappiness" coincides precisely with the long life of Sophocles.

By looking forward in Hegel's text, we have now provided a much fuller account of how the preceding shapes are necessary moments of True Spirit than Hegel himself offers at this point in his extremely schematic account. But there is one difficulty in that schematic summary which we have still to comment on. What is called "Reason" is the singular subjective consciousness that takes itself to *have* reason as its distinguishing "property"; but Spirit is the experience of consciousness in which we begin with the clear awareness that no singular consciousness *has* reason, except through its participation in the Objective Reason that is socially established.

It is not Reason that is the "property" of the singular consciousness, but singular consciousness that is the property of the "rational thing." That will turn out not to be the final truth, because the concept of thinghood is inadequate to Spirit. Hence the "experience of Spirit" itself involves the emergence of the self that *is* Reason (the Stoic *spark* of divinity), and a long process of *Bildung* towards the knowledge of itself as *absolute* spirit. In that process the self that has reason is an alienated shape. Reason is degraded into the distributively universal means or instrument for the organization of the material world. Hegel's characterization of Reason in this paragraph looks forward to that "fallen" condition. It can only be

reconciled with the opening claim of chapter V that “Reason is the certainty of consciousness that it *is* all reality” (par. 233, my italics) by taking that proud claim as the *programme* of the Stoic self who emerges from the downfall of “True Spirit”; while the characterization of the finite *Gestalt* that “*has* Reason,” refers to the “Reason” that *results* from chapter V—the Reason that has reached the end of its fall, and has experienced the formal emptiness of its Stoic pretention to the ultimate limit.¹⁸

(b) *Spirit as the Intuitive Subject*

- 4./441. The immediate truth of Spirit is in the ethical life of a *Volk* (the individual that is a world). It must go through a series of shapes (leaving ethical beauty behind) to reach *Wissen* of itself. These shapes are real spirits or world-shapes.

The existence of a “custom,” by which all who speak a certain language and recognize common Gods are bound, constitutes the immediate unity of a *Volk*—its bond. In the Germany of his time, Hegel felt himself to be, first of all, a Swabian. He could speak of Württemberg as his “fatherland.” But it was properly speaking “the Germans” who were *das Volk*. Being a Swabian was like being an Athenian or a Spartan. One had to be Athenian or Spartan or Corinthian, or Milesian, or Eleatic, or Seriphian and so on, in order to be a Greek at all; and in Hegel’s Germany it was the same. Being a Swabian was a very important ethical reality. It created bonds of loyalty even in the academic world, where “truth” was, supposedly, the only *Sache selbst*. But it was to the *Germans* that Hegel wanted to give “Philosophy,” just as Voss had given them Homer, and Luther (who was no Swabian) had given them the Bible. The language is the immediate “universe” of discourse, and the *Volk* which speaks that language is the “world” with which the speaker can immediately know herself to be identical.

Beyond this immediate universe and world, there is the universe of thought as such, and the world of Reason generally. As the truth of Reason, Spirit must therefore pass from *its* “certainty,” the certainty of identity with one’s own linguistic community, to its “truth”—the scientifically validated identity with any and every truth-seeking rational consciousness past, present, or to come. The movement from the certainty that Spirit is the *Sache selbst* (which was “Reason’s truth”) to that “absolute” truth of Spirit is what we are now going to observe.

The immediate certainty of the Ethical Substance is not even full-fledged Self-Consciousness. We have already seen how all the shapes of Self-Consciousness and Reason are sublated within the Ethical Substance. But the Substance itself must “*advance* to the consciousness of what it immediately is.” Its immediate self-consciousness is an “intuition,” not yet a thought. The “shape of the world” for True Spirit is an *aesthetic* awareness. The citizens of this world must, of course, think; but their ethical thought moves towards an “intellectual intuition.” The only mode in which their substantial identity can be expressed is the creative spontaneity of the artist. It is the artists of this world who create the sensory objectivity of its uni-

versal selfhood. True Spirit is visible to itself *as* a spirit (an I that is We) in the family of the Olympians; and the advance towards thoughtful consciousness of what Spirit immediately is, begins with the portrayal of human life in tragedy.¹⁹

The form of truth's immediacy, the shape of spiritual *certainly*, is Beauty. The explanation of this proposition is a long story, and no more than a few clues to the main sources of it can be offered here. We should remember, first, Plato's doctrine that among the Ideas, Beauty is the one through which the Form of the Good appears to the senses.²⁰ This Platonic doctrine expresses for Hegel the rational goal of Greek art; and his concept of True Spirit explains why the Hellenic canon (especially in sculpture) is for him the absolute canon of Beauty. The conception of Beauty as an objective standard (in the Kantian sense) comes from Kant himself. Kant held that judgments of Beauty, though necessarily immediate and non-discursive, were intentionally "objective"; that is to say, every rational observer with the appropriate sensory capacities can either appreciate their truth, or dispute about it.

The critical thinkers who brought these two doctrines together, so as to confer upon Greek art (especially drama and sculpture) the canonical status that it enjoys in Hegel's recollection of our cultural tradition, were Winckelmann²¹ and Schiller. But the great *paradigm* of the theory, the properly aesthetic proof of it, so to speak, was provided by Goethe; and although other Romantic thinkers (such as the Schlegels and Novalis) made important contributions to the sympathetic understanding of non-Hellenic cultures (for example, Egypt and India) the welding of *all* the traditions into a unified "phenomenology of Beauty" around the "Greek ideal" was Hegel's own achievement.²²

The *Phenomenology of Spirit* both creates and utilizes this central trunk of Hegel's aesthetic theory. Since Beauty is the immediate appearance of the Spirit as *absolute* we cannot discuss it properly until we reach his account of the "Art-Religion." But it seems proper to point out, at once, that the central thesis of the *Phenomenology* ("that the True is not Substance, but just as much Subject") is bound to produce a tremendous revolution in our conception of aesthetic standards generally. I do not see how anyone can challenge the thesis of Winckelmann, Schiller, Goethe, and Hölderlin, that it was the Greeks who gave *our* culture its absolute standard of Beauty. But, if I have comprehended it rightly, Hegel's analysis of Kantian "objectivity" as a double inversion of ordinary objectivity (i.e. a concept that must necessarily comprehend ordinary objectivity as its own "Substance") means that the Kantian objectivity of aesthetic judgment is itself "relative." Thus, the Greek experience enshrines the absolute canon of Beauty "for us," because it was in the culture of the Greek cities that the Absolute first *appeared* "for us." Anyone who tries to deny that, and seeks to apply a non-Hellenic standard to our tradition, will only produce a distorted, whimsically subjective, interpretation of our art—one in which both the "Renaissance" and "Romanticism" will be radically misunderstood. But if someone whose cultural substance is not European wants to "comprehend the recollected past in the daylight of the present" then she must necessarily have concepts that are logically analogous both to the Platonic theory of

the “objectivity of the Idea” and to the Kantian theory of the “objectivity of judgment”—for otherwise the effort of comprehension will not be recognizable and identifiable as “comprehensive recollection”; but equally certainly she *cannot* have the Greek canon of the Beautiful, but must have instead the actual shape in which the “Absolute” sensibly appeared in her non-European tradition. Thus the universal objectivity of aesthetic judgment (and, indeed, of value judgments generally) is not as simple and intuitive as it appeared to Kant and the Enlightenment. Reason is forced back to its ground in Spirit precisely because aesthetic objectivity is necessarily historical (and hence conceptually dialectical).

It is my view (a view that I shall try to demonstrate in its proper place, which is in the commentary on “The Art-Religion”) that Hegel understood this historical relativity of his own aesthetic theory perfectly. He came to grips with the problem, I think, when he was developing the aesthetic theory itself, during the years of his close association with Hölderlin. More than any of the publicly visible figures I have mentioned (and more than Schelling whose importance was also enormous) Hölderlin influenced Hegel’s aesthetic theory, especially the “classical Ideal” at the heart of it. Hölderlin’s influence extends to the smallest details; some of the oddities in Hölderlin’s versions of the *Antigone*—which his other friends and contemporaries ascribed to his mental breakdown—find a plausible explanation and justification in Hegel’s analysis; and Hegel’s analysis has never been suspected or accused of simple craziness.²³

Hellas, the spiritual “shape” of Beauty, is dead and gone. The substance of the *Sache selbst* has now taken on a higher form. Our own substantial world has expanded until in the shape of self-conscious (i.e. “philosophical”) Reason it has become concretely universal. In the world of “Beauty” the Concept of Reason itself is present but invisible, because it is unmoving. It becomes visible (to Anaxagoras, Plato, and Aristotle) only when it is beginning to move (in what Plato called the “war” between Poetry and Philosophy). The “appearing” of Spirit is the full history of that movement. The *Phenomenology of Spirit* is the *logos*, the scientific account, of Spirit’s appearing. Now that we have discovered Spirit, as the “ground” of the evolutionary movement of Reason, we can conceptually comprehend what the Greeks could make visible to themselves only in their art. In their art, the substantial unity of their self-consciousness with their actual life, was unfolded in a series of “presentations” (*Vorstellungen*) that go all the way from the visibly transformed environment of temple architecture to the moving images of mortal life in drama, (with the sculpted Gods as the middle term). Plato’s theory of Ideas conceptualizes the eternal stillness of this “middle.” But our perspective is not that of Plato—for whom any actual “movement” of the Concept could only be degenerative. Our perspective is that of a critical Reason which has comprehended the necessity of movement. We have no need to weep for Antigone, to curse Creon, or to extol Athena’s wise judgment of Orestes.

For us, this Greek “homeland” of the Spirit is only one region of the “homeland of truth” (par. 167). It is the Earthly Paradise—the garden which God (i.e. Father Zeus and his *Dike*) planted “eastward in Eden.” We have a journey to make from

here that will open out the “homeland of truth” for us as a whole. Our destination is the spiritual Paradise. But that destination is not identical with Dante’s Rose, and it still includes the man-made Eden that we started from; so the best “sign” for our journey is not the Cross but the Rainbow (the first sign that God gave to man in our own religious tradition). The rainbow clearly goes from Earth to Heaven and back; and we can never reach the end of it. Also it is not a substance, but a phenomenon. We shall find that this makes it an apt symbol both for our quest, and for the role of “God” (the supposed substantial being) in the quest. Even here, though we are only just starting our quest, we cannot rightly say which “end” of the cultural bow we are starting at (that of Sophocles or that of Hölderlin). From the beginning (our own “philosophical” beginning) we must see it as a complete arc.

- 5./442. The immediate life of Spirit is its Truth. When it reaches the abstract *Wissen* of its essence, ethical life perishes in formal legal right. After that it is divided into the real life of culture, and the realm of thought. Insight, becoming general as enlightenment, confounds and revolutionizes this distinction; and self-consciousness (as Morality) grasps itself as what is essential. As Conscience it is spirit certain of itself.
- 6./443. These three phases, ethical life, the shattered world and the moral world-view, are the spirits from whose development the actual self-consciousness of absolute spirit emerges as the final result.

For us, the historic community who are the great-grandchildren of Hellas, the Greek experience is the truth of sensible being, because it gave us our standard of sensible Beauty. Truth is for Hegel a Platonic form, in the sense that it is a standard by which “facts” are measured; it is only “correctness” that pertains to the propositions and sentences that meet the measure of “fact.” This does not mean that Hegel either ignores or despises the ordinary “truth of fact.” He made that clear in the Preface (pars. 39–41). But he also made clear that for the science of how the concept of truth has “appeared” this ordinary standpoint is a logically *inverted* one (par. 26). As soon as we admit that truth has appeared in different shapes it becomes axiomatic that one can “know something” (i.e. possess the truth about it) “falsely.” If we are to be able to measure this falsity we must necessarily have a *conceptual* measure for it; and now that we have come to the “ground” of Reason we can see that the factual and the conceptual standards of truth have to be united. There are many students of Hegel who get to this point and then become *Platonists*. That is to say, they accept the direct unification of the two standards as their concept of Truth, and they think that this concept is (or at least that it ought to be) Hegel’s. What is involved is an arrest at the “first inversion” (which results in the view that it is only the *Platonic* concept of Truth which really matters). What these interpreters make of Hegel, as a result, is a brilliant interpreter of human culture in the Platonic tradition, but one who somehow managed to mystify himself and everyone else with a lot of loose, and ultimately meaningless, talk about “system,” “science” and “logic.” This view is offered to us in many forms, and in versions that are both positively and negatively critical. In my opinion the positive critics (those who think of themselves as Hegel’s “friends”) are more dangerously mis-

taken—further from Hegel and his truth—than the negative ones. But that is only an opinion. What is a certainty (and one that I shall try to raise to “truth”) is that all of them are *wrong*.

Nothing could be less Hegelian than this aesthetically intuitive concept of “Truth.” In the last analysis we shall find that Hegel is closer to the ordinary concept of truth than to this neo-Platonic and mystical conception. Of course, he is also far removed from the ordinary “correspondence theory”; but the distance between “truth” and “correspondence” is something that he wants (more than anything else) to make comprehensible to ordinary consciousness. The mantle of the prophet is not for him—whether it be the agile wit that produces paragraphs headed “Why I am so wise,” or the earnest profundity that speaks with a bewildering simplicity of the “uncoveredness” of Truth, and manages, as it does so, to veil the truth ever more deeply. That Hegel also made himself appear superhumanly wise, and that he effectively veiled the truth that he wanted to uncover, is empirically undeniable. But I aim to show that his failure was only an empirical one. Anyone who will take the “logic” and the “system” seriously will find that *science*, not “wisdom,” is indeed the goal that is reached, and that it is wedded with common sense and public discourse, not with the depth of what is “uncovered” but remains beyond speech.

What is “uncovered” but beyond speech in the Greek experience, is not deep but shallow. It is the aesthetic surface of truth and no more. Our world has largely lost touch with the sense-world as an object of cognitive contemplation. But there is no need for anyone (except artists) to become ecstatic about the rediscovery of it. To do so is like getting fixated upon the “riches” of Sense Certainty. Hegel himself tended to become ecstatic about the Greeks at times. This makes it all the more important to underline the calm objectivity with which he describes the career of “Spirit” here, and to point out that the Conscience which is its result is something that Squire Horner (as shallow a “self” as any) had, but Sophocles (as deep a “self” as any) did not. Anyone who cannot see this as a revolutionary *advance* is out of tune with Hegel himself.

About the stages of this advance, there is not much that can usefully be said at this stage. The fate of Beauty is to perish in its direct opposite—the abstract (formally conceptual) knowledge of essence. This formal community of Legal Right is the real world of *Stoicism*; a world which the triumph of Scepticism reveals to be the simple prevalence of the “law of the stronger.” The Unhappy Consciousness—in which the inevitability of death, and the Last Judgment of the Unchangeable beyond death, controls the “harsh actuality” of natural violence—is the world of *Bildung*. The static *Gestalt* of self-abnegation turns into the moving Concept of Faith, as the saved self remade by voluntary discipline gradually gains its concrete shape and content; and the world of Faith is also (necessarily) the world of Reason.²⁴ This world and the world beyond are brought together by the rational insight of the Enlightenment. Insight appears to belong to the individual because it is immediate; but it is really communal, because it is not insight at all unless it is shared, and spontaneously communicated. That is why it can revolutionize the spiritual world.

We must supply here the memory of the actual Revolution; with it the resurrection of the Ethical World as “Morality” begins; and, as the preamble of chapter V shows, the Idealism of Critical Reason is the stable *Gestalt* of Reason proper. So we must integrate what we observed in that chapter with the concrete *Gestalt* that will come before us in the Moral World-View.

Since Hegel ends his preview with Conscience, we can safely infer that this is the stable *Gestalt* of concrete Spirit; we must never forget that Conscience is a “world-shape”; its dialectical dissolution (when we come to it) has to be taken simply as the logical transition to the sphere of Absolute Spirit. Mutual recognition and forgiveness *maintain* the world of Conscience; this is the World-Shape in which moral autonomy is integrated with its ethical ground. Hence Conscience needs all of the complements and supplements that I have brought into Hegel’s summary above; if it did not contain all the spiritual content that we have recollected in our science, the individual conscience could never count as the complete “shape” of our actual world. Speaking formally, the rational conscience is the same identical *Sache selbst* from which our quest for the Ethical Substance (as its ground) began. It is with Jack Horner that the circle closes; and we may note, in passing, that the “hypocrite” was a familiar *Gestalt* within the Ethical Substance. Creon is as bad as Pilate, or any modern successor of Pilate, when he says that “Hades put a stop to this marriage [not me].”²⁵

A: The True Spirit, Ethical Life

The transition from Law-Testing is directly to Sittlichkeit. The observant moral critic discovers by experience that she must move from critical judgment to immediate identification with what is observed to be the ethical substance of the consciousness that pretended to judge it. It is not because I have the faculty of moral judgment that I know what is right. Rather it is because what is right is my own substance already that I have the faculty of choice and decision. The circle of Ethical Life ends at its own beginning; and now we turn to go round it from its beginning. Antigone’s protest looks like Conscience to us; but that is not how it appeared to her.

(c) The Ethical Substance

- 7./444. In its simple truth, Spirit is consciousness, and strikes its moments asunder. This is the division produced by action between universal essence and singular actuality. Self-Consciousness raises the singular agent to ethical action on one side and brings the essence down to singular actuality (as *its own work*) on the other.

We have already seen (par. 441) that the Ethical Substance is not yet an actual, thinking self-consciousness, and that it must *advance* to that. The dissolution of Critical Reason was the dissolution of Self-Consciousness as such. True Spirit is like the Unhappy Consciousness; it exists at the level of “consciousness.” We must begin by seeing what this means.

In the observational forms of Consciousness the “self” is just *forgotten*; it is there, but it is sublated in that quite elementary way. Consciousness is a purely theoretical, contemplative attitude: simple awareness of the world as “what is.” So it is not properly “consciousness” that trembles at the lightning flash, or cowers instinctively at the thunder; being then in the presence of Zeus, the finite *self* is made mindful of itself—and the true Spirit exists as the object of consciousness, because the Greek observer is in the presence of the divine King.

This finite self of True Spirit is a mode of Reason. It trembles in the presence of the thunderbolt because it recognizes the absolute presence of the creative Reason of which it is itself a “child”—a mere “mortal” but one who is free. In its maturity this self is not properly fearful, therefore, but in *awe*; the inevitability of death it has long since recognized and accepted.

Whenever I act I must be aware of the *Trennung* between my subjective consciousness, and the Substance that I have been observing. In the case of the Ethical Substance I must be aware of the *Trennung* between the substantial *custom* and my personal consciousness of it. Antigone distinguishes between the “unwritten law” and her own mortal consciousness. She condemns Creon’s decree by reference to the objective custom; and she makes this judgment as one of the children of the Dragon whose teeth Cadmus sowed. The tribes dwelling in Attica followed their customs; but when Theseus united them, he created a *self-consciousness* in the Ethical World—the community of Athena. This *Gemeinwesen* (par. 450) stands between the “singularized” consciousness (of families and tribes) and the Sky Father. It is an “infinite middle” in the good sense of “infinite,” because it is a complete and self-sufficient embodiment of the universal custom in a concrete communal way of life. It unites the singular consciousness of the child of Zeus with the Father, by establishing the way in which to achieve the goal of an ethical life. This communal *self-consciousness* had its implicit being in the worshipper’s consciousness that she was the *child* of Zeus; but now that implicit unity becomes explicit. Athena herself, the wisdom of Zeus, raises the singular consciousness up to unity with the divine Father; all of the tribes (and their members) know that they belong to Athena’s City.

Implicitly, this unity of consciousness with the Substance that is its “true self” must exist for every child who is born free in the *polis*. The child becomes a self-conscious citizen because it is “raised up to the universal essence” in its education; it identifies with the custom as its own ethical being. When the adult stands forth as a self-conscious Athenian, then the “universal essence” of the custom is brought down into effective agency; the thought-substance is now completely united with the singular action of the free self. Ethical life as the goal (*Zweck*) is achieved. The identity has been produced; and it knows itself as its own production—it is the identity of a self. The conscious self has become what it wanted to be from the first; but both the substance and the consciousness are divided in this process. How this happens is explained in the next paragraph.

- 8./445. This stepping-asunder of consciousness means that the ethical substance both exists as independent of self-consciousness, and displays the self-distinguishing nature of

consciousness. There is the human law, and behind it a natural (or divine) law. Self-Consciousness divides, and allots itself logically to one of these laws; as a result it becomes a dialectical unity of knowledge and ignorance. It experiences the contradiction both of the powers and of its cognition. Through its downfall the ethical substance becomes actual self-consciousness and ethical life perishes.

Self-Consciousness “strikes consciousness apart” into the substance and the “consciousness” of it. This is the establishment of the Substance as a recognized social authority. As authoritative the community exists as an antithesis (*Gegensatz*) to the self. But because it has divided in the process of becoming a human authority, it “equally displays in itself the nature of consciousness” through an inward self-distinction. Instead of being one solidary system of ethical custom it is now two different “laws,” the divine law that was always there, and the human law that has been “thought of” and realized by self-consciousness. In empirically descriptive terms the Hellenic *Volk* becomes a community of independent political communities.

This is the “division of the substance” that we have already discussed. But we must now examine how the “articulation into masses” displays the “nature of consciousness” in the Substance. The “articulation into masses” that are not accidental “distinctions in the essence” but arise necessarily from the activity of “self-consciousness” was first mentioned in paragraph 437. The “ethical essence” is the whole Greek world over which Zeus holds sway. But the self-consciousness of different groups articulates the essence into different “masses” each of which establishes its own “human law.” All of these communities have the same “divine law.” But each self-conscious mass within the whole builds its own law onto that foundation. The communities cannot help being aware that this is a matter of human institution (i.e. of the establishing of a “self-conscious” identity within the ethical substance of the essence), because in this respect they are all different, whereas with respect to the “divine law” they are all the same.

The universal custom of Zeus and *Dike* was always *substantial* because all of the Greeks spontaneously observed it. But there was no humanly instituted system of enforcement behind it. The families and tribes maintained their own ancestral friendships and vendettas, out of ethical commitment alone. That “law of nature” was both erratic and irrationally wasteful; hence the articulation into “masses” with a self-conscious identity was essential to the Substance itself. The justice of Zeus can only reliably be done by communities that have a “self-conscious identity”—or in plain language a *public will* executed by a State-power that is recognized and supported by the Will of All—i.e. by the whole mass of singular consciousness.

When “simple substance” articulates itself into “masses” (the “cities”) it becomes an “ethical essence” that is internally “distinguished.”²⁶ “It splits into a human and a divine law.” The public will of each of the masses must maintain both the *Sitten* that it has established, and those that were there before it began its own law-giving activity. By a natural necessity that we shall soon understand, male con-

sciousness is now devoted to the particular law of the City, while female consciousness remains devoted to the older universal custom of the *Volk*. This allotment of self-consciousness was firmly rooted in the universal custom, otherwise the political development of the independent “masses” could never have occurred.

In paragraph 446 we shall learn that the articulation of the simple substance into masses that possess a self-conscious identity, is the creation of “spiritual *things*.” The mass of consciousness becomes a self-conscious Concept as the city of Thebes or Athens; but in the backward-looking perspective of the original continuum of *spiritual* Sense-Certainty this “thing” is a multitude of “properties”—the families in which its citizens are born and made. The older community of families and tribes, with its “divine law,” becomes a *political* community (*Gemeinwesen*) because it is a self-conscious mass that has a will to maintain itself. It may take itself to be a substance (just as Perception takes its “things” to be substances). But it is not really an independent substance; the true Ethical Substance is the universal community within which it has articulated itself as a “distinction.”

The downfall of the national self-consciousness of this community of communities has its logical origin in the split between the two laws. Male consciousness is allotted to the human law because self-assertion is primitively a male function; custom becomes “public law,” because the male consciousness breaks away from its family and tribal loyalties and “raises itself to the universal essence” of a community that is “thought-of.” It knows that the community belongs to it, because it consciously sustains this community.

Thus the myth of Oedipus expresses the conceptual difficulty that “spiritual thinghood” creates; and the story of Antigone shows what happens when the substantial continuity of the “properties” is self-consciously asserted. What Hegel says here applies to the knowledge and ignorance of both sides. But the myth of knowledge and ignorance is properly the myth of Oedipus and the Sphinx; and the tragedy of True Spirit is the tragedy of masculine authority. So we must begin there, even though it is the equal self-assertion of female knowledge and ignorance that completes the circle.²⁷

Oedipus is cut loose from his natural origins by the divine decree of the Oracle (or, in the language of thought, by conceptual necessity). He knows nothing of his family. He becomes the executive authority of Thebes, without anyone knowing that he has killed the king who was its divinely appointed natural head, and without his own knowing that the king was his father. The public authority is not (and cannot be) a “family” matter; and everyone must forget his family connections in its service. Similarly Oedipus marries the woman who was his natural mother because the public interest requires it; the family that he establishes is as much an ethical contribution to his political career as his forgetfulness of the parents who gave him life.

But the Sphinx whom he thinks he has vanquished decisively by answering her riddle with the word “Man,” and going on to exemplify the self-making of humanity as a free self-positing of “human law,” is the divine law of nature, which he necessarily had to forget in order to do what he did. The human law has violated the divinely authorized custom (which needed it in order to become *law*);

and the ethical action of voluntary commitment to the communal Self-Consciousness has unknowingly done what is absolutely unethical. The natural origin of the “free self” cannot be ignored; the contradiction between Nature and Spirit is made explicit by the attempt to forget what we naturally are. There is an ambiguity about what is ethically substantial. The ethical essence (the *Volk*) comes into conflict with the distinction of its “masses.” The dialectic of Perception repeats itself, and the “spiritual thing” collapses into an overt contradiction. The universal certainty of natural custom, and the determinacy of human law cancel one another out. Only the universal Law, understood in its intellectual abstraction, and the arbitrary will of the natural self-consciousness are left. The self-consciousness that maintained the identity of the Substance with its “singularized actuality” emerges as the only *true* actuality.

Paragraph 444 summed up the positive achievement that will be described in the following subsection (a). Paragraph 445 summarizes the motion of downfall (*Untergang*) which is described in Hegel’s subsections (b) and (c). So we are meant to apply the myth of the Sphinx to Antigone as much as to Oedipus. She is the self-consciousness that allots itself “according to its essence” to the divine law; and her project shows that it is indeed “law” even without any humanly constituted agency of enforcement. The ethical action that establishes the human laws “divides consciousness” in dividing the substance. The womenfolk do not go to war or to the Assembly; and it is natural for them to suppose that “ethical action” is not their concern. Ethically they are only supposed to be *patient*.²⁸ But the natural self exists within every singular consciousness, and its emergence is radically free (and hence unpredictable).

This natural wilfulness is a more primitive name for what is poetically represented as “ignorance” at the level of Spirit. We are dealing with a practical ignorance—i.e., with a *refusal to recognize the authority* of the opposed law. The tragedy could never happen if a “life and death struggle” were not provoked. Creon’s edict provokes Antigone certainly; but she is the first to assert her *natural* self. Neither of the opponents is ever conscious of asserting their natural selfhood; but each accuses the other of it—and both are right in what they observe. These two are the Nemesis of the Ethical Substance because that natural selfhood is supposed not to assert itself at all within the substance. “Self-Consciousness” is supposed to have been completely spiritualized.

VI A(a): The Ethical World, the Human and Divine Law, Man and Woman

The simple substance of ethical life is a permanent continuum of transience like the world of Sense-Certainty. But we must remember that “Sense certainty” is the certainty of a world of Sachen. The tribes, and even the still unorganized masses, have their identities, like the peasant wife’s cows. The tribes of Attica were there, before there was a city of Athens; and it is the primitive community of Athens (or Thebes) that is the “case of action” for the primitive lawgiver. The City of Theseus is the ethical thing that arises from ethical action.

(d) *The Spiritual Thing*

- 9./446. The immediate certainty of ethical being passes over to ethical perception and repeats the dialectic of singularity and universality at a higher level. The two laws are the universal and singular moments of the ethical thing. Both masses of lawful substance are the whole Spirit, so the moments of the Concept are not now the substance, but only a superficial antithesis.

The “thinghood” of Spirit is identical with the *political organization of tribal custom*. In Perception, Consciousness wavered back and forth, characterizing both thing and properties first as universal and then as singular; thus the essence of thinghood was revealed to be the identity of these opposite conceptual moments. Now we have a real substance—the living community of Hellas as a *Volk*—which differentiates itself into “spiritual things” that express these conceptual moments as a “superficial antithesis.” Every self-conscious Greek community perceives itself as the identity of the universal spirit of Hellas with the singular spirit of Athens or Thebes (or Sparta, or Argos and so on).

The “case of ethical action has many ethical connections”—consider, for instance, the action of Hippolytus, who by his exclusive devotion to Artemis arouses the vengeful anger of Aphrodite. If he had been married as a young prince should be, Phaedra’s passion might not have lighted upon him (or at least it might never have revealed itself); and if it did still come into the open, the whole ethical balance of things would have other than it was. What happened between Hippolytus and Theseus would certainly have been different.

But that is not a case that we are interested in. The Ethical Substance must have many of these “connections” reconciled within it. All of the shapes of consciousness are sublated in it, and it needs many poetic shapes of the Gods for that reason. But just as we did not need to be concerned with all the multifarious properties of things in order to develop the concept of the “thing,” so we do not need to concern ourselves with the whole company of the Olympians, or with all of the hero-cults—not to mention the divinities of nature, universal and singular, from the Mother and Daughter at Eleusis down to the devotion of some rural boy or girl to the dryad of the tree that shades the family hut.

The conceptual structure of the Ethical Substance can be summed up in the same antithesis that the concept of the perceptual “thing” was reduced to. The substance of Spirit is the *recognition of law*; and for the ethical perception that takes this substance to be a spiritual *thing*, the *Gegensatz* is between the law as the universal custom of the Greeks, and the law as the actual constitution of Athens (or Thebes). The antithesis is “superficial” because each side of it is “the whole spirit.” The custom of the Greeks is ordained in the constituted law of Athens; and the free authority of the communal self-consciousness is divinely ordained and recognized in the universal custom.

There is a marked contrast between paragraph 445 and paragraph 446. Each of the “masses of the Substance” (the universal custom of Greece, and the singular constitution of the self-conscious community) is “the whole Spirit”; so this is

called a “superficial *Gegensatz* here. But in paragraph 445 it was described as an inevitable split (*Spaltung*) in the substance, that would prove disastrous because it puts the two powers (*Mächte*) into contradiction (*Widerspruch*). This contrast is only an accident of perspective. Paragraph 445 surveyed the whole movement of “True Spirit” (as Concept, Experience and Result); paragraph 446 is the preamble for the exposition of the “Concept at rest.” When the Ethical World is in perfect working order, the *Gegensatz* of “spiritual thinghood” is merely apparent; the two laws are in perfect harmony because they mutually comprehend one another. Within this harmony there can be many “tragic collisions” (like those of Hippolytus, or Alcestis, or even Pentheus in the *Bacchae*). But it is only when the wisdom of Athena in the *Eumenides* is lost, that the two *origins* of what is really *one* law seen under its opposite aspects give rise to a necessary conflict.²⁹ When that happens the split in consciousness becomes a tragic life and death struggle between the two sides of the Self-Consciousness of True Spirit.

- 10./447. Singularity has here the significance of self-consciousness generally; the ethical substance is the *Volk* as a constituted community, and its actual consciousness is the citizen. The “thinghood” of Reason (par. 349) has become the truly actual Spirit.

Hegel considers first the moment of singularity in the intellectual *perception* of the “ethical thing.” Every singular consciousness is the universal self-consciousness of the Substance. What makes the community *one* is the fact that all of its conscious members recognize its law as their true selfhood. It is their *Gemeinwesen*, the essence that they all have in common. As a multiplicity of “properties” the individual citizens are the *Gegenschein* (“reflection back”) in which the spirit of the people is “for itself.” It is a “substance in itself” in that it is the source of the free life of all of them. They all know themselves to be “the people”; and each recognizes her dependence on this substantial identity.

When Hegel says that “as actual consciousness the spirit is the citizen of the *Volk*,” it is natural to remember Aristotle’s distinction between the free “citizens” as “members” of the *polis*, and the slave class as part of its “equipment.” But every native-born person is the “actual consciousness” of the *Volk*. Every Athenian, slave as well as free, knew the stories (as Hegel remarked in 1796).³⁰ Hegel assumed that everyone went to the drama festivals. The actual custom was more nearly Aristotelian; but the plays pictured a society to which Aristotle’s definition of “citizenship” is hard to apply. Creon calls the hapless guard who reports the burial of Polyneices in the darkness a “slave” (*doulos*); and the Chorus uses the same word for the Theban shepherd in the *Oedipus Tyrannus*. But these two surely represent the “actual consciousness” of the *Volk* (especially the Theban shepherd, as the only character who is generally recognized by the others to know the whole story). So (with a prophetic reference to our *modern* situation) we must regard everyone who “tears up the universal [spiritual or cultural] being and takes his own share for himself from it” (par. 439) as a *Bürger des Volks* here.

But there is a more radical ambiguity in the word *Volk*. The “singular” *Volk* is “Athena’s people” (or the “children of Cadmus” as Oedipus calls the Thebans);

while on its “universal” side the *Volk* is the Hellenes, the children of Zeus. The difficulty is that (like “fruit” to use one of Hegel’s favorite logical examples) the Hellenes are a universal that occurs only in particular shapes (Athenians, Thebans, etc.). The singular *Volk* (Athens, Thebes etc.) is the “spiritual thing” that came under our observation as a result of Reason’s attempt to find itself in the “skullbone.” It is the Ethical Substance *instantiated* in the *polis* that is Reason as a perceptible “thing.” This has now emerged “in its truth *for itself* as conscious ethical essence.”

Let us now consider the crucial role of the “singular self-consciousness in general.” The Council authorizes Creon’s edict. They make it the voice of the people of Thebes. When Antigone acts in defiance of the edict she is not encountering an irrelevant and incomprehensible Necessity like Faust and Gretchen or Romeo and Juliet. In speaking for the great community of the dead she speaks for the “people of Zeus”—and that is the true *Volk*. But the particular spirit of a “child of Cadmus” preserves itself in her too; and she would be sad to see Thebes brought low by the other “children of Zeus” (as it very nearly is). She can only obey the law of Zeus by claiming burial for her brother in *Theban* earth.³¹

The ambiguity of the word *Volk*, the fact that there are no “citizens of Hellas,” is what the tragedy of the “ethical Substance” brings to light. Athena speaks with the voice of a *Gemeinwesen*; Zeus can only do that “accidentally” at Olympia. Every one of the Olympians—except Hades—is *both* a particular City-God and a universal Greek deity. Antigone’s law is the Universal, Creon’s the Singular. But also Creon’s voice is the Universal and Antigone’s voice is the Singular. This is the shifting dialectic of Perception repeating itself. Because each of them is immediately identical with the Universal, “this consciousness has its essence in simple Spirit” for both. But the certainty of *actuality* is deceptive. The “voice of the people”—which is what we are here concerned with—turns out not to be the “voice of God” after all, because Thebes is not Hellas. In the end Teiresias makes Creon see that Thebes is a *Greek* “thing” among the others, and that it must be “for itself” what it is “for them”; but by then it is too late for Antigone (or for Creon himself).

The “spirit of the people” is *actual* as the legitimacy of the government. This is how the “singularity” of the spiritual thing appears to Creon. It is his single voice that “has the significance of self-consciousness generally.” My counterpresentation of Antigone as the singular self-consciousness of Zeus is only an anticipation of what we find Creon and Antigone seeing and saying in the play. We are not concerned with that yet. The dialectic of spiritual thinghood has not yet begun.

11./448. This spirit is *human* law because it is essentially a self-conscious actuality; as universal it is well known. It is *singular* in every citizen, and *simple individuality* in the government. As valid authority it *exists* as a liberated finite being.

The actual *Gemeinwesen* is constituted by the human law, because the “spiritual thing” is a self-conscious communal will. As the spirit of a self-consciously actual substance—one that is a “subject” in the sense of being able to *act* both in relation

to other actualities like itself, and in relation to its own conscious members—the community must have a *government*.

All of the traditional ways of the *Volk* need to be humanly regulated in the political community. Thus, for instance, one is a citizen because one's parents were legally married citizens; when "the Laws" argue with Socrates, they ask him first whether he has any complaint against the law that married his parents. But much of what is enacted as "human law" was well known as the custom everywhere. It can only be *recognized* by the self-conscious community; it cannot be changed. What the human enactment affects is only the consequences of a violation.³²

As *human law*, the universal custom is validated in the singular consciousness of every citizen as the will of the general self-consciousness. The consciousness of the citizen is a *Gegenschein* of the custom. Each one "reflects the custom back" as a known law; and there is now an *actual self* that will judge and punish me if I do not observe it. So the constitutional establishment of the "government," which executes the will of the people, is the most vital moment of the "human law." This is the self-certainty of "self-consciousness in general."

The "simple individuality" of political sovereignty is represented for spiritual intuition by the poetic image of "the king." But without the *Gegenschein* of the custom in all citizens, Creon could not be "the king"; and for this mode of consciousness the image is needed. We need to *see* the "backshining of the Spirit," in order to be conscious of our law as a singular will. The City itself does not need to *have* a king. One of the functions of Antigone's tragedy (in the mind of Sophocles) was to show why the kingship had to be superseded. Even Sparta, which retained its ancestral kingship, had two royal families, and two kings at a time; at Athens the "ruler-king" (*archon basileus*) belonged to a board of nine archons. His title was a surviving vestige of what Aristotle regarded as a universal institution in the archaic communities of Hellas;³³ and for spiritual "intuition" the story of the primitive community provides the necessary image of its mature conceptual structure (as well as the explanation of why the structure could not remain in its primitive condition).

Since the myth only represents how the citizens must intuitively conceive their relation to their community, it does not matter whether the kingship of Thebes or Athens was historic, just as it does not matter whether there was once a hero called Oedipus, or one called Theseus. The dramas express the actually valid philosophy of government; and Hegel is trying to make that philosophy conceptually explicit without falsifying its actual shape. In the evolution of clear cognition we must start by facing our human lawmaking capacity in the shape of another self who is as "indivisible" as we all are. In this *Dasein*, this finite being who is "let go" or "set free," we have the immediate certainty of our substantial being, perceptible as a valid *Existenz* in the open light of day.

Dasein is a category of Being. It designates what "is there" filling a finite space for a finite time, but always in an unstable state of "becoming." It comes into "being" and passes back to "nothing." This is precisely the category of what can be *pointed at* (at the climax of Sense-Certainty). *Existenz*, on the other hand, is a category of Essence. It is the appearing, or standing forth for observation, of the inward

essence that is eternal. The sovereign authority of Thebes is necessarily as permanent as the independent community of Thebes itself; they are different logical moments of one identical “thing.”

But the form of this *Existenz*, its way of being sensibly present, can vary. In fact, it must vary since the king dies and the kingship passes to another. Even the “kingship” is only a *form*. When Antigone calls the Chorus *koiranidae* (“princes”) in her final plea for the recognition of her “piety,” she implies unmistakably that the heroic kingship has perished; it died with Eteocles and Polyneices, and she herself is “the last of the princesses.”³⁴ But the “individuality” of Thebes abides still, although it can only be *understood* (not sensibly intuited) in a senatorial Council or in the democratic Assembly that is its mature shape.

Kingship as an actual institution belongs to the pre-political world, the world of the tribe, in which all authority was “divine law.” When the “human law” is properly established, the king must go. But the memory of “kingship” remains, so that the new *polis* can know (in the consciousness of every member) what it is and how it is alive.³⁵

- 12./449. The divine law emerges to confront this public power, which has coercive authority over individual license. The inward essence is something other than this actuality.

Hegel now turns to the *divinity* of the law—its “givenness” as a law of our nature, which can be supported but not changed by any self-conscious will. That we should institute a government to clarify it and make it secure in execution is a natural (i.e. logical) imperative present in the divine law itself. The institution of the Areopagus at the climax of the *Eumenides*, signals the end of family feuding (the “bad infinite” aspect of our natural identification with the family or tribe). This institution resolves the contradiction that is involved in the kingship being regarded simply as a natural (or divinely given) authority. *That* assumption injects the justice of the feud into the family itself, with the result that the traditional conception of kingly authority as an ordinance of God comes into tragic conflict with the conception of family integrity as the goal of natural ethics. In this way the *Oresteia* (and specifically the *Eumenides*) displays for intuition the logical reason why the “divine law” had to become a human (or “self-conscious”) institution.

The “human” law is the *Existenz* of natural ethics as a *Wesen*. A self-conscious decision about what is best for the community is quite different from the gut-feeling of what I, the natural self, must do for the integrity of the family bond of blood. The instituted authority takes over my responsibility for vengeance, and my newly rational self-consciousness (that is to say, the consensual sense of what is “just”) obliges me to bury the hatchet when human justice has been done; but the sense of grievance may still persist. Injury and revenge are the “singular being for self” that we must think of here. The public authority prevents me from stealing, and protects my property from open theft. Open refusal to recognize a right of property was just the sort of occasion from which blood-feuds began. The “being-for-self” that is supplanted by the “actual universality” of human law, should be conceived *ethically*

as a will for vengeance that is seen as “taking the *law* into one’s own hands.” This is what is now ethically barred. But it is an open question how far the self-conscious (or rational) vengeance of the government can be pushed without provoking *ethical* defiance. Vengeance cannot now present itself as an ethical motive; but that is not all that is involved in the integrity of the ties of blood. On the contrary, each of the two laws (natural and instituted) contains the same “whole.”

The older obligation to maintain the custom of the *Volk* confronts the instituted law of community as the “simple and immediate essence of *Sittlichkeit*.” I recognize that I have to do what the instituted authority demands; but I still have all of my more primitive feelings about how I must behave. My ethical “knowledge” is what tells me which of these obligations is really the ethical one. The public authority has coercive power; but that cannot make it an *ethical* authority if my knowledge tells me that some primitive obligation of natural feeling still holds. The evident “actuality” of the public authority will only drive me into operating by stealth. Electra and Orestes are driven to scheme against Clytaemnestra in secret; and Antigone buries Polyneices the first time under cover of darkness.

- 13./450. The whole substance *exists* in both ways. There is the self-conscious ethical community, and the immediate substance of the Family. This is both the possibility of ethical life, and the moment of self-consciousness. It is the *element* of the People, and stands opposed to the actual ethical life that forms and maintains itself by cultural labor.

In paragraph 446 Hegel pointed out that whereas the abstract “thing” of perception was constituted by the conceptual determinations of singularity and universality, the spiritual thing is a substance, and the conceptual determinations are only a “superficial antithesis”—i.e., they are two different ways of conceiving something that constitutes itself. In paragraph 447 and paragraph 448 we looked at the substance from the side of singularity (or “self-consciousness”). We conceived it there as a singular thing. The humanly established law was the unity of the thing, and the citizens who recognized that law were its properties. The unity exists as the government, and is intuitively represented as the monarch, the self in whom every citizen can recognize the sovereignty of Self-Consciousness.

But in paragraph 448 we also began to consider the substance under the aspect of universality. The perceptual thing exists in a world of things; and it turned out that its relations with all the other things *were* its essence after all. Similarly the substance of the spiritual thing is the Divine Law that was not made by the sovereign community, but given equally to all of the spiritual things by nature (or intuitively), by the Father of the Gods, the god of kingly justice and good government. The conceptual antithesis of “essence and existence” applies to the universal aspect of the ethical substance, just as much as it did to the singular aspect; and because the fundamental antithesis of thinghood is only “superficial” every subordinate antithesis is dialectical—i.e. it can be applied in opposite ways.

From the point of view of self-conscious sovereignty as an existence that stands forth as human government, the divine law is an “inner essence.” But in the story of substantial existence the divine law was there first, because it has always existed.

It had to exist already in order for self-conscious sovereignty to come into existence. The sovereign community (*Staatsmacht*, par. 449) is the “actual self-conscious agency” of the substance; but the tribalized world of families was (and is) the subsisting potential of that agency, or the way that it “immediately is.”

(e) *The “Element” of Ethical Life*

The main problem in understanding paragraph 450 is to discover what Hegel means by saying that the family is the “*unconscious* still inward concept” of ethical life “although, on the other hand, it has the moment of self-consciousness within it just as much.” It is only “the universal possibility of ethical life *überhaupt*,” yet it is an equally complete way for the ethical substance to exist.

Thus far I have taken the “immediately subsisting” shape of the ethical substance to be the “tribe” (with its own natural head, or “king”). But even in that immediate “shape” the opposition of human and divine law is present. The king is a “self-conscious” authority, because everyone is conscious of the obligation to support his decisions. Tribal existence is not the mere “possibility” of ethical life, or its “element”; it is an actual shape of ethical life. There is no problem about seeing how it “contains the moment of self-consciousness” or how the “human” and “divine” aspects of the law implicate one another in this primitive but actual shape of society.

The *family* as such is more elementary altogether. It is a unit that cannot maintain itself in perfect independence. The “tribe” already contains a plurality of families. That is why it needs a *royal* family to hold it together. One can see why the family is the possibility (or the “element”) of ethical life, by considering how it necessarily evolves into this wider kinship group. It does so because it cannot subsist *actually* on its own account.

But how does the logically minimal family—the two parents, their children, and the “holding” from which they get their livelihood—“contain all the moments of the content of the ethical substance”? This is tantamount to the question of how it contains the two “laws” (for apart from that antithesis we do not know what the moments are). We have to see how the family is a “whole spirit” involving both of the laws.

Hegel himself tells us what the spirit is; and from that we can see how the family substantiates the “divine” law. Just as Athena is the spirit of her City as an actual human community, so the spirit of the family is the Penates—the household gods. These are really the *ancestors*. The family is an “immediate or subsisting substance” only when each generation takes itself to be the subsistence for this time of an identical being that has endured from time immemorial. The Divine Law of the family, is that every new generation must preserve the memory and the honor of those who went before. This duty and this reverence must be practised and taught. Every natural self who comes into the world must replace the selfhood of natural desire with this other spiritual self of identity with the “substance.”

The family’s Human Law is the *spiritual* sense of the relation between parents

and children. The father is, of course, a natural lord; he can make everyone in the family fear him. But then, it is not a *father's* authority that he has, and (so far as the relation to him is concerned) there is no family. The human law of the family is not "the law of the stronger," but the categorical obligation to identify one's own will with a family tradition of which the father is the living representative or mouthpiece.³⁶

Let us consider now, how the "whole spirit" that has this self-conscious identity is itself the "*bewusstlose*, still inward, *Begriff*" of the actual ethical life of the *Volk*. The inculcation of family loyalty constitutes an ideal preparation for actual membership in the ethical community, because good family members will already have gone through the experience of identification with an ethical community. But the domestic experience is not one that family members have a conscious choice about; and they do not realize that it constitutes their selfhood. In the wider community the situation is different. When the constituted society demands that the young men who are ready to leave home and start their own families should do it as ethically committed members of a constituted community with a publicly made and formally recognized law, there has to be a new kind of identification—one that is "chosen" in Aristotle's sense, even though it is rarely deliberate.³⁷

The whole complex of institutional training and service, with all of the labor of maintaining the public good, requires the "active citizens" to forget their families; and even those who are not expected (or even allowed) to do the *labor*, all join in "tearing up the universal being" and taking their share in the enjoyment of the *Werk* (par. 439). Even for the girls, their membership in the political community *sublates* the original loyalty to the elementary community to which they belong by blood-kinship. Legal marriage, and consequent participation in the founding of a new family, involves the self-conscious expression of the "self" that is formed spontaneously in the "natural ethical community."

Everyone in the City goes to the drama festivals and "enjoys the *Werk*" of political existence; but only the men have to build up a disciplined readiness to leave the natural community behind, and sacrifice their lives for the constituted one. For the womenfolk the required transition of loyalty is from the family they are born into, to the family in which they bear the children. This is another tension within the Divine Law, and there were myths (and dramas based on them) where the remembered bonds of the woman as sister or daughter come into conflict with her mature ethical loyalties as wife or mother.³⁸ But in the ethics of True Spirit, the free self-consciousness of a woman, whether natural or ethical, whether constituted by spontaneous desire, or by conscious decision, is always an identification with the "spirit" of some family.³⁹

The spontaneous identification with the Penates is "the self-conscious moment that expresses ethical life in the element of immediacy." But the universal Concept that is involved is still unconscious in the sense that there is no public expression of it, and no overt recognition is demanded and enforced. The actual community of the City is constituted in the "element" of all the voluntary labor and sacrifice that goes into family life; but only the service of the City is "labor" in the acknowledged

sense. In the virtuous citizen it may come to be just as voluntary and spontaneous as a family commitment. But it was first imposed by authority, and its spontaneity is the result of long training and discipline. That family life involves training, discipline and sacrifice, too, is implicit in its designation as an *ethical* community. But in the perspective of the harsher discipline of social duty, all of that domestic labor is over and done with. Domestic life is an “immediate or subsisting substance,” because we do not have to act to realize it. On the contrary, it gives us the substantial foundation of *character* upon which we must stand in order to be properly political agents. This is just as true for Antigone as it was for Oedipus. The difference between them is that she is not supposed to act publicly at all.

The character in whom we can see what is meant by the “*unconscious* still inward concept” of ethical life is that of Ismene. When Antigone’s deed is done, and the punishment must be faced, she shows that she has “the moment of self-consciousness” in her. She is as ready as Antigone to identify with her dead brother and her family then. But initially she has no consciousness of the “substance as actual self-conscious doing” at all. She has no sense of a *duty* to act, because she is deeply conscious that she has no ethical right to act.⁴⁰ Hegel’s use of “conscious” and “unconscious” in this paragraph is determined by the antithesis of “knowledge and ignorance”; and that refers to the awareness of what is categorically required in action.

- 14./451. It is only as spiritual (i.e. as the recognition of self in a *universal* other) that the family is ethical. The immediate identity of love (feeling) is natural. It seems that what is ethical is the relation of the single member to the Family as the whole substance. But the creation and formation of the singular agent is the purpose of this whole. Family property is only an ethical means (or a natural need and so non-spiritual). So the ethical function of the family is to sublimate family membership. It forms the virtue that must leave it behind. It may be incidentally helpful after that, but that is not an essential relation; and even education for citizenship is not a complete ethical *action*. So only the relation to this singular life as a universal Spirit can be properly ethical. Thus it is the dead Shade to which the family is ethically related.

As a community of instinctive feeling—“the concord whereof dependeth upon natural lust,” as the bachelor Hobbes so rudely put it—the family is a *natural* entity; but as one of the shapes of “True Spirit” it is a community that transcends the here and now of sensory presence. Even the mammalian species that mate for life or the social animals such as the dolphin, the gorilla, and the chimpanzee, are anticipations of “natural self-consciousness,” but not of “true Spirit.” Spirit is the “self-consciousness” that binds the living and the dead into a community.

The spirit of the family shows itself in the obligation of the vendetta; but in that aspect it is sublated by the establishment of the Human Law. When we recognize that we must establish a system of communal justice that overrides the primitive bond of blood, the ethical character of the family is transformed. In the political context, the principal function of the family is that of an ethical *means*. Its ethical

goal is to sublimate itself, by creating “citizens”—i.e. singular consciousnesses who recognize *another* consciousness as their true selves.

As we have seen, this is just as true for the female members of the family, as for the males; the girls pass from being daughters and sisters in their natural family to being wives and mothers in their ethical family. But motherhood is the most absolutely *natural* of all bonds; and the ideal of the family is to become a community of feeling that is completely unclouded by the sense of “otherness.” So none of the actually effective relations that exist in a true family (i.e. one that corresponds to its concept) can possibly be purely ethical. When Hegel is seeking to justify Antigone’s claim that her duty to her brother was peculiarly obligatory, he rightly comments that Hellenic marriage was an *ethical* bond (par. 457). Both daughters and sons were supposed to be obedient to their parents in this matter; it was the parents who decided what marriages were to be entered into, and when.⁴¹ But the relationships of mother and wife are necessarily a *mixture* of natural and ethical feeling. The bond of “love” is a natural recognition of oneself in the other; but so far as the ethical aspect of the relationship is concerned, the marriage bond is completely subject to social regulation. whenever husband and wife have the experience of *ethical* recognition in their marriage, it is as citizens who might equally well be married to other partners.

The family itself, as an ethical institution, aims to foster this experience of civic recognition. Family prosperity, which is necessarily part of its natural goal, has no ethical status at all, except in so far as it may help to produce better educated citizens, and may enable them to assume and fulfil social responsibilities that require economic resources. This use of wealth in the public service is the “merely instrumental” (*nur mittelbares*) aspect of family power and wealth in its “higher determination”—i.e. its civic aspect.

The ethical goal of the family is to create *virtuous* citizens—men and women alike. Hegel speaks as if only men were citizens, but the womenfolk have their civic duty, and their ideal of “virtue,” just as much as the men. In this process of making citizens, however, there is no truly ethical relationship—no relationship of free commitment and equal recognition. The children learn to be *obedient* to their parents; then, as maturity is reached, this obedience gives way to the ethical independence of citizens. How can the ethically independent citizen be ethically related to the family that made him (or her) independent? One may, accidentally, be able to do many things for father, mother, brother, sister, husband, wife, son or daughter that one cannot do equally well for other citizens. But there is nothing logically necessary about any of this. Even the great task of civic education breaks up into an accidental set of services in which the part played by the family is strictly finite and has a “limited content.” It is really the political community and its “laws” that educates the citizen to virtue (see pars. 352, 425).

The whole story of Oedipus, from the moment when his mother gives him to the Theban shepherd, after his father has pinned his feet together, to the moment about eighteen years later when he reappears as a stranger in Thebes demonstrably fitted for the kingship, illustrates Hegel’s claim that everything the family does is

either an *accidental* benefit for the individual, or produces him as a *work*. In the limit case of Oedipus, both propositions are true; and it seems likely that Hegel is actually thinking of the two shepherds saving Oedipus when he says that the “content of the ethical action” must not be thought of as “help in time of need, through which in truth, the single [family member] is saved as a whole; for this help is itself an entirely contingent deed.” The only action in the story of Oedipus that has its intended effect is the saving deed of the Theban shepherd. But that was not dictated by custom at all. The salvation of Oedipus, and the way in which he did receive in another city the domestic and civic education that would properly have belonged to him in his native Thebes, illustrates how what might appear to be the essential civic function of the family is only an accidental series of services, rendered not to the self as a “whole,” but only to the natural consciousness. Oedipus soon discovered that he was a foundling; he did not belong either to the civic community of Corinth, or to the ancestral “universality” of its Royal Family.

The adoptive parents of Oedipus did everything that they could for his education, under the general *Vorstellung* that he was going to be the prince and eventually the King of Corinth. But they could not make that *Vorstellung* true; and everything that they did for his happiness, served in the end only to make him unhappy. It does not, and cannot, belong to the family to make the singular agent happy (in accordance with virtue) while she is alive.

“Call no man happy until he is dead,” said Solon. The happiness that the family can bring to its mature single member in its truly ethical relation to him (or her) can only come when she looks back on life and makes its accidental sequence into a whole of sorts, as death approaches. Here again, Hegel’s language directs us to the case of Oedipus: the “One Shaping gathered together complete out of the long series of his scattered thereness” surely refers to the old man resting in the grove of the Furies at Colonus, and refusing to move because he knows that his wandering has at last come to its terminus. The tragic aspect of Sophocles’ drama about the reconciliation of Oedipus with fate is precisely that Oedipus wants to be reconciled with Thebes in his death, and to be buried on Theban soil; Creon refuses this in the name of the Theban Council. At that point Eteocles is the King of the embattled City; and when Polyneices, the leader of the attackers, seeks his father’s blessing, Oedipus assails him furiously because the two brothers had combined to have him exiled, and thus made him a homeless wanderer again in his old age. The two girls, Antigone and Ismene, are with him still (though Ismene does not share his wanderings). But only Theseus, King of Athens, witnesses his death, and weds his body to Athenian earth. This makes Athens the third City to be involved essentially in the “One *Gestaltung*,” and provides us with an anticipatory image of the reconciled universality of the Ethical Substance as the triad of Home (Thebes), Estrangement (Corinth and Thebes unrecognized), and Homecoming (Athens for Thebes, with the Furies turning their “kindly” face, and Theseus as the King who comprehends the *universality* of the *Dike* of Zeus). It is in Colonus, the homeplace of Sophocles, that the cult-memory of the Theban tragic hero is maintained, when there is no family at all left to maintain it. But it is only the dying hero who comes

home to the family of Zeus; and it is only the “one who is *not actual*, only the pithless shade,” who is happy.

- 15./452. Death happens naturally. The right of consciousness has to be asserted. The peace of self-consciousness is different from the natural cutting off of life. The individual lives and dies for the community, and this must be recognized. Consolation and reconciliation must come from a public action. Burial by the family takes over what happens naturally and makes it an action. This makes the purely singular being into a universal individuality [i.e., a spirit]. The family makes him one of the community of the earth, and its dead, which is mightier than the rain, the dogs, and the birds.

The natural death of living things is an aspect of the “Infinity” of the Understanding. Death is the universal fate of living things; to be alive is to be mortal. The Infinite of Understanding is a perpetual motion. When Hegel calls it “the soul of the World or the universal blood” (par. 162) he is indicating the transition from mechanism to the concept of Life. But he is also indicating the fact that all natural life is sustained by the cyclic Infinite of Understanding, and returns into it.

The free rational consciousness knows that death is not just part of a natural cycle of perpetual repetition. The record of a rationally active life is eternal but *unique*. Burial as a conscious act performed by the family (which is itself a moment in the “circulation of the universal blood”) completes the record of a life of free rational activity with an act of recognition. That nature should appear to put an end to what is free is unfitting; the truth that the free life belongs to a continuing community of freedom must be upheld. As a material thing, the dead body returns by its own natural motion of dissolution and putrefaction to the universal order of inorganic Being. But the resting universality of the Spirit is something quite different, so that those who are conscious of themselves in the Spirit cannot let it appear to be produced by Nature; they must make the truth visible.

The death and burial of Oedipus (in *Oedipus at Colonus*) shows us positively how absolute this obligation is (and how it falls upon the Ethical Substance as a whole to fulfil it, if it does not happen in the ordinary way. Oedipus received an oracle, which declared that he would be a “blessing” to the City that received him, and buried him in its territory. Thebes would not receive him, so the oracle was carried out by Theseus, and he was supposedly buried at Colonus (where Sophocles himself was born). This presents for our intuitive understanding the spiritual truth that although the fact of death appears to have no necessary connection with the public good, the recognition of death in the ceremony of burial is vitally important. The Oracle makes the death of Oedipus, far from home and family, into a “return of consciousness into itself”; and Theseus, the paradigm of the wise king, understands what Apollo’s declaration means.

The death and burial of Oedipus’ two sons, Eteocles and Polyneices, makes the significance of burial plain, by showing what happens when the blessing is denied, and becomes a curse. The two brothers kill one another—and so stand before us plainly as the paradigm *Gestalt* of the “struggle for recognition.” They were fighting for the Kingship—which belonged by natural right to Polyneices (so he

thought). He was the King's first son, and he had made an honorable agreement to share the royal inheritance. But the Kingship belonged to Eteocles by the recognition of the community (for he could never have exiled Polyneices without that).⁴² The judgment of Zeus (as delivered in the battle) was that it belonged to neither; and the result of the subsequent attempt by the communal self-consciousness to accept one dead hero, and reject the other, showed that Zeus is indeed wiser than mere men.

The community could easily have buried its chosen King and left the royal daughters (Antigone and Ismene) to bury Polyneices privately. But in life and death situations, passions run high. The edict of Creon, supported by the Council, that those who died attacking the City should go unburied is not without parallel in the wars of the Cities.⁴³ But its application against a member of the royal house was the most explicit challenge possible to the older kinship-basis of community-membership. Worse still, it involved the claim that the community could freely define family membership. It is clear that Sophocles (like Plato) felt that the community should not dishonor its dead (or even the dead of a hostile army). In the case of Oedipus, he makes Creon propose burial just outside the boundaries of Thebes. This would have allowed the family its rights; and since Oedipus had polluted the most fundamental ethical bonds of the family, one could argue that in this case the community was defending its own foundation in the piety of kinship. But from the way that Theseus treats the alien wanderer Oedipus, we can see that this is not how *he* would have decided Creon's problem about Polyneices. The piety that triumphed even over Achilles' wrath, ought to be absolutely paramount. Had Theseus been the Theban King, Oedipus would have received burial within the borders, and both of his sons would have rested with him. Other Theban supporters of Polyneices would have gone to their family graves, and the alien bodies would have been buried or returned to their families for burial. This was what the *Dike* of Zeus required; and since Hegel identifies *that* as the "Ethical Substance" he agrees with the verdict of Sophocles and Plato. But the knowledge of Good and Evil comes only by disobedience.

The case of Oedipus in death is like that of Orestes in life. It illustrates how the Ethical Substance *can* overcome the most disastrous consequences of the contingency that attaches to human freedom. It displays for intuition the spirit that inspired the Athenians after the battle of Marathon. They buried not only their own dead, but the Persian dead, too, believing (so Pausanias tells us) "that it was in every way holy to cover a man's corpse with earth."⁴⁴

At this stage of the argument Hegel simply wants us to grasp the absoluteness of the burial obligation. So although his references to the "forces of abstract stuffs" and to "the lower living things" (or "every base, irrational individuality") are deliberately intended to connect "Force and Understanding" with the rain, the dogs and the birds attacking the unburied dead, it is the horror of Antigone and the prophetic wrath of Teiresias that he wants us to remember. The Chorus says to Creon that it is his prerogative to dispose of the dead in his law, just as he does of the living.⁴⁵ But they are mistaken.

The completion of a free existence must be recognized; and this recognition makes the free self into a "spirit," by identifying it with the universal community, to which it naturally belonged—the family. The ethical requirement that this recognition must be accorded in all circumstances, by whoever is able to give it, in case the living relatives are absent, shows forth the identity of the singular family-spirit with the universal substance of "True Spirit." Formal burial recognizes the dead individual as a child of the Earth, the universal Mother, and a member of the total community for which our Earth is "home." Death will soon reappear in the character of the "absolute Lord" in which we first met him (par. 194—cf. par. 455). But now it is his community that "consoles and reconciles" the departed spirit and overpowers natural life.

Natural death is the "side of the *Entzweiung*" because organic life does not make a proper circle. Birth and death remain separate. The burial completes the circle of the True Infinite by returning the body to the womb of all animal life. Mother Earth is the "elementary individuality that does not pass away." But the burial is only the beginning of the remembrance that is essential. From his reading of Book XI of the *Odyssey* Hegel knew that the disembodied "Shades" in the Underworld had only the palest shadow of a real existence. In particular, they had little or no consciousness or memory. Odysseus restores this to them by allowing them to drink the life-blood of a fresh sacrifice. Goethe dramatized the Homeric conception in his *Iphigenia* by letting Orestes discover that all the agents and victims of the ancestral curse had forgotten their crimes and sufferings. The significance of the image is clear. It is the poet who supplies the life-giving blood.⁴⁶

The "universal" life of the shade is in the memory of those who maintain the cult; but the remembering of how a self-conscious agent completed his or her "work" by dying, is the forming of a thought with a singular referent—the *Vorstellung*, the setting forth, of a uniquely individual essence in its eternal significance. To remember the dead being is to make it into a "being-for-self," i.e. an independent member of our living community of Self-Consciousness. So it is in the communal respect for the family cult of the dead that the Ethical Substance—the universal community of Zeus—actually exists. If the cities do not all respect the brotherhood of the dead in their Human Law, then the Substance will have no self-consciousness at all, not even the shadowy existence of the dead heroes in Homer. The universal community of the Underworld must always remain a vividly present aspect of this world (in which it is the inevitable destiny of the living to fight one another to the death).

- 16./453. Burial fulfils the divine law. Otherwise every *duty* to the single human is part of human law. Human law seems to have all of the actual power, but this is not the case. The Earth is on the side of the dead, and it pulls even the City back into it.

To say that burial is the *divine* law is to say that so far as the dead are concerned no humanly constituted authority ought to interfere with the way that immemorial custom has structured the feelings that exist as recognized bonds of kinship.⁴⁷

The interesting thing about Hegel's doctrine is that the right to customary burial is the *only* aspect of custom that he takes to be beyond the range of self-conscious human regulation. The natural—or subethical—bond of the family is one of *love* (not fear). So the human law must regulate family-relations. For instance, the absolute authority of the family-father over his children has to be subject to legal limitations.

What the law leaves to the free play of feeling is just what helps to create the “self-consciousness” of the community—i.e. whatever has a natural tendency to elevate the actual consciousness of the single family member above the pursuit of private family goods and interests. Education for communal life is the essential function of the family itself with respect to its living members; but only the ethical community can perform the function properly. The contribution of the family, although essential, is never adequate; yet we find here the rather surprising statement that as *actual* beings we belong to the natural community of the family.⁴⁸ This has the important consequence that the nurturing activity of womenfolk is recognized as a significant contribution to the universal *Werk*; the “actualizing” of the single agent as ethical (or virtuous) is identical with his or her sublation out of the bondage of nature. The Family as *ethical* is the free motion that sublates it as a natural community.

“The actual ethical substance, the whole *Volk*” belongs within the scope of the human law. How can this “whole *Volk*” make itself *actual* as a Spirit? It reveals itself in experience as a universal *Macht* that comes from “the *elementary* individual.” The reference to the Earth is plain enough. But the meaning of what is said about it is not so obvious: “his might [the dead man's] is the *abstract*, pure *universal*; the *elementary* individual, which equally wrests back the individuality . . . , into the pure abstraction as into its essence, because it [the elementary individual] is the ground [of the individuality].” The Earth, our mother, is also our common grave; she has the *might* of death, which prevails even over our communities.

In Sophocles' play we can see that Thebes is in danger of being wiped out; a particular City may perish, but life goes on.⁴⁹ But Hegel means more than this. The Earth will eventually swallow the whole world of the Cities; and it will be the assertive self-consciousness of the royal prince who emerges from the grave to which the Ethical Substance is consigned.

We shall see later on “how this might displays itself in the people itself.” For Thebes the avenging Fury of the unburied dead comes (through the pollution of their altars) from the other Cities (par. 474). The play gives a perfectly rational account of this vengeance. Both in Aeschylus and in Sophocles the Furies represent the Underworld of family-kinship. Hegel only makes the *universality* of the Hellenic family plain, by calling Mother Earth the avenger.

Hegel's interpretation has the advantage of connecting birth and death. When he called himself a “son of Earth” in the “Resolution” poem of 1801, he certainly meant to underline both his identity with all of humanity, and the boundary of his conception of human destiny. All of the vistas of spiritual immortality and infinity must finally be interpreted in terms of our existence here on the Earth which is our

home. There is no “Beyond”; this life on Earth is the place of homecoming for our spiritual Odyssey. The womb of the Earth, “the elementary individuality,” is the true Infinity of natural life; and it is in that character that the Earth is the place of the Furies. The free human spirit “steps forth from the Earth” in the first *Philosophy of Spirit* (1804).⁵⁰ This is the “natural selfhood” of the Life and Death Struggle; and this “natural humanity” is the agent of tribal vengeance.

There is also a deliberate ambiguity in the use of the word *elementary* here. The Earth is an *element* brought to life (made fertile) by the cycle of the other elements; but it is the *family* that is “the moment of self-consciousness that expresses ethical life in the *element* of immediacy or being.” When the family is ethically injured, and needs vengeance, it throws up just that “elementary individual” whom we met at the beginning of chapter IV. The “might” of this individual is his consciousness of absolute freedom; and that is the “*abstract, pure universal*” which wrests the “spiritual thing” back into “the pure abstraction” that is its essence. Human freedom creates “the spiritual thing”; and human freedom destroys it again. The City is not the simple substance that it takes itself to be. The perceptual “thing” was a substance that contradicted itself; and so is the *polis*.

(f) *The Organic Body of Ethical Life*

- 17./454. There are *distinctions* and *stages* in both laws, because they involve consciousness. Hence they are actively connected and pass into one another.

This paragraph contains a programmatic statement only. What the “distinctions” in the two laws are, we shall see in paragraphs 455–456. The “stages” are the moments in the motion of the two laws at which the “distinctions” emerge. We have just seen how the human law of the community absorbs the ethical activity of the family completely except for the burial of the body that has no *actual* life. But we were also reminded that the actuality thus absorbed comes from the family in the first place. The motion of human law is in the male experience; and that of the divine law in female experience; and when the motion of the two laws is complete we shall see why the Divine Law is just as important as the Human Law.

- 18./455. The community is executively individuated in the government, which lets the essence articulate itself. Government is actively self-conscious spirit, the independence of parts is Spirit’s real *Dasein*, and the family is the element of this finite reality. But government is the negative unity of the parts, and as such it makes them feel their dependence on the whole. It lets families acquire property, and labor organize itself in craft-guilds. But all belong to the Assembly where these differences are negated. By making wars, government liquefies them all. Individuals are reminded of the lordship of death, so that they do not become rooted in their economic identities, and fall away from their ethical identity. Thus the ethical community depends upon the Lord of Death and upon the Divine Law.

Hegel's brief account of how the two laws cohere and pass into one another begins with the general awareness of the political community as self-governing.⁵¹ As a sovereign power, the government is "the simple *self* of the whole ethical substance"; that is why it is represented as a singular self in the drama. Opposed to it is the moment of the "essence"—the articulated and extended "body" of the social self (i.e. all the different modes of ethical life). Since "the family" is the "element" of this reality it is legitimate to interpret the "articulation of the essence" as the spontaneous development of many kinds of family, and of family-activity; different tribes and demes, farmers, craftsmen, citizen families, metics and serfs etc.

Every Greek city was tribally organized, although in historic times the blood-kinship of the tribe was entirely mythical.⁵² It is certainly correct to say that "kinship" was the "element" of this political articulation. Tribal origins were influential in the effective distribution of land; but the division of labor into family-crafts was also of great significance for the mature political community.

Some families were rich and owned property (including slaves); so the system of personal and property law enters as one of the "distinctions" of the Human Law. But also a civil law of economic association was needed; crafts had to be legally regulated. In many cities alien residents supplied craft-skills; and this is a moment of "true" Spirit, because all were Greeks together. All of them were "children of Zeus"; but from the point of view of "human law," the metics foreshadow the phenomenon of "estrangement," because all articulations, political and economic, ought properly to be dissolved in the Assembly (where the aliens cannot appear). The Assembly has legislative sovereignty. It is the "general will," as opposed to the singular executive will of government. The tragedy enacted by Creon and Antigone represents the tension in the Ethical Substance between this finite "objective spirit" of the political community, and the infinite Spirit of the religious community.

Primitively it is the power of government to make *war* that dissolves all of the articulations of the essence. This power belongs to the executive with the support of the Assembly. "War" is voted by the Assembly, before the executive can start uprooting citizens from their systems of articulation. It obliges the citizens to recognize that they owe the City a death; and so reveals the absolute authority of Hades in his kingdom (par. 452). This sovereign right of the Human Law to require the sacrifice of life, has its "truth and enforcing" in the essence of the Divine Law. As life and death sovereignty the Human Law "coheres with and passes over into the Divine Law." The stages that Hegel referred to, seem therefore to be: tribal monarchy, self-regulating civil and economic order, democratic sovereignty,⁵³ war. War is the appeal to divine justice, in which the universal Spirit (of life and death) becomes manifest.⁵⁴

19./456. The distinctions in the Divine Law are family-*relationships*. The Husband/Wife relation is immediate cognition of mutual recognition; it is realized in the children, and disappears in their coming to manhood (parents grow old and children begin to look after them). All this is a mixture of natural and ethical relation (ethically guaranteed by the *Volk*), because all parties *feel* the continuity and the separation involved.

The corresponding phenomenology of the Divine Law is a logical analysis of the Greek family. The distinctions in the family are the three relations distinguished by Aristotle in the nuclear family (and the *stages* are easily recognized).⁵⁵ First, there is husband and wife, joined by the marriage law in an ethical bond; then there are parents and children joined by love in unequal recognition. Finally, after the parents die, there are the adult brothers and sisters. The maturity of the family is dealt with here (and the control of human law is bracketed, so to speak). This ethical theory of the family gives us Antigone's conception of how her life ought to work out.

The husband/wife relation is one of *natural* recognition. They are the sides of the natural genus (see par. 171 and commentary). Their recognition and (carnal) knowledge of one another has its natural reality in the child they conceive. The spiritual actuality of the family consists in their being effective parents to the children by educating them for citizenship. But the successful achievement of the spiritual relationship necessarily brings about its dissolution: the children become properly educated adults, and the parents get old and die (under the care of the children). Reference to the *Volk* with its public law is necessary here, because it is the legal security of this transition that gives the family its permanently recognized status.

Although it is ethically regulated, the whole process is emotional in its substance. It ought to be a bond of *love*; and it is, in any case, a bond of reciprocal responsibility determined by the natural flow of time. The bonding of husband and wife is partly one of sexual desire; but it evolves into responsibility for the children. The natural basis for this is living identification with them: "The piety of the parents towards their children is emotionally affected by the consciousness of having their own actuality in those others, and seeing being-for-self coming to be in them, without being able to get it back; on the contrary, it remains an alien actuality, all its own."

For the children, on the other hand, the movement of time is the inevitability of separation: "The piety of the children toward the parents is emotionally affected by having the coming to be of themselves—or the *Ansich*—implicit in another that is disappearing, and by attaining being for self and self-consciousness of their own, only through separation from their source." The "piety" of parents toward children is controlled by respect for life, and that of children for parents by respect for death. This double-sided sense of having to separate reflects the necessary passage from family to City, or from the Divine to the Human Law.

- 20./457. No ethical equality is possible. Only brother/sister is an *unmixed* ethical relationship—the sexual relation being barred here. So it is as sister that the woman has the supreme presentiment of the ethical essence. Consciousness of ethical actuality she does not reach. Her relation with her parents is transient and unequal; and she perceives her roles as wife and mother ethically. The ethical aspect overrides the natural, because these bonds are all the life she has. For the man the natural and the ethical separate, and because he is ethical as citizen, he can freely enjoy his family. Only the sister's relation to her brother is *purely* ethical and when he dies her duty is absolute. [See *Antigone*, lines 904–928.]

The equal “ethical relation” is properly the recognition of the other as identical with the same community with which I am identical. The relation of husband and wife is an instinctive recognition that each is the opposite complement required for the identity of the “genus”; they are essentially an “identity of difference,” not an “identity of equals.” The same is true in a different way of parents and children; here the difference is more complex, being temporal and self-inverting. First our parents care for us; then we care for them. Hegel ignores the relation between brothers here. The consequences of their *natural* equality as exhibited for intuition in the myth are potentially disastrous.⁵⁶ Within the family it is the ethical equality of brother and sister that is important to us, because they are naturally allotted to different laws. Consequently it is in the role of sister that woman has her highest *Ahnung* of the ethical essence.

This paragraph is mainly a mistaken attempt on Hegel’s part, to make Antigone’s last long speech into an accurate account of Greek ethics. In fact that speech was *not* an accurate account of the ethical piety of the Greek family, and Sophocles did not mean it in that way.⁵⁷ Antigone says that she would never do for husband and son what she has done for her brother; but at this point she is still unmarried, and if she is ever allowed to marry after this speech (which is in effect her last throw) then the social situation will be different. The time of the ancestral Royal Family will be over. Antigone will never *need* to do for a husband or son what she has done for her brother; and the situation that made Polyneices a declared traitor can never recur. The bargain she offers is a sophistical one, which has *no* clear ethical implications.

But Hegel wants to establish that there is a necessary *ethical* relation between brother and sister. They are equals, and the natural relation of sexual recognition is barred between them. The bar itself is “ethical”—for in all traditions we find exemplary stories of how sexual attraction has led to its violation. There is a *negative* ethical relation between brother and sister that is immediately and primitively recognized as “necessary”—i.e. God-given. Hegel wants to argue that precisely because of this, the *purely* ethical bond of the family is necessarily felt *positively* by a sister towards her brother. For a woman who perceives her own situation in life in a strictly ethical perspective, he claims, the religious duty of burying her brother is the highest and purest.

In the Ethical Substance, woman’s whole life is ideally characterized by the natural emotion of love. She must do as her parents think best in the matter of marriage. But she *desires* a husband, and the wedded couple ought to *please* one another. Ismene explicitly asserts that the betrothal of Antigone to Haemon is a love-match.⁵⁸ So the ethical aspect of family life is all “intimations” (*Ahnungen*) except in cases (like that of poor Phaedra) where the self-conscious unity of the family is ruptured, so that feeling and duty become separated. In a normal case, only the natural breach caused by death can bring the ethical *Ahnung* to clear consciousness. Thus—according to Hegel’s interpretation—Antigone’s speech expresses the Divine Law at the point where it has to show itself as a Law.

This is because her brother is “her other half” not naturally but rationally. The

two are *equal but different*, and their mutual recognition is the rational recognition, the theoretical intuition of human nature as such. Hegel takes Antigone to be claiming that the affection of sister for brother is both *ethical* and *absolute*, because its natural expression is ethically barred, and no public duty can ever intervene to override it. Civic duty can easily make it unethical for brothers to follow the impulse of natural affection. One can imagine, for example, that there were cases of one brother drowning and the other surviving at the battle of Arginusae, where public indignation led the Athenian Assembly to condemn and execute six of the victorious generals for not stopping to pick up drowning men (or at least their bodies for burial) in the heat of the battle.⁵⁹

On the other side family duty (to husband or children) may conflict with, and ethically override the natural affection of sisters. So it is only the affection of sister for brother which is both ethical in itself (because of the incest taboo) and contains no implicit potential for an ethical conflict. So the sister-brother relation can be seen as an *ethical* anticipation in the natural family of the supreme mode of *morality* in the *universal* family of Reason—the relationship of charity.⁶⁰ We can readily understand, therefore, why Hegel's attention was caught by this aspect of Antigone's action, and particularly by her last speech in justification of it.

Goethe found this speech quite repugnant to his moral feelings, and inconsistent with what he thought of as the rationally conscientious character of Antigone's general behavior and argument up to this climactic point. He suggested that the speech was an actor's interpolation unworthy both of Sophocles and of his brilliantly conceived and realized heroine. It is clear that Hegel wanted to show, on the contrary, that Antigone's last long speech is entirely consistent both with her character and with the "ethical" context of action in her society. I believe that he is demonstrably right against Goethe, about the consistency of Antigone's character—which is not at all "Kantian."⁶¹ But it is certain beyond dispute that he is wrong about the "ethical" context, both in the archaic and in the historical period. Antigone's argument belongs to the generation of Sophocles and the major Sophists. Hegel has let himself be misled into inventing a "substantial" foundation for one of the most brilliant strokes of *subjective* characterization that Sophocles ever achieved in the mature style which he himself called "most expressive of character (*ethikotaton*) and best."⁶²

That there was no peculiar bond of duty binding a sister to bury a brother, or to maintain his memory in particular in her family-cult, hardly needs argument. The nearest analogy offered is the story of Althaea's revenge on her son Meleager, for the death of her brothers. But that is a case of conflicting family loyalties in a feud, and there is no sign of an "Unwritten Law" here at all.⁶³

Against the claim that there was *any* normal ethical duty binding a sister to bury a brother, we can cite two indubitable "ethical" facts. First, marriage must often have deprived a woman of the opportunity to participate actively in the cult of her birth-family at all; and her brother's duty as a soldier would often have resulted in death away from home (whether her home or his).⁶⁴ Secondly, the right of parents could, *in extremis*, extend to the *selling* of girl-children. For Sophocles' own time

(though not for the pre-war world in which the *Antigone* was presented) this is vividly portrayed in the *Acharnians* of Aristophanes. One can fairly argue, of course, that Aristophanes was dramatizing the desperation that overrides *all* ethical ties. But the implications of this case for the archaic world before Solon abolished debt-bondage seem to me to be clear; and the existence of a recognized ethical bond between sister and brother in that world must surely be ruled out. The married sister had more urgent *living* obligations; the unmarried sister had no status upon which any obligation could be founded except that of filial obedience.

- 21./458. The brother is what the family produces for the *Volk*. His task is to create self-conscious ethical life.

That sister and brother must be lost to one another in life is logically required by Hegel's own view that the family produces a young man who is an ethical individualization of the City, a consciousness that accepts its divine self-consciousness as his own rational Self; and its Laws and custom are the concrete *Sache selbst* which is the rational standard for all of his activity. When Hegel calls the adult brother "the side on which the family-spirit comes to individuality" we understand that as a *living* individual he identifies with the universal consciousness of the City. The *custom* of the individual City follows logically in the series of the *Gestalten* of consciousness, because the "universal consciousness" of the City is the "individuality" of Active Reason. It is not the Ethical Substance as such that is the actual *Gestalt* of True Spirit. We shall only come to the Substance in its properly universal shape in the *Art-Religion*. For the moment we are dealing with the relation of a spiritual property to its thing; but this "thing" is conscious of itself as an individual, because its "property" is an individual self-consciousness. So the family that educated him into this universal selfhood, must maintain him in it when he returns to them at death. Otherwise, the spiritual thing itself will collapse back into the flux of Life.

Without the establishment of the communal memory it would be wrong to call the Universal established by the sacrifice of natural self-consciousness a *true* self-consciousness. It would only be the "universal light" of Reason, and not a "self" at all. The community of the free selves is a "self" because it recognizes itself in them, and they recognize themselves in it. If it is a True Spirit, then it must make them spirits likewise; they cannot recognize themselves in it, if the death that it requires of them cuts them off from it. They are capable of this feat of recognition and self-sacrifice, because the family that produces and educates them is already a non-conscious (or natural) Spirit which remembers (and avenges) its dead.

- 22./459. The sister's destiny is at home, *presiding* over family life and cult. This is the ethical significance of sex-distinction; the distinction of public and private life has a natural foundation (as it must in immediate ethical life). This is what showed as the original nature in the spiritual animal kingdom.

If Hegel is serious when he ascribes to the adult "sister" the *Vorstand des Hauses*, then he has not read his texts properly. Ismene makes it very clear that in

the archaic world as Sophocles envisaged it, an unmarried girl was not the *Vorstand* of anything; and this was certainly true in Sophocles' own world just as it was in the world that he pictured. A wife (particularly a queen in Homer) might exercise a lot of household authority; and Aristotle thought it both right, and distinctive of the Hellenes, that a wife should have her own sphere of proper authority.⁶⁵ It must be Aristotle's doctrine that Hegel is depending upon. The young man, unmarried, leaves a sister behind when he goes for his civic (essentially military) training; the sister becomes the wife of another, and the trained brother marries his own wife. The wife it is, who is left behind when the young soldier is on campaign. So, in both cases it is the wife who "becomes or remains head of the household."

But even if we grant the most generous interpretation of the Aristotelian household we cannot justify the title "*Bewahrerin* of the divine law" for the wife (or for any woman). Hegel knows perfectly well that it is Cephalus, the grandfather, who goes out to supervise the household rites in the first book of the *Republic*; and no one who reads the *Antigone* with passionate concern (as Hegel certainly did) can fail to understand that Antigone is stepping out of her place in assuming the responsibility for her brother's burial. From Aristophanes, Hegel knew that there were important religious festivals that were the communal concern of the women alone; and he may reasonably have supposed that there were domestic rites that were their responsibility likewise. But he certainly knew that they did not supervise any religious activities in which their menfolk were involved.

Since Antigone is Hegel's clearly identified model we can properly infer that what he means is that the family cult has a clear priority in the consciousness of the women. So we must take it that *bewahren* here means "putting this thing *first*" (which is what Antigone does with the divine law). Also we can see how the remembering of the family dead is directly continuous with those concerns of family life that Aristotle regards as the wife's proper sphere of responsibility. But the two spheres of life and death, of family maintenance and religious cult, are distinct; and it is not necessary to Hegel's argument that women should generally be more concerned about family memorials than men. Antigone is a logical ideal; her concern reveals the *natural* foundation of spiritual life; and her story displays the boundary situation where the temptation for a woman to emerge out of her normally subordinate role must arise.

Hegel's expression "*naturally* distinct *self-consciousness*," needs careful interpretation. "Self-consciousness" refers to a spiritual level of conscious identification with a community that is one's true Self. We can properly speak of a *sexually* distinct self-consciousness in so far as there are segregated religious activities; and there were some all-female festivals. They are, in fact, more prominent and obvious than the all-male religious observances (except for the Games). But religious segregation is not what Hegel is talking about. "Self-consciousness" always means a communal consciousness in which *both sexes share*. The "natural distinction" is introduced by the practical life of which the cult is the self-consciousness. The public cult in the temples of the city, where men and women participate together,⁶⁶

was the general self-consciousness of the *City*, for which the men alone made the laws. The domestic cult, where both sexes again participate together, was the self-consciousness of the Family, which the women were kindly allowed by their rational husbands to run. There is a Zeus of the Hearth (as one would expect, since their hearths are the first altars that the menfolk fight for). But marriage and child-birth were presided over by Hera, the Queen of Olympus; and Hestia, who is both the hearth and its divine spirit, is feminine. Aristotle's philosophy of the family is a direct conceptualization of what is portrayed by the religious imagination of the *Volk*. These *Vorstellungen* are "the immediate unity of the substance with self-consciousness"; and the two *necessary* forms of religious cult, public and private, express in this immediate form the recognition of the natural organic difference upon which spiritual life is necessarily founded.

The unhistorical idealizations of sexual specialization in this paragraph are violations of Hegel's observational method. So we are bound to ask whether they are backward projections of his "systematic" ideal. Hegel, like Aristotle (and unlike Plato), regarded gender as the "original determination of nature" that Reason *must* accept. For Plato sex and reproduction was only a given element in the "spiritual animal kingdom"; Reason could and should organize the whole realm freely in accordance with the talents and interests that experiment and observation revealed. We cannot deny—and certainly Plato did not deny—that sex was the "original determination of nature" that lay at the foundation of the customary ethics of his own immediately given spiritual community, the community of the Hellenes. But equally, Hegel cannot deny that rational nature, which is "originally determined" as gender in the immediate ethical order becomes quite indeterminate and freely plastic in the world of universal Reason. When he says that "this moment loses the indeterminacy that it still has there," we cannot fail to note that this "loss of indeterminacy" is a benefit for theoretical cognition, but not for practical freedom. It is still the modern Enlightenment that exhibits the developed shape of Reason. Hegel's idealized picture of the woman's role was appropriate for his own time. But the implication of his theory for us is that women should enjoy rational freedom of self-expression in the universal community just as much as men. Hegel was not a progressive when it came to the abolition of the sexual division between private and public life in his own world. But the only rational basis for his conservatism, was the fact that it is not the philosopher's business to be "better than the world." This has no bearing on the logical truth that the fully rational relation between Spirit and Nature is Christian-Platonic not Hellenic-Aristotelian.

- 23./460. The family depends on the public order to which it sends the husband; conversely the public order needs the family as its raw material—and depends on family piety for its strength and confirmation. Each law depends on the other. Validity comes from the unseen world, conscious recognition and effective existence from this one.

We come now to the "coherence and transition into one another" of the two laws; and by speaking explicitly of the husband here, Hegel admits implicitly that it

is the wife (not the sister) who represents the unity of substance from the side of the family. The unity of the Substance depends on, and is expressed by, the cyclic dependence of life and death, and of the two laws. The husband finds “his self-conscious essence” in the community. His identification with Athena (who is the “self-conscious essence” referred to in the case of Sophocles or Socrates) gives a “universal substance and permanence” to the family of the citizen. We can readily see what the *Bestehen* is here, since it was the defence of the family that the *polis* was established for; the “universal substance” is what is immediately portrayed in the general lordship of Zeus. Zeus is the Father, the god of the hearth, as well as the King, the god of the political community. In the old tribal world, family piety could only give rise to feuds—and in the feud the family itself might perish. Now Zeus is effectively the god of every hearth, and the father of all the families; the law of the City guarantees this.

On the other hand, the public community has the “formal element of its actuality” in the family. I think that *formale Element* here means the *element in which it is formed*, i.e. the raw material. We have to go back to paragraph 455 to see what “the force and confirmation” are, which the community has in the Divine Law. This will be further explicated in what follows, but just by considering that the Divine Law is the law about death and the dead, we can see that all public recognition of the citizen’s self-sacrifice must fall under it.

The two laws cannot be separated. Human law is instituted in order to preserve and maintain the family; and it is in the family that boys and girls alike are taught the universal unwritten law of Zeus. The public law depends on that foundation. Without the sense and awareness of that immediate authority, and without the experience of immediate identification in feeling, both the recognition of an authority mediated by rational discussion and communal decision, and a conscious identification with the public will, once the decision has been reached, would be impossible.

Human Law springs from and returns to the Divine Law; there is a cyclic relation between them in which Divine Law, the conscious recognition of what is unconsciously given and immediately felt, is fundamental, because it is the necessary first and last moment. It gives birth to human law (in the spontaneous formation of the original natural monarchies mentioned by Aristotle)⁶⁷ because *Dike* must come forth from the Underworld and be exercised and maintained by Zeus. Zeus becomes the father of a *tribe* of Gods, because we find that family justice destroys both itself and the family in feuding. We arrive at Human Law, when there is a “universal assembly” through which the community governs itself. Thebes has reached the point of transition in the *Antigone*. The City has *chosen* its King. It has been driven to become the arbiter of *Dike*. But now the King must remember that the *Dike* of Zeus, the only authority universal enough to maintain the public law, has her home in the Underworld. Without him the public law would not be effective; but without her, the spirit of Zeus would not be *bewährt*, confirmed in its *truth*. Public authority would be mere *Gewalt* (or violence)—not *Kraft*, which is the inward Force that *utters* itself.

(g) *The Syllogisms of Marriage*

- 24./461. Thus there are two ethical essences: the universal substance and the singular consciousness. They are universally actual in *Volk* and family; and actively individuated as selves in man and woman. Reason's object has become self-conscious, truth has become actual. What is given is *Sitte*, which has to be interpreted (as law). Singular consciousness enjoys its *pleasure* in the family, and is reconciled with the *necessities* of the *Volk* and citizenship. The *law of the heart* is the *Sitte* itself; and *virtue* brings its own real reward—it does what it aims at. The community is the real *Sache selbst*; the laws (above and below) tell us what to do; and we can tell what is good and what is base.

Both of “the universal ethical essences” are what the poets portray as Zeus; so the “Substance as universal” is the Hellenes as the *Volk*, for whom Zeus is the “Father and King of Gods and men.” But the singular (or natural) self-consciousness knows Zeus initially as the god of its own hearth and home. The husband is the natural agent in this singular moment through which the goal of purely subjective Reason is achieved. The *Sache selbst*, the objectivity that was first a non-conscious order, and then an abstraction for subjective Reason, becomes both an animate agent, and a concretely present and recognized real authority. The human nature that Reason observed has become the self-conscious human community; and the abstract Category has become the actual custom of rational life.

Hegel claims, without any restriction, that the “goals that the preceding shapes of consciousness set for themselves are here achieved.”⁶⁸ But he does not actually go back beyond the first form of Reason. For Observing Reason, the object was the “law of nature,” which was simply *found* to be operative everywhere. The ethical custom of the *Volk* has that same sort of immediate validity; but it is only actual as the act of the agent who recognizes it. Of course, if some singular subject fails to actualize it, others who know what to do will do what custom dictates (for putting things right) without any hesitation.

Active Reason has its Pleasure in the mutual enjoyment of husband and wife (and we may note that Hegel is right to take the *Antigone* as a love-story, for everyone, even the Chorus, knows that Haemon and Antigone are in love, and Haemon acts out the part of Romeo to the end); that Pleasure coincides with Necessity in the duties of civil discipline, and the pains of child-bearing. Everyone (not just the male citizens on whom Hegel concentrates our attention) knows that the ethical custom to which she is wholeheartedly devoted is the “law of all hearts.” But there is an implicit ambiguity about the community of the Heart, so that Antigone and Creon will accuse one another of the Frenzy of Self-Conceit; and both of them are guilty of it. It is the implicit presence of the Heart in Greek Virtue that brings True Spirit to grief.

The “consciousness of the self” is known as “the universal order” in the shape of one of the Olympians. It may be Zeus, himself (at Olympia for instance); but even Zeus, in this recognition, is only one of the Twelve, not the “Father and King of all.” It is only the humbler and gentler virtues of womanhood and family life that are directly the universal service of Zeus in every City. The warlike virtue of man-

hood only properly becomes the service of Zeus in the universal piety of burial. To die for the community is a *virtue*, and (as the Athenians showed after Marathon) this death is regarded with ethical *respect* even by those whom one dies trying to kill. Death is the “essence” that must be brought into “actual presence”; and it is rational recognition of death as part of life that defines the “universal life” of rational virtue.

Finally the rational consciousness of the *Sache selbst* is satisfied here. The *polis* as a self-conscious community realizes Reason as the Category. This is a Kantian way of expressing what Aristotle means when he says that only the *polis* is self-sufficient. The *polis* is the human community that makes the good life present as a possibility, and supplies all the active opportunities and material resources that enable rational humans to actualize it. The *Dike* of Zeus (both in Heaven and in the Underworld), dictates the concrete laws that Law-Giving Reason could not supply abstractly; and *Dike* is a rational standard that can be applied in every situation, because when we want to “give to each his (or her) due”—the best abstract definition of “Justice”—our custom will tell us what is due to everyone, both communally and severally.

- 25./462. This perfect equilibrium must have injustice to overcome. But the justice of human law replaces the “state of nature,” by a governing consensus in society, and personal recognition in case of injury. The spirit of the corpse is his own Fury [*Antigone*, lines 94, 256]. It is directed against Nature which has done the wrong; and the kindred repairs the wrong by making natural death into an act.

The ethical *whole* here is the universal family of the Hellenes, the divine and human family of Zeus. Its proper parts are the members of that divine family, or each of the human families that exist together in the freedom of the “good life” which the universal justice of Zeus makes possible. Hegel says “Every part is an *einheimischer Geist*.” This can refer either to the “household Gods” or to the Olympian God of the City at home in its temple. I believe we should take it to refer indifferently to both. For the citizen families are the proper parts of the City; and the Olympian Gods have each of them both a home-City, and a temple-home in each City. It is certain that Hegel is now discussing the whole Hellenic community, and that war is here regarded as the “justice of Zeus” (not as the climax of human “pol-icy” as it was in par. 455).

Hegel agrees with Plato rather than Heracleitus: it is peace that comprehends war, not vice versa.⁶⁹ But the “comprehension” of war must be an active and an actual comprehension; so there have to be wars, in order that they may be resolved in the dynamic equilibrium of justice. It is Justice that Zeus stands for; and Justice as the totality of active virtue is displayed by death in defence of the City. So *Dike* in the Underworld is the vital link upon which the wholeness of the moving equilibrium of life and death depends.

Without the City and its public daylight authority, there can only be what Bacon called the “wild justice” of revenge. Drama offers to the intuitively rational consciousness many images of the world as it would be without Zeus and his *Dike*. Cly-

taemnestra treacherously kills Agamemnon when she has him naked and helpless in the bath. Her own children Orestes and Electra scheme secretly to revenge their father, and Orestes kills Clytaemnestra. This is not the Justice of Zeus. That comes to birth only when Orestes comes before the Areopagus, and Athena (being herself unmothered as she says) gives the casting vote that frees Orestes from his matricidal guilt.⁷⁰

Before the human law is established, the law of revenge is all that exists in the daylight world; and the operation of *Dike* in the Underworld is even worse. The daylight paradigm is Orestes; Oedipus is the tragic victim of the darkness. Hegel seems to have both cases in mind, but his principal concern is with Oedipus. Oedipus acts unconsciously, not knowing who he is killing or who he is marrying; and the occasions for his actions are accidental and fortuitous. It just *happens* that he meets his father on the way to Delphi, and that he arrives at Thebes when it is being plagued by the Sphinx. Apollo's Oracle is in control of everything, and it executes "justice"—but it is only a chapter of accidents as far as human volition and purpose is concerned. The "court" of the Oracle is always like that. The world (and the religion) of the Oracle is pre-political. It is only the establishment of *political* justice that makes human history into the "justice of Zeus"; and the "judgment of God" is not simply what *happens* (even if a community decrees it). The principle of Creon's decree was the old law of revenge. It is Antigone who speaks with the voice of Father Zeus when she says: "It was not enemies but friends that I was born to share."⁷¹ In the archaic age Sparta *enslaved* the Messenians; and the Spartans lived always in the presence of that *Gegensatz*. When the vengeful Athenians asserted their imperial will by slaughtering the men of Melos, the Ethical Substance was near to death. History does *not* prove that "might is right"; rather it proves the opposite. But above all, it proves that only *human recognition* of "divine justice" can produce any justice at all.

The horrible "tricks" (*Tücke*) of Atreus and Thyestes, the "treachery" of Clytaemnestra, and the "ingratitude" of Orestes are clearly sublated by the advent of human law. But Athena's wisdom in that settlement consisted in the incorporation of the Furies, the old blind piety of kinship, into the new order. The Fury of the dead man is the old spirit of family feud. This can be appeased by a proper reverence for the dead. There is no divine vengeance in the Beyond; but there is the living family here and now who must be reconciled with public justice. Otherwise the "self-conscious will of all" will not exist. The public court must speak both for Zeus and for the Furies; so no one must be pursued by justice beyond death. The piety of wedding the dead man's body with the earth is a crucial part of the justice of Zeus. The community of the living must recognize both its natural dependence on the Earth, and its own spiritual continuity with the community of the dead. That is how the Fury of the blood can be reconciled into the kindness of the Eumenides. The enemy is not death itself, but the blankness of inanimate being. The dead body has passed from one state of Nature to another; but the living individual did not belong to Nature. The funeral ceremony acknowledges that she has passed from one part of the spiritual community to the other.

What Hegel says about the *injury* of natural death, and the vengeance for it, seems to fly in the face of the facts. It is Nature that does the wrong; and "in dissolving the wrong the singularity is directed not against the communal universal, but against the abstract universal of being." This is odd, because in our paradigm case, it is certainly the community that suffers. But the protest *is* against natural oblivion; and the wrong *can* be mended by the "consciousness" that still survives. In the "state of Nature" the "family individuality" would be the "Fury"; but in political society, the family burial dissolves the wrong by taking the singular self out of Nature and over into the universal community. The particular political community should not be involved at all.⁷²

There is one novelty in this paragraph. When Hegel says that "the *Gerechtigkeit* of the *human Recht* brings the independence of the estates and individuals back into the universal" he is not thinking of the private economic interests that are shaken up by war in paragraph 455. He is making a new point; for we can recognize here a probable reference to the work of Solon who created social harmony in a community that was on the verge of class war. But the claim that this human justice is "the government of the *Volk*" contains the ambiguity revealed by Antigone's protest. As a *universal Volk* the Greeks had only a *divine* government; in the relations of the communities, what Heracleitus said was *outwardly* true: "War is the Father and King of all." Not even Plato, writing after the catastrophe of the Peloponnesian War, could go beyond the conception of a City without imperialist ambitions, and supremely well able to defend itself against imperialism. The Olympian community is a quarrelsome *family*; and the myths show us just how terrible the working of family feelings can be. The Divine Law remains fundamental, and the Human Law can only triumph in an imperialist form that destroys the *truth* of Substance. The "whole" is not a "peaceful" (*ruhig*) equilibrium on earth as it is in heaven. There is *not* as yet a "present individuality of the universal essence," or a *constitutional* "will of all." The cities are the real Olympians; but there is no real court of Zeus; only a blind Fate presides over them.

- 26./463. Thus the immaculate harmony of the ethical world is preserved without a split. Each law confirms the truth of the other. In the marriage of free citizens the self-conscious spirit (Reason, Law) is united with unconscious Spirit (natural self-consciousness). Man and woman as self-conscious are each the middle term of a syllogism. The universal self-consciousness requires the willing sacrifice of natural life (man's syllogism). The spirit of the single life that is sacrificed must be raised to self-consciousness again (woman's syllogism). Marriage unites the two syllogisms.

As we come to the end of this first moment of Spirit as the "shape of a world" we must notice that the emphasis on the forward motion of the Concept has changed. The Concept that we have before us has its own *self-sustaining* motion. In the next section this stable cycle will become unstable, and pass into the movement of "experience," where the observed Concept becomes a moment in the motion of a more comprehensive Concept. But there is nothing false or self-deceitful about the internal motion by which True Spirit maintains itself as a *Gestalt*. The movement that is

unfolded and imaginatively presented in the *Oresteia* is as “necessary” as the one that is unfolded in the Theban trilogy of Sophocles. The *Oresteia* shows how the Divine Law comes to its proper fulfilment in the Human Law. The Theban plays show how the Human Law should continue to sustain the Divine Law upon which it is founded. Sophocles shows this *dynamically* by portraying the inevitable downfall of the Divine Law in its immediate form. Historically, this downfall is the beginning of the “biography of God,” through which a self-conscious harmony of human and divine law is finally established at a higher level. We can now see clearly that the Divine Law depends for all of its *ethical* character upon human recognition of, and absolute respect for, the community of humanity as one family.

Further explanatory commentary on paragraph 463 is hardly necessary because the argument has been exhaustively expounded already. Each of the Olympian *Gestalten* has its “self-conscious” and its “unconscious” (or natural) aspect. But the *Dike* of each side confirms the other in its truth. The man comes home from the law-making of the universal assembly to his wife and family. This is the real interpenetration of the free Spirit with its foundation in nature. The drive of biological and economic life is the “extreme” of Spirit which is “without consciousness” (*bewusstlos*). This “unconscious” spirit has *Dasein* in the wife and mother, and becomes actual through her. The course of the argument has shown that this extreme (which is “without consciousness”) becomes in the end the *absolute* consciousness. The woman bears the child—and what is born is just a “non-conscious” (and certainly a *non-rational*) *Dasein*; and what the mother thinks and speaks of is natural need. But when she preserves the memory of the dead then what is “non-conscious” in the most obvious sense becomes conscious.

The masculine syllogism is the establishment of the universal spiritual self-consciousness through the voluntary sacrifice of the singular, natural living self. The feminine syllogism is the raising of that singular natural living self out of the unconsciousness of life (at one end) and death (at the other) into the spiritual community of memory.⁷³ As an agent self I am a self-conscious *body*; but the significance of my agency does not depend upon my body at all. Hence my freedom as a Spirit can be absolute. The natural genesis of the agent-self depends on the mother. The father is only necessary as a starting-impulse; and the raising of his natural force into agency (self-conscious fatherhood) requires the institution of marriage as a structure of general social recognition. A political community in which the men are to die for the preservation of their children requires that the women, at least, must be monogamous. The eventual emergence of a community of *equal* recognition will follow more readily if monogamy is socially required of both sexes; and only in that case will the evolution of the ideal of rational recognition be circular (so that the community of memory can finally become perfect, and be unstained by any residual bitterness).

Seen in this perspective, the Greek ideal of True Spirit is where the *actuality* of Reason logically begins; and the *Antigone* illuminates why nature (feeling) and freedom (logic) must (and can) move in harmony, even under the most extreme stress (i.e. when one side recognizes only strict logic, and the other side only natural feel-

ing). The syllogisms of “man” and “woman” express what will be categorical for a virtuous man and a virtuous woman when they are *driven* to make choices.

Virtue is a spiritual thing (i.e. a creation of the social self-consciousness). Antigone and Creon act as they have been taught; and it is perfectly obvious that the social self-consciousness is *free*. The *Antigone* portrays “what naturally happens”; but it shows us precisely why that ought not to be allowed to happen. The moral is clear. Political and domestic responsibility cannot be sexually segregated without disastrous consequences. It is easy to document Hegel’s life-long admiration for Antigone. But he would have to have been as blind as Creon not to notice that hers was a *political* act. He idealized her, because she did not want to intervene in politics; and he agreed with Sophocles that when political life was properly conceived and organized she would not be driven to do so.⁷⁴

Notes

1. It is worth remarking here that the two appearances of Kant’s Practical Reason in the *Phenomenology* (at the climax of chapters V and VI) give us the key to all of the apparent paradoxes and contradictions in Hegel’s different discussions of *Sittlichkeit* and *Moralität*. In the case of *Sittlichkeit* we must distinguish between the ancient (or unselfconscious) and the modern (or selfconscious) form; in that of *Moralität*, between the abstract and the concrete interpretation of the concept. There is a copious recent literature on this topic (mostly focussed on the *Philosophy of Right*): D. Henrich and R.-P. Horstmann (eds.) (1982); D. Lamb and L. S. Stepelevich (eds.) (1983); W. Kuhlmann (ed.) (1986); and the *Hegel-Jahrbuch* (1987). These volumes will provide many further references. The best overall discussion of Hegel’s “ethics” in English is that of A. W. Wood (1990); and A. W. Wood (1991) provides a very good summary account of his interpretation of Hegel.

We may remark, tangentially, that J. Heinrichs (1974, 265) is right in claiming that at this point we move from the “logic” to the “metaphysics” of the Concept (of Reason); and by the same token R. Aschenberg (1976, 279–280) is right in saying that we have now arrived at the “correct” Concept (i.e. the Category as *Sache selbst*) and can proceed to the demonstration of its “truth.” But those are matters best studied after one has comprehended the “Science of Experience” as a whole. Discussions like that of G. Krüger (1970, I, 285–303) appear to be based on my understanding of Hegel’s purpose.

2. If we place it there, we can see that the discussion of Kant’s Practical Reason becomes more or less continuous.

3. This is not very clear in Miller’s translation because he has garbled the outline of “Lawtesting Reason.” An accurate rendering of the relevant sentence would be: “It [the consciousness of the spiritual essence] is still in fact distinct from the substance as a singular consciousness, and either gives arbitrary laws, or fancies that it has the laws as they are in and for themselves in its own knowing as such; and considers itself to be the power that passes judgment upon them.”

4. As Antigone insists, the consciousness of God’s law is *ageless*. It becomes a moment of self-conscious Spirit when it comes into conflict with real human law-giving. It is important that Antigone’s “ageless” law is the bond of natural feeling; for that is still with us in the world of “Law-Testing Reason,” whereas Creon’s law of the City has long vanished. The sense of something as *sittlich* is a feeling of having *no choice*. The obligation of *Sittlichkeit* is

the sense of what it means to be a member of this community. See C. Taylor [1978] with the helpful comments of S. Avineri.

5. The most literal translation I can contrive of the lines from which Hegel's first reference to the *Antigone* comes is as follows: "For it was not Zeus who proclaimed these things [i.e. Creon's edict] to me/ nor the *Dike* who shares the home of the Gods below,/ who defined the laws that hold among men./ Nor did I consider that your proclamations had such strength/ That they could run beyond the unwritten and unshakeable/ Decrees of the Gods, being mortal as they are./ For it is not for today and tomorrow, but forever/ That these divine decrees live. And no one knows from whence they appeared." (lines 450–457 translated from the text published at Frankfurt in 1544).

6. The relations between this section (VI A a) and Hegel's other writings (both earlier and later) are well brought out by D. Janicaud (1975, Part 2, chapter III).

7. Plato, *Protagoras* 328a.

8. Flay (1984, 348, n. 12) sets up an interesting opposition between E. Bloch (1962, 95) and R. Garaudy (1966, 53). From the standpoint of "Spirit" we can see that Bloch is right in arguing for the primacy of our social activity. Objective Spirit forms the real context of all subjective Desire. But the satisfaction of Desire has a certain priority, not as "subjective" but as the cycle of "Life." Flay is right to insist on "reciprocity" (whether between individual and community or between Spirit and Nature). But the sense in which both authors are *right* is at least as important as that in which they are both wrong.

9. Although it makes problems for us, we should notice that Hegel's insistence on the *Hellenic* origin of Stoicism and Scepticism here is another argument against interpreters like Solomon, who believe that only *Roman* Stoicism and its critics are important for the *Phenomenology*—compare Solomon (1983, 459).

10. *Politics* I, ii, 15 (1253a).

11. *Politics* I, ii, 14; cf. 15–16 (1253a).

12. Hegel identifies both "Pleasure" and "Necessity," but then passes over the *antitheses* of the "Heart's Law" and "Virtue." In the case of the "World's Way," the reason is obvious. The antithesis of concrete civic virtue is simple vice. This is familiar to everyone in the world of True Spirit; and the Old Comedy is full of intuitive presentations of it. For the "Frenzy of Self-Conceit" we must look to Tragedy. We can see the intuitive image of it in Aeschylus when Prometheus defies Zeus as a tyrant. In the *Prometheus Bound* the life of virtue is pictured as a life of *suffering*, and the supreme Lawgiver as a tyrant. But we do not know what the "ethical" resolution of that paradox was; so it is wiser perhaps to study the *Philoctetes* of Sophocles, where Neoptolemus reconciles the embittered "heart" of Philoctetes with its true substance, but avoids the conspiratorial cunning of Odysseus. This play seems to me to set up the antithesis between the "lawful" and the "conceited" Heart correctly; and one could not ask for a more prominent (or more generally *admired*) model of "self-conceit" than Odysseus. So the place of this moment in True Spirit is securely established. The "conspiracy theory of history" was actually invented by the Sophists—and specifically by Critias. See the fragment of his drama *Sisyphus* cited by Sextus Empiricus IX, 54. Hegel read Sextus fairly thoroughly so he probably knew this clear case. Aetius and Aelian both quote the play as by Euripides, and from the quality of the poetry I surmise that this is right (see D.-K., 88 B 25). But there is no doubt whose the ideas were; and the thesis that a cunning ruler *invented* the Gods to back up his own authority is the Hellenic form of D'Holbach's view.

13. When Hegel began lecturing in 1801 he spoke of Solon as a philosophical lawgiver for the Athenians (Rosenkranz, 189–190; Harris, *Night Thoughts*, 193). But in his *Lectures on the History of Philosophy* he denies that Solon's work was a genuine "law-giving" (*Vorlesungen* VII, 11).

14. G. Severino (1971, 98–99) says that Socrates plays the same role in the history of philosophy as Antigone; and indeed, he does "test the laws" only as "something done." But the difference is at least as important as the resemblance.

15. See *Politics* III, 5 (1278a) and VII, 8 (1328ab). (For a commonsensical account of how free Greek citizens differed from Real Individuals see M. Hardimon, 1994, 151–153.)

16. Sparta generally would not allow the Sophists to operate in the City. Hippias boasts of being an exception (see Plato, *Hippias Major*, 283b–286a).

17. *Politics* I, 2 (1252b).

18. It is not clear just what Hegel wants to say about the consciousness that *has* Reason. But some such hypothesis as the one in the text is needed in any case. The English, French and Italian translators all construe the sentence as follows: "But as immediate consciousness of the being that is *in and for itself*, as unity of consciousness and self-consciousness, it [*er* = Spirit] is the consciousness that *has Reason*—the consciousness which, as the *having* indicates, has the object as determined rationally *in itself*, or by the value of the category, but in such a way that for the consciousness of the same, it [*er* now refers to *der Gegenstand*] still does not have the value of the category. It [*er* now means once more *der Geist*, the spirit as 'Reason'] is the consciousness that we have just now finished considering."

This reading makes good sense, because "the category" is the transcendental Ego; and the whole "experience" of Reason is precisely that the object does not have the "value" of the Self. But Hegel probably uses the pronoun *er* to refer to *Spirit* all through his summary. So the intended sense may be that "Spirit" is the "object," which the rational consciousness has, but which does not have categorical value for it. In that case it is objective Spirit that "still does not have the value of the Category" (while "subjective spirit" is directly experienced *as* the category).

As we have seen, the passage is difficult either way because chapter V begins with the clear assertion that "Reason" *is* "the certainty of being all reality," and that it *is* "the Category." The present summary indicates that the rational consciousness *has* that (subjective) certainty, but that it only *is* that certainty when it becomes "true Spirit" and intuites itself as the object, or as ethical actuality. Only then does "it" (whether it is "the object" or "Spirit") properly "have the value of the category." The "Reason" of chapter V has only a *formal* certainty of "being all reality," because it cannot *find* itself as "the object," or as "its own world."

19. That was why, when we wanted to identify the previous Shapes dancing out of the substance and returning back to it, we had to look at the tragedies, rather than at Greek history or philosophy. History and philosophy will show us an "advance" that transcends "intuition" and does not return to it.

20. *Phaedrus*, 250a. (The "aesthetic ladder" to the Form of the Good is supplied by Diotima's speech in the *Symposium* 210–211.)

21. On the contribution of J. J. Winckelmann, see M. Baur (forthcoming).

22. The attentive reader of Schelling's *Philosophy of Art* will soon perceive that this is an overstatement. But Hegel did radically *transform* the Platonic thought-materials that were common ground for all of the early Romantics.

23. But, alas, Hegel's analysis is not often studied with the text of Sophocles himself at hand. Even George Steiner studies Hegel's text less closely and carefully than he has exam-

ined both Sophocles and Hölderlin. But his discussion can be heartily recommended to all who wish to investigate the truth of my claim about the reciprocal influence of Hölderlin and Hegel in more detail (see G. Steiner, 1984, chapter I).

24. As soon as the Ethical Substance perishes, we are in the sphere of Judgment. Hegel mentions only one side of Judgment, and it is always the one that is *new*. He expects *us* to supply the one that we already know about. “Formal legality” is Stoicism; so it *needs* the concrete aspect of Scepticism. *Bildung* is the concrete world of the Unhappy Consciousness as Devotion. The missing complement of “Faith” is obvious. But having called the singular *Gestalt* Reason, Hegel will call the moving concept “Insight.” This is because Reason is both the beginning and the end of the whole movement from chapters V to VIII. *Instinctive Reason*—the Reason that instinctively (i.e. inductively) finds itself as a self-preservative organism in the thing-world, appears with Bacon and Descartes; but Reason only comes to our own critical awareness of itself as the universal “Category” in Fichte.

25. *Antigone*, line 575.

26. For “an [inwardly] distinguished ethical essence” Miller substitutes “distinct ethical substances.” This is an outrageous mistranslation.

27. The question why Hegel deals with “True Spirit” through Sophoclean Tragedy has not been adequately answered. D. Janicaud (1975, 177) says this is where the *tension* of the ethical substance is revealed. O. Pöggeler (1964) may have inspired this thesis. Most authors—e.g. Lauer (1976, 182), Taylor (1975, 173)—take the use of tragedy to be a simple matter of convenience. Hyppolite (1974, 335) does a little better. Royce (1919, 203)—rightly speaking of “an *ideal* commonwealth”—makes the paradox explicit. See further note 53 below.

28. This view is clearly expressed by Ismene at the beginning of the *Antigone*; and Creon reiterates continually that women must not “rule.”

29. The “kingship” of Thebes or Athens was a *customary* institution. But the ground of this customary status was ambiguous. This ambiguity is clarified perfectly in the *Eumenides*. The climax of the trilogy is reached when Athena—the wisdom of Zeus—establishes the supreme authority of a human court: the Areopagus. Apollo and the Furies are content to appear, and to have their dispute settled, by that court; and the court itself, although it is established at Athens, has the universal jurisdiction of father Zeus, for it mediates the quarrel between the two universal powers (of the daylight and the darkness) about the ancestral kingship of another city altogether. (Orestes was the natural heir to the throne of Argos.)

30. *Politics*, III, 5 (1278ab); *Jedes Volk hat ihm*, Nohl, 216; Knox, 147–148. The properly *universal* conception of communal Self-Consciousness contains the logical imperative for the political liberation of woman even more evidently than it implies the liberation of the slaves. L. Irigaray (1988, 98) offers us a half-truth: “Hegel a une conception esthétique de la société, de l’Etat. Cette conception masque bien des horreurs.” What this reading masks is the *logic* of the Concept.

31. The problem of *where* Oedipus is to be buried is the focal question of the *Oedipus at Colonus*. Sophocles uses “Theseus” to make him an honorary citizen of Athens.

32. For the marriage law see *Crito*, 50d. The most striking example of the human law as a sanction of burial custom is the trial of the generals after the naval victory at Arginusae (Xenophon, *Hellenica*, I, 6–7).

33. *Politics*, I, 2, 6 (1252b).

34. *Antigone*, lines 940–941.

35. The situation of a modern nation is different. The argument for “monarchy” in the *Philosophy of Right* can only be a “phenomenological” reading of the rationality of what is “actual” in Hegel’s own time, and for his own *Volk*. There cannot be an *absolute* form of government. To read Hegel’s “real” philosophy as an “absolute” ideal, degrades it into the kind of abstract “Ought” that he explicitly condemns in his own Preface to the *Philosophy of Right*. Of course, the actual constitution described in that book is a *mixed* one; and the general principle of “mixture” certainly has a more nearly absolute status than any particular mixture.

36. The view of P. A. Simpson (forthcoming, chapter 4, section 1), that the *family* is the institutional expression of the Divine Law, is a bit oversimplified because the Human Law is sublated in it. Also mothers can sometimes be the voice of family authority; but the actual evolution of political authority in our tradition has masculine family authority in the background. Plato’s *Republic* shows that there is nothing *logical* about that.

H. M. Ravven (1988, 163, n. 5) says Hegel “*fails* to see that phenomenon [lordship/bondage] as arising in the social structure of the family.” On the contrary, his view is that it is present but sublated. Even in the community, the natural drive for lordship is sublated in “ethical obedience” to the City. (Of course, the system of sublation is unstable, and it is the natural drive for lordship that smashes it.)

37. See the *Nicomachean Ethics* III, 1–5 for Aristotle’s distinctions between “voluntary,” “chosen” and “deliberate.”

38. One of the clearest is the story of Althaea, who brought death on her son, Meleager, because he killed her two brothers.

39. Even Alcestis dies (in Euripides) for her *husband* (though he is a king, and there may be some undisclosed political reason why his death was required); and although Clytaemnestra presents clearly the ethical anomaly of a regnant queen, the declared motive for her assassination of Agamemnon is the avenging of Iphigenia. Jocasta illustrates the political *influence* that a woman can have in True Spirit; but the primacy of her family-commitment is evident in everything that she says and does. Only in Comedy is the hypothesis of a “woman ruling” (which Ismene and Creon both regard as ethically impossible) seriously proposed (*Lysistrata*).

40. As her later conduct shows, Ismene’s initial position is to be attributed to her “virtue” not her “nature”. She is naturally gentle and kind, just as Antigone is naturally self-willed and rather unkind; but like Antigone, Ismene acts *ethically*. Critics who call her “timid” are misreading her in the very same way that Creon misreads Antigone.

41. This is plain enough in the exchanges between Creon, Ismene and the Chorus regarding the betrothal of Antigone and Haemon (*Antigone*, lines 567–576). But it is also made clear that that engagement was, in fact, a love match.

42. Compare the sarcastic comment of Polyneices in Sophocles (*Oedipus Coloneus*, lines 1295–1298).

43. The great debate about the burial of Ajax (in Sophocles’ play) may have been inspired by the controversy about the burial of Themistocles. His relatives defied the decree that forbade burial in home territory (Plutarch, Themistocles 23). There are several other cases of “traitors” having to be buried outside home borders—see C. M. Bowra, *Sophoclean Tragedy* (Oxford, 1944, 48–51).

44. Pausanias I, 32, 5. (We must remember that the enemy dead would have included many Ionian Greeks.)

45. *Antigone* lines 29–30 (her horror); 213–214 (Creon’s supposed discretion); 998–1032 and 1064–1083 (the prophecies of Teiresias—note especially lines 1072–1073: “These things [burial rites] are not your concern, nor that of the Gods above, but you have interfered by force of your own will.”)

46. The need for an “actual and external deed” in the “ethical life of Spirit in its immediate truth” is interpreted in a very high enlightened fashion in this paragraph. It is as if Hegel believed that the poets literally *created* the haunting spirits and the Furies. But he seems to know better when he speaks of the “Fury” of Polyneices later (par. 462, compare par. 474). Obviously “consolation and reconciliation” are of the first importance if men are to go to war (and women are to send them) voluntarily (and even with enthusiasm).

47. Compare the *Ajax* of Sophocles, and the argument about the Argive dead in Euripides’ *Suppliants*; also the comment of Teiresias quoted in note 45.

48. In place of Miller’s “the natural community to which he in his [natural] existence belongs,” we should read “the natural community to which he belongs as *actual*.”

49. In the *Antigone*, the fate of Thebes remains in suspense, but it suits Hegel’s use of the myth to let the tragedy play itself right out.

50. *G.W.* VI, 269; Harris and Knox, 207–208 (note 8). For “Resolution” see *Dok.* 388.

51. Miller’s translation contains two mistakes. “Das obere Gesetz” is not the *superior* law, but the law of the Overworld (as opposed to the Underworld); and the “simple power [of the Government] allows the essence [not “the Family”] to expand into the articulation.”

52. It seems probable that the effective democratic constitution of Athens was mainly the achievement of Cleisthenes (archon, 525[?] B.C.), who created a completely artificial system of tribes (after the expulsion of the Peisistratids in 510 B.C.). But we hear little of him in Athenian tradition; and this may partly be because he was skilful in directing attention backwards and away from himself. For instance, he may be largely responsible for the *reconciliatory* version of the myth of Theseus (cf. R. Graves, *Greek Myths* I, and the conflicting versions of the myth that he summarizes). In the Aeschylean vision the Athenian constitution itself becomes a thing “immemorial”—the work of the Goddess.

53. Hegel’s analysis seems to agree with Aristotle in ascribing conceptual *actuality* to the Athenian model of democracy. His argument requires the granting of this “ideal” status to the democratic principle, because the final model of the universal moral community of Reason—within which Absolute Knowledge dawns—is the Lutheran congregation. Respect for the singular moral conscience is the principle of Kantian practical Reason, without which Hegel’s concept of Reason as a true Infinite would become self-contradictory in a vicious sense. (Hegel did not regard even universal male suffrage as the “standard” towards which the modern “community of nations” was moving. But that proved to be the case—and we can fairly say that the “judgment of God” upon this masculine-militarist foundation of modern democracy has been as categorical as the judgment upon the original “ethical substance.”)

R. C. Solomon (1983, 495) says that “the omission of Athens at the height of its development should show once and for all that this [the movement of ‘Spirit’ in chapter VI] is in no literal sense history for Hegel.” A logical transition of some sort from a Sophoclean Tragedy to the world of Stoicism and Roman Law is certainly not ordinary “history.” But it may be “philosophy of history.” As for “the omission of Athens,” Solomon had better ask himself what is more *gloriously* Athenian than Sophocles; and then look again at Hegel’s paragraph 455. (The *proper* question is “Why is the City State presented to us only through the work of the Athenian tragedians?” And the answer is that “True Spirit” is an *aesthetic* mode of con-

sciousness, with an “Art-Religion.” It is not yet “philosophical”; the philosophers are its grave-diggers.)

54. Hegel incorporated this same conception of the function of war into his “real-philosophical” theory of the relations of modern national states. S. Avineri (1972, 196–199) presents it in a properly balanced light; J. D’Hondt (1967) gives it a “progressive” turn by claiming that Hegel only justifies modern wars as productive of advance towards popular sovereignty (which is perhaps what Hegel ought to say, but not what he usually does say). V. Hölsle (1987, 217–223) fails to take account of the circle-closing function of war in Hegel’s politics. R. Dohrmann and C. Stein (1984/1985) understand this and draw the correct consequences for the theory of international relations. But, of course, the transformation of war into “total war” in our century (and even the stalemate of “trench-war” in 1914–1918) has “sublated” the whole Hegelian theory. “Real philosophy” must follow the evolution of the “real world.” (M. Tunick [1992, 88–92] has understood how the evolution of *war* had made it impossible even in Hegel’s time to be politically nostalgic for the Hellenic world—as J. N. Shklar thinks Hegel was.)

S. Avineri (1972, 206) summarizes Hegel’s view of modern *national* war neatly as follows:

Thus even war itself, with all its negativity, does finally receive a meaning within the wider scheme of things. Out of the vortex of clashes characterizing international relations, an inner order emerges and reason appears in history not as something given *a priori*—as an axiomatic system of norms—but as the end product of a long, arduous and sometimes seemingly meaningless process.

But what was true of war between the Greek Cities, and even between the sovereign European nations of Hegel’s time, ceased to be true of the *world-wars* that began in 1914.

55. For the Aristotelian background of Hegel’s theory see C. Despotopoulos (1984/1985) and T. J. Gerald (1984/1985).

56. Ethically, the brother-sister relation ought to be sublated into the universal brotherhood of the City; and there is no ethical relation between sisters after they marry. It is clear enough that the *model* relations between siblings are *naturally* loving in Greek ethics. This is obvious in Sophocles, and it becomes explicit both in Plato’s *Republic* and in Aristotle’s criticisms. But all such relations are necessarily *mixed*. The *ethical* freedom of Antigone’s act of burying Polyneices is demonstrated by the fact that Ismene—who certainly loved him just as much—does nothing. But equally, the presence of *natural* self-consciousness in Antigone’s decision is shown by the way she loses her temper with her sister.

57. A lot of effort has been put into the psychoanalytic diagnosis of this mistake of Hegel’s; and since it certainly is an error, the psychological approach to it is legitimate (see for instance J. Derrida, 1986). R. C. Solomon [1983, 545] says that “most commentators agree [that Hegel’s claims] can be traced to his own emotional relationship with his sister Christiane.” But he may be exaggerating, for he cites only two others. Inquiries into Hegel’s personal psychology are of no systematic philosophical interest; but for those who are interested in Hegel’s relations with his sister, the essays of H.-C. Lucas (1984/1985, 1988) can be recommended.

C. Mancina (1991, 156) notices how paradoxical it is for Hegel to give first place to the brother/sister relation in his family ethics—he never does this anywhere else. Unlike A. Elsigan (1972, 153–160) she has understood that the paradox arises from Hegel’s view of the developmental relationship between the classical and the Christian family. (Hegel refers

back to this passage only once—in the *Naturrecht und Staatswissenschaft* course of 1817/1818, see *Vorlesungen* Bd. 1, 111, lines 981–986).

J. B. Elshtain (1981, 176) thinks that Hegel's "ethical" analysis of Antigone's speech expresses his own view of *modern* marriage. This is a bad mistake. Everything he says about the ideal of marriage in the Christian-German world coheres with his position in the famous fragment on "Love" (*T.W.-A.* 1, 244–250). G. J. Hayim avoids Elshtain's error (1990, 9). But otherwise her account of the family in modern society is confused (and far removed from Hegel's own thought).

58. See *Antigone*, lines 566ff.

59. This is one of the most astounding examples of the conflict of "ethical" imperatives in Athenian history; and the triumph of Antigone's view in the mind of the community has great relevance to Hegel's analysis of the downfall of the Ethical Substance, since the victory at Arginusae represented an almost miraculous recovery by Athens in the dark days at the end of the War. Socrates regarded the condemnation of the generals as quite unconstitutional, and refused to put the matter to the vote when the Presidency fell to him by lot. We can hardly doubt that he was right. But not even the wisdom of Theseus can always overcome the *unwisdom* of *Dike* in the Underworld. See Xenophon, *Hellenica* I, 6–7 for the battle and the trial; Plato, *Apology* 32b, for Socrates' part and his attitude.

60. This validates S. M. Easton's image of Antigone as a heroine of "love" (1987, 37–38). But that is a dangerously loose way of characterizing what Antigone represents. Her ideal is not the rational "Law of the Heart," but the recognition of the ties of *blood* as holy, and therefore as the basis of ethical duties—compare note 63 below.

61. See his *Conversations with Eckermann*, 28 March 1827. (He made the comment incidentally in a discussion of the Hegelian view as expounded by H.W.F. Hinrichs.) G. Severino (1971, 93) recognized that Hegel was interpreting Antigone's last speech; but he agreed with Goethe. Similarly P. Furth (1984/1985, 23) agrees with Goethe about Creon. (On that view Creon and Antigone cannot represent "equal rights.")

62. This quotation is found in Plutarch, *De profectibus in Virtute* 7.

63. The Fates told Althaea that her baby boy Meleager would die when the burning brand in the fire was consumed. She snatched it out and locked it away. Meleager first killed two of his mother's brothers after the hunt for the Calydonian boar (his mother *curse*d him for that). He withdrew from the feud between the other brothers and his father until his wife Cleopatra persuaded him to join in. Then he killed the other two brothers—and Althaea put the brand back into the fire. So there *is* the analogy that Althaea lost *all* of her brothers before she acted. After her action (which was commanded by "the Furies") both she and Cleopatra committed suicide. The conflict of Althaea's sisterly love with her status as wife and mother is clear. But it does not appear that anyone ever thought that a proper resolution for it was *ethically* dictated. The story tells *against* Antigone's argument rather than for it.

64. Hegel probably believed that Antigone's argument that she had an absolutely overriding duty to bury her brother, was grounded in the fact that, in the course of nature, a sister would often be the dead man's closest surviving relative. But, quite apart from his wife and children, the assumption that a *woman* would normally be charged with such a responsibility is certainly mistaken. In the primitive tribal structure of Greek society the minimal units were the *phratries*. These were all-male brotherhoods into which the youth was solemnly inducted upon reaching military age. Homer knew them (though the heroic world he was singing about did not) as the normal units of military organization. It fell upon the *phratry* at Athens to negotiate the settlement if a man without close male relatives was accidentally

killed by someone else. The *phratry* was often invited to a wedding. Clearly the *phrateres* would bury a man slain on a distant battlefield; and I cannot help thinking that they would take charge of the funeral of anyone without close surviving adult male kin.

The word *phrater* is very old. It is not the normal Greek word for a brother. We cannot doubt that originally a *phratría* was a kinship group. But it seems to me that the rather sceptical view of phratries as they existed in historic Greece that has been proposed by Andrewes should be accepted—see A. Andrewes, *The Greeks*, chapter 5 (New York, Knopf, 1967); and Homer, *Iliad* II, 362.

65. See *Politics* I, ii, 3–4 (1252ab); xii, 1 (1259ab); *Ethics* VIII, x, 5 (1160b).

66. Priestesses were important in the communal religious life as well as priests—think for example of the Pythia at Delphi who is a focal point of the whole Ethical Substance.

67. *Politics* I, i, 6–7 (1252a).

68. We have shown in some detail that this is true (in the commentary on par. 440 above). Much of the necessary commentary on paragraph 461 has been given there. Simple repetition has been avoided here.

69. Compare Heracleitus (D.-K. 22 B 53); and *Laws*, Book I.

70. Athena's comment that she herself had no mother (*Eumenides*, line 737) was dismissed by Jebb as a "quaint subtlety" of Aeschylus. But, of course, Athena is both the "wisdom" of Zeus, and the "self-consciousness" of her City. Her argument expresses the necessity which Socrates and Plato recognized: that the *Polis* (who is feminine) must be recognized as the true spiritual "mother" of all her citizens. She has to be the *first* in that capacity.

71. *Antigone*, line 523. (Nevertheless L. Irigaray [1985, 216–226] is right to insist that Antigone is only an intermediary between the battlefield and the grave. The universal Greek family—the family of Zeus—is beyond death).

72. In our paradigm case, it is because a conflict of communities is involved, that the vengeance falls upon Thebes itself—compare the commentary on paragraphs 473–474 below. The tribal background of paragraph 462 is well brought out by M. Tunick (1992, 78–80). But he abstracts it from the developed context of "human justice." He does not comprehend the *universality* of "ethical life" properly. His work, like that of Allen Wood (1990) shows us how the theory of objective *finite* Spirit can be abstracted from its infinite context, so that reference to "Spirit" can be dispensed with. (All the same, he offers some insightful criticisms of Solomon's more simple-minded "humanism" [see 1992, 12, 84–86, 90].)

73. We cannot hope to understand the argument of paragraph 463 if we do not distinguish the "individuality" of the man, who works for the community in supporting his family, from his "singularity" as a mortal living organism. But Miller has translated *die Individualität des Mannes* and *der bewusstlose Geist des Einzelnen* as if "individual" was present in both cases.

74. S. Swindle (1992) has connected paragraph 463 with the Lordship and Bondage relation in order to argue that modern feminists ought to appreciate the significance of the *Phenomenology* more positively. Hegel himself would not like this because (already in the ethics of True Spirit) he distinguished (like Aristotle) between wives and slaves. At Berlin, he commented on the fact that "love" could sublimate the bondage of a female slave (see M. J. Petry, 1988). But in his theory of the modern family there is tension between Aristotelian "ethics" and Christian "morality" because "love" is a relation of "equal recognition." (The debate between Swindle, P. J. Mills and H. M. Ravven illustrates the usefulness of Hegelian ideas, but does not contribute positively to the understanding either of Hegel's own world-inter-

pretation, or of his “System.” The running discussion of this theme in A. Cutrofello [1995], which was partly stimulated by this exchange, is well worthy of attention.)

Joanna Hodge (1987) says Hegel is inconsistent on the position of women. What is correct in this claim is that Hegel’s logic of “selfhood” (in the *Phenomenology* and in the theory of Absolute Spirit) is Platonic-egalitarian; while his theory of family and State (in the Real Philosophy) is—necessarily—Aristotelian. I say *necessarily* because the real world whose rationality he was uncovering was Aristotelian; and it is not the task of philosophy to prescribe to the world how it ought to be. It is also the case that Hegel subjectively agreed with Aristotle, and his own real world. But that is not of any philosophical importance *to us*.)

In her book (1987, chapter 1), P. J. Mills offers a clear discussion of Hegel’s different views of the significance of Antigone in classical *Sittlichkeit* (the *Phenomenology*) and in his own society (the *Philosophy of Right, Aesthetics*). But in her critical evaluation she fails (like Hodge) to take proper account of the fact that “philosophy is *its own time* apprehended in thoughts.” Thus when she says that “his system does not permit woman to be viewed as fully human” or “Hegel’s universal is necessarily male,” she ought to say that “his *world* (as he interprets its rational structure) did not permit this (or it required that). It is not the business of *philosophy* to permit or require anything—though it can show us why some things we dream of (a “just society,” a world without war, the brother/sisterhood of humanity realized as a political system, etc.) *cannot* actually come to pass. Within these logical limits, things like the human significance of gender, or “free universality” must be settled by history (and all that philosophy can say is that *no* settlement will be absolutely permanent).

The “syllogism of marriage” gives Hegel’s theory of *Sittlichkeit* a sexual foundation. This abides undisturbed in the downfall of the *polis*, and the evolution of “national morality.” But it was always clearly destined for transformation—compare D. O. Dahlstrom (1987). T. O’Hagan (1984/1985) provides an instructive analysis of how difficult it is to achieve the point of view (and mode of expression) of a pure “observer” on problems of this kind.

The essay of H.-C. Lucas (1984/1985) is full of valuable insights into Hegel’s discussions of Antigone—which, if O. Pöggeler (1987) is correct, began in the “Spirit of Christianity” manuscript at Frankfurt. For a good survey of the critical reception of Hegel’s *Antigone* interpretation see M. Donougho (1989).

Chapter 4

The Expulsion from the Garden

VI A(b): Ethical Action, Human and Divine Knowledge, Guilt and Destiny

Hegel understands Greek Tragedy as the political means through which the perfect balance of the spiritual truth was maintained. Thus the Antigone is a political parable about what happens when the “true” relation of the sexes is violated. We can find in it, therefore, both the truth of the Greek polis and the logic of Greek political history. “The Ethical World” showed us the first (the Concept at rest). “Ethical Action” will show us the second (the Concept in motion, or the “experience” of natural Sittlichkeit). Ethical certainty inverts itself, and in the comprehensive result the new truth of positive law replaces the truth of custom. The Antigone itself shows us the inversion, and why the transition to a world in which positive law is necessary must follow.

The “Concept at rest” sublates the motion that is involved in its own living concreteness by spinning on the axis that is provided by the “syllogism of marriage.” What upsets that balance is the imperative that the two parties to a marriage must each be ethically blind to the commitment of the other—and in that sense ignorant of what the other one knows. The “ignorance” and “knowledge” are not of any ordinary kind; for the whole knowledge (God’s knowledge) of the situation is portrayed by the tragic poet. The Theban trilogy of Sophocles displays it all. Through Sophocles, the community recollects the whole syllogism of marriage. For them, it is a warning; but for us it reveals the logic of history, because of the contradiction between the intuitive aesthetic awareness of the whole, and the divided practical knowledge of what is imperative for individual action. Even the aesthetic intuition of “God’s knowledge” came too late. Sophocles lived and wrote during the period of Athenian imperialism and the Peloponnesian War.

This second section is where the motion of “experience” takes place. In the first section there was perfect unity and harmony throughout, and the “motion”—foreshadowed in the antithetic headings—was only the unfolding of the concept of Dike, the justice of Zeus. But here, in the second section, it is all judgment, all division—and the new sequence of headings prepares us for this.

(a) *Action as a Judgment*

- 1./464. The antithesis of the two laws in true spirit is such that singular individuality has not entered into its rights. The *actual* self expresses itself in its action. Its freedom sets the two laws against each other; they fall together into the abyss of *destiny*; and pass over into the singular self-consciousness.

In the first section of chapter VI A, we were shown the harmonious ethical world of the Cities, contending with each other in their wars. This was a kind of serious playing for the Gods in which the meaning of life is revealed; and the dead are remembered gloriously, like Leonidas and his Three Hundred who fought to the last man at Thermopylae. Now we shall be the audience for a single ethical action, which by distinguishing between the fates of two who have fallen, sunders the two laws. This sundering is possible, because although the two laws circle into one another to make the unity of the ethical world, they are not known to human agents in the way that they are known to Zeus. Human and divine law are one, but human and divine knowledge of them are not the same. For this reason the union of man and woman becomes the conflict of two ethical views. The male decision, which differentiates the fate of the dead men, is answered by a defiant female action which restores equality. Both parties are “guilty,” and in the collision both laws perish in the “simplicity” of natural death. All that survives is the singular selfhood that makes itself known in Antigone’s defiance. In the Truth of Spirit singular selfhood belongs only to the realm of the dead; but in the person of Antigone the singular individual emerges and does an “ethical deed” (other than the incomplete deed of dying). This upsets the balance of custom. The beautiful order of justice which the political artists of human nature have put in the place of the “law of nature” comes crashing down. Antigone destroys not only what she was consciously opposed to, but what she was trying to defend. Hence it is the singular self (in all its mortality) that comes to light as the positive shape of that “eternal necessity of fearful *destiny*” which even Zeus cannot fight against. True Spirit is the paradigm of a finite community whose Pleasure turns over into the harshest shape of Necessity.

The Ethical Substance is a complex mass of *custom* which human *art* has put in the place of the spontaneous natural reactions dictated by kinship. Before the Ethical Substance came into existence, the kinship-group was the only “individuality” that existed. It made manifest the fact that it was indivisible by avenging harm done to any of its “members.” The founding-hero of the *polis* put a communal justice system—the “individuality” of a *universal will*—in the place of the vengeance of the blood. Nothing done in accordance with civic justice counts as a “deed” (*Tat*). Everything customary is authorized by the “universal will” and is part of the “peaceful organization and movement of the ethical world.” It is not Creon who acts, but only the ethical world that moves when the edict is published.

Antigone *acts*. Hers is an *ethical* action, because she does what is customary; but she does it in knowing and open defiance of the edict; and the edict was (in the most explicit way) the expression of the *universal will*. This is the obvious com-

monsense view, and it was put to Antigone very plainly by her sister Ismene before she did anything at all—even before she performed the secretive action that was typical of the older order of the law of nature.¹

- 2./465. In the ethical realm the ethical consciousness is intent on its duty; and it knows exactly what its duty is. There is no room for choices or conflicts of duty. Collision of duties in non-substantial consciousness is comic, because the contradiction reduces the Absolute to a nullity that is. In the ethical substance everything is immediately, i.e. naturally, decided.

It is within True Spirit that the concept of “duty” first emerges properly. As the ethical consciousness of the objective *Sache selbst*, the singular self-consciousness is duty. There is nothing to argue about; one knows what one’s duty is. The duty of a man is to the City that made him, and whose self-conscious will he helps to make (in the Assembly); the duty of a woman is first to the Family that made her, and then to the one she grounds. These duties are given by the determination of Nature. The Ethical Substance could never have come into existence if it did not recognize and accept the structure of the “state of nature” from which it originated.

In the rational conscience that makes its own laws, or at least tests its own maxims, there can be “collisions.” The collision between duty and interest (or duty and passion) is not significant for our purposes because it can occur anywhere. But the “collision of duties” that can occur in our world, but not in True Spirit, is a moral *comedy*. When Hegel says that as far as its content is concerned, this collision of duties is the same as a collision of duty and passionate inclination, he is anticipating the doctrine of Conscience that he will put forward in due course. But his doctrine was logically prepared for when we were shown that Lawtesting Reason can find a universal maxim to cover any non-criminal action that we actually desire to do. The collisions in the empty Absolute of subjective Reason are comic because they show up the fact that the *Sache selbst* (the Category that produces “categorical imperatives”) is not a “real Thing” at all. This formal Absolute can contradict itself without any serious consequences; its very “collisions” only show up the fact that it is always empty. In contrast, the only possible “collision of duties” in the Ethical Substance is tragic because a *real* Absolute perishes. The whole civic order—the Justice of Zeus—is swept away.

- 3./466. The ethical consciousness acknowledges one law as its character, but is aware of the other as a power opposed to it. Each is actual in the singular self, so in self-consciousness they are “for themselves,” whereas they are only implicit in the ethical realm. The unacknowledged law is seen only as tyrannical caprice or self-willed disobedience.

The word *Charakter* in German is borrowed directly from the Greek (as the spelling itself shows). It does not seem to have taken over with it the active senses of “engraver” or “stamping die.” But it has kept all of the predominant passive senses, both literal and metaphorical, that it had in Greek. Keeping as close as we can to the primitive literal sense, we can read Hegel’s doctrine thus: each of the two

sexes is *stamped with* the mark or *character* of the law to which it naturally belongs. In other ways individuals may differ; but all have received the indelible impression of one of the two natural types. Thus, the two sisters, Antigone and Ismene, are very different examples of womanhood; but the ethical *character* of womanhood has been deeply impressed upon them both. How this happens Hegel does not say here, but from paragraph 451 we can readily infer that the impression comes from everything that is said and done to the child by the community. All we are concerned with is the way the free consciousness identifies with (and so takes the “impress” of) one side or the other of the general custom of life. “I am a boy” or “I am a girl” is the fundamental consciousness that determines the direction of all of the child’s active efforts. Thus his mother Thetis can hide the young Achilles among the girls; but it does not take Odysseus long to find him out, because Odysseus knows some acid tests for the mark of ethical manhood.

But this account is too simple to be an adequate description of the categorical stamping of sexual ethics. The “will of singularity” plays a crucial role. Antigone is not just a woman, but an exceptional one. Her sister is both of those things too; but they are exceptional in quite opposite ways. Antigone has her father’s imperious temper and impatience. That is not how a woman is supposed to be, according to the custom. Hegel cannot have failed to see that Ismene is the sister who feels and behaves in the way that a woman was supposed to. But the tragedy needed a woman in whom the impress of the Divine Law would lead to a decision to act on her own.

The tragedy really is an *action*; it springs from an ethical *initiative*. Sophocles shows us that Antigone could have persuaded others to protest in a way that Creon would have to heed (as he does eventually have to heed them). But that would not be “ethical action.” Antigone’s drive to act, her sense of being-for-self, comes from nature. She buries her brother *twice*—once by secretly outwitting the public authority, like her mother, and then again by the open assertion of her will, like her father.² The point is, that for her the unwritten law is immediately authoritative; and her duty to her dead brother is simple obedience to Zeus, while the rest (her proper feminine role for instance) is just obedience to men. Hegel showed in paragraph 453 why the duty of burial is the only aspect of the natural law that is not affected by the advent of political justice. Antigone’s clash with Creon is important because they find God in different places. He finds God in the “universal will”; she finds God in the “blood of the Family.” So she is a *rebel*, and he is a *tyrant*.

- 4./467. Ethical consciousness is afflicted, therefore, with the antithesis between what it knows and what it does not know; and from this arises a conflict between the absolute right of the self, and the divine right of “essence.” For Consciousness, what is actual has “essence.” But it is one-sided without knowing it. It has forgotten its own being-for-self, and it follows a law that is absolute. Action is the immediate self-expression of the Substance. So the action is just what the ethical knower knows it to be.

The difficult mode of expression in this paragraph conceals a fairly simple argument. Hegel wants to make clear the difference between ethical self-consciousness

and simple consciousness on one side; and between ethical action and subjectively rational action on the other.

Within the Substance there necessarily arises the *Gegensatz* between what is conscious (the universal will) and what is not conscious (natural instinct). Within the ethical consciousness there arises in the same way the *Gegensatz* between what it is aware of as authoritative, and what it is not aware of (in that way). In the myth of Oedipus the two antitheses are directly parallel. So for him the conflict between the “absolute right” of Freedom, and the “divine right” of Nature is the discovery that biological Nature has a right that he has violated. For Antigone, on the other hand, her ethical agency comes into conflict with the “divine right” of *ethical* Nature. She fails to recognize the *divine* authorization of the political *Wesen* that is “natural” to humanity.

In order to make this point about ethical agency and human nature (in its double aspect, as “given,” and as “made”) Hegel feels it necessary to give us an elementary lesson on the evolving use of the word *Wesen*. We may well think that this is not necessary. But we ought to attend carefully; for the tendency to confuse “self-conscious” and “divine” *right*, with Human and Divine *law* has had disastrous consequences.

The lesson is actually a simple one. Simple Consciousness takes what it is objectively aware of as fact, to have an “essence.” Sense-Certainty moves to thing-perception on this basis. But Self-Consciousness knows that the thing-world has no essential status at all; and simple Consciousness is substantially Self-Consciousness. “According to its substance” Self-Consciousness is “the unity of itself and this opposite,” i.e. the thing-object of consciousness; and the ethical self-consciousness is precisely the one that is immediately (or intuitively aware of its own Substance. It does not have to tumble over its own objectivity, in all the ways in which the singular self-consciousness has to struggle with the antithesis of freedom and life, and all of the subsequent shapes that the opposition between subjective freedom and objective fact assumes until we reach the rational Category that claims to give, or to test, laws. The ethical self-consciousness *is* that Category realized as a *universal thing*; it is the custom as a universal will.

This ethical selfhood of custom has put aside all of the subjective one-sidedness of action as rational self-expression. When it acts, it knows exactly what it is doing (like subjective Reason); but unlike the *Werk* of subjective Reason what it does cannot be inverted. Anyone who (obstinately) misinterprets what the ethical self does must be ethically in the wrong. The ethical agent can prove this by appealing to the “universal essence.” This is not a formal principle of Lawtesting Reason (the easiest of all things to invert); it is the absolute *Macht*, the might of God. Antigone *knows* that she has done the will of God; the decree she has defied is only “accidental human *violence*.” But she does not know that the will of God has another necessary shape under which Creon can know that the decree is the will of God, and that her action is “the *disobedience* of inward being-for-self” (par. 466). Hegel has already applied the word *Frevel* (sacrilege, profanation) to the defiance of the government’s commands; so it is Antigone (rather than Oedipus)

whose “absolute right comes into conflict with the divine right” at the beginning of paragraph 467.

The mistake of the ethical self can be characterized logically as failing to recognize that the spiritual “thing” which is the Substance of its own self-conscious identity has two equally essential sides. Antigone identifies (as she feels) with the essential unity of the whole. Creon and the Theban Council are expressing only the manifest aspect of sense-certain transience. On the other side, Creon, being the representative of Thebes, speaks for a manifest God; and Antigone is a transient self-will speaking only for another natural self that has already passed away. The customary right to which she appeals is only valid *within* the discretion of the political will. Everyone knows that in its independence, that customary right brought intolerable evils into the world (cf. par. 462).

- 5./468. The ethical essence is split into two laws, and consciousness, as unsundered, is allotted to just one. The essence has a right to be doubled, and it is the essence of self-consciousness in that double shape. The setting of one shape against the other is the ethical *deed*, for which the essence in the other shape becomes external actuality. The deed violates the other shape and is *guilty*; but innocence is impossible. Ethical action *transgresses* because the sexual allotment of the laws is not sublated. This transgression is not the act of the single agent, but of the ethical species. Self-consciousness in the ethical substance is specified but not singularly individuated; and action is founded on secure trust in the whole.

As unhesitatingly dutiful (or “virtuous”) the ethical consciousness is naturally allotted to one law. The virtuous woman thinks only of her family duties, the man only of his civic duties (which do include the raising of a family). But duty itself is one and indivisible; and because its essence is spirit, it exists nowhere except within the ethical consciousness. The lightning bolt is only a *Vorstellung*. The ethical consciousness is not controlled by fear; it knows that divine Justice is its own essence. Its own knowing and doing of the Right is the being of the Right as it is in itself. Unluckily for the agent, however, the divine self-consciousness that is her or his “true self” has an unknown side. Because the ethical consciousness is identified with this Substance of custom, this unrecognized aspect is her or his *unconscious* side.

The custom is rightfully doubled. It has one shape for men, another for women; and everyone will say that it is right that things should be so. So the custom as one substantial whole can “take its stand upon its right to be doubled in reality.” This doubling is, indeed, the most fundamental “reality” in it. And everyone whose substance it is must know that it has this doubled shape; no one could act rightly otherwise, since the activities of men and women cohere and interweave in so many ways. Each side needs the other, and will bend all efforts to support the other. So the “right to be doubled” is not like the right of the Christian world-substance to demand faith in “Heaven *and* earth.” The doubled reality of the ethical custom is all here on earth; the whole of it is “the very being of self-consciousness.” But the fundamental “deed” (*Tat*) that it demands of the ethical self-consciousness is “to

be a virtuous man” or “to be a virtuous woman.” Hence my most fundamental act of being what nature made me sets up of a *Gegensatz* in the ethical substance. I must know the whole, but the fundamental thing that I know is that the whole is categorical for me in the *male* shape (or the *female* shape) according to Nature’s decree. *This* is what I am responsible for; and there is another sphere that I am not responsible for. But when, in accordance with my naturally given responsibility, I deny responsibility for the other side, my responsibility becomes “guilt” (the German *Schuld(ig)* means both). For that denial is the expression of my “not knowing.” Hegel uses “known” and “not known” in the sense of “known or not known as categorical (or absolute).” Everyone is responsible for the whole substance; but no one can be responsible except as man or woman. So there is a transgression (*Verbrechen*) involved in the act that sets up the *Gegensatz*; and the transgression becomes explicit when obedience to custom in one of its shapes involves violation of it in the other.

This is Hegel’s reading of “original sin.” In the Biblical story the disobedience of Adam and Eve is made to appear contingent and gratuitous. But actually this sin is logically involved in the first statement of the creation of “man”: “In his own image created he *him*; male and female created he *them*.” This is exactly what is *known* in the Ethical Substance; so not even a child can be “innocent.” Ethical action *must* transgress; until the transgression occurs the recognition of the *unity* of humanity as God’s image is impossible. Hegel himself says that “according to its content the ethical *action* has the moment of transgression in it, because it does not sublimate the natural distribution of the two laws to the two sexes.” So he holds the sublation of sexual distinction to be in *some* sense *necessary*. The heaven of Reason knows nothing of “marrying and giving in marriage.” In effect, he is complaining that Antigone performed a political act, without recognizing that it *was* political; she denied the validity of the political realm altogether.³

“The ethical action” as Hegel explains it here is *not* the act of “the singular individual.” Polyneices, Antigone, Haemon, Creon’s wife Eurydice, these are “singular individuals” at the end of the action (i.e. at the end of the play) because they are dead. But the agent who *does* the action is “the woman.”⁴ The burial of Polyneices is the ethical act of “the Family” which is directed at “the single individual” (pars. 451–453). The dead man is a “*whole* singular” (par. 451) because his life is whole and complete. He has paid his last debt to the community by dying. In the case of someone who dies in bed it is not evident that he *has* paid a debt; if he dies far from home like Oedipus, the family cannot make this explicit by acting for him; but the case of Polyneices is the most extreme problem, because he died fighting against his City. It was *Greek womanhood*, in the person of Antigone, who recognized his membership as a complete singular individual in the community of the “children of Zeus.” This is how Antigone saw her action (which she repeatedly describes as her “piety”).

Against this pious ethical action of “womanhood” stands the execution of “justice” on the part of “manhood.” Creon carries out the judgment of the political community upon the “transgressor”; and he is very conscious that this is not an

ordinary crime. In its *ordinary* aspect it was peculiarly heinous because it gave aid and comfort to a traitor; even when the transgressor was still unknown, it already appeared to Creon to be simple human justice to execute the guard whose negligence allowed it to happen. But when Antigone commits the offence again in daylight it is the radically *unethical* character of her action that distresses Creon most: a *girl* has no business meddling in this matter at all.

As ethical agents, neither of them want to express their singular selfhood. They are simply expressing the ethical meaning of being a man and a woman. That is as far as “ethical self-consciousness” goes. The ethical self is necessarily *particular*—i.e., its duty is one part (or species) of the whole (or genus)—but it does not want to exclude anything in the ethical universal. It has “a sure trust in the whole.” Zeus is both the universal King and the universal Father. But ethically, one has to relate to Zeus as King if one is a virtuous man, and as Father if one is a virtuous woman.

Creon’s “justice” is a transgression against the “whole” too. But it not *his* “action” in any perspective. It is the action of Thebes, and the penalty for the transgression falls upon the real transgressor. The other Cities come against the City that has allowed the altars of the Gods to be defiled.

The action as a whole is Antigone’s, not just because she dies for it, and becomes, ethically speaking, a singular individual through it. In that perspective she is not the agent; she has to be buried by someone else like any other natural self. But in its *unethical* aspect—the very aspect in which we can see that not Creon, but Thebes, is the transgressor on the other side—the action belongs to Antigone as a singular individual. If she would admit that it *is* a political act, that Creon’s view of it is as valid as her own, she would indeed be “positing an excluding self, an actuality that is negative towards itself.” For in acting politically she would be “excluding” her own womanhood, negating the very actuality that is the foundation of her *ethical* status.⁵ She never does verbally acknowledge that her action is an ethical transgression, but it is the first thing that Sophocles makes clear (through the mouth of her sister, who is ethically committed enough to be ready to die with her). If we allow both of the perspectives to be valid then we can recognize that Antigone asserts herself as the *whole* of Reason (the complete image of God). She “sublates the natural distribution of the two laws to the two sexes” and becomes a Real Individual. That is not what she wanted to be, or what Sophocles wanted us to see in her; but the Hegelian perspective on the Ethical Substance does make clear why *we* feel bound to admire what Sophocles saw as the operation of a divine *curse*.

(b) *Ethical Ignorance* (“In suffering is learning”)

Hegel was no doubt attracted to the *Antigone* because the woman is the ethical “sinner” here. But it is more important that in this myth the *Gegensatz* of “the known” and “the unknown” is *ethical*. Nothing that Creon says is a surprise to Antigone. She simply “does not know” (i.e. she ethically refuses to admit) that it is valid. At this level of consciousness (the tragedy of what is ethically “known” and “not known”) the sinner must be the woman; because the self-made community of

“human nature” is an assembly of men. But if we go down to the more primitive level of the “conscious and the unconscious” (the free and the natural, the made and the given, the chosen and the felt) then the man becomes the sinner, because he makes the community.

The mythic *Vorstellung* of this male experience is Oedipus. When he receives the Oracle he cuts himself off from the family that is ethically his. But already he does not know who his natural family is; and so he pollutes it. This “not knowing” of father and mother is an ethically necessary “guilt” of civic existence. The story of Oedipus turns it into seemingly accidental crimes; but Hegel’s claim is that the myth of Oedipus only makes explicit what is inevitable, not accidental at all. The man who is truly devoted to the City cannot help violating family piety. The Oedipus story is an explanatory image for the knowledge of good and evil. What is done because it is good, makes itself known to us afterwards in its evil aspect; so no one who acts, however ethically, can be “innocent.” Innocence belongs only to stones: beings that do not know, or choose, or act at all.

The inevitability of the original sin of ethical knowledge comes to light necessarily when custom decrees one way of life for the true man, and another for the true woman. Humanity is not *individuated* in the *Volk* as the Ethical Substance; it is only *specified* into the two sexes. Oedipus and Antigone are Adam and Eve, the first human *individuals*, because their peculiar situations lead them to learn from their actions, the aspect of evil that is involved in action itself. Oedipus is unconsciously set against the *Dike* in the Underworld; Antigone consciously sets herself against the *Dike* of the daylight community. It is what *happens* that shows them both that they are “guilty.”

- 6./469. The experience of transgression develops in effective action whichever law it is devoted to. It calls up a hostile essence seeking revenge. This is the *hidden* side of the ethical resolution. Oedipus (devoted to the daylight God) does not know father or mother. But he cannot deny *guilt* when the deed shows its hidden side afterwards.

In paragraph 468, Hegel only argues that ethical action is inevitably guilty because it is one-sided; this *metaphysical* guilt attaches to the most innocent (and customary) activity. Every child is “guilty,” because only a stone could be innocent.⁶ The purpose of the drama was *cautionary*; the Sophoclean moral in the *Antigone* is: Do not put absolute trust in your own arguments. Creon and Antigone are both guilty of setting their own *logoi* too high. The story has to be told because this lesson has to be inculcated; and Hegel now runs through it as a whole starting with Oedipus, the good King, who transgressed the Divine Law. The story is set up so that we can see that Oedipus could not *avoid* his guilt; in the story, wisdom will not help him, because his ignorance is literal not ethical. But the literal accidents represent ethical necessity; what the myth says, is that all action that is effective (and makes a difference) has a hidden side. The terrible fate of Oedipus represents the price of the masculine commitment. We learn by doing, and one necessary aspect of learning is the discovery of violation and loss. To make something, nature must be sacrificed; when what we make is the City, all those bonds of felt identity that

made the tribe flesh of our flesh and bone of our bone, must be wilfully broken, in the sense that the new political authority has sovereign discretion to decide what wrongs will be avenged and how. Those who set up the public law must identify with it, even when their own feelings are crying out. The burden of “guilt” may be appalling, the price to be paid may be terrible, and the day of reckoning may be long delayed. The consciousness of being “just” will not help us; and the day of reckoning must come. That is what the Oedipus story shows.

Oedipus is the perfect intuitive model of the Human Law. He is not the son of a God, but “of Chance” as he tells the Chorus;⁷ he comes to his own City as a stranger. He is chosen by the people, and he is a good King. But then this sovereign is found to be guilty of the worst imaginable sins against natural feeling. If we read “the sovereign City” for the poetic intuition of “Kingship” in this myth, we can recognize Aristotle’s complaints against Plato’s *Republic*. The City of Reason must “kill its father” by wiping out whatever constitution has been established by custom; and incest is inevitable if no citizen knows his or her natural siblings. But this only helps us to understand Hegel’s view that the *Republic* expresses Greek *Sittlichkeit*.⁸ In Hegel’s reading parricide and incest are poetic metaphors for what human nature does to itself (logically) when it becomes *political*.

- 7./470. The ethical agent may not even be aware of the divine right he is violating. But guilt is purer when the divinity of human law is challenged because the law is known. Antigone aims to actualize the ethical custom; but she learns by experience that her right was not a true right.

Hegel takes the story of Oedipus as an intuitive presentation of the terrible problem that the civic authority faces. The “state of nature” can be experienced as so awful, that ruthlessness seems to be the only possible response; and even when that is not the case, the political authority may not realize that there is anything “holy,” anything that needs to be revered, in bonds that can express themselves so strangely. Thus the British in India stamped out the “Thug” cultists (who worshipped Kali by ritual murder) quite successfully; but *sati* still survives marginally as an ethical problem for the present Indian government itself; and the Indian Mutiny of 1857 was occasioned by a simple failure to attend to the religious significance of cows and pigs for the different communities from which the Indian Army was recruited. Similarly Creon sees nothing “wrong” in the prohibition of burial for traitors and public enemies.

Ethical blindness is different from the *moral* blindness of the Law of the Heart. Antigone takes herself to be defending the actual custom, and Creon to be a “conceited” tyrant. But her single heart must learn that the Custom is what is actual on both sides; and that the opposed actuality cannot be condemned and inverted, without a corresponding inversion of the Law of the Heart itself.

Thus if Antigone declares that the public authority is tyranny, then the power that maintains legitimate marriage and children is cast into the same pit. That is what the play shows. “In suffering, is learning” (Aeschylus). Antigone dies by her own hand; and by killing herself, she acknowledges that she *has* erred.⁹ But Creon

loses wife and child too. Both parties are “guilty”; and for us the *real* “suffering and learning” is when Thebes is threatened with destruction. We can all clearly see what Creon himself learns then: that the forbidding of burial violated the Divine Law. But when, in the light of that, we compare what Antigone wanted but did not get, with what Creon had that was taken from him, we see that the judgment of Zeus is that the “divine right” was violated by the “absolute right” on both sides equally. The whole substance is the true *actuality* of both sides.

- 8/.471. Accepting her fate sublates the dissension between Antigone and the actual divine right. But this means surrendering the ethical character (as immediate identity with substance). Character now becomes *disposition* not action. This loss of immediate identity is impossible for true ethical individuality.

In paragraphs 471 and 472 the interpretation of Antigone’s own verdict on her tragic fate continues. Her recognition of the justice of her tragic suffering expresses the fact that the split between her ethical goal and the supposedly tyrannical actuality has been overcome. If the Gods allow her to be sent to her tomb, then she must accept her fate. Zeus has given judgment, and a properly formed ethical disposition must submit. The ethical *Gesinnung* (Aristotle’s *ethos*) has two sides: action and *pathos*. Ismene argued that when a political decree is given, the woman’s part is all *pathos*. But Antigone thought that Zeus had given a higher decree, and that she must act. Now she accepts the judgment of the actual authority as the will of Zeus. But this judgment means that she, who acted, must surrender her character and the actual side of her “self.”

After Antigone’s great protest on behalf of Zeus and the *Dike* in the world below, Creon becomes so far sensitive to family piety that he says she is not to be put to death, but imprisoned in a dark cave with minimal life-support. It is she herself who translates this living death into simple natural death. Deprived by the civil law of her “character” as a young woman destined to become a wife and mother, and of the actual side of her civil existence, she follows the example of her mother and hangs herself. The community, represented by the Chorus, can change its mind, but Antigone has taken the penalty upon herself already. Since it was she who said “having suffered, we would agree that we have erred,” Hegel holds that her action *is* her agreement.¹⁰ She exacts the penalty decreed originally. Antigone’s very being is “to belong to her ethical law as her substance.” Just staying alive is ethically irrelevant. “Belonging to her substance” means (actively) the founding of her own family, and the raising of children for the City; and (passively) submission to her husband, the City, and the Gods. All of that has been taken from her. Her future husband told Creon that everyone secretly agrees that what she did was right; but nothing came of that, except a compromise that sends her living to the house of Hades. If she lives upon these terms she will be *nothing* but “ethical disposition.”

Ethical “disposition” (like “character”) embraces both action and submission. But “disposition” is the ethical whole regarded as submission, just as “character” is

the whole regarded as active self-expression. Creon calls the penalty he proposes “praying to Hades, whom alone she reverences among the Gods, for the luck of not dying.”¹¹ The fate that would leave Antigone clinging to life in the dark (like her father) maintaining her own innocence and the rightness of her “disposition,” is properly anticipatory of the Unhappy Consciousness in the age of Reason—and particularly of the “ethics” of Fichte.¹² Fichte holds that we must all live always in and for “the ethical disposition: that nothing counts except the Right.” Antigone would have to do that, if she accepted the verdict of the Human Law; and the verdict of the Human Law upon Antigone expresses, mythically, but therefore *vividly*, just what the life of the Fichtean righteous conscience amounts to: living in the dark, unable to do anything, except to maintain the moral will, the pure respect for what *ought* to be, but never *is*.

Antigone rejects that fate. She refuses to be just “disposition”; when she is reduced to that, she *acts* still, and pays her last debt to the Substance. She will not accept to be, and to live as, the very *Gesinnung* which we (beginning with Goethe) all *are*, the disposition with which we all read her tragedy (or watch it) and say: “She was right. Her fate was wrong. It *ought* not to have happened.” She herself says, on the contrary, “It did happen. So it is the will of Zeus, and I accept it.”

Antigone is a woman. That is what God (or Nature) made her. It is her *pathos*—she suffers it at the hand of Zeus or *Dike*. It is stamped upon her by nature, and she suffers the educational imprint of her domestic and civic education to form her “disposition” and teach her what being a woman means. The problem is that she is not submissive by nature. We can be sure that her active individuality “stood over” this suffering process of formation all the way. The impression which she accepted as a natural and cultural *pathos*, she affirmed as *herself* with vigorous insistence. Natural submissiveness she did not have; her sister Ismene had all too much of it. Ismene thinks they must do nothing, and pray to Polyneices for forgiveness.¹³

There is no weakness in Ismene’s “character,” for when Antigone does act, Ismene identifies with the action and wants to die with her. In their choices we can see how they individuate themselves—and hence how “individuality brings the substance to life and stands above it.” Antigone’s own decision is to act; and it is consistent with her hyperactive character, that she does not passively accept the verdict of the Human Law. She identifies actively with her character as a woman, and when her destiny in that role is brought to nothing by the “downfall” of the Divine Law into the Underworld,¹⁴ she “cannot survive it.”

Antigone cannot think about herself and her action in the dispositional way in which we think about it. This inability is just what Sophocles chooses to found her actual tragedy upon. Had she been able to accept life as an “ethical disposition,” she would, in fact, have triumphed in the end, since even Creon finally admits that she was right. But by the time the City had buried Polyneices publicly, it was too late to release Antigone, because she had taken her law, the law of death, into her own hands. She “stands above” substance as her *pathos*; and that means that she immediately asserts the *pathos* as her character. She cannot stand still and raise her hands to pray. Even to submit, she must act.

- 9/.472. Antigone dies with the certainty that the other side must suffer equally. In the ethical tragedy both go down together (for neither is more essential than the other). A character, as a naturally imposed *pathos*, belongs to one side only; but both characters are split into conscious and unconscious knowledge; and through action each becomes guilty of its own ignorance. So neither side can triumph. The ethical substance emerges as *Destiny*.

In accepting her fate Antigone has the certainty that “the individuality whose pathos is the opposite power *suffers no greater evil than it does*.” Just as he has already treated Antigone’s conditional acknowledgement of error as confirmed by her suicide, so Hegel treats her wish that “these men may suffer no greater evils than they are unjustly doing to me” as a prophetic certainty that the actual individual (Creon) who has authorized her living death will lose as much as she is losing.¹⁵ The play authorizes this interpretation because Antigone’s wish comes true. Creon’s own son Haemon attacks his father (like Oedipus, but knowingly) before falling on his own sword; and Creon’s wife Eurydice follows her son’s example by plunging a knife into herself when she hears of his death. Thus the blindness of Creon to the Divine law turns out to be violence against his own family ties (and we have an example of how the divinely imposed ignorance of Oedipus really works in a normal case).

These two agents, Antigone and Creon, set the two aspects of the divine Justice that is the substance of True Spirit in motion against one another. The motion has reached its true End only when both sides have suffered the same downfall. How much is meant by the downfall of the two “sides” is ambiguous. In the play it is Antigone and Creon who suffer the same loss to Hades. But the two *Mächte* (meaning the Family and the City of Thebes) also go down to the same ruin when Hegel tells his version of the myth a bit further on (par. 474). Since he began paragraph 472 by citing Antigone’s *wish*, we should probably think only of the two shapes of consciousness for the moment. The two *Mächte* need to bring their conscious partisans to grief. For they are equally essential, and that is the “divine right” that is the “essence of self-consciousness” (par. 468). The essence is properly “selfless.” The two powers “are there as self-essence in the *deed*, but one that is at variance [with itself], which contradicts the unity of the self.”

When the two worlds of ethical substance (the men’s world and the women’s) are working in harmony, the harmony is not “self-conscious” at all. There is one “self” in the Assembly, the courts etc., and another in the home, with the children etc. But there is no self of the whole. When some conflict arises between the spheres, there is a “self-essence,” because they can communicate with each other, but it is *verschieden*, i.e. it is *discordant*, the selfhood is at variance with itself, because they do not hear each other properly. This is where “the deed” occurs. The spheres try to act on one another; but the only act they can perform is to destroy one another, because neither is the self of the whole.

The self of the whole is a deceased (*verschieden*) self.¹⁶ It exists only in the great family of the *Underworld*, where all the disagreements are forgotten. Each charac-

ter has been stamped by the substance in one way. To be male or female is its *pathos*. Each knows about the sphere of the other, but cannot have a categorical intuition of it. If they did, the stamp of Nature would not be an ethically defining “character,” but only a “disposition.” If the character is perfectly stamped, and no singular self-hood “stands above it”—if we have only a submissive woman like Ismene faced with the edict—then the wrong is done, and the guilt incurred, only on one side. That is tragic, but it is an “uncompleted work.” The characters must both be active; each must “call forth the *Gegensatz*,” make the not knowing of the other’s imperative its own “work,” and incur the guilt of violating it. Then *Destiny* appears (or in our own theological language it becomes apparent that Zeus is the “Lord of Nature,” but not the “Lord of History”).

In empirical terms, it is unrealistic to say that “character” is an absolutely categorical stamp. Empirically, Aristotle is right; “character” is a *hexis*, a mere disposition to behave in a certain way. But Greek Tragedy sets up the *ideal* that Aristotle himself would agree with. The good citizen should become absolutely reliable, or “identical” with virtue.¹⁷ But then our choices become categorical, and an absolute conflict of imperatives ensues. Thus the tragic conflict between Oedipus and Jocasta is about what ought to be “known,” and what ought not. The *political* imperative is that “everybody should know everything.” But Oedipus does not know everything himself—as Jocasta does after he tells his story. So this collision is an “uncompleted” work, like the triumph of “self-consciousness” at the point where Antigone leaves the stage in her own tragedy. But the *Antigone* completes the tragic climax. It “proceeds unhaltingly to the equilibrium of both powers.” Oedipus was finally defeated by the divine Underworldly power of the Sphinx—whom he thought he had vanquished in gaining the kingship. What triumphs in the *Antigone* is “the ethical substance as the negative might . . . or almighty and righteous *Destiny*.”

(c) *The Destined Downfall*

- 10./473. This conceptually necessary tragedy takes determinate shape in the myth. Nature (which has a Right of its own) produces *two* royal heirs. Naturally speaking, they have equal right; but society requires *one* monarch. So they kill one another fighting for the throne. By human law, the outside attacker is the traitor (that he was betrayed first is a mere private matter). That they both died is the justice of nature, but that traitors must be dishonored to the last, is humanly just.

Hegel’s retelling of the story is interesting in several ways. First he says that “unconscious nature has a *Recht* against *Sittlichkeit* and self-consciousness because the latter is only the *true* Spirit, [or] only in *immediate* unity with its substance.” True Spirit presupposes a perfect harmony with nature. But unconscious life displays its freedom as contingency of all kinds (pars. 295–297). It has a Divine Right against the self-conscious designs of Spirit, because it is Nature that determines how what is ethically right is to be embodied. That *two* brothers should be born in

the royal family is an accident of organic life; and Hegel clearly holds that the order of birth cannot create a *natural* right. Many communities have thought that it does create a right (including Sophoclean Thebes—for both Ismene and Polyneices tell the story of the strife between the brothers as originating in the failure of Eteocles to recognize the right of primogeniture as he ought to).¹⁸ The rationale of Hegel's view is just that in principle, this is the point where the "absolute right of Self-Consciousness" takes over. The *Volk* can choose. Primogeniture can be canonized as the "will of all." But it need not be. The polluted state of the *natural* claim of Oedipus *represents* the implicit sovereign right of the *Volk*.

The only "right" that is purely "natural" is the right of fair combat; and the disorder produced by that right (feuds within the family) is one of the factors that leads the *Volk* to recognize its own ethical sovereignty, so that True Spirit is born. Hegel follows the version offered by Sophocles in the *Oedipus at Colonus* (which is what we should expect).¹⁹ According to the statements of Polyneices and Oedipus there, Polyneices, as the elder son, took the kingship first. But about the necessary expulsion of Oedipus, at least, there was an agreement between the brothers, because when Polyneices banished Oedipus, Oedipus blamed both of his sons, and cursed them both. In due course, Eteocles persuaded the City to exercise its right of choice (as it had done in the case of Oedipus); and then, of course, he banished Polyneices.

It is clear that Eteocles wanted to rule as a constitutional monarch, and it seems certain that Polyneices would not accept that change in status. The constitutional right that springs from Eteocles' "persuasion" of the City is the "absolute right of self-consciousness." Polyneices was "relieved" (*abgelöst*) of his responsibility for the community. His brother then expelled (*vertrieb*) him as a mere private citizen (*Einzelne*). Eteocles "knew how to get hold of him" this way—"having persuaded the City" as Polyneices says. Polyneices distinguishes that "persuasion" from "being victorious in *logos*," as well as from "proceeding to the trial by combat or deed," so he does not consider that the City was a competent court of appeal.²⁰ But in Hegel's view, whatever wrong was done to Polyneices in the pre-constitutional frame of reference that he took to be the frame of "natural justice," was now a private matter.²¹ The community supported Eteocles. So in terms of human law Eteocles was in the right.

Polyneices left the City in a great rage. He went to Argos, married the king's daughter and returned with an Argive army led by seven champions. Outside the walls he proclaimed that he would lay waste the City.²² The judgment of Zeus, now that Polyneices had forced his brother to face it, went against both of them. But the judgment of the City naturally went against him. It is axiomatic that Zeus is "right"; but so is the City.

11./473. These royal brothers are the highest tip of the social pyramid. But the socially dishonored dead man has a divine force behind him. Nature, the family, is essential and cannot be destroyed. It gives way outwardly, but there is a backlash. *All* the cities whose dead have been dishonored and altars defiled, come against *this* city [Thebes] (and the community itself is destroyed).

Whatever the character of the dispute in which he was banished may have been, it is clear that when Polyneices came with the army of his father-in-law, Adrastus King of Argos, he was asserting his *family* right to the kingship of Thebes. The City on the other hand had *chosen* Eteocles. So in declaring Polyneices to be a traitor, and refusing to let him be buried, the new-born "Universal" (the City as a self-conscious community that makes its own law) is expressing its victory over "the rebellious principle of singularity, the Family." The City "lightly brushes away the pure tip of its pyramid" (the tribal monarchy). It is "the Universal," i.e. "the highest Spirit of consciousness, or of the commune" which does this, even though its agent is "the restored simplicity of the self of the community." There were two naturally given kings, and the community "restored simplicity" by simply choosing one. Then Zeus removed them both, and the community entrusted Creon with the kingship. Here it became perfectly clear that the "restoration of simplicity" is the direct act of "the Universal."

Creon issued the edict as the "government" of the City, appointed by the City. But he was a stupid man, and it was a stupid edict. Simple obstinacy and wise flexibility happen just as naturally as passivity and activity do. But the inevitable "selflessness" of the whole becomes visible when an ethically *simple* man is faced by an ethically *active* woman. The edict violated the fundamental principle of the piety that belongs to "human nature" as the unconscious form of spirit; and the newborn self-conscious Spirit is only called "true" because it expresses consciously the truth of that unconscious nature. Nature cannot be abolished; so its truth is there still, even when it is denied. The "spiritual thing" ought to express that truth immediately. But as a selfless "essence" (a whole that is without self-knowledge) it is an automatic system of action and reaction. Everyone (meaning everyone in the *linguistic* community) shares its blood-ties. When the *polis* is founded, we must "forget" all that, in order to escape from all the horrors of the world where blood-ties came first. To return to that world now would be madness. But the Gods themselves swore their most holy oath by the Styx. Even when we drown all of the ties of nature in the river Lethe we must still remember the Stygian "oath" of obedience to the "unwritten law."

What has to be forgotten in life must be remembered in death. That is the immediate (or natural) way in which the Underworld of our biological nature can be both Lethe and Styx at the same time.²³ The City can exist as the self-conscious expression of the justice of Zeus, only as long as it remembers that the "truth of its oath" is a debt of justice that it owes to all Greeks. Polyneices with his Argive army was a traitor to Thebes; but even if he was no longer a true Theban, he was a Greek, and so were all the Argive enemies who fell with him. Adrastus, King of Argos, can find support in every City when he cries out at the pollution of their altars, by all the dogs and birds dragging the dead remains everywhere. To leave the dead unburied is unGreek, barbaric. It puts shame on the Gods whom all Greeks worship. So the natural operation of nature, with the weather and all the living creatures doing what comes naturally, returns human relations to the old law of vengeance automatically. This is the message that finally gets through to Creon

from the mouth of Teiresias.²⁴ Sophocles lets Creon be converted, and survive equally punished with Antigone, but choosing the life of empty “ethical disposition” that Zeus has left him. Dramatically, this leaves Antigone alone at the centre of her own tragedy; ethically, it shows us that the edict was only Creon’s action *as the King*.²⁵ The fate of the City, the male “power” of the “human law,” Sophocles does not make explicit. Hegel reads him *prophetically* and assumes that Thebes was sacked; the poets told the story differently. Euripides gave it an “Athenian” shape—in his *Suppliants* it is Theseus who supports the cause of the dead, and he spares the City itself.²⁶

- 12./475. In the myth it all looks accidental. These people *felt* this way so the city was destroyed. But what is emerging is the logical principle of singularity (the inwardly divine law). This is actual not just in the Underworld, but as family ambition, intrigue and faction in the community. The community’s activity of self-maintenance (and disciplining of family selfishness) creates this oppressed inner enemy that it cannot do without. Woman presides over the family; so she is the supporter of the inner enemy. But the dependence of the City on family spirit emerges in its wars. Here is it apparent that the ethical order survives by luck. In principle it is mortal; a universal/singular order must replace the universal/specific one.

In this myth everything happens because of how the agents felt. What they had to do imposed itself upon them as a *pathos* of personal feeling. Theseus would never have issued the edict; and Ismene would never have defied it. But the accident of Creon and Antigone colliding, reveals the inevitability of a rebellion of natural feelings against any harmony of ethical commitments. The primitive principle of natural self-assertion which “stands above” the ethical *pathos* of them both, is normally disciplined into “identity” in life, and granted its natural right of recognition in death. The Underworld is a poetic metaphor for the natural feelings. To the government this inner feeling is the proper matter of social discipline; so the ceremony of burial appears to be just an external actuality, which can be allowed or denied.

But the “divine law” does not just have this “underworldly, or in its *Dasein* outward effectiveness.” It is quite as actual in the *Volk*’s life as the sovereign power of the Assembly. This public actuality is what we recognize when we comprehend the drama. What emerges nakedly into the daylight in the life and death struggle of the two brothers is the “principle of singularity generally.” The new-born community, governed by its own law, must sublimate this; no single family should get free from the governmental control. But the domestic cult, recognized as Divine Law, guarantees that families will keep their independent consciousness; and the City itself needs this, because it needs men who will fight and die for it.²⁷ And, since ours is the rational species, none of us fight and die for anything, unless we were willing to fight and die to get our own way, to have our own will prevail “in a state of nature.” Primitively death is only accepted for the sake of *lordship*. So in the “state of nature” (as a form of society with “natural justice”) the battle of Eteocles and Polyneices must forever recur; it is a battle about Divine Right. But when the political community is firmly established and universally recognized, this life and

death struggle becomes a faction-fight for *political* lordship. "Through intrigue the universal purpose of the government is turned into a private purpose, the universal activity of the government is transformed into a work of this determinate individual, and the universal property of the State is overturned into a possession and ornament of the family." We can see this already in the story of Polyneices. He goes off to Argos and forms a family-alliance in order to get his family-property back; and as long as there was an aristocracy in the Greek cities, there was perpetual faction.²⁸

Hegel expresses this very sound insight into Greek history in terms of the "intuitive universals" of Greek mythology as we find them in the poets. "Womanhood presides over the family," he says again. Therefore "the community . . . begets for itself in what it oppresses, and what is at the same time essential to it, in womanhood its own internal enemy." It is womanhood, therefore, which intrigues, and actively turns, transforms and overturns the communal goal, activity and property into a family goal, activity and property. Thus although Hegel puts the ultimate blame firmly on the all-male assembly, we are now asked to see every wife as Eve, whispering the promise of the serpent in Adam's ear, and dangling the apple under his nose.

Except for the bit about the City oppressing what is essential to it, this is certainly not historical fact. The wife "presided" over very little, and there are not many cases where we can show (or plausibly suspect) that a wife was the main-spring of faction or personal ambition in Greek history. There was no woman behind Alcibiades for example; Olympias, wife of Philip II of Macedon, and mother of Alexander, is an exception, but then Macedon had remained a kingdom, and was not politicized into "communities." So she does not belong to the pattern that Hegel is speaking of here; Olympias was only carrying on the struggle of family politics that belongs mythically to the world of Agamemnon and Clytaemnestra. The tragic poets of the War period (Euripides as well as Sophocles) support Aristophanes' image of woman as the peacemaker.²⁹

Hegel's parable is only understood in its poetic "truth" when we read it as the story of Public Spirit and Private Interest in the political community. If we want to take it as history at all, we must put "life" in the place of "womanhood"; and "self-consciousness" in the place of "manhood" in this new myth of the Fall. The Family is the spiritualized form of "life"; and the Community is the rationalized mode of "self-consciousness."

But we must first validate Hegel's claims in his own "intuitive" terms—i.e. we must find his argument in the Greek poetic tradition. He offers us several character sketches, that are quite plausibly identifiable. The first of them is almost certainly Helen. She certainly perverted everything, and turned the ethical world upside down; but it was not because she was a political intriguer. She did not care for politics at all. She turned men's heads; and she certainly turned "the earnest wisdom of ripe age to ridicule." She personifies "pleasure and enjoyment"; and Paris, whom she chose, was a good example of the "frivolity of immaturity." She represents perfectly the *temptation* of youthful lightheartedness (which is what this

first long clause seems to be about). But intriguing for power was not Helen's thing; and Paris was not notable for *Kraft* of any kind; so the second half of Hegel's sentence with its triad of distinct "shapes" must be considered separately.

"In general, woman exalts the force [*Kraft*] of youth into what counts." Under this heading Hegel distinguishes the three family relations of son, brother and husband; and his first case is mythically unmistakable. "The son, in whom the mother has borne her lord"—this is Oedipus and Jocasta. The "policy" of Jocasta in the *Oedipus Tyrannus* is quite plain. She knows the truth, and she is desperately anxious to prevent it from coming out. What motivated her to let the situation arise and continue, puzzles the Chorus, and should therefore puzzle us; but we cannot be concerned with that here. Jocasta's motive in trying to persuade Oedipus not to drive the truth into the open, is plainly the salvation of her family. Apollo is a God whom she has every reason to hate, and she plainly says that she cares nothing for him, or for his oracles; when she makes her offerings later on, it is clear that she has been driven to it, partly by the reaction of the Chorus, but mainly by simple desperation about the behavior of Oedipus.³⁰

Because it is Jocasta who personifies the secret wisdom of the Sphinx in the Sophoclean story of Oedipus, we are bound to think of Antigone as the sister who finds an equal in her brother, and the young woman who will become an independent family founder through marriage with Haemon. Antigone is an intriguer against the City, since the *first* burial of Polyneices is done secretly during the night. She only did it again openly when she realized that unless she was taken in the act, the deed itself would be concealed (and others would suffer for it). She never does achieve the "independence" of wifehood, but Haemon attacks his father and kills himself on her account. So she fits the pattern in an ambiguous way even though her brother is dead, and she herself dies unwed. But unlike Jocasta she does not in any way pervert the end, activity or property of the community into a purely family concern.

A much clearer sister-model of what Hegel says about womanhood as "the eternal irony of the community" is offered by Electra and her mother in Sophocles' play *Electra*. Here we find Electra waiting anxiously for her brother Orestes to do the deed of vengeance upon Clytaemnestra. That her father's throne is now occupied by the younger man Aegisthus is what she is obsessed about; she rejects her mother's claims about avenging the death of Iphigenia, and insists that Clytaemnestra's only effective motive was her desire to make her paramour into her husband and King. The importance of Aegisthus in Sophocles' play is in striking contrast to his subordinate role in the *Agamemnon* and *Choephoroi* of Aeschylus; and Electra, though she dominates all the females by whom she is surrounded, feels herself to be helpless until her brother arrives. Antigone is unique because she emerges plainly into the daylight; the heroines of the *Oedipus* and the *Electra* remain, Sphinxlike, in the shadows.

The Deianira of Sophocles' *Trachiniae* is perhaps the young wife who wants to keep her husband at home, instead of letting him pursue the public good. But the Sphinx is the proper mythical image of what Hegel is talking about. Here we can

recognize “the cunning of Reason” as it exists in the immediate world of “true Spirit.” Only the rigorous exclusion of women from public life justifies Hegel’s allegorical identification of the Sphinx with “womanhood.” What is “oppressed” by the Community is the Family—to which all citizens, male and female, belong. Youth is “oppressed” by the “earnest wisdom of ripe age.” The Real Individuality of True Spirit is the *polis*. The Hellenic *Volk* is an assemblage of these spiritual individuals. Like the natural self-consciousness, they have to go to war in order to confirm the absolute freedom of their rational selfhood. War was essential to the existence of the Ethical Substance (which is Zeus and Justice, not any lesser God) as free self-consciousness. Unlike Eteocles and Polyneices, the spiritual individuals cannot kill one another; but the young men must die for them. This is the real life that produced Greek Tragedy; and by the same token it is the rebellious desire for “pleasure” that lies at the foundation of Comedy.

Hegel is not concerned with Comedy yet; and he admits the one-sidedness of the metaphor of “womanhood” when he says that the spirit of singularity “would not be able to do anything were it not that the community itself recognizes the force of youth as the *force* of the whole.” Greek virtue (*arete*) was “force” (*Kraft*) before it became ethical goodness.

Except for the Spartans, the Greeks were not in fact militarists. Hegel clearly understands and says that war is only a necessary “moment” of the Ethical Substance. He sees the oppressive aspects of Greek society clearly, and he identifies the military origin, both of slavery and of female segregation. This was quite explicit in his analysis of the origin of servitude; and it is explicit here in the analysis of the “enmity” between “womanhood” and the City. But it is essential to realize that the military ethics according to which the “pursuit of happiness” is “weak and womanly” is not Greek but Roman. Antigone sees the happiness of life in the community to be what is worth seeking. She is no intriguer for private peace and selfish prosperity; she seeks only to keep warfare in its subordinate place.

Hegel wants to show us, through her tragedy, why the principle of youthful aggression could not remain a mere “moment” in the justice of Zeus. For that purpose he has to concentrate attention on the uncontrollability of human aggression; and the mythology of the family feuds imposes itself as the content of the discussion, because the natural law of family obligation is the immediate shape of the *Sache selbst*, the objective standard for rational life which nature itself provides.

The story of Oedipus and Jocasta (rather than that of Antigone and Creon) is the ultimate symbol of the impossibility of “true Spirit” as an immediate harmony of Spirit with nature. It is this quite unique “marriage” that we must think of when we want to interpret Hegel’s symbolic use of “*der Mann und das Weib*.” The Greek City, as a face to face community of families which aims to establish a rational system of “justice,” is this “marriage” of Mother Nature to self-defining Political Freedom. When the truth comes to light, the *polis* must fall. For the truth is that everything turns upon the survival of the City in its wars. This is where the story of Eteocles and Polyneices becomes crucial, for this story of the sons is the resolution that is not contained in the story of Oedipus himself.

The story of the emergence of the deceased natural self from the Underworld, as the “thinking self” of Stoicism, does not express the whole truth of Greek ethical life as Hegel understood it. For that we must wait until chapter VII. Nor does Sophocles’ Theban trilogy express Hegel’s own philosophy of sexual relations. The *piety* of Antigone (her attitude to her dead brother) anticipates his Christian conception of the universal rational community of Absolute Spirit; and her ethics (her attitude and expectations about her proper destiny) anticipates the ideal of the family for his own time. But the “selfless” community of natural *Sittlichkeit* is only the training ground that makes the natural self into a formally universal self-consciousness. Hegel’s own ethics of sex and the family is Christian not Greek. The “result” of tragic ethics is a militarist ideology in which “woman” symbolizes the pleasures of peace; she is a distraction—something that can properly be enjoyed only as the prize of victory after the battle.

For the Greek Cities, victory was a matter of luck, and defeat was an encounter with incomprehensible necessity. But when a social power emerged for which Conquest was God, and *Fortuna* was the handmaid of the City itself, the “*living folk-spirits* pass away because of their individuality—they go to the gound in a *universal* community, whose *simple universality* is spiritless and dead, and whose vitality is the *single individual qua singular*.”

This is the first inversion of True Spirit. True Spirit cannot be *philosophical*, because only a thinking self who identifies with the truth of her own individual thinking can do philosophy. True Spirit knows only *particular* powers. In Hegel’s reading of the *Antigone*, womanhood is seen as the preserving and reconciling power that presides over the ending of our life, because it must naturally and necessarily “preside” over the beginning of it; in the world of immediate or true spirit, the singular biological organism that comes forth from the womb remains a natural, or singular, personality for the womenfolk, because they are ethically prevented from living with anyone on any other terms. Hence, quite without any regard to the normal empirical arrangements about funerals and sacrifices, the womenfolk have to be conceived as achieving their *spiritual* self-consciousness in the family cult of the dead, because the family-cult is for them the way in which the enmity between the life-giver and the life-taker can be reconciled and healed. As long as war can be seen simply as the necessary moment by which the life of the community as a self-maintaining “individuality” is preserved, there is no “enmity” between Family and City. But the story of Eteocles and Polyneices shows how the wars between the Cities are bound up with the continued existence of feud and faction within the Cities. They united once against an imperial power that was not itself a City. But against a City that makes Empire its absolute goal they are helpless, because they never could unite properly; and they did finally teach their citizens to be “individuals.” In the inversion that follows as a result, the universal community of singular natural individuals in the Underworld becomes the real community of the daylight on earth; and the “folk-spirits” perfectly realized in the “spiritual individualities” of the Hellenic Cities, the “folk” of Zeus, pass into the realm of death and spiritual memory.

- 13./476. The downfall of the ethical substance arises from the fact that ethical consciousness is not *mediated*. Nature itself determines the structure of ethical activity, and this natural commitment is the seed of disaster. For the ethical *Volk* has a naturally given limit; it must die. With this death the living consciousness of substance is lost. Substance is replaced by the formal universality of a legal order of self-conscious points.

Antigone's Divine Law is naturally given. The *Dike* of Zeus is something immediately felt, whether in daylight or in the night-time. The *Iliad*, which ends with Achilles surrendering the body of Hector for burial, begins with Athena taking him by the hair when he is moved in his warrior's wrath to strike the High King, Agamemnon. The custom, whether of public or of private life, is all consistent; but it is a face to face world—everything is customary. Achilles would have done what Oedipus did at the place where three ways met; that is why Oedipus is visibly proud of it. But Agamemnon comes to his death because he sacrificed his family to the communal need, or alternatively because his wife fell in love with a younger man—the unstable relation of Spirit and Nature is visible, whichever way we interpret the story.

The political consciousness regards nature as wayward and unstable, while the customary consciousness is stable. Hegel speaks of nature as “unconscious rest” (with no conscious decisions and actions) and of spirit as “consciously unresting rest” because he wants to distinguish the kinds of *immediate stability* they can achieve. The law of custom is what is stable in both views. Clytaemnestra says she is avenging Iphigenia; but the Sophoclean Electra claims that she is falling below the justice of Zeus, in order to gratify desire. So according to the custom, she must be killed in her turn. This is the ambiguity of the two kinds of immediacy, the ambiguity involved in being “determined by nature.” Hegel holds that a case like this is symbolic of the stress that made the Greek Cities mortal entities, and not immortals as they took themselves to be. They solved the problem of family feud by establishing universally recognized constitutions. But they continued to be a warring family among themselves; and every city was a self-polluted family, the family of Oedipus.

The beautiful balance between daylight justice, and the pious memory of family ties, could not be maintained; the community involved was too small and too local. It necessarily existed in a wider community of others like itself; and in the nature of things the Cities could destroy one another. The harmonic opposition between public law and natural custom (to give the “absolute right” and the “divine right” their universal scientific names) was bound to be replaced by a “formal universality.” This would be the work of a self-consciousness that was not local, and cared nothing for the many living harmonies that self-consciousness had created within the total community of the Hellenes. The Hellenes thought of themselves as an immortal *family*, with many different forms of public law. The Romans had the same consciousness of their law as their own living substance. But for them there was only Rome, the Universal City. They did not see themselves as part of a family; so for them there was no division between the public law of the community and the general custom of the nation. It is poetically apt that Creon survives at the end of

the *Antigone*; his pigheaded blindness to the existence of the wider community of Nature is prototypically Roman.

But, of course, change came about gradually, and the Ethical Substance matured over a long period. Sophocles was presenting the intuitive image of a wisdom that can avoid the disastrous clash of categorical imperatives. When that wisdom of feeling exists, the whole is not really “selfless.” But the self who has comprehended the whole can readily pass from one “spiritual thing” to another. Plato can go hopefully to Syracuse and waste his substantial ethical wisdom on “the *singular* individual *qua* singular.” Aristotle can come from Macedon to acquire that wisdom and teach it (less wastefully but for its own doom) to Alexander; and every wise man in Alexander’s world knows that the subjection of his native City is a matter of no great moment. It is no great marvel that the Cities who taught this higher philosophical wisdom, could not defend themselves against a City which had no such dangerous knowledge; but it was they who made the Empire into a “universal community” quite different from the world of “subject peoples” that the Roman Republicans supposed it to be.

VI A(c): Condition of Right

The Rome that Hegel is interested in is Hellenistic Rome, the Imperial power that already controls an Empire, and is forced to give up its old balance of aristocratic and popular institutions in favor of an executive who is King in all but name. In fact, the family name of Caesar eventually became the title of other personal authorities who ruled over a plurality of “nations”: the Kaiser, and the Tsar, or Czar. In the languages that were more directly indebted to Latin it was his title that passed down: Imperator, he who commands. In Hegel’s own world the new Emperor of France was on the verge of abolishing the German Kaiser’s title, which was only fictionally connected with Rome in the first place, and had long ceased to have any commanding power (as Hegel showed in his essay on the “Constitution of Germany”). This was another sign that Hegel’s book was “comprehending its time.”³¹

(d) The Rule of Law

- 14./477. The formal universal unity is a spiritless community of atomic individuals, who are all equally *persons*. In the ethical community they enjoyed this singular independence only after death. The ethical substance was true *spirit*; but now it is supplanted by personal *certainty*. The individual is the substance as positive law, but as an effective agent he is a universally negative *self*. The ethical powers were the victims of Destiny. Now we can recognize the Ego of self-consciousness as Destiny.

The Empire to which the Romans brought their Peace was a “spiritless” community. Every different community in it did what the Roman masters told them (or else—in a case like that of the Jews—the Romans wiped them out). The Romans themselves did not identify with Rome as the Universal City in the old way; not

even Rome was self-governing, and hence spiritually “self-conscious.” The new community was spiritless, but not “selfless” in the way that the “spiritual thing” had to be. It was not a “substance without self-consciousness.”³² The Roman Universal was itself a “personality”; it was the Emperor’s head that was on the coins (and not, for example, Athena’s owl). Everyone was a citizen—although, initially, it was a high privilege to be a *Roman* citizen. Caesar was both the first citizen and a God. In the West he moved from the human to the divine status at death; but even in the West he was always revered as the son of a God. It is the Western custom that Hegel renders (poetically) by calling the new universal unity “this dead Spirit.” The Stoic philosophers taught that the universal spirit was everywhere *alive*—but they were free selves who could not exercise any actual freedom.

In the natural (sub-ethical) order of custom, the single consciousness was not a *persona*, a voice of the Universal. That was what Antigone became in the Ethical Order. She was only a family member, a conscious living link in the chain of blood; but she spoke for the personality of the dead. Creon was logical in reducing her to the living voice of Hades. Now Creon’s voice, the mortal voice of the *Volk*, becomes the voice of an absolute authority. The Ethical Substance withdraws into the certainty of a living self. The Ethical Order becomes a real universal Empire, everywhere pacified; and its actuality is a universal self of the personal kind. The single individual who was properly only “a selfless departed spirit” (because in life he was completely given over to the community) advances out of his unactuality to become the recognized principle of actuality. The law gives every citizen his rights (and even hers, though in a lesser measure);³³ and the jurists teach that “what pleases the Prince has the force of law.” In place of the blind chance of natural and political fortune, into which the “shapes” of Family and City, and the “powers” of City Law and universal custom collapsed, we now have “what pleases the Prince.” Nothing is uncertain; there is no fate, to which even Zeus is subject. Fate is here in the open. It is a “self” like us; the Emperor’s decision is final. The singular self-consciousness is lord of the World.

- 15./478. Persons are *recognized* as beings-in-and-for-themselves. Each is a legally rigid, abstract self not dissolved in the substance.

We have entered the world of independent self-conscious wills. Everyone is a separate person with her own legal rights. In their own private lives they are bound to be family members (and they may be as firmly committed to some community of blood as Antigone was). They may also think of themselves as mortal members of their own “community”; and they may be ethically “dissolved” in the will of that community. But that is a matter of “disposition” and arbitrary choice. It is what they are “in the eyes of the Law” that matters; and whatever differences of status the law may recognize between them—including their being members of their different families and communities, the logical fact is that each of them is a separate being.³⁴

We ought to admit, perhaps, that it is only full citizens who are “essences subsisting in and for themselves.” The rigid “abstract self” is the one whose *will* is

valid in the eyes of the Law. Slaves, minors, and even adult women who cannot dispose of themselves and their property legally, are not properly recognized as legal selves. But although they have no substantiality of their own, they are not “dissolved in the Substance.” Their being is phenomenal, but each one is still exactly what she is separately recognized to be. Since they cannot dispose of themselves they are not legal selves; but they are at the legal disposition of some other fully recognized self.

As we shall see, the introduction of this relative perspective in which “some animals are more equal than others” has a dialectically revolutionary effect. Since “what pleases the Prince has the force of law” every “self” is ultimately at the disposal of this absolutely recognized Self. That is the visible face that “Destiny” has acquired. But, at the other extreme, the law does protect the life of everyone against arbitrary violence. Even “what pleases the Prince” must have the form of law in order to be law.

- 16./479. This independence of personality is the actualization of Stoic theory. True spirit was at once the lordship and the bondage of the self; now we have the thought of independence realized as *legal right*. Stoic thought and legal right are both independent of all commitments and all greater goals.

This legal theory, according to which everyone is a “rigid self,” is now imposed upon the world of the Ethical Substance in which all selfhood was supposedly “dissolved.” The living custom of the “inhabited world,” as the apologists for the Roman Peace called the Empire, pretending that there were no civilized humans beyond its borders, was immensely various. Onto this variety of custom the law of the Roman administration was imposed, with whatever Creonlike rigidity was typical of the particular administrator. The universality of the law, and of justice, was necessarily “abstract” precisely because it was Roman. In other words, it came from elsewhere; the procedure and guiding principles of this universal system of legal recognition grew out of the practice of a small City in central Italy. The Roman administrators adapted it as best they could (and none of them had much license to bend it, especially in cases that were serious enough to be subject to appeal) to Britons, Spaniards, Gauls, Germans, Rumanians, Africans, Egyptians and Jews; as well as to the Hellenized world of the Eastern Mediterranean. To do this, the Romans had to create the army and administration itself—a great mass of “rigid selves” founded upon military discipline.

The self that really counts as the “essence subsisting in and for itself” is this disciplined and largely militarized self. When we are looking for the selfhood of Destiny, i.e., of this universal imposition, we must not let our minds be distracted by the megalomaniac personality of the Emperor, which first appears in Gaius Caligula, and reappears several times (notably in Elagabalus). That is a symptom of illness, a sign of the movement that leads on to the next stage. The “self-consciousness” into which Spirit has now returned, contains all the rationality of the Ethical Substance peacefully sublated. Gibbon chose to begin his account of the *Decline*

*and Fall of the Roman Empire*³⁵ with the reign of Commodus, because in his opinion: "If a man were called upon to fix the period in the history of the world during which the condition of the human race was most happy and prosperous, he would, without hesitation, name that which elapsed from the death of Domitian to the accession of Commodus."³⁶

In this aspect, the Roman Peace is what Hegel called "the boredom of the World."³⁷ He was much struck by the fact that Gibbon detected the working of "a slow and secret poison" in this age of ideal peace and prosperity:

This long peace, and the uniform government of the Romans, introduced a slow and secret poison into the vitals of the empire. The minds of men were gradually reduced to the same level, the fire of genius was extinguished, and even the military spirit evaporated. [The natives of Europe were brave and robust] . . . personal valour remained, but they no longer possessed that public courage which is nourished by the love of independence, the sense of national honor, the presence of danger, and the habit of command. They received laws and governors from the will of their sovereign . . . The posterity of their boldest leaders was contented with the rank of citizens and subjects. The most aspiring spirits resorted to the standard of the emperors; and the deserted provinces, deprived of political strength or union, insensibly sank into the languid indifference of private life.³⁸

This "slow and secret poison" is the *universal* experience of the "Unhappy Consciousness" in its "first relationship" (where the Unchangeable appears as "pure consciousness," i.e. as Right or Law—see par. 214). But we are not concerned with that yet. The making of the "rigid" self is expressed as an abstract theory by Stoicism. Stoicism at Rome was the philosophical platform for Senatorial opposition to the Emperors. But this "opposition" was strictly theoretical. The Stoics set themselves above and apart from the universal division of the world into Lordship and Bondage. The key figure is Seneca, who was Nero's tutor and for several years his most influential adviser, but who committed suicide as a good Stoic when the Emperor decided that it was time for him to go.

As Hegel says, the "spiritless independence" that "was for Stoicism the *Ansich* only in abstraction, is now *actual* world." The actual world lives under one universal law. In theory the Stoic lives under the dominion of the one universal Reason—but only by "loving fate" and surrendering all active control of what happens. The fact that everyone, even a slave, can be a Stoic shows how everyone is a "rigid self" that "subsists in and for itself." Stoicism is the *theory* of the universal Law; and, as such, it was also very influential in the codification of the great body of decisions known as the Praetor's Edict, carried out by Salvius Julianus on the instructions of Hadrian in the year A.D. 129. When we come to the climax of the "boredom of the world" we find the whole imperial apparatus being administered by the Stoic Marcus Aurelius. Here the opposition of "actual world" and "formal freedom of thought" is completely reconciled. Marcus is the *Gestalt* of the *Rechtzustand* as a concept; and since we must remember that the "shapes" of Spirit are "shapes of a world" I will quote Gibbon's verdict again: "The united reigns [of Antoninus Pius

and Marcus Aurelius] are possibly the only period of history in which the happiness of a great people was the sole object of government.”³⁹

One point of detail that needs comment is the passage “just as that [Stoic Self-Consciousness] issued from Lordship and Bondage, so too Personality has issued from the Immediate Spirit, which is the universally sovereign will of all, and equally their subservient obedience.” This is a parallel in which the fact that the “shapes of Spirit” are “shapes of a world” is of crucial importance. “Lordship and Bondage” is a *personal* relationship. But there was no personal “Lord” in the Ethical Substance.⁴⁰ The emergence of the “world of Persons” from the “world of True Spirit” is quite distinct from the sublation of Lordship and Bondage in Stoicism. It is in the world of legal Persons that we can recognize all of the “shapes of natural Self-Consciousness” just as we met them in chapter IV. Only the *movement* of Unhappy Consciousness belongs to the *next* world, that of “self-estranged Spirit.”⁴¹

So it is in the Roman world, not in True Spirit, that we can see the *universal* shape of Lordship and Bondage. The whole world is in bondage to the “abstract Self” of the Law. Stoic “freedom” is precisely the freedom that arrives at the *thought* of its “independence” within this universal servitude. Antigone certainly feels that she is being treated like a slave; but that is not how things ought to be in her world, and she refuses to be either a slave or a Stoic. Her suicide is not free self-assertion but “ethical obedience,” or the “self-dissolving” acceptance of divine Justice. The “issuing of Personality from Immediate Spirit” is the movement from a “universal law” that is unwritten to one that is written; the move from Lordship and Bondage to Stoicism is the move from “the law of the stronger” to “rational autonomy.” Hegel’s analogy is a bad one; it commonly tends to support a Marxian conception of the Greek *polis*; and, however correct that may be, it was not what Hegel found significant. *He* wanted to emphasize the contrast between “being dissolved in the Substance” and “not being dissolved in it.”

- 17./480. Thus we shall now have a repetition of the actualization of Stoicism. The accidental babble of Scepticism will now be realized in the world of Right. Legal Status, like Scepticism, is the contradictory unity of independence and dependence of consciousness. The “absolute essence” is a legal fiction. But the substance is real life, and in the absence of ethical constraints life becomes an absolute anarchy. Human fortunes (material or spiritual) are just a matter of chance. Everything is valued externally, nothing internally. That is why “person” is used contemptuously.

Stoicism involves a withdrawal into the abstract realm of logical thinking. Scepticism, as the “actual experience” of Stoicism, stays in this realm. The Sceptic, who is happy to play this “thought-game” with the Stoic, proves to him that, in the supposed rational autonomy of his thought-world, he has *no* knowledge. The Unhappy Consciousness wants to get out of this world of abstract thought but cannot.

Consciousness becomes “Unhappy” because of its situation in the real world. The abstract thought of the free personality has been forcefully imposed on this world in all directions. The result is that the sceptical experience of the world of thought as a flux of opinions in which freedom can be found only through the

“suspense of judgment” is repeated as an experience in the real world. But we now have “fortunes” in place of “opinions”; the changes of personal fortune are a play of chance on the surface of substance; and that is what the legal abstractions refer to. It is the rights of *property* that are recognized; but the substance of real life is not controlled by that. Real life operates under a power of its own, which is now just fortune in the sense of “luck.” Let us observe this whirl of fortune the way good Stoics see it.

The self of *ownership* is the *Sache selbst* in the shape of the abstract category. This abstraction is now *realized* by legal recognition. The law defines what is mine, and what is yours. But by my word, given before witnesses, I can change or alienate my external property and make it yours. The doctrine of Stoic autonomy assumes that this separation of the category from the content applies to spiritual as well as material “personality.” Marcus begins his *Meditations* with an analysis of the spiritual gifts he has received from various specified donors. But, of course, we cannot alienate and receive our spiritual substance at will. In the Stoic view there is a Universal Spirit who bestows our spiritual personality upon each one of us. This power operates capriciously, for it gives great gifts to some and smaller ones to others, regardless of their formal equality as “persons.” Language itself teaches us the sceptical lesson implicit in this. The personal dignity and independence of Seneca slashing his wrists in the bath, declines into the near nonentity of the “person” for whom the servants can find no better name, because she is clearly not a proper lady or gentleman—like that legendary “person from Porlock” who is supposed to have interrupted the composition of Coleridge’s poem on “Kubla Khan” so disastrously.

Hegel wants us to pass from the Stoic Spirit of the Universe, who is so utterly arbitrary and capricious in the “personal” endowments allotted to the different rational sparks of the divine fire, to the equally arbitrary power of the “Lord of the World” in the sphere of real property. But, before we go with him, we should pause to consider the difference between the alienated “spiritual giving” of the capricious Universal Reason, and the identity of “true Spirit.” The view of Marcus that many of his “gifts” came from his forebears and teachers forms a kind of halfway house here.⁴² Socrates thought that everything important in his character was given him by “the Laws,” and that both his philosophical quest in life, and his obedient death was a debt that he owed to the City. Even in Plato’s “noble lie,” that native endowment of the soul which is hammered into the best shape that it will take by the educators, is supposed to have sprung from the native earth of the community, not from Mother Earth generally; and we can see how this faith operated in the mind of Sophocles, who comes at the end of his long life to seek in the story of Oedipus’ death in his own birthplace of Colonus, a glimmer of hope for his embattled City on the verge of defeat.

Seven cities claimed to be the birthplace of Homer. This is appropriate because he was the voice of the “Ethical Substance” generally. It is of him, most of all, that what Hegel wrote in 1803 holds good: what the Stoics (and we moderns) take as a “personal gift” is really an attribute of our own community. True Spirit knows nothing of “personal gifts”:

Mnemosyne or the absolute Muse . . . is itself the universal speaking consciousness of the people. The art work of mythology is propagated in the living tradition . . . This work of art is as much a universal possession as it is the work of everyone. Every generation hands it on to the one that follows beautified, or in other words it has labored further on the liberation of absolute consciousness. Those who are called *geniuses* have acquired a certain type of special skill, by which they make the universal shapes of the people into their work just as others do other things [of universal value]. What they produce is not their discovery, but a discovery by the people *as a whole*. It is the *finding* that the people has found its essence. What belongs to the artist as *this man here* is his formal activity, his particular skill in this mode of exposition, and it is precisely to this that he has been educated in the universal skill.⁴³

Working, thinking, speaking, creating for one's own community gives everything one does a substantial meaning. In the new situation, everything is a matter of chance; and everything is really external. To begin with, one is publicly valued in terms of one's external property. One can actually give this away (and one must make arrangements to give it away at death); it is not the real "substance" of the self. Even the inner "gifts" that one cannot give away, can be "wasted" like real property; and it seems to be nobody else's business. The "boredom of the world" arises, because it does not seem to matter, it makes no difference in the end, what one does. Everything external is "positive." Some value can be put upon everything one does; it is not a mere show (as the Sceptics proved Stoic knowledge to be). But it comes to the same thing, because the *self* has no reality and no value. The *Spirit*, the truly communal structure of selfhood, is gone. This is the "Spiritual Animal Kingdom" at the very beginning of its evolution. Everything that one does, one loses; it passes straight into the maelstrom created by the self-expressive activity of others. Only Fortune reigns over all; and we shall now see what that means, and how the *Gestalt* of "Chance" makes itself inescapably obvious.

(e) *Anarchy*

- 18./481. The freedom of the content has to be focussed in one of the atoms. This is the unitary authority, the absolute master of all. For him there is no higher spirit. But it is the legal subjection of the rest that makes him *lord*. When this authority fails, chaos ensues. The imperial authority is just the mantle and the soil of the tumult. The Emperor knows himself as the living God; but since he cannot control this chaos, his consciousness expresses itself only as excesses.

The sceptical dialectic only really inverts the stable Concept when we turn from the ups and downs of private citizens, and the arbitrariness of God's distribution of personal gifts, to the problem of the succession to the Imperial Purple. The God of the Stoics is spiritless because he has no true other in whom he can recognize himself. His *actual* analogue, the Emperor, suffers from all of the diseases that Plato discovered in the soul of the tyrant. Tiberius was solitary and suspicious to the point of paranoia; Gaius Caligula clearly suffered from hysterical megalomania,

and Nero and Domitian were not far from it; and after the “good Emperors” of the world’s “boredom,” the tyrannical disease is evident again in Commodus, Septimius Severus and Caracalla. But among the later Emperors probably only Elagabalus was madder than Gaius Caligula. The succession continually broke down into a military struggle; and in some periods the Roman authority broke down also. This is Gibbon’s theme, and his picture of the century and a half between Commodus and Constantine is the main “content” of Hegel’s conceptual analysis in the present paragraph. But the “year of the four Emperors” (A.D. 69) in the *Histories* of Tacitus is also of crucial importance.

The mental disturbance evident in several of the Emperors is the clearest sign of what Hegel calls their “lack of effective force.” As the wearer of the Imperial Purple the Emperor was the “self-consciousness of the world.” But the purple mantle in itself meant nothing constitutional at all. From the time of Claudius onwards, it signified only that the Army (or rather, some part of it—in the case of Claudius it was only the Praetorian Guard in the capital) had chosen this man. The unfortunate wearer was often, very sensibly, unwilling to accept the honor—but he had no choice in the matter. After Claudius and Nero, when there was no one left with a family connection to Julius Caesar,⁴⁴ the armies showed that they understood what the Praetorian imposition of Claudius on the Senate meant. In A.D. 69 there were four emperors (mainly because Vespasian, the most competent general and administrator, was in Judaea with a Jewish revolt on his hands when the crisis erupted). It is arguable that the “boredom of the world” began with Vespasian, since the armies did not get involved in politics again until Commodus was throttled by an athlete on the last day of the year 192. Gibbon is even willing to overlook the upheaval of A.D. 69 and speak of the Augustan peace as lasting for over two centuries.⁴⁵ In the *Phenomenology* Hegel seems to me to accept this latter view. The “Condition of Right” is a “world-concept” that is stably realized between 27 B.C. and A.D. 192. The revolutionary upheaval of A.D. 68–69 is simply the transient moment where the internal “antithesis” is revealed, so that we can see that all the traditional forms of constitutional authority are a mere façade. In reality it is the Army, as a great collection of disciplined atomic selves wrenched out of all their communal traditions (and even out of stable family life), that governs.

It is really the Army, therefore, that “collects the dispersion into one point.” Everyone *recognizes* the Imperial Authority, but it is the soldiers who “make up the valid universality of the person” who has “stepped over against everyone.” The personality (and even the capabilities) of the Emperor are not ultimately significant. It is what Gibbon calls the “respect of the legions for their oath of fidelity” that makes the Emperor “the actual God.” Just as the Emperor’s body is formally wrapped in the purple mantle that his legions put upon him, so the world is formally wrapped in his consciousness. Everything is done in his name; but the substance of the self-consciousness of this “actual God” is just the physical soil over which the tumult of battle flows as the legions come from near and far to establish the authority of their candidate.

Beneath the military discipline of the army (which is the “negative power” of

universal Roman law and justice) there is now simply a “chaos of spiritual powers.” The army is recruited from everywhere, and all the primitively uncivilized barbarism of the unconquered Germans in their forests, or of the various barbarian tribes who invade the Empire from outside, is only just below the surface in the armies that defend the borders of the Empire itself. Once the legions forget their “oath of fidelity,” the Empire can tear itself to pieces in the “wild excesses” of the “elemental essences that move against one another in a rage of destruction.”⁴⁶

This began to happen after the assassination of Commodus. The wars of the years 193–197, and the ruthlessness of Septimius Severus when his Balkan legions finally triumphed, are the first example of this rage of destruction; in the following sixty years the Imperial authority broke down and shrank until in about 260, Italy and the eastern Mediterranean lay between two effectively independent powers, Gaul on one side, and Palmyra on the other. Rome itself was fortified against invaders with the great “Aurelian Wall” (begun in 271). It was not actually attacked by barbarian forces for more than a century, but the crisis of confidence is evident. Unity was restored and there was stability under Diocletian. Then there was another time of troubles until the accession of Constantine. Constantine’s accession marked the end of the “world-shape” with which we are here concerned.

- 19./482. The Emperor becomes aware of his power through his destructive authority over his subjects. They cannot recognize their “true” self in him, being independent persons. But in their negative relation, he is the source of order; so he can destroy them. This supremacy is not self-consciousness; it is a devastating madness in which self-consciousness is cast away.

The first (simple) inversion of universal right and justice is universal tyranny. Various emperors were denigrated (after their death) as tyrants; and some were “tyrants” in the fullest generally accepted meaning of the word. Tiberius already exhibits the tyrannical psychology of morbid suspicion; Gaius Caligula and Nero behaved tyrannically as far as the Senate were concerned (and the opinion of the old Senatorial aristocracy was all that counted). Domitian counted as a tyrant in the *Panegyric* of Pliny and the historical rhetoric of Tacitus (whose praise of his own more enlightened emperor, Trajan, has an ironic note to it).

But if I am right in thinking that Hegel accepted Gibbon’s view of the “artful system” established by Augustus, none of this is part of the real inversion of the Concept. The “artful system” was a continuum of legal right in which the atoms could maintain their independent being; and the *Imperium* was the “essence and content” of this “formal continuity.” Hegel certainly realized that every Caesar was subject to denigration after his death—just as he was bound to be deified. That was how the world of “persons” necessarily had to experience the personal lordship that was integral to the maintenance of law. Caligula and Nero did have a “consciousness of the universal might of actuality,” I suppose. But the “actual consciousness” of what that meant only became universal in the period when the Emperors were obliged to *fight* for power while they were alive, and when there was open anarchy if the recognized Caesar died or was assassinated. The contrast

between the settlement of Vespasian in 69 and the barbaric ferocity of Septimius Severus in 193–197 is what is crucial. From 193 until the settlement of Diocletian in 285, tyrannical ruthlessness was absolutely essential to the survival of the imperial power.

Thus, when we read that the “destructive burrowing in this essenceless soil” (of private life) becomes necessary to the maintenance of imperial consciousness, and the almighty self is “mere devastation,” we should think of Septimius Severus allowing his troops to sack the great city that is now Lyons (in 197) and of all the warring devastation of the next ninety years. And if it is the devastation of the Empire, both by its own legions, and by its external enemies, that is the “casting away of the imperial self-consciousness” then we must distinguish this breakdown of law and administration from any aberration in the personal psychology of the Caesars. Genuinely crazy people like Caligula and Elagabalus could hardly be elected to the purple in the period of military tyranny. Hegel speaks of this devastating self as “outside itself,” because the legions were as bad as the barbarian invaders, and the Empire itself was divided. But obviously the “casting away of its self-consciousness” looks forward also to the conversion of Constantine. The end of the whole world-shape comes with the second (or comprehensive) inversion of this whirling dialectic of the atoms—with its opposite faces of imperial law and military anarchy—into the absolute otherness of the Divine Spirit in the “beyond.”

- 20./483. This is how the actual world is constituted: it is the actual world of the Unhappy Consciousness. The validity of consciousness is the reality from which it is estranged. The self is actual in this world now as “the person.” But the actuality is inverted into a loss of essence.

The world of the “condition of Right” is the real world “in which Self-Consciousness is *actual* as absolute essence.” If we look back to chapter IV we can recognize both how generally Hegel intends this, and how true it is. Those on whom the purple mantle was put, were frequently unwilling to accept it because a struggle to the death was involved. No one could expect to retire to private life, or be banished to an island, if he lost. The Empire at peace is the real world of Stoic speculation; and the Empire in civil war is the real world of the Sceptical suspense of judgment. In the conversion of Constantine, and the gradual establishment of the other-worldly monotheism of the Christians as the source and fount of all truth and all authority, we shall finally see what the comprehensive retreat of self-consciousness into itself means.

The Sceptic is aware of his own inessentiality; but his consciousness is a humorous one. For him, life is just a great comedy of impressions; but life is no longer comic when the uncertainty of “fortune” becomes a matter of his own survival. We can smile while we dispute whether Justice is “natural” or “conventional,” as long as Justice is firmly established. But when the peace and prosperity of real life under law is threatened on one side by the barbarians, and on the other side by the warring legions themselves, the formal Reason that is common ground to Stoicism and

Scepticism will tell us that the real justice, the effective reality of law, is not to be found in this world at all, but only in a divine self-consciousness that is beyond it and alienated from it. This was the logical truth implicit in the “Stoic independence of pure thought” as realized in the Roman Peace. But we now have the Unhappy Consciousness as the experience, not just of Paul and of a strange sect of fanatics who will not acknowledge the divinity of the Emperor, or of any of the gods in the Pantheon, but as a world-experience.

In the “Condition of Right” the flux of life is just like the flux of the elements. There are new fights in the amphitheater, new chariot races, every week. Life is a bore, and death is the rest to which we all go. The Stoic Emperor himself came to this conclusion, and cried “How long then?” The first form of despair for the world is this sense of pointlessness. This is “the boredom of the world.” But when there are not just comic disagreements about justice, but violence everywhere, it is plain that the decision of “the self” (some prince or other) is all the law there is; and when he perishes it is equally plain that that is no law at all. The “essence” of the community is a self; but that self has no “essence” at all. We have to make it into a “universally valid self.”

This is where we pass over to the real world of the Unhappy Consciousness (in its “second relationship”). The world knows that its “essence” is a self (God) and that the divine self has absolute validity. God’s will should be done on earth; but this world is actually where the Devil rules. The “ethical action” that destroyed the “selfless” Ethical Substance, must now be reborn as self-reformation. Action, *actualizing*, must overcome the estrangement between the world as it is, and the world as it ought to be. “The actuality of the self, has been gained through the return of actuality into the person.” The world of persons defined by law, must give way to the world of persons who act to make themselves (or in the language of “estrangement,” to “save their souls”). The difference between the “Unhappy Consciousness” and “Culture” is that the subjective desire and labor of the Unhappy Consciousness is a contradictory failure because of its simple self-assertion; that of Culture is a success, because it aims at self-reformation. We do make a new world; and eventually we make a new self that is not unhappy but self-confident. We never get what the Unhappy Consciousness wants; but we *get over* wanting it.⁴⁷

Notes

1. Antigone and Ismene are *resolute extremes*. Ismene is ready to die with her sister; but her acceptance of the public authority is equally resolute. The *middle* between them—Antigone’s conviction that *something* must be done, combined with Ismene’s conviction that it is not for a woman to do it—would have produced the response that the harmony of the two Laws needed. A different view of who the *guilty* agent is, is possible—and the “action” of the play, which is the *complete* “ethical *Handlung*,” will bring it to light. But in no case is Creon properly describable as a guilty *individual*. Only Antigone is “the *absolute being-for-self* of the purely singular self-consciousness.”

J. Royce (1919, 203) says that “the ideal commonwealth lives through an unconsciousness as to what its own inner doubleness of loyalty *means*.” J. C. Flay (1984, 352, n. 22)

objects that the poet produces “consciousness.” But *intuitive* subjective consciousness only exacerbates the problem. (Antigone *understands* the situation much better than Creon. But that only strengthens her “resolve.”)

2. It is this second burial that is the *political* act. Antigone cannot let a common soldier (a mere *serf* in Creon’s eyes) pay the penalty for her *secret* piety.

3. V. Ehrenberg (1954, 33) says “Antigone believes in a divine order of the world; Creon relies on human laws and standards”; and he faults Hegel for believing in a “higher unity of the two worlds.” “Hegel’s mistake was to take Sophocles for a Hegelian.” Now Sophocles was certainly not a Hegelian; but he *did* believe that the human world should conform to the divine order. It was Hegel’s merit that he saw why this was impossible. Empirically Antigone is wise (aware of the unity) and Creon foolish (aware only of the dichotomy). But it is Antigone who is the *transgressor* in action. On what she loses by her “transgression” see the interesting argument of J. Bernstein (1994, 66). His article brings out the implicit anticipation of “Conscience” very well.

4. “The question of exactly how woman can represent the sphere of particularity while never knowing herself as this particular self is a question never addressed by Hegel,” says P. J. Mills (1986, 139). She has the problem backwards. There is *no* problem about *how* we know ourselves as “this particular [i.e. singular] self.” That is intuitive in Sense-Certainty, and everything we learn in “experience” develops it. “True Spirit” requires us to forget that knowledge ethically in order to know what it means *in particular* to be a woman (or a man). How the *singular* can be identical with the *universal*—how the *I* can be *We*, and the *We* can be *I*—is the problem of the whole book; and the answer remains as *existential* as the “first experience” of freedom. The scientific *theory* does not do away with the practical difficulties. (Pace Adorno 1973, 173, whom Mills cites approvingly, Hegel does not “shrink from the dialectics of the particular [i.e. the singular]” at all. But he starts from the Truth of the Ethical Substance—“True Spirit”—and not from the “Truth of Enlightenment,” as these authors do.)

5. Like many other critics P. J. Mills (1986, 140) says “Sophocles does not create Antigone and Creon as ethical equals.” Of course, Hegel does not say, or suppose, this. As man and woman they cannot be ethically “equal,” but only different—see further notes 3 above and 26 below. Hegel’s position is that the commitments they make are both *necessary*, and each is *blinded* by the commitment. Oddly enough, in spite of her admiration for Antigone’s superior “ethics,” Mills claims that “Hegel misses what is most significant: that Antigone must *enter* the political realm” (139). Even Antigone does not *miss* that; she regards it as ethically irrelevant. And Hegel cannot “miss” it because he regards Creon’s political responsibility as having an equal “right.” What Hegel “misses” is the relevance of Antigone’s necessary entry into the political realm for *our* world. His world was contentedly Aristotelian, and he did not draw out—even logically—the *difference* between naïve *Sittlichkeit* and “returned *Sittlichkeit*” (compare chapter 3, note 74).

6. This doctrine is clearly stated in the Theses of 1801: “XI. Virtue excludes innocence both in acting and in suffering” (Rosenkranz, 159).

7. *Oedipus Tyrannus*, line 1080.

8. *Politics* II, iv, 2–3 (1262a); compare *Philosophy of Right*, Preface. Aristotle also complains (in II, iv, 1) that all kinds of offences against the person are more heinous when committed against a parent—and this essential difference made by the unwritten law is washed out by Plato’s scheme. In the myth, of course, a justifiable homicide is united with parricide.

9. C. J. Arthur (1988) claims that paragraph 470 is mistaken because Antigone feels no “guilt.” It is, of course, *action* (not “feeling”) that counts in “True Spirit”; and Antigone’s actions (like her father’s) contain her acknowledgement of “guilt.” (Arthur also claims that “Antigone is not a tragic figure at all in the Greek sense.” Sophocles would certainly have preferred Hegel’s understanding of the tragedy that he called by Antigone’s name, to this truly medieval reliance on a very simplistic reading of Aristotle’s *Poetics*; and Aristotle himself would have agreed that Aeschylus and Sophocles knew best what a “tragic figure” is.)

10. Some ink has been spilled foolishly over the fact that Hegel misquotes Antigone’s *conditional* statement: “But *if* these things be fair in [the eyes of] the Gods, then having suffered, we *would* agree that we have erred.” But Hegel (who certainly knew how to translate the passage literally) saw the deliberate echo of the Aeschylean *pathei mathos*. That echo is the key to Antigone’s suicide. Hegel also realized that the alternative possibility offered by Antigone was similarly *prophetic*: “But if these men [the human authority] are in error, then may they suffer no more evils than those that they unjustly do to me” (*Antigone*, lines 925–928). Zeus hears that prayer, too. Creon *loses* the spouse and son that Antigone is never allowed to have. C. Ferrini (1981, 401–403) rightly says that it is not woman’s lot to face death; and that the Divine Law is only a *feeling* until Antigone has to admit her error. This shows us why Hegel’s reading of her conditional statement is essential to his theory of the downfall of *Sittlichkeit*.

11. *Antigone*, lines 777–778.

12. J. B. Hoy (1981, 412) is only half-right when she says that “self-respect varies so significantly that it is meaningless to cite it as a good desirable to human beings per se.” It is not “meaningless.” We are meant to recognize Kantian *moral respect* as the “returned shape” of Antigone’s identity of “character.” But, of course, they *are* radically different.

13. *Antigone*, lines 65–66; compare the fate Creon offers Antigone at lines 777–778 (cited above).

14. Compare Creon’s alternative to “the luck of not dying”: “or she may know indeed, though only at the last, that it is an extravagant labor to reverence Hades’ realm” (lines 779–780). Again Creon echoes Ismene (line 68) but with an open impiety that she carefully avoids.

15. In view of this second “misquotation,” it should be obvious that Hegel is interpreting what Sophocles *means* (not mistaking what Antigone *says*).

16. Since the “ethical action” is a conflict about the deceased spirit of Polyneices, it seems clear that Hegel intended the pun when he made his Tacitean use of the word *verschieden*.

17. This absolute identity precludes “private judgment.” A wise monarch (Theseus) does the *wise* thing just as immediately as Creon does the *simple* thing. The contingency of the decisions is *natural* (not reflective). This is how virtue is “absolute” in the sense of Thesis XII (1801): “Morality is repugnant to absolute virtue in every way” (Rosenkranz, 159).

18. Ismene says nothing about any agreement to share the Kingship, but simply blames the rebellious youthfulness of Eteocles for starting trouble (*Oedipus Coloneus*, lines 367–381). But Oedipus has been away from Thebes for years. So we must assume that Eteocles was the choice of the people after each brother had reigned in turn; and Polyneices naturally had to be banished because he would not accept that decision. Polyneices feels very strongly that his younger brother cannot be allowed to get away with the final act of usurpation (see lines 1292–1300; 1422–1423).

19. *Oedipus Coloneus*, lines 600, 1173–1206, 1254–1446. The Critical Editors think one detail definitely comes from Aeschylus, *Seven Against Thebes*; so they refer to that for the

whole story. Quite probably Hegel's comment about "the other who at the very walls had already proclaimed its laying waste" does refer to the curse that Polyneices lays upon Thebes in the *Seven* (lines 633–635—compare note 23 below). But I think Hegel simply borrowed that because it makes the justice of the City's curse upon Polyneices plainer. Sophocles took great care to provide a rational motivation for everything in the story (e.g. the curse of Oedipus on *both* sons) and we know that Hegel studied his Theban plays carefully, and talked to Hölderlin about them at length. So I think we should assume that everything that *can* come from Sophocles, *does* come from him. Logically, however, it does not matter *what* version of the events leading up to the life-and-death struggle we adopt, since the appeal to that struggle equalizes all finite rights and wipes out all finite wrongs—cf. *System of Ethical Life* (Lasson, 458–459; Harris and Knox, 140–141).

20. *Oedipus Coloneus*, lines 1295–1299. Polyneices has a *Lockean* conception of the state of nature, with combat as the court of appeal. But the appeal inverts the Lockean view into that of Hobbes.

21. The thesis of 1801: "IX. The state of nature is not unjust, and on that account it is to be left behind" (Rosenkranz, 156) is to be understood in this Sophoclean sense.

22. The detail of Polyneices' public proclamation comes from Aeschylus. But in the *Oedipus Coloneus*, Antigone begs him "Not to destroy yourself and the City" and asks him "If you lay waste [or raze to the ground] your fatherland what will it profit you?" (*Oedipus Coloneus*, 1417, 1420–1421). Of course, Sophocles would have the *Seven* in his mind (and Hegel would certainly notice the connection); but it is the Sophoclean account in which the curse is interpreted as the *destruction* of the City rather than the simple *conquest* of it.

23. We can see now that Hegel's earlier reference to the "*Stygian* water of forgetfulness" (par. 467) was not a slip of memory, but a deliberate collapsing of absolute forgetting and absolute remembering into a single image. For an interesting meditation on Hegel's use of Lethe see D. J. Schmidt (1988, 181–184).

24. *Antigone*, lines 1080–1083.

25. Incidentally, however, this "result" does show how—*pace* note 5 above—P. J. Mills is right in saying that Antigone and Creon are not ethical equals (1986, 140). Antigone maintains her ethical *character* unto the death. That is what the simple *truth* of Spirit requires. (Of course, if we think that she dies *defiantly*, then she is only naturally braver than Creon and they are ethically equal—because both are self-willed to the point of stupidity. But like Hegel, I am confident that Sophocles intended to exemplify "learning by suffering," and so to make the difference between them into an *ethical* one. Mills sees the difference clearly, but she calls Antigone's courage "moral" (141). This adjective is completely out of place; it typifies what we might call—*honoris causa*—the "Goethe fallacy.")

26. See the *Supplices*, lines 724–725. This may well come from the epic tradition of the Theban Cycle. The singer of the *Iliad* knows of Oedipus falling in battle (xxiii, 679); and of Polyneices raising an army against Thebes (iv, 378). (Hegel needs to have the "spiritual thing" destroy *itself* in its relations with the others; and that is what Thebes has logically done by the time that Teiresias prophesies its doom.)

27. Theseus argues in the *Supplices* of Euripides that the young men who are the City's resource, will cease to fight for her if they fear they will not be buried with due ceremony (*Supplices*, lines 538–541). The *need* for male aggression is what gives Irigaray's reading (1985) of the "eternal irony" (par. 475) its power. What gives it *validity* against Hegel's own world, and his real philosophy of that world, is the fact that although the slaves—whom Hegel silently ignores in the Ethical Substance—are politically liberated, the womenfolk are

supposed to adopt Antigone's *piety* (and her protest against its political secularization) as their ideal. For *our* world, H. M. Ravven (1988) offers the properly constructive feminist interpretation of Hegel. (See also the essay of T. J. Gerald [1984/1985]. The *Hegel-Jahrbuch* 1984/1985 contains several essays on Hegel's theory of the Family.)

Failure to take into account the *historical* dimension (and limitation) of "True Spirit" is endemic among interpreters of the *Phenomenology*, and critics of Hegel's theory of sexual relations generally. See, for example, J. Loewenberg (1965, 193); W. Becker (1971, 118); R. C. Solomon (1983, 545); J. B. Elshtain (1981), S. Moller Okin (1980). In this respect S. M. Easton (1987) and T. O'Hagan (1984/1985) deserve commendation.

28. We find here the explanation of the paradox remarked on by M.B. Foster (1929, 85–86n.). He says there is no proper recognition of party-politics in Hegel's image of Greek *Sittlichkeit*. Hegel would have pointed to all the signs that "dispositional opposition" *ought not* to exist: the *graphé para nomón*, ostracism, expulsion of factions, etc. It is the *Platonic Ideal* of the City that is displayed in Aeschylus and Sophocles. (In par. 455 Hegel seems to hold, like Aristotle, that *democracy* is the fully developed shape of the *polis*. But he also holds that the *polis* is a self-contradictory concept.)

29. It is Aethra, the mother of Theseus, who persuades him to take up the cause of the *Suppliant Women* (lines 297–331). She urges Theseus to go to war, but she pleads for the common piety of Hellas as one family. Thus she agrees with Antigone (see chapter 3, note 71 above, and *Antigone*, line 523).

30. *Oedipus Tyrannus*, lines 708–709, 857–858. The reaction of the Chorus follows the second declaration at once—see especially 895–896; and Jocasta promptly makes ceremonious penance for her impious words at 911–913; but it is plain enough that she wants everyone to leave the secret of the Oracle's truth unrevealed.

31. When Napoleon fell the cunning of Reason overtook Hegel's own expectations about how the nascent world would come into being; but the (European) world that *did* come into being answered his *logical* expectations quite well. He only *needed* to be right about the triumph of constitutional nationalism in principle.

Useful studies of the *Rechtzustand* are J. Hyppolite (1966), J.-F. Kervegan (1987), R. Bernasconi (1989), and especially M. H. Hoffheimer (1992). There is a translation of this section, with a useful introduction and notes, by M. H. Hoffheimer (1993)—see also the "Prelude" above, note 1.

32. True Spirit is a "substance" without a proper self-consciousness. The self of the City is only the stone statue of Athena (for example). Citizenship is the forgetting of the singular self in the universal community; this direct coincidence of the moments is the *truth* of Spirit. It is a true Spirit because it can say "We"; but it cannot yet say "I." (R. Stern [1990, 43–54] gives us a bird's eye view of the dialectic of Universal and Individual in the *Phenomenology*. But the inadequacy of a logical analysis that tries to ignore the historical context becomes very plain when "individuality" emerges triumphant at this point. What Stern calls "a one-sided allegiance to the divine law and individuality" [51] was just the opposite. It was the ethics of the Family that was truly "universal.")

M. Westphal (1979, 159) remarks that the "truth" of the Ethical World is a problem, not a solution. But this could be said about every "result" (even about "Absolute Knowing" because it sets us the problem of the Logic). The "problematic" appearance of the *Rechtzustand* is more striking than usual, partly because Hegel's presentation is coldly ironic (in contrast with the warmth of the account of "True Spirit"); and partly because the story is so condensed. If we reflect on the two centuries of the Roman Peace—as opposed to the Hera-

cleitean dominance of war in Greek history—we can comprehend why the “Condition of Right” properly counts as a “solution.” It gets its “problematic” appearance largely because the *happy* pages of history are blank.

33. On the concept of personal equality, compare J. W. Burbidge (1992, chapter IX). In early Roman law, the position of a woman was that of a perpetual minor. But “the Roman woman obtained during the Empire a position of great independence, both personal and in respect of property, whether married or unmarried” (*Oxford Companion to Classical Literature*, compiled and edited by Sir Paul Harvey, 1937, 239, column 1; M. C. Howatson is less fulsome in the second edition [1989]—see 599, column 2).

34. R. Bernasconi (1989) brings out the ironies and paradoxes of Hegel’s various discussions of “personality” in different contexts—and, in particular, he brings out the importance of the “mask” sense of the term. But he does not manage to put the different aspects together into a proper “Concept.”

35. Hegel first read Gibbon at Bern, in a Swiss edition of the English text—cf. *Unkunde der Geschichte* (early 1795), Nohl, 366. He quotes Gibbon in the *Natural Law* essay—*G.W.* IV, 456, line 30–457, line 5; Knox and Acton, 101–102. (The citation—which is given below at note 38—is relevant to the point made here.)

36. Gibbon, *Decline and Fall*, London, Everyman, I, 78. This is where Civil Society originates (and VI A and B are aspects of its development). Compare F. Valentini (1968, 95–97, 104–110). But Civil Society is only mature when the work of Culture is completed (and legal inequalities are abolished).

37. Rosenkranz, 136; Harris and Knox, 181. To say, as J.-F. Kervegan (1987, 55–56) does, that this chapter “totally ignores the State” is misleading. “The State” does not yet exist. There is a universal legal system imposed upon “political communities” and on many more elementary forms of social organization.

38. *Decline and Fall*, London, Everyman, I, 56–57. This is exactly the way Hegel quotes the passage in the *Natural Law* essay (see note 34). Only the clause in square brackets has been restored by me.

39. The short encomium by Gibbon should be studied as a whole (being the most likely source of Hegel’s own “recollection” of the “condition of Right”)—*Decline and Fall*, I, 76–78. Of course, Hegel read the *Meditations* for himself; so he will have known that as well as “the idea (*phantasia*) of a state with one law for all, based upon individual equality and freedom of speech, and of a sovereignty which prizes above all the liberty of the subject” (I, 14) there are some vivid expressions of the Unhappy Consciousness in Marcus. One of the most famous is: “Everything above and below is ever the same, and the result of the same things. How long then?” (VI, 46).

I do not know whether Hegel read the *Panegyric* of the younger Pliny on the “restoration of Senatorial freedom” at the accession of Trajan (ruled A.D. 98–117). But he would have liked the following expressions of what he calls “the pure One of [the person’s] abstract actuality”: “nearly all of us live according to the standards of one man” (45,5) and “He will know when we use the freedom that he gave that we are being obedient to him” (67,2).

40. It is not even true that the “male self-consciousness” as such is “lord” of the Ethical Substance. That was Creon’s mistake certainly; and it was matched by Antigone’s mistaken idea that *she* could speak for the “unwritten law” of Zeus. Only Zeus, the divine Father and King, is “Lord” of the substance; and it is not accurate to call any of his children his “bondsmen.” They are all ethically committed “to the death”; so if we take *Knecht* in the sense of “man-at-arms” the *Herrschaft-Knechtschaft* relation holds. But it is “ethical obedience”.

41. The “first relationship” of the Unhappy Consciousness is already here, but (as forecast in par. 211) the “behavior” of the Unchangeable is different at the substantial level, from what it was in the singular consciousness.

42. Marcus Aurelius (like other Roman Stoics) was orthodox in ethics, but rather agnostic, though not an outright Sceptic, in physical theory. He often toys with the Epicurean view of nature, and seems a little inclined to the dualistic hypothesis of an Epicurean world of matter, and a Stoic world of mind. See for instance *Meditations* IV, 27; VI, 17,24; IX, 21.

43. Rosenkranz, 180; Harris and Knox 254–245. (The original text will be published in *G.W.V.*)

44. A hero-cult was established for Julius Caesar at Rome during his own lifetime, so that he is properly the first “person for whose consciousness no superior spirit exists.”

45. Patricia Fagan (forthcoming) has interpreted the whole section plausibly in terms of Roman history from Caligula to Vespasian. Only the need for a continuous evolution of the World-Spirit makes this unsatisfactory. It is plausible because the resting Concept must contain its own moment of “Antithesis.” The paragraph in which Gibbon deals with the Year of the Four Emperors is worth studying:

During a long period of two hundred and twenty years from the establishment of this artful system to the death of Commodus, the dangers inherent to a military government were, in a great measure, suspended. The soldiers were seldom roused to that fatal sense of their own strength, and of the weakness of the civil authority, which was, before and afterwards, productive of such dreadful calamities. Caligula and Domitian were assassinated in their palace by their own domestics: the convulsions which agitated Rome on the death of the former were confined to the walls of the city. But Nero involved the whole empire in his ruin. In the space of eighteen months four princes perished by the sword; and the Roman world was shaken by the fury of the contending armies. Excepting only this short, though violent eruption of military licence, the two centuries from Augustus to Commodus passed away unstained with civil blood, and undisturbed by revolutions. The emperor was elected by *the authority of the senate*, and *the consent of the soldiers*. The legions respected their oath of fidelity; and it requires a minute inspection of the Roman annals to discover three inconsiderable rebellions, which were all suppressed in a few months, and without even the hazard of a battle.

This period (27 B.C.–A.D. 192) is the “world” of the *Rechtzustand* as a stable shape. The crisis at the death of Nero (A.D. 68) is the internal “antithesis” (*Gegensatz*) in which the dynamic tension of the “Concept” is revealed. From A.D. 192–311 the concept is “in motion”; with Constantine (311–337) the world of *Bildung* begins. (From that time onwards there is a *division* of “divine” and “human” *right*. We enter the world of “Culture,” and of the Universal Church.)

46. M. Le Dantec (1982, 140) is right in saying that the “historical foundation” of the Unhappy Consciousness is here. But he is mistaken in arguing that the impoverished class of modern Civil Society is in the condition of the Unhappy Consciousness. Only if they believe that *God* has put them in their wage-slave condition will they be “unhappy” in the relevant sense. The “unhappiness” of Consciousness is a condition of *guilt*.

47. Of course we shall then discover that our “enlightened” “happiness” is inadequate; in the end we do need to obtain what the Unhappy Consciousness wanted—but not in the impossible shape in which the Unhappy Consciousness looked for it.

Chapter 5

The Far Country of Grace

VI B: The Self-Estranged Spirit; Culture

The second main section of Hegel's sixth chapter is divided into three phases (of which the first two are dichotomous). First comes "I: The World of Self-Estranged Spirit"; then "II: The Enlightenment"; and finally "III: Absolute Freedom and Terror." This chapter of our commentary deals only with Phase Ia: "Culture and its Realm of Actuality." This embraces the "cultural" transformation of the Weltgeist between the Conversion of Constantine and the French Revolution.¹ The mental transformation of our way of thinking is the topic of Phase II; and the resulting revolution in the real world follows in Phase III. (We shall deal with Ib and IIa together in our chapter 6; and with IIb and III in chapter 7. The reasons will be explained in due course.)

Hegel himself begins with an overview of the whole section VI B in three paragraphs. So we can dispense with any preliminary discussion of "Estrangement" (Entfremdung) here.² For the moment, I shall offer only a brief exposition of the metaphor upon which this chapter of the commentary is founded. The Ethical Substance of Hellas was the "Garden of Eden" planted by the Spirit in Nature. The story of that human Garden of Eden is over; and mankind has learned what the world of self-conscious desire and labor is actually like. The Spirit must now embark on the great labor of self-making. The Roman Imperial World was the world of "natural Self-Consciousness." In that world we were all in bondage, and obliged to recognize the absolute selfhood of an earthly Lord. When the otherness of the Lord becomes absolute, the appearing of Spirit can become self-conscious. This is what happens in the triumph of the Gospel as "the belief of the world" (par. 758). We are now invited to recognize ourselves in the "absolute otherness" (par. 26) of a Spirit who is "not of this world." In this present life we are estranged from our true selves in God's kingdom.

We must each one of us "make ourselves over" in order to join the true community of the Spirit in the other world. Our own present world is the place of "Culture" (Bildung).³ The land where we shall truly be "at home" is far away, and by culturally reforming ourselves we are journeying, like pilgrims, towards it. The "grace of God" is what makes this possible.

(a) *The Concept of Self-Estrangement*

- 1./484. The Ethical Substance kept consciousness in unity with its being. As custom it was something existing only *for* consciousness, which was also the essence of consciousness. In the Condition of Right the substance is external, and the self is a thinking atom. But this external world is spiritual in essence, penetrated by individuality, made by man even though it appears as given. The content of legal right is made by self-externalization. The ruin that seems to come upon the Empire from outside, really comes from the self-alienating activity of the spirit. The destruction is necessary, because self-alienation is the actualization of the Substance.

This first paragraph of Hegel's chapter VI B is a review of where we have arrived, as compared with where we began in VI A. In the ethical world the citizen, man or woman, was simply conscious of the custom as objectively given. The custom was recognized as law (divine or human); but it was not something external to one's own being. In True Spirit we have a situation in which there is no antithesis between "consciousness" and "being," or between "self-consciousness" and its "essence." The essence is there already, the custom is Athena's wisdom, and to be "self-conscious" is to be living virtuously. One is not born with this identity; but to have established it is what being grown-up means, since this identity is one's "true" self. The identity is a *specific* (or *particular*) one, because we are born either male or female.

Antigone, for instance, is a violent and passionate person by nature. She says things to her sister that sound like expressions of absolute hostility. But Ismene does not accept them at face value. And, of course, she is right, for how could Antigone really be estranged from her own family? What sense would her "ethical action" make if estrangement were possible for her? Antigone does not want to die, and she does everything she can to avoid it. But she accepts death because she would be less than nothing in her own eyes, if she were to lose her active identity with her customary substance and be reduced to mere "ethical disposition."

In the Condition of Right, on the other hand, the good citizen has to be "ethical disposition." She must be ready to do what she is told obediently. If Antigone disobeys Creon openly in this new world, and gets away with it, then we have chaos. The substance of right and justice can now be produced only through estrangement from self, and the doing of what is commanded. I am not supposed to identify with it, but to recognize it as imposed from above. The self becomes a social atom. The Law is a norm for the interactions of atoms, just as the physical world is an external reality that reliably obeys its own laws. The *Dike* of Zeus is still preserved in thought; for according to the Stoic theory the whole system is moved and controlled by one universal Spirit, which is the life of the physical world, and the shared Reason of the ethical world. But this is only a sublated Spirit, because the actual social world is an Epicurean system of atoms moved by Chance. The social world is recognizably the work of self-consciousness, but the "self" is alien. We must all be "law-abiding"; but the law is a foreign authority. The emperor Caracalla made every free citizen of any community in the Empire a *Roman* citizen (the *Con-*

stitutio Antoniniana, A.D. 214). But this universalization of the imperial City did not change anything significant, except the taxation system. Caracalla belongs to the period of overt military tyranny.⁴

The realization of Self-Consciousness as a *world-order*, involves a reversal of the categorical development of the singular self-consciousness. When the world moves from the Stoical condition of Right to the Sceptical condition of military tyranny, the Self-Consciousness of the world divides into the *judgment* of Lordship and Bondage, and the rationality of Law declines into the natural self-assertiveness of the stronger will. If we examine the syllogism of Stoicism, Scepticism and Unhappy Consciousness, we can see why this is necessary. The Sceptical self-consciousness is already an internally divided one even as a singular *Gestalt* (with the Changeable and Unchangeable as its sides); the transition to unhappiness only involves the admission that the rational standard (the Unchangeable), which is just as essential to Scepticism as it was to Stoicism, does not exist in the mind as anything more than an abstract form (or postulate). In reality it is beyond our reach. The communal experience of this estrangement brings about the explicit development in the world of all of the moments that it comprehends. In order for a *world* of Unhappy Consciousness to exist, the rational self-consciousness has to become the passive observer of the evolution of the community, from the stage of blind will, to the moment of voluntary self-estrangement. The formally simple transition from the Sceptical standpoint to that of Unhappy Consciousness involves a radical transformation of consciousness—a conversion experience in which all of the old standards of truth and rationality are overthrown.

If we take Caracalla as our paradigm of Legal Tyranny,⁵ we can see that in murdering his brother Geta he was not only establishing which of the two sons of Septimius Severus was to be master (in a primitive struggle for recognition); he was also consciously preserving the unity of the Empire. To maintain unity and public order was his proper *Werk*; but underneath the order that he was maintaining—and outside its borders—there was an “alien actuality” of elemental passions. Resistance had to be stamped out; so thousands perished, because they were suspected (often upon very slight evidence) of being “friends of Geta.” Among those executed was the great jurist Papinian, who refused to provide a constitutional apologia for the murder, saying “that it was easier to commit a parricide, than to justify it.”

Papinian represents, very neatly, the consciousness of Legal Right that does not recognize itself in the reign of terror through which Caracalla maintained order. This kind of “pacification” was necessary because Caracalla had to spend most of his time on the frontiers. Gibbon ignores the military aspect of the crisis, but by concentrating on Caracalla’s brutal massacres within the boundaries of the “inhabited world” he makes clear the justice of Hegel’s comment that the “elemental essence” (i.e. all the primitive and barbaric forces of the natural self-consciousness that did not recognize itself in the Roman Law) was also the *Arbeit* of the Lord of the World. His positive *Werk* was the maintenance of unity and order; but he performed the labor of it, negatively, by exercising barbaric violence, and liberating those very same destructive forces of natural life which it was his office to dominate

and control. These rebellious and anarchic forces are generating the new self. The military tyrant, embracing all this disorder (within which “legal” and “illegal” are only labels used arbitrarily), is tilling the ground, doing the negative “labor” of the self; and the unconquered barbarians are doing the same.

Thus it was not the barbarians outside the Empire, but the revelation that the legal self-consciousness is itself barbaric, that made the decline and fall of the Empire inevitable. This was what became clear when formal Reason sought to establish “mastery” (a relation of unequal recognition) over the natural passions. The attempt was inevitably transformed into the tyranny of aggressive self-consciousness (the military) over finite life (the civil population). The real self of the inhabited world was shown to be a “play of raging elements,” because the imperial authority, as a military tyranny, is “without substance.” The whole system based upon the immediate recognition of “personality” is arbitrary. The Empire falls, because all selves must learn the lesson of self-estrangement, the lesson of submission to a command from above. The substance that truly belongs to “legal right” is its “emptying out” into disorder; and this disorder is the birth of the *new* substance, the ordering of the spiritual powers of the political world and its underworld into a new pattern, with the “inhabited world” on one side, and the Overworld on the other. The “essence” is now “self-estranged” because the commanding voice is in the Overworld. God himself becomes the absolute Person, the Lord of the World.⁶

- 2./485. The new order is thus spiritual, but alienated into two worlds. The world of actual consciousness is an alienation of finite spirit into the natural order of things; through the struggle both of the finite sides are sublated in its pure consciousness, the perspective of God in Heaven. These alienated sides still logically involve each other.

The transition that the world-spirit makes at this point is a transition at the level of Religion. Hegel has already explained it (in chapter IV B) as well as it can be explained from the standpoint of the natural (singular) self-consciousness; and he told us then that for the finite self what happens appears as the act of God in his own independent world (pars. 211–212). The existence of another world, the Beyond which we can enter only in thought, is *revealed* to us. So at this point Hegel can only tell us that the self of our present life must regain substantiality by alienating itself, by emptying itself out into a world where the spiritual powers order themselves in a self-preserving way.⁷

When he says “Substance is in this way Spirit” he is referring to this doubling of the world. Spirit, as we know, is “pure self-recognition in absolute otherness” (par. 26). This definition was realized in the “ethical order” because *Dike* appeared as the “absolute other” with which the self identified. In the world of True Spirit, the self simply forgot itself in the otherness of the objective custom. The Condition of Right was “spiritless” because there was no absolute otherness, there was only an absolute but natural self. That absolute self has now been recognized as nothing but *its own* otherness—the unconscious and uncontrolled forces of natural life. This factual otherness must regain selfhood from “beyond.” The ethical self

looked to God (or rather, to “the Gods”) for its substance in the sense of its objectivity, and rational stability. The substance for which the estranged living self looks to God is its own real selfhood—its “immortal soul.”

It is “Substance” that is now Spirit properly. Antigone’s Zeus does not succeed in being the absolute Spirit of the Ethical Substance; he has to yield to the “absolute otherness” of Destiny. It is “Destiny” that becomes a *Self* for Unhappy Conscience. Spirit is “the self-conscious unity of the self and the essence.” The actual self—even in its universal shape as “Lord of the World”—has shown itself to be a mere “play of the raging elements” of natural life. But in its Stoic rationality it knows that selfhood is identity with the spiritual “essence” (Justice, Virtue) not with nature. This *pure* consciousness now confronts it as a revelation; and by self-alienation it becomes one with the eternal truth. It is finitely conscious of the natural world; it takes this world over and unites it with itself, by obedient labor. It empties itself out into the world in obedience to the divine authority; and the world passes back into its possession as a result. It is at this point that our Science of Experience properly becomes the “appearing of the Spirit.” The rest of our story will be the evolution of the relation between “finite spirit” as actual consciousness and “absolute Spirit” as “pure consciousness.”

The whole actual world, both the finite self-consciousness and its world of work, is now inverted into the subordinate status of a mere moment in the divine plan for humanity. This “divine plan” is a thought-construct; and the thinking is ours. But our *pure* consciousness is estranged into the Beyond. In its estrangement it is “essence,” i.e., it is our having already been thought by God. The realm of Essence is a comprehensive, eternal world, for which our natural world is just the temporal, changeable, moving antithesis. The finite self is a spirit because it is not just a mortal moment in this world of transient life and labor, but an absolute other of that natural self, an immortal soul, destined in one way or the other—either by damnation or by salvation—for union with God.

On this basis, it becomes rational, once more, to be obedient to those set over us in this world—even if they are still no better than Caracalla. For we now know that God put them there as a necessary part of his plan. Our “vocation” is to bring “this side” back to God on the other side. God is neither a “substance” nor an “atom,” but a properly universal Self; and the way to be united with Him, and to bring “this side” back to Him, is *obedience*.

This logical analysis provides Hegel’s final answer to the problem that troubled him from his schooldays onwards: “Why did Christianity triumph over paganism?” His conclusion was that the evolution of the Hellenic culture from aesthetic particularism (the Cities as “spiritual things”) to the philosophical comprehension of human nature, accompanied by the emergence of a “universal Empire,” demonstrated that rational freedom cannot be stably achieved in a society of “natural Reason”; and natural Reason cannot tolerate the discovery of its own contradictoriness. In order to stabilize a social world in which authority is natural (and therefore *arbitrary*) we are forced to postulate that it is founded upon supernatural Reason.

This is an *absurd* postulate, because “absolute authority” is contradictory. The

original contradiction is only *doubled*; we hide it from ourselves by pretending that it is resolved in the Beyond. Reason can only coincide with Freedom; the absurd postulate of a rational divine *Will* in the eternal world of thought is just a necessary first step in the emergence and evolution of this “identity.” Universal Christianity, as a social institution, justifies what is logically and ethically experienced and known to be absolutely unjustifiable: the acceptance of arbitrary authority. But without the projection of Reason into the Beyond, humanity could never become what it essentially is: a *free* self-making spiritual community, not a community of “natural Reason.”

- 3./486. So this spirit has a *doubled* world. Ethical spirit had only this world (with its hidden part under it). Everything and everyone was present, because the family maintained the rights of its dead. Now the present world is despiritualized; the unseen spiritual world is elsewhere and exists only for the pure consciousness of Faith. Just as the two laws of the Ethical World returned into the self that is now in this divided state, so these two worlds must return into the self of Reason, the universal consciousness that grasps its own concept. This return is Pure Insight. What Culture produces is: the *forming* of world as self and self as world. As hostile to the other world of Faith it is “Enlightenment.” Enlightenment invades the other world critically, making us see it as the image of this world until we achieve the insight that Faith’s world is just the unknowable absolute Essence, and all of its uses for us. Then both worlds go down in the revolutionary consciousness of Absolute Freedom. This marks the transition from the land of Culture to the land of Morality.

Having characterized Estrangement, Hegel now looks forward and tells us what happens in the whole of his section B. True Spirit was properly “selfless,” because *two* selves accepted their natural allocation to its sides. Legal Right is “spiritless” (not “selfless”) because there is no recognition of the absolute Spirit in it. Formal (legal or abstract) recognition of selfhood turns out to be the *loss* of the divine Spirit. “Estrangement” solves this problem by giving us an absolute Spirit and a concrete self (an ethical substance) in the Beyond. In our legal theory we have learned to *think* universally; so we know that the “pure consciousness” that confronts us is our own thought. But the thinker knows that what is truly thought must always *have been* true. Our pure consciousness confronts us therefore (like our actual consciousness) as *what is*. But being eternal, it is in God’s kingdom, not here in the transient temporal realm.

“Hence this spirit projectively molds for itself not just *one* world, but a doubled, sundered and opposed world.” This is the only way in which the sentence can be construed consistently; but the most usual and natural meaning of the verb is rather different. *Ausbilden* means “to educate, to train.” But not even God could be said to “educate or train” this *divided* world, since in its comprehensive or eternal aspect it is unchangeable. By using the word *ausbilden* Hegel suggests already the opposite of what the world-consciousness of this divided world believes. According to the finite consciousness that knows itself as part of “God’s plan,” “this world” is a forming or training-ground for the “other” one; actually the projection of the

“other world” is part of our training for this one. We know that in this world of *Bildung*, the self-estranged Spirit is forming or training itself as a self-conscious Spirit that will regain its truth. Thus the use of *ausbilden* really indicates that the standpoint of True Spirit is the correct one. It is this *present* world that is real. It is this present world that is molded into the shape of *one* divided world, which has the *pure* consciousness of eternally unchangeable truth as its “beyond,” its non-present, aspect.

It is in this world that training makes sense; but to conceive this present world as a world of training, and nothing but training, would not make sense. Faith prepares itself for the other world; but in the end, the Beyond must be recognized as the “training” aspect of this present world. On behalf of the estranged Spirit, I have spoken of “this world” and “the other one”; but Hegel never does that. He allows the Understanding to have two worlds (even two “supersensible” worlds). But Spirit has only one world, however much it may have to be logically divided; and there is no doubt that Spirit’s one world is this present world. Otherwise Hegel could not use the expression *true* Spirit, as he does, for the self-consciousness that directly identifies with its present world. That is why he recapitulates the standpoint of True Spirit here, and emphasizes that the departed spirits in the Underworld are just as much present as the embodied living selves; they are present *substantially* in the “blood” of the kin-group; and *spiritually* in the “self” of the family.

In order to follow Hegel’s argument, we have to employ certain concepts (notably those of “self,” “self-consciousness” and “Universal”) in unfamiliar ways that seem paradoxical, because they violate our ordinary assumptions about concepts, things, and self-consciousness. But if we make these logical adjustments—which are what is really meant by “Substance is Spirit” or “Spirit is Substance”—we can not only turn all the otherworldly talk of the world of culture into straight talk, but we can come to understand why the otherworldly talk was necessary. There is no “other world” of pure Spirits; the world of Absolute Spirit is the highest aspect of this world—the “comprehension” of it. That is what will eventually be understood.

The truth that “Substance is Spirit” could only be formulated initially as the hypothesis (the faith) that every actual person has her pure consciousness “in the Beyond.” The true being of everything, its *Wesen*, is received from the supremely real essence which is God. We live and move and have our being here and now, in this other consciousness that is eternal. Here I am a mortally embodied self; but Yonder I am an immortal soul. Every single person is a duality of temporal and eternal being; and the substantial world as a whole is a duality in the same way. The division of the world of True Spirit into the seen and the unseen collapsed into the natural self-assertion of self-consciousness; and in due course, the division of the world of estranged spirit into the visible and the intelligible, the realm of actuality and the realm of faith, will collapse back into the categorical identity of the rational self; and as “pure insight” this rational self will unmask the irrationality of the claim of faith that we can receive the truth of “pure consciousness” by revelation.

Pure insight (i.e. pure self-consciousness) will destroy pure consciousness, leaving just the universally rational self with its world of useful things. This sweeping

away of the “faith” aspect of “pure consciousness” is *Enlightenment*. The unknowable Absolute Being is all that is left in the Beyond. Enlightenment completes the estrangement of our world from the Beyond; but as a result our world loses its substantial basis; and the actual world that was interpreted in terms of Faith is overthrown when its ground disappears. The Absolute Freedom that reigns as a result turns into Terror immediately, because Pure Insight knows that it can be perverted; and it must suspect all others of perverting it. So the Beyond of Faith is reborn almost at once as the necessary Beyond of Reason. Estrangement ends when Faith becomes Reason; but Reason is left to liquidate its own Beyond, the realm of “moral consciousness” or “rational faith.”

If we consider this review in relation to the external structure of the section that it surveys, several things become clear. First, there are three historically successive stages, which we can identify in more traditional terms as (1) “the age of Faith” (with Reason, or Insight, as its “handmaid”); (2) the struggle between Faith and Reason (which everyone, including Hegel, calls “the Enlightenment”); and (3) the Revolution (political in France, intellectual in Germany).

Secondly, the three sections of Hegel’s argument do not correspond to these historic stages. The evolution of the social world through both of the first two historical stages is dealt with in the first part of his first section. (This is the topic of *our* present chapter.) The second section deals with the movement of thought in the second stage (and the second part of Hegel’s first section lays the foundation for that). He takes advantage of the fact that the account of social consciousness has already been brought to the verge of the Revolution. He presents and employs the concepts of “Faith” and “Insight” in their developed antithesis from the first. Finally (in Section III) he returns to the French political revolution; and he leaves the German intellectual revolution for the last phase of his sixth chapter.

In the coming section of the argument (i.e., in our present chapter), social history is seen as producing the movement of ideas; then (in our next chapter) the movement of ideas is seen as producing the social revolution. But if we take in the pattern of Hegel’s chapter VI as a whole, the perspective changes. For it is clear that Hegel was not interested in the social history of Greece at all. He presented only the *Vorstellung* that the pre-philosophical Greek culture had of the Family. It is in the “Condition of Right” that social history takes over.

The overarching topic of chapter VI is Law and Right. Beginning with the family as a system of “ethical” rights, Hegel moves through the evolution of legal and constitutional right into “natural right” and so back to the rationally universalized sphere of moral right. The middle phase (our present chapter) is concerned with the ousting of religious authority from the sphere of human rights. It is *social authority* not *religious faith* that is the general theme of Hegel’s sixth chapter. We are helping to make this fact visible by leaving “Faith and Pure Insight” for our next chapter. The Enlightenment is logically just the unfolding of that antithesis.

As scientific observers we have to observe the movement of the World-Spirit in a *logical* order. That is why we must observe the actual evolution of dialectical thinking to its full self-consciousness (at the very brink of the Revolution in which

it advances to seize the royal authority) in order to comprehend what the principle of Pure Insight actually *is*. Pure Insight was liberated by the banishment of True Spirit from the world, but it takes a long time to mature. We shall here watch the disciplining of the natural self into the self of Reason. Then (in our next chapter) we shall watch Reason take over the world of thought. It does that in the very process of its development towards full self-consciousness. The discipline of singular consciousness into “Faith” had to come first; and we have *already* observed that in our analysis of the Unhappy Consciousness. But from the time of Luther and Descartes, the movement of Insight towards self-consciousness goes hand in hand with its movement towards actual power. (That is the topic of our *next* chapter.)

I: The World of Self-Estranged Spirit

Hegel has already surveyed what is to come; and he will now give us a slightly more detailed survey of what happens in the first phase of his argument. No doubt he is being extra careful because history and logic do not stay evenly in step in the story of the estranged world—as they did, on the whole, in the story of the Ethical Substance. The world we are entering is the one divided into “Heaven and Earth”; its story is the story of how Faith and Reason change places. This Reason is the subjective singular Insight that we have already observed in Hegel’s fifth chapter; and the result that emerges is a concept of Pure Insight that is radically dialectical. The movement of that Concept—the antithesis of the Faith that accepts the world of pure thought as a revelation—will follow logically in the next phase.

(b) *The Dialectic of Estrangement*

- 4./487. Self-estranged spirit has a doubled world: the actual world and the world of thought. In the aether of the other world it is supposedly not estranged, but actually that is the complementary mode of estrangement, because it is Beyond. Therefore, this is not the consciousness of “Religion” but of “Faith”; and Faith is not alone in the world of thought. The spirit of knowledge is there too, because thought is its element.

This paragraph introduces the “resting Concept” of Estrangement. Actually there is little rest in the whole section, because the Concept is coming to be “for itself” in actuality; and when it does, we find that in its self-estranged shape it has the divided structure of a judgment. The Pure Insight that comes to be “for itself” is opposed to the Faith that was there from the first. “Faith” and “Reason” actually make their appearance together; but as Reason develops, their relationship changes. “Faith” is the “resting Concept,” whose motion is the evolution of Reason as Thinking. This motion is our proper concern. Faith in its stillness is not a mode of knowledge at all. It is the “devotion” of the Unhappy Consciousness at the threshold of thought. In that strictly singular shape, it falls into contradiction whenever it seeks to realize itself in the world. Faith proper, has crossed the threshold into actual thought; and it does successfully transform the world. But as Pure Insight it will come back to the experience of contradiction.

“The world of this Spirit falls apart into the doubled world” of actuality and pure thought. “Estranged Spirit has its consciousness in worlds of two kinds”; but it “embraces both.” It is the faith in the world of pure thought as “another world” that has to be overcome (as the root of our estrangement from this actual world). Once we recognize that the other world is the world of our thought, our own thinking will take it over. Then the estranged *authority* of the other world will be done away with in this actual world, and Reason will be master in its own house.

“Breaking up” or “falling apart into a doubled world” is what happens from the point of view of the one actual world of the Empire. In that world, there always was the realm of the Gods to which the dead Emperors go. But now that world of the Gods falls away from this one altogether, because there is only one God, and the revealed Truth is that “In the beginning” he created his eternal world with our temporal sphere inside it. Our present world of time has lost its “essence,” its eternal status.

The standpoint of Faith, however, is not the same as our standpoint (as rational observers). From our point of view this eternal edifice is erected for its own edification by the world-spirit that we are observing. This great thought-construct is necessary because the actual world of human life in time is a world that has become self-estranged. I am here in this world, but I do not belong to it, nor it to me. On the contrary, I am a spirit; and as a spirit the eternal world is where I belong. That eternal world belongs to Faith, i.e., to the *pure* consciousness of an intelligible world. I could never know that it is there at all if it were not “given” to me. It is no more mine (as the work of my humanly rational self-consciousness) than the natural world of empirical consciousness is.

The world of Faith belongs to the Other just as the world of Nature does. But I am conscious of the world of Faith intellectually—or through *pure* consciousness. My awareness of it has no sensory aspect. “Faith” is the knowledge that God gives us, whereas knowledge proper is always self-knowledge.⁸ We shall only reach “Religion” in our science of consciousness when our “faith” becomes “knowledge”—i.e., when we share God’s knowledge of himself and his world, or when our knowledge *constitutes* what God is.

The sphere of “pure consciousness” is the intellectual world. Faith is a mode of thinking that takes itself to be knowing without thinking, or at least to be knowing something that is other than thought. So pure thinking must appear when Faith does; but it appears in a subordinate role. Pure consciousness is necessarily “the element” of pure thinking (i.e., of the logical Concept), as well as of Faith with its intuitive knowing.

We shall only consider Faith in its antithesis to the *Begriff*, says Hegel. This is a warning that our treatment of the *content* of Faith at this stage will be a limited one. We dealt with the dogmas of Original Sin and Grace in our discussion of the Unhappy Consciousness. The content of Faith is the dogma of the Trinity. But because “Religion proper” is a much higher development we must understand that these earlier discussions are not complete or final.

The estranged shape of Faith—the belief that it is not our thinking at all, but a

knowledge that is *given*—is the complementary form of our estrangement from the actual world. We picture a world in which the alienation of thought from life is done away. Here in our actual world, all the ideals of our thought are flagrantly contradicted by life. There, in God's world, all of our pure thoughts will be absorbed into a life that is better even than they are. We must labor painfully and faithfully here, accepting the violation of all our ideals in actual life patiently, in order to pass over to that higher life; but this supposed "overcoming" of estrangement in thought is simply the fulfilment, or logical completion, of the estranged condition of our world itself. Our actual estrangement consists precisely in the logical need for another world in which what this one lacks is supplied. Religion proper will be the overcoming of this whole conceptual pattern of estrangement. We ourselves (as students of this commentary rather than as observant readers of par. 487) are already *religious* observers, because we already understand why the "age of Faith" is a necessary moment in the "phenomenology of God as Spirit"; and as religious observers we are the "self-consciousness of the absolute essence as it is *in* and *for itself*."

VI B.I(a): Culture and Its Realm of Actuality

We shall begin with the actual world of this estranged consciousness and follow the evolution of its actual thought about itself—the thought that guides and controls action in it—until it reaches the point where the self-estrangement of intuitive Faith from self-conscious discursive thought is dissolved in Pure Insight. This is the conceptual advance produced by Culture (Bildung).⁹ As Hegel said (in par. 485) "through its emptying out (Entäusserung) the actual self-consciousness passes over into the actual world, and the actual world passes back into it." This identity is "pure Culture," and the passage to it is a purely intellectual one. With the dawning of "pure Culture" we shall be conceptually equipped to deal with the "pure consciousness" of Faith. We shall have comprehended the "element" within which Faith and the Concept constitute the fundamental Gegensatz.

(c) The Task of Culture

- 5./488. The Spirit is now an essence that knows itself as an actual world facing an independent *self*. The world's way of being is a motion in which the self brings its world forth by putting off its personality. Only by doing this does self-consciousness count for anything at all. Equality in this world is not legal but a conformity to the universal produced by active self-estrangement.

Unlike the Condition of Right, Culture has a properly absolute Spirit. In the Condition of Right there was a finite self that claimed to be absolute (the Emperor); but now the Emperor himself is a servant of God. The absolute Spirit is present in the world of Culture as a multitude of souls who belong to God's *Church*; they face a world, which is a "spiritual essence penetrated right through by self-consciousness." I know myself as a free agent; and the actuality that confronts

me is constituted by the cultural motion through which I transform it. The previously spiritless world of Legal Right is “penetrated right through” by the new spirit; and this penetration inverts all normal views. We are all children of God, ministered to by his Church, headed by the “Servant of servants.” The “new spirit” is the conviction of all of the selves that they must alienate their natural personality (“put off the old man” is the metaphor of the new religion). The “things of this world” are foreign to this new spirit; but our spiritual self-conversion is bound to transform the world as well, because the self of Culture inherits from True Spirit the awareness that spirit is identical with its world. I cannot make myself over, without making the world over. The finite identity of “self” with “property” still holds good (as in Legal Right); but what matters now is not my “given nature” but the self that I make; and it is not treasure on earth, but treasure in Heaven that I am concerned about.

In the traditional terminology, the finite spirit is a “soul” (immortal spirit, not Aristotelian life principle) which knows that it must “put on the whole armour of righteousness”; whether my soul is eternally saved or damned depends upon the “actuality” that my active self gives to it in this world.

I have to “master” the natural world (especially my own nature); and, like the serf, I have to do it according to a pattern given me by the “Lord.” But again, as in the case of the serf, it is my own sense that I give to things in mastering them¹⁰—and particularly it is my own sense that I give to the new self that I reform and actualize. Thus the problematic relation of my soul to God in the Beyond provides a standing ground for Reason, so that it does not degenerate into the Hobbesian tyrant (which is all that the “Lord of the World” can be, as soon as the open market for military support is established).

The salvation of the soul was what mattered to the Unhappy Consciousness. But the experience of self-assertion and of the satisfaction of its own desires through its labor was for it the perpetual occasion of renewed repentance, and self-castigation. The self of *Bildung* is implicitly rational; it has got over that bind about self-assertion; and it is not hung up about the impossibility of reaching the Beyond. These problems are by no means solved, and they will return to plague Reason in its “moral faith”; but for the moment, they are not problems, because the only question is whether I have carried out God’s will *in this world*. Whether I am at peace with God in my own mind is not what is important; and how God will decide my fate in the other world does not matter on its own account at all. *My anxiety about it* matters as the stimulus through which I am enabled to remake myself and reorganize the world. Once it has served that purpose, it will be liquidated through the recognition of its unintelligibility. The goal of Culture is to produce a universal self-consciousness that has no *need* of that estranged selfhood standing at the seat of Judgment in the Beyond.

The equality that matters now is not equality before the law, but equality in the sight of God—the positive equality of salvation or justification. The Unhappy Consciousness demonstrates that one *cannot* be justified by works, so its salvation comes by faith in the forgiveness of sins; the world of *Bildung* is properly the world

of justification by good works done in the security of faith. It rests upon the faith of the Unhappy Consciousness, and it speaks the language of “justification by faith.” But it knows what “good works” are, and it has no hesitation about affirming its own capacity and will to do them.

- 6./489. *Bildung* is the foundation of actual being. Man’s true nature can only be regained by alienation from its natural state. That is how God’s will gets done *and* I get saved. My actuality and power depends on my self-educative effort. I put aside my natural self in order to be the self God knows. Quantitative differences in natural endowment do not matter. The good will is simply God’s—it is not “good in its kind.” It is absurd for a “kind” to set itself up as something on its own account; Pure Insight will make “type” into a term of abuse and contempt. We are all brothers, and only our efforts to do God’s Will count.

In paragraph 488 Hegel said that “the spiritless universality of Right accepts within its range every natural mode of character as well as of being, and justifies them.” This indicates that the application of the concept of “character” is much looser and more ordinary in the Condition of Right than it was in the Ethical Substance. Hegel’s reduction of ethical *character* to the simple dichotomy of male/female was an *ethical* simplification borrowed from the *Antigone* for a logical purpose. This division is the ethical translation of the *Gegensatz* between Life and Freedom in natural Self-Consciousness, and the sublated shape of the Dependence/Independence relation in True Spirit.

But all of the relationships distinguished in Aristotle’s theory of the family (husband, wife, brother, sister, free citizen, slave) are modes of *character* that are necessary to True Spirit; and the “ethical characters” sketched by Aristotle for many of the virtues, and by Theophrastus for many non-virtuous, and some vicious types, illustrate the emergence of “individuality” in Comedy.¹¹ When one considers Hegel’s early admiration for the “individuality” of Socrates (and all the remarkable followers who got their inspiration from him), it is mildly paradoxical to observe that according to Hegel’s mature conclusions about how Christianity triumphed over paganism, all of those forms of “human wholeness” were part of the *breakdown* of the Hellenic ideal. But even in his earliest reflections Hegel distinguished between wholeness within the community, and the rational need to be separately autonomous.¹²

The development of *personal* identity passes over directly into the world of alienated *Bildung*; and when alienation is overcome, the Stoic autonomy of “character” will become a universal goal again in the Enlightenment. This is the social context in which we find the “spiritual animal kingdom” of the Real Individuals. But its destiny there is to be broken down by the “absolute culture” of *Rameau’s Nephew*. Hegel’s anticipatory reference to that work here is intended to close the circle of Culture as an infinite concept, by connecting the impact of naive Culture upon the system of “natural character” recognition in the Condition of Right, with the impact of “absolute culture” on the “spiritual animal kingdom” that Culture itself produces. Self-alienation as a substantial (or stable) cycle already shows the basic

pattern of “rational action” or of the *Sache selbst*. It is “what is there,” as well as the goal that is aimed at; and equally it is the means or mediation of the transition.

In his discussion of the Condition of Right Hegel remarked on the irrationality of the distribution of natural gifts to the rational personalities who enjoy formal freedom and equality in the Stoic view (par. 480). In the spiritual perspective of Culture, this irrationality and divine caprice is completely transcended, because the given nature of the individual counts for nothing. The individual achieves her true status as a spiritual essence by “putting off the old man” and “putting on the whole armour of righteousness.” It is by alienating oneself from nature, including one’s own nature, that one can establish one’s real status as a soul in God’s eternal world; this is what Hegel calls *die gedachte Substanz*, or the “thought[-constituted] substance” actually visible in our world. This alienation from nature is also the *salvation* of the soul into Heaven and out of Hell—the passage of “the *determinate individuality* into *essentiality*.” How far one succeeds in this labor of salvation is what determines one’s status in the other world. But given that one succeeds at all, the comparative measurement of one’s achievement is not important.

What Jesus represented in the parable of the laborers in the vineyard (who all received the same payment of a penny no matter whether they worked the whole day or only for the last hour), is brilliantly portrayed in terms of the “*particularity* of nature and character” in Canto III of Dante’s *Paradise*. Dante (being the emulative character that he is) finds it difficult to credit that those who occupy the lowest ranks in Paradise do not envy those whose rank is higher. Piccarda explains that the love of God wipes out every possible discord with his will: “and in his will is our peace.” Then, in Canto IV, Beatrice explains that no one really is “higher” or “lower” in Paradise. Everyone really does receive the same penny, and the distinction of the spheres is valid only *quoad nos*.¹² This is what Hegel means by insisting that “the originally *determinate* nature is reduced to the *unessential* difference of quantity, to a greater or lesser energy of the will.” The equality of the blessed (when we give it an *actual* interpretation in this world) becomes the objectively implicit presence of Reason. Enlightenment only has to strip off the cloak of estrangement for everyone to see this.

In the development of Culture, the Concept does specify itself; some distinctions between “kinds” will become socially important. But as far as the Science of Experience is concerned, this importance is strictly transitory. Absolute Culture will possess an “insight” that sees *through* all social distinctions of worth. The Spiritual Animal Kingdom is only a phase in the evolution of Culture (though it is also a permanent feature of the rational society). Rational contempt turns the world of “spiritual kinds” into the world in which the word “*espèce*” expresses contempt. At that stage both the properly spiritual estate and the Nobility become completely confused with the educated bourgeoisie. The specification of *labor* into kinds (the guild system) remains functionally important; but it was without spiritual significance from the first, because it belongs strictly to “this world.” It is the survival (in sublated form) of the system of “character recognition” that came into existence in the Condition of Right. The truth of Culture is that we are equal in the sight of

God, just as the blessed are all equal in Paradise, even though they appear to Dante in an orderly array of higher and lower spheres. What Piccarda told Dante in Paradise, Rameau's Nephew will eventually reveal (contemptuously rather than humbly) to Diderot.

- 7./490. "Culture" is the simple "soul" of the substance. The movement of individual culture transforms the actual world. Thus the formation of the estranged consciousness results in the control of the world. We make over the world in our own way even while taking it for God's creation, and using his gifts in his service.

Faith sees the whole social order as established by God's Will: "The rich man in his castle,/ The poor man at his gate,/ God made them high or lowly/ And ordered their estate."¹⁴ But, in reality, the general effort of everyone to do God's will on earth is what produces the stable order of society. We can see here why Hegel insists on the immediacy of the transition involved in truly rational action. At the level of the World-Spirit, our own activity becomes quite invisible to us. We do God's will; and we say that He made it all just the way our efforts turn out. This is how we are estranged from our world; and since we do not want to go back to a world of warring legions or lawless barons, we can appreciate why children were (and are) taught to sing this hymn.

But even Mrs. Alexander—who wrote the hymn—knew that the world was full of active and ambitious people whose self-formation involves a conscious effort to "have power over" (*bemächtigen*) the status system. Here we have the free expression of "original character and talent" that we recognized as what was meant by *action* in the rational world of the Real Individuals (par. 404). In the present thought-context, this is the "actualization of substance." Every soul fulfils God's purpose by making itself over. Mrs. Alexander may want the children to sing about God making everything (including the social order) on Sundays; but she would fervently endorse the view that they must make themselves in conformity with God's order all the week.

Hegel's reference to *Rameau's Nephew* at the end of paragraph 489, as well as the clear echo of the concept of "rational action" here, impose this reading of the paragraph in terms of the "maturity" of Culture. But he is about to introduce a whole string of concepts (Good, Bad, State-Power, Wealth, Nobility) that apply to the earlier phases of this "world-shape."¹⁵ So we ought to consider how the doctrine of this paragraph applies to Culture in its beginnings. My example—which takes us into the cultural world after the Revolution—is helpful here. The barbarians breaking down the Empire, like the tyrant-emperors who maintained it, were simply expressing the actual, natural self, breaking through all formal legal and philosophical structures. But to the extent that they were later seriously affected by the educational work of the Church, they entered the new thought-world in which the *remaking* of the self was the primary concern. It is not important to us, or to Hegel, to decide who was a robber-baron, and who was a "Christian knight," in this transitional stage. At the level of empirical fact we are faced with a massive

amount of “hypocrisy” (both conscious and unconscious) at every stage of “Estranged Spirit.”¹⁶

When Hegel distinguishes the Unhappy Consciousness as a “subjective shape” that cannot achieve objectivity, he seems to direct us to the Crusades as the time when the grip of Faith upon society became truly “objective.” Having been educated as a Lutheran himself, Hegel was convinced of the importance of the Reformation; and the formation of the national state, with the movement from feudal monarchy to popular sovereignty, is the main focus of interest in the present section. But we do not need to accept any of his particular historical views. Obviously he had to do the Science of Experience in terms of the history he knew. To interpret it in terms of what *we* know is only to test it appropriately. So our proper concern is with the “Christian world-view” as an ideology evolving above the level of personal decisions and commitments. Thus, without worrying particularly about individual commitments in any period, we can take Mrs. Alexander’s famous hymn as the final (truly “contemptible”) decadence of what began with the *Song of Roland* (and with the Christian struggle against the Saracens that it celebrates).

(d) *The “Values” of Culture*

- 8./491. It is only a *sublated self* that is actualized. The estrangement of the self in this world brings Heaven and Hell to life; and that gives life in this world its meaning. But the distinctions will not stay fixed. The soul of this understandable fixity is dialectic; the [linguistic] *Dasein* of this Spirit is Good/Bad as an identity of opposites. We shall see how estrangement estranges itself and the whole returns into the concept of Culture.

The foundation (or starting-point) for Culture as the *Gestalt* of a stable world is provided by the Unhappy Consciousness. This is the singular self that knows itself as sublated. Its true self is “beyond.” It does not even know itself (except *per speculum et in aenigmate*, “by a mirror and in a riddle”); for in its own view it is not the unity of consciousness in *this* world, but a purely intellectual principle that subsists in God’s world. Life in this world is only the time of decision about its eternal fate. The crucial question is whether it will be saved in Heaven, or damned in Hell.

The “faithful” self does not know that the world that it is remaking is its own substance. Instead, the two sides of its doubled world operate like a magnet: “Through the self as the soul, substance is developed (*ausgebildet*) in its moments so that one opposite inspires (*begeistet*) the other, each gives the other stability (*Bestehen*) and receives it in like manner from the other.” These opposites are the Here and the Yonder; and Hegel uses the word *ausgebildet* to express the manifestation of God’s eternal Providence in time. God’s Heaven is set against “the world, the flesh and the devil.” Our world is only the mouth of Hell; “thought *fixes* the difference in the most general way” as the absolute opposition of Good and Bad, the sheep and the goats.

But Divine Providence is only the estranged absolute Self of the human self-consciousness that is passing from its natural existence to its self-possession as

Reason. From the standpoint of our rational observation this self is the “soul” (living or moving principle) that develops Substance into its moments; the world of Heaven and Hell only arises because estrangement is necessary for the transition to Reason as objectivity. Dante’s world-picture shows us the *fixation* of the movement of Reason in the form of an understandably stable eternal whole.

Heaven and Hell are the fixed forms that shun each other and cannot in any way become the same; but the “distinction” that is fixed as an *actuality* by this opposition is between this world of time, and the eternal world of Heaven and Hell. The temporal world is evil: “the world, the flesh and the Devil” must be renounced. But in temporal experience, the flight of good from bad cannot be maintained. The movement of Culture will show that devotion to God’s will is not in principle better (or even different) from devotion to the things of this world. Good and Bad are “pure thoughts”; Dante’s world-view is established in the realm where everything turns over dialectically into its direct opposite. This will still be true, even when the Enlightenment brings Heaven to Earth. The Spirit of the estranged world is the dialectic through which Faith gives birth to Pure Insight. The world of self-estranged values will finally collapse into that.

- 9./492. The alienated Substance of Culture has *four* masses (two Heavenly, two Earthly) corresponding to the two masses of Ethical Substance. It is like the stable Earth, and the moving cycle of Air, Water and Fire that is Earth’s *life*. First, the Air of Spirit is the *an sich* universal, self-identical, spiritual essence [of the Community as Church]; second, the Water of Spirit is the State as the divided structure of public service and cultural enjoyment [the Estates]; third, the Fire of Spirit, is the comprehension of the unity of Church and State. This Fire is both the dialectical Insight that brings the Revolution, and the speculative Reason that preserves the *Gestalt*.¹⁷

In his account of the Ethical Substance, Hegel used the word “mass” to refer to the matter in which the universal form individuates itself as a *thing*. In that context a *mass* was the population group that became a *polis* under the impact of Self-Consciousness (its founding King). It already had the Divine Law in its own shape; for otherwise its self-consciousness as a mass could not be generated. But with the founding of the City it becomes a *doubled* mass, because it now embodies not only the “law of Nature,” but a self-consciously made and willed Constitution.

In the world of Estranged Spirit, the social mass is a *national* community; and it has a fourfold structure. It is *double* both in “actuality” and in “thought.” Metaphorically, it is like the Earth-Process. Around the solid Earth, the three free elements create the infinite cycle of transformation upon which all natural life depends. In the analogy Earth stands for the community as a conscious (but not yet self-conscious) living organism. This is what we normally call “the national economy.”¹⁸ Every member of the community has to “make a living”; and the living of everyone is controlled by the “invisible hand” of which Adam Smith speaks. That is the alienated shape of the Divine Law in actuality.

On the side of thought, what corresponds to this alienated law of life, is the universal faith in salvation. Everyone belongs to Mother Church and to God’s

Kingdom in Heaven. This is the spiritual “air” that we breathe; and from the Church we receive what we regard as the *true* Divine Law.

The Human Law is doubled likewise. In actuality, we must all devote ourselves to the public service. Even the peasants do this, when common soldiers are needed; but there are three self-consciously active Estates whose vocation is to serve the community in different ways. The Clergy mediate the Divine Law of the Faith for us all; the Nobility (and their Peasants) fight our battles; and the Third Estate both creates the national wealth, and runs the civil service (including especially the education system). This is the “rain-cycle” of society; the articulated “watery” mass mirrors the elementary structure of the whole. The first dichotomy of Reason into spiritual “kinds” is the division between the nobles (and peasants) who sacrifice life, and the “third estate” who serve the public for their actual living. The Clergy represent the principle of Estrangement itself, by giving up the life of this world altogether.

Finally, in thought, there is the community of human Reason as a universal mass. Initially the Clergy do all of society’s “self-conscious” thinking; but the advance of enlightenment sets the peaceful atmosphere of Faith “on fire” almost literally. The whole realm of Faith, with its Divine Law, exists in the element of thought; so it is essentially and necessarily combustible by the fire of rational reflection. The world of Culture ends (like the Stoic World-Order) in the universal conflagration of Absolute Culture. When Enlightenment makes Insight universal we finally realize that the Kingdom of Heaven is only the thought-ideal that we have to realize on Earth.

Thus Earth and Water are the “elements” of the actual world (and of *natural* and *human* law); Air and Fire are the “elements” of the ideal world (and of the laws of Faith and Insight). Universal Insight is the Destiny in which the whole system is engulfed; so self-conscious Reason is now quite knowingly the *Macht* over all of these *members*. The Revolution of 1789 will engulf them all.

Only “the Earth” is not here treated by Hegel as a moment in the motion of Culture.¹⁹ The Earth is almost literally “the subject of these essences and of their process, their departure and their return.” I say “*almost* literally” because we must understand the Earth as the home of Spirit, and not simply as the stage of our mortal lives. We never go to “the other world” except as a way-station for our “return” to this one. That is what the Enlightenment reveals, and it is an “insight” that is not destined to pass away.

The only difficulty for this view is the description of the masses as *daseienden noch unbegeisteten Momente* (“extant, still unspirited moments”). The Economy, the Church and Civil Society have the right sort of simply factual existence; but the Enlightenment becomes truly a “universal fire-mass” only when the whole is engulfed by its revolutionary force. Hegel speaks of it first, however, not as “consuming,” but as sustaining spiritual life (*beseelende*). So we should think first of the conservative “fire of Faith” that unites private and public life in the universal community of the Church Militant. This is what is gradually transformed by the process of Culture into the consuming blaze of universal insight and Enlightenment. It is a “mass” inside the Earth (of our natural life).²⁰

The “inequality” of the watery element of public service is quite simply the social inequality of the “three estates of the Realm.” We shall follow the functional dissolution of the Nobility into the Bourgeoisie in Hegel’s conceptual analysis. But we have to remember that the Reformation began this process by dissolving the “spiritual estate” into the lay community; the “fire” of Faith had its “outbreaking and consuming aspect” long before the advent of Voltaire. Also the unifying function of *war* is carried over directly from the smaller community of True Spirit; and this reminds us that the “watery element” actually has *four* estates. It is the peasants who are the soldiers of this “self-sacrificing” mass; and they certainly showed a fiery cultural aspect during the Reformation.

Unlike the True Spirit, these “masses” do not have an *einheimische Geist*. The spirit of the Economy is the “invisible hand” of an alien “mechanical” power; that of the Church and of Public Life is the God of salvation; and although when universal Faith is transformed into universal Insight that Divine Spirit does come to Earth, it is not “at home” here. It proves to be as alien as the “invisible hand” or worse. Instead of the promised “Heaven on Earth” the Enlightenment creates only the living Hell of the Terror. But unlike the alien might of the historic destiny that overwhelms Zeus and his children, the Cities, the Enlightenment knows exactly what it is doing; Robespierre, who presides over the Terror, is a very typical representative voice of Pure Insight.

It is the Spirit of “Faith”—“the being *in* and *for itself* of the whole”²¹—that “splits apart” into the Church and Civil Society (the Air and Water Masses). The Revolution, when it comes, will be the “flame erupting from Substance and consuming it.” In the actual context of 1807 Napoleon was engaged in restoring its “abiding shape.”

- 10./493. Community and Family are represented in both ways: in thought, the first member is the Good—an unchangeable essence, and the might of God’s Will; the other is the Bad, the physical world that lets us take our singular life from it. This too is permanent. The first is the foundation and result of our universal Reason; the second is the instrument of our singular happiness.

Hegel has already said (in par. 491) that thinking *fixes* the distinction between the Substance as abiding and the Substance as self-sacrificing “through the absolute opposition of *Good* and *Bad*.” For the abstract characterization of the opposition as pure thought, Hegel returns here to the terminology of the Unhappy Consciousness. The Good is the “unchangeable essence of all consciousnesses”; and the Bad is the essence that allows itself to be enjoyed and consumed (the nature that is to be reduced to *nothing*, *das nichtige Wesen*). “This absolute becoming-dissolved of the essence [into Augustine’s two Cities] is itself abiding.” On the one hand there is God’s eternal world for which we are destined as baptized members of the Church: “the foundation, starting point and result of individuals, and they are purely universal in it.” On the other hand there is the actual world of our life on Earth. The “pure thoughts” correspond to the “physical mass” of life on Earth (the Bad) and the “spiritual mass” of the Church Militant (the Good). These are

the universalized shapes of Family and City. It is logically important that the “mass” which is thought of as the Bad is precisely the “result” that emerged from the experience of the Condition of Right. The Bad is the natural life that must somehow go on (to the despair of the Unhappy Consciousness); the living Earth gives itself in order to sustain the human form that the Son of God took upon himself for our salvation.²²

In the symbolism of the Eucharist the Bad becomes Good; but in principle it remains the Bad. The Good is the “thought” of the Church as the spiritual “body of Christ”; but we could never be members of that mystic Body if we did not continually return to ourselves as *singular* and abidingly “come to be *for ourselves*.” This imperative inverts the pictured interpretation of Christ’s coming. The Risen Christ is not a “Lord,” but an inner self incarnated in every one of us.

- 11./494. These thoughts are also real goals in this world. The Good is public service (State-Power) and the Bad is self-seeking (Wealth). State-Power is the substance, the universal *Werk*, the Thing Itself (or *res publica*). The Republic, however, is likewise the Common-*wealth*, it exists to maintain us in our selfishness. Our common *work* is the means of our private pursuit of happiness (a quite unspiritual pursuit). But this self-seeking produces common benefits, and universal goods; the privacy of wealth is ultimately illusory.

Hegel himself now proceeds to actualize the “pure thoughts” as *motives*; and this justifies my interpretation of them as Augustine’s Heavenly and Earthly Cities. The “pure thoughts” are *Vorstellungen*; and we must picture them in such a way that they can become the motives of our lives. No one wants to go to Hell, so that cannot serve as a motive. But to contribute to the peace and prosperity of the Earthly City is a valid goal, even for the Heaven-seeker. Hegel’s “actual objectives” are the driving forces of the two “members” through which the four “essences” of Estranged Spirit correspond to the Community and the Family in True Spirit. The pure thinking that we are observing, is the logical exposition of the four “essences” presented to us as *Vorstellungen* of the Understanding (“extant, still unspirited moments”) in paragraph 492. The Good and the Bad of paragraph 493 are the Sunday-sermon idealizations of the Earth and Air masses, before their momentum against one another in the weekday world of the Water mass begins.

The “actualization” of the pure thoughts is their self-estrangement. When we reflect upon the practical character of the concepts Good and Bad, we can appreciate the necessity of this estrangement. These two “thoughts” are a *Sache selbst*; so they have to be a goal, a raw material, and a means, all at the same time. The Good is an ideal to be realized in the world; its actualization is a *motive*; and the motive of “public service” is the real “Power” of the State. When the State-Power actually exists it will absorb all the moments. The estrangement is plain enough. We have moved from the realm of thought to that of actuality: from the Church to political life in this world (the sphere of the Bad), from the abstract to the concrete.

In the case of the Bad, the movement of “immediate self-estrangement” is the other way: we go from actuality to thought, from our earthly life of consumption to

the economic market, from the concrete to abstraction. The Bad becomes Wealth, enjoyment becomes money; and Money is the generalized concept of the “Goods of this World.”²³

This is the emergence of the “watery mass” that is “internally unequal.” In its *good* aspect it is “the public service”; in its *bad* aspect it is the social world of ambition and self-interest. The logical dialectic of the simple ideals of Good and Bad (Heaven and This World) with the practical (this-worldly) motives of public service and private profit organizes the watery instability of our weekday lives into the “estates of the Realm”; but this stabilization into social types is eventually shown to be spurious, when the “fiery mass” emerges visibly in its consuming aspect.

At the beginning of the movement, it is the translation of “being good” into earthly terms that is most important. The modern State is the direct successor of the *polis*. Hegel drives this home by employing much of the same rhetoric. The Greek citizen knew that the *polis* was his *Werk*, better than we do. We have to comprehend that State-Power exists, because we voluntarily devote ourselves to public service. The State is, of course, an *authority*; we have encountered it in that shape as the Empire. But simple authority is necessarily *arbitrary*; it becomes *rational*, only because like the citizens of the Ethical Order, we consciously and devotedly create the *Macht* upon which the public authority depends. We *know* ourselves as English, French, Spanish (but not yet as Italians or Germans). “Popular sovereignty” is logically implicit in this knowledge of nationality, just as “democracy” was implicit in “citizenship.” But these two concepts are not identical, because the nation articulates free personal individuality through its more complex system of “masses” and “estates.” That will be the lesson of the French Revolution; and France is our model of the Nation because the dialectic of “Estrangement” moved more logically (or “purely”) and went further in that community.²⁴ In Germany and Italy the movement of the masses has been anomalous, so that they have not yet become Nations with a central *Macht* at all. In 1806 Spain and England were still mired in the dialectic of “Goodness,” “Nobility” and the “mixed identification” of the bourgeoisie.

In our bourgeois world, we are not *ethically* aware of how we constitute the *Staatsmacht*. Our *Werk* is invisible to us, and the State exists for us in an estranged form: it is a *utility*, or “being for others.” The world of utilities is where we acquire *wealth*. So we know the Substance under this self-dissolving aspect. The State-Power is the invisible “aether” (the fifth element in the classical theory of Nature) within which the whole movement of the spiritual elements (from the living Earth and back to it) is comprehended. The “heavenly fire” of which Faith and Enlightenment are just opposite faces, supplies the essentially socio-political direction and purpose for the world of *Bildung*.

“State-Power” is the common good of the community, and its increase is the object of desire for all who are “public-spirited” as we say. In this perspective we can see how it is the universal *Werk*, for even the most blindly selfish agents contribute to it as long as they are not wilfully criminal; and everyone who is devoted to the Thing Itself—the *res publica*, the public thing—is necessarily conscious of

the universal significance of what she does. The public good is the result of all efforts; but for the public-spirited consciousness it is also the “absolute foundation and standing (*Bestehen*) of all its action.” All of life is willing service, and hence “being for the other.”

But the worldly peace and prosperity that this ideal State-Power secures, is not just the “public thing,” but also the “Common-*wealth*.” There would be no virtue in devotion to the public Good, if it were not shared out and enjoyed by all individually. This is where actuality differs from pure thought, since in Paradise (and even in Dante’s Purgatory) there is no good whose enjoyment by one excludes its enjoyment by others. Life in our actual community is that enjoyment of “the things of this world” from which the Unhappy Consciousness could not escape. It cannot be spiritualized; and most of the work of the world is directly concerned with it. We collaborate; we work together, and we work for others as much as for ourselves; someone whose conscious motives are entirely selfish may do as much or more for the common welfare as someone who is public-spirited. Motivation is a matter of inner intention, and pure selfishness is as unachievable as pure altruism (in which there would be no element of primitive self-will). The impossibility of pure altruism was shown in the Unhappy Consciousness. Here Hegel concentrates on the impossibility of pure selfishness. What is always actual is the immediate identity of the opposites.

(e) *Self-Conscious Judgment*

- 12./495. Thus “public service” shows us what we implicitly are; and the “pursuit of happiness” is what we explicitly are. Because the world is out there (opposed to my negative unity) the pursuits are *alternatives* for my choice. But in this choice I return to the perspective of pure thought; so it is apparent that they are not simple alternatives. I can choose either, both, or neither, with good intent. The other (or both) will then have its value determined by my judgment.

Because of this essential identity of the public and the private interest, the problem of choosing a path in actual life becomes complicated. Public service is the *Ansichsein* of self-consciousness, the implicit essence that is the goal of its universalization as Reason; and Wealth is the rational goal of natural selfhood, the guarantee of its independence, or *Fürsichsein*. Spirit is the necessary unity of both aspects—the movement from *Ansichsein* to *Fürsichsein* and back again to their final harmony. Subjective spirit (the singular rational consciousness) is the “negative unity” of the two, i.e. it is the conscious awareness of their opposition; the subjective spirit knows itself to be separate both from the community (the Universal) as a self-determining individual, and from the objective actual world as a subject or self. The principle of Pure Insight makes its appearance here, precisely because of the alienated status of the State-Power and Wealth as actual objects for consciousness.

Rational Insight can evaluate the objects available for its choice in opposite ways. A decision between State-Power and Wealth is not necessarily a choice between

God and Mammon (as we might be told on Sunday); for we can all be Good Samaritans with the wealth that we have. The choice may even be for “neither.” We shall see an example of this stance later on in the nephew of Rameau. His position is “A plague on both your houses! They are essentially the same anyway.” Like Diogenes in his tub, the young Rameau prefers to stand by his insight. But the more obvious way of “choosing neither” before that insight has developed, is to take vows of poverty and chastity and withdraw from the world of actuality altogether into the cloistered life of religion. This choice takes account of the fact that “the life of this world” is always Bad; and in that way the “First Estate” is constituted beside the Second (the Nobility) and the Third (the Bourgeoisie).

In the subjective choice, it is only the thoughts of Good and Bad that are essential. As personal judges we have the “essence as *essence*” in ourselves; we define the world to be judged, the question to be decided. Am I to give myself to God, or to take all the gifts of Nature that I have or can acquire, and live as happily as I can for myself? Dante’s awakening in the “dark wood” is this sort of choice. He gives himself to God, but this does not involve his withdrawal from the world. Thus he offers us a model of the complex problem that “judgment” becomes in the actual world. The *simple* choice between the monastery and the world is the choice between *Ansichsein* (union with God) and *Fürsichsein* (expressing oneself). We have already seen (in the Unhappy Consciousness) why this is not a “*spiritual* judgment.” It involves the attempt to divide the Absolute Spirit from the finite spirit; and the result of that attempt is the insight that the abolition of finite spirit is the wiping out of Spirit altogether. Even the life of the cloister is a compromise.

The same applies to the choice of a career “in the world.” Dante’s choice was certainly in harmony with the “immediate determinations of the two sides of the actual essence.” But that did not make it the only possible “*spiritual* judgment.” Every choice, even the choice of the monastery, involves the reconciliation and identification of *Ansich* and *Fürsich*, the mutual recognition of God and man. Hence the concrete choices of individuals in the world cannot be simplified into the decision between Church, public service, and private life. Good and Bad become *relativized* in experience. God does not call everyone to leave the world; and if one is *in* the world, one may find that one’s estimate of the State-Power is different from that of those who exercise it, just as one’s estimate of “worldly happiness” will certainly differ from that of the monk. Good lives can be founded either on harmonized or on opposite evaluations of public and private life.

We have now reached the level of individual judgment proper. We began with the immediate (universal) thoughts of Good and Bad (no choice). Then we had the *particular* choice of being good either in public or in private life. But in using our *personal* judgment we have four choices. We must now examine them.

- 13./496. The Good is that in which I recognize myself; and the Bad is what is opposed to my selfhood. Goodness is harmony; evil is dissonance. Thus it is judgment which, in this second stage, creates Good and Bad. The judging spirit gives values their essence. But in the third phase the objects will declare themselves according to their own spirit.

In so far as it is an act of arbitrary free will, this *personal* judgment in which the individual “has the essence as *essence* in itself,” is only a *Meinung*. The belief that we are “Real Individuals,” is not borne out by experience. But the insight that we have a choice is a true one; and it is at this point that “good” and “bad” become thoughts in the ordinary sense. Originally *the Good* was “the *self-equivalent*, immediate and unchangeable essence of all consciousness.” This was a pure thought of the Platonic type.²⁵ What we have reached now is the ordinary thought of what is “good *for me*” or “from my point of view.” The Platonic standard has to be applied to my relation to the world. This gives us the logical formula that “the *good* is the *equivalence* of objective reality with consciousness, while the *bad* is their *non-equivalence*”; or, using Kantian terminology, the good is my “happiness,” the harmony of my social duty with my nature, and with nature as a whole.

There are four possible judgments about the two *particular* shapes of actuality. What I ought to do or to be can be harmonious with the pursuit and possession of *both* State-Power and Wealth (and then I judge *both* to be *good*); or it can be harmonious with one, and out of harmony with the other (and then two oppositely complementary, but *mixed* judgments follow); or finally it can be out of harmony with both (and then I judge them to be both *bad*).²⁶ I can make this last judgment and still be “happy” in a rational sense, because I am “the spirit, the negative unity of their standing, and the separating of individuality from the universal, or of actuality from self” (par. 495). But since this “separating of individuality from the universal” is only a *Meinung*, the “happiness” of this last choice will be radically unstable.

Paragraph 496 gives notice that the evolution of the four relational judgments will bring us to a third phase in which Good and Bad will be informed by their own Spirit. At present, we can only discern how this stage begins. The transformation of the Platonic Ideas of Good and Bad (involved in the total pattern of the four logical applications) brings to birth in each side a “spirit of its own”; and what they will then be “in and for themselves” will be different both from what they are “in themselves” (the simple ideals of Paradise and This World—the Air-Mass) and from what they are “in themselves for us” (the actual social world structured by the four judgments—the Water-Mass).²⁷ With the self-conscious arrival of the comprehensively *negative* judgment, the Fire-Mass will become visible in its dialectical, all-engulfing shape.

- 14./497. The consciousness that is in and for itself must necessarily reverse the simple judgment of the alternative values: state-power gives law and protection, which is good; but as sovereign, it is authoritative, and hence oppressive. Wealth, on the other hand, is general prosperity and happiness (even if somewhat arbitrary in its distribution).

In my commentary on paragraph 496 I set out the possible judgments of the insightful individual in an abstractly logical way. First, the harmony of both actual “powers” with the self, then the two mixed judgments, and finally the rejection of both. But Hegel takes them in an objectively logical order of appearance. The way that we constitute the State-Power is invisible to us; but our participation in the

working enjoyment of this world is necessarily visible. So although we recognize that the State-Power is necessary, it appears to us as alien to our own life activities. We know that the State-Power is our rational essence; we are estranged from our legal Stoicism, but it is still there. Our Real Individuality is a reflection into “the consciousness that is *in* and *for itself*.” We see State-Power as a general utility; but it is authoritative (and frequently irrational). It ought to be minimized (and centralized as little as possible). “That government is best that governs least” because at its best it is only a necessary evil.

This is the attitude of the commercial bourgeoisie who get rich by private initiative. For them, Wealth is “the good”; and the economic philosophy of the *Wealth of Nations* is their “insight.” State-Power is Bad; private happiness is Good. We cannot all be rich, and some of us live in need; but as long as riches are not achieved by conspiracies for the restraint of trade, the accumulation of wealth will always operate to make everyone happier. This “mixed judgment” is the essential bourgeois faith; so it is the proper foundation for the fourfold organization of the modern “civil society” that replaces ancient citizenship.

- 15./498. But it remains true that according to the intrinsic essence of consciousness, the public good is what is good. There ought to be law and government; and the pursuit of happiness is essentially transitory. So Republic is Good, Wealth, Bad.

Even the satisfied and prosperous merchant knows that the public service is necessary. His own “mixed judgment” requires the opposite one in order that the society of wealth-seekers may be stable. The honest merchant who has read Adam Smith, needs honest public servants. He (or she, for there have always been prosperous business enterprises run by women, and “equality of opportunity” is the rational imperative that ultimately revolutionizes the system of estates) needs public servants who share the insight that the best government is the one that governs least. But the “honesty” of a public servant consists precisely in knowing categorically that (in spite of appearances) the Public Service is the Good and private profit is Bad. (We had to recognize in Antigone’s case that one can “know” things in different ways. Here again the second member of the progression is second because she must have the sublated knowledge of the first stage.²⁸ But she knows that she is committed to the more fundamental social task of maintaining the system in which “liberal individualism” can flourish. The two “mixed judgments” form a social balance; and for both of them “bad” has a sublated or relative sense; government is seen to be “necessary” in the first case; and wealth to be “desirable” in the second. Thus paragraph 497 begins by conceding that the free individual consciousness “does find in the State-Power its *simple essence* and basic *standing*”—i.e. the *laissez-faire* liberal is essentially “law-abiding.” And paragraph 497 argues that the *laissez-faire* judgment is incomplete. Neither of the mixed judgments seriously maintains that one of the opposites is “bad.” In their mutual complementarity “badness” disappears altogether. Phenomenologically, the *result* must be a judgment that puts the two sides together and recognizes this.

- 16./499. We must now appraise this divergent judging. Where it finds harmony of self and estranged substance it is “good,” where it finds dissonance it is “bad,” since both the for-itself and the in-itself are essential moments. Both of the one-sided judgments are “abstract.” Only consistently divergent judgments are real shapes of consciousness.

Hegel says that “we must now *beurtheilen* this divergent *Urtheilen*.” This is not a dialectical trick, for it is quite true that the outside observer can see more of the game here; and our judgment is empirically well-founded. The logical reason for it can easily be seen as a result of our experience. The two mixed judgments are “abstract,” because with respect to the bad they are not seriously meant.²⁹ That is why they are “bad” themselves on that side. As soon as a dishonest trader arrives in the free market, the honest trader will appeal to the government; and as soon as everyone is agreeing that some regulation is “oppressive,” the rational administrator will change it. Thus the observed consciousness itself can easily learn (if it needs to) that “both *being-for-itself* and pure *being-in-itself* are equally essential moments.”³⁰

We must judge the mixed judgments at this point, and recognize that both of them are “abstract,” because only we can take the next step in the phenomenological movement. The market members and its administrators can each recognize the “abstractness” of their judgments; but that only serves the valuable purpose of stabilizing their lives. They may then produce someone like Sir Richard Whittington, a successful merchant who becomes a magistrate.³¹ This only short-circuits the dialectical movement that we are interested in. Sir Richard Whittington is a “noble” of sorts, but not a proper noble. Again, if their well-administered market is threatened by a foreign enemy, the merchants will tax themselves to pay for soldiers. But a *condottiero* like Sir John Hawkwood is not a proper noble either (though he was one when he fought for his king at Crécy); and Italy did not become a Nation, but only a battleground for the aristocratically governed communities that achieved Nation-status.

It is *our* insight that sets aside cases like these; and our insight shows *us* that the crucial positive judgment is the “noble” insight that sees Wealth as the “good instrument” of State-Power which is the Good-in-itself. Sir Richard Whittington’s judgment is “abstract” because it is *upside down*; and the same applies to that of the Republic of Florence (which hired Sir John Hawkwood, and put his statue in Santa Croce).

Hegel also mentions here the completely negative—or “contemptuous” judgment that both State-Power and Wealth are bad. These two consistent judgments both produce genuinely individual shapes of consciousness. But we shall find that the cultural journey from one to the other is quite lengthy. With the logical emergence of the Nobility we go backwards in time from Hawkwood and Whittington. The “contemptuous consciousness,” on the other hand, historically presupposes the full development of the bourgeois world.

- 17./500. The genuinely alternative modes of judgment either approve both—the “noble-minded” attitude that sees public service as its essence, and wealth as the essential condition of its existence;

- 18./501. Or disapproves both—the “contemptuous” attitude that sees the ruling power as oppressing its independence, and is inwardly rebellious; and wealth as a selfish, transitory good which it loves but despises.

With the opposition of the “noble-minded”³² and the “contemptuous” consciousness we have reached the Concept of Culture as a Disjunctive Judgment. The bourgeois world of the Water-Mass is substantially (and stably) constituted by the abstract (and necessarily complementary) “mixed judgments” of the private citizens and the civil servants. Historically it emerges out of the feudal world in which Lordship and Service is displayed in a whole range of forms; and when it successfully dissolves that Feudal World into itself (through the activity of the opposed “contemptuous consciousness”), the Fire-Mass becomes visible and the Revolution ensues.

As we have seen, the comprehension of “noble-mindedness” is *our* achievement. Even in the case of True Spirit we had to study the world in its “maturity” to find the key to its beginnings. When we come to the world of “pure thought,” and the dyad of “Faith and Insight” we shall find that we are doing this again; and the reason is the same in both cases. The Ethical Order achieves aesthetic intuition only at its perfect fruition; the Estranged World begins with Faith and develops Insight only gradually. But we ourselves are using insight, in order to gain more insight. We began by comprehending Faith in terms of the insight that we already have; that taught us that (regardless of what Faith thinks and says) it is the *actual* world that is important. We used the pure insight of our actual world to reach the point now where Faith itself has become *actual*.

The merchants and civil servants have faith in the “other world”; but the noble-minded consciousness must have faith in what it does here. For the “noble mind” (like True Spirit) must put life on the line for its “categorical knowledge.” This is the mind that commits itself to public service as its “simple essence” and has “inner respect” for it, not just “actual obedience.” Since the law-abiding disposition of the bourgeois (merchant and civil servant) is “actual obedience,” this “inner respect” means something more. It is just the commitment of the noble heart (*Mut*) “to the death.”

Wealth is necessary for nobility too; it is the essential *instrument* of the noble life. It cannot be an end-in-itself; so it cannot be a goal, and it must be received (in some permanent form) as a *gift*. The noble mind is *grateful* for this gift.

This is an interpretation of the personal fealty relation. A noble swore fealty to the Lord who granted him the landed estate that made his noble existence possible; but *he* remained the judge of what duty he owed. “Contempt” for the actual powers that be, is always a possibility for this wholehearted commitment. Hegel has certainly framed his description of the “contemptuous consciousness” with the “haughty vassal” in mind (cf. pars. 505–506).

Except as the inner antithesis of Noble-mindedness—the appeal to the “judgment of God” that is made possible by the fact that the Noble’s commitment is an act of personal judgment which is *simply* categorical—the Contemptuous

Consciousness is not so easy to identify in the actual cultural world; or at least, it is not easy to show that we have identified it correctly. But the first step is to realize that it should not be translated as “base” (Baillie’s word) or “ignoble” (Miller’s).³³

When we follow the logical evolution of “noble-mindedness” we shall see why (when the Nobility become the courtiers of the “absolute” Monarch) they are bound to become arrogantly “contemptuous” of everyone else. But they themselves are clients who receive their comfortable living for nothing except the production of courtly flattery; so their arrogance towards others is only the mask of self-contempt.

But not everything Hegel says about the Contemptuous Consciousness is literally true about the typical courtier. It is clear that some of the time, Hegel is thinking about the consciousness of Absolute Culture. That is the “comprehensive inversion”—i.e., the contemptuous consciousness into which the independence of nobility has returned: Rameau’s Nephew. Only of Young Rameau’s contempt can we say that “it clings to its disparity with the two essentialities.”³⁴ The Courtier has nothing against wealth; and in the “first inversion” the State-Power becomes simply the means for that.

Only the consciousness that still contains “noble-mindedness” in a sublated way can be “contemptuous” in the comprehensive sense that Hegel gives to the word here. So only Rameau’s Nephew satisfies the concept properly. He is no willing laborer, but an unwilling, self-despising, client of those who have freed themselves from labor: not an ant, but a grasshopper. Also, he is self-consciously responsible for his own insight; but he is not a simple Cynic—he is not just Contemptuous Consciousness as a *formal* disjunctive alternative to Noble-mindedness. He is the consciousness of Absolute Culture, because he has comprehended and sublated “noble-mindedness.”³⁵

When we compare Young Rameau with the ancient Cynic the secret of the Contemptuous Consciousness is revealed. No one could take Diogenes as the *Gestalt* of his world. He was at one extreme of the range of individual character that is possible in the “fallen” world of natural (i.e., pre-spiritual) philosophy. But we are required to take Rameau as the *Gestalt* of his *world* as a whole. How can he be that? To outward appearance he is simply an entertainer. He is a musician but a failure (that is the point of his being named through a relationship); he “sings for his supper” through his wit. Everyone takes him for a buffoon; he expresses his whole world by being its jester. He is the court fool of the world of Wealth; and his true ancestors are the Fools of Shakespeare’s noble-minded courts.³⁶ As a jester he is licensed to express a universal insight into what everyone feels, but will not allow themselves to admit; Diderot shows this by placing him in the company of an enlightened philosopher. The secrecy and hiddenness of the contemptuous consciousness as a *universal Gestalt*, is a matter of the Estranged World being a system of social self-deceit. All of the critical Enlighteners draw our attention to that; Reason’s contempt hides behind the equilibrium of the two *mixed* modes of judgment, and emerges only as a *joke*. All of the critical Enlightenment is the Contemptuous Consciousness; and those who do not deserve to be called “critical” (for instance,

Robinet or Frederick the Great) are part of its comedian's mask. They constitute its sycophantic accommodation.

Once we have recognized the whole world of the Enlightenment as the Contemptuous Consciousness, we can see why the Young Rameau is its complete shape. "Self-contempt" does not, at first, appear to be a logically necessary moment of the unmixed judgment that State-Power and Wealth are both Bad. This judgment is a very fair characterization of the insight that only universal cultural enlightenment is really Good. The quest for political power and for wealth are *both* mistaken when they are regarded as ends-in-themselves; and we might think that the consciousness that can see that has every right to be satisfied with itself. But if we compare Voltaire with the "proud vassal" we can see why this is a mistake. The "proud vassal" is a Noble whose naturally positive judgment of the two goals coincides with a genuinely negative judgment of both of them. When his own autonomous selfhood is at stake, he truly cares nothing for either of them. Enlightened (or "rational") contempt, on the other hand, is only "abstract." It may set itself above ambition or greed; but it continues to be dependent upon them both. So if it affects to despise them, it must logically despise itself also. It is the *radically* estranged intellect. It takes the lordly view that every thing is a "utility" for the common good. But it is hypocritical because there is no genuinely universal good within the utilitarian perspective. The Lordship of Universal Reason is the bondage of its preservation as Singular Life.

This contradiction explains why the world-view of "Absolute Culture" can only express itself as a *joking* consciousness. This is a world in which the governing class is at first a small group of landowners; but gradually this aristocracy melds with, and eventually it is absorbed into, a more general kind of plutocracy. It still remains essentially oligarchic; the great majority is excluded from it. And the whole system rests on (or in) an otherworldly ideology; everyone is incessantly pounded with the message that the "things of this world" (which the plutocrats have) are worthless.

The rational self-consciousness that comes to birth in this world must do rational justice to this ideology. The things of the spirit (for which the music of Rameau the elder is an inarticulate symbol set against the Eucharist bell of Unhappy Consciousness) *are* higher goods than physical welfare (or than the government which fitfully and inequitably secures it). Young Rameau stands logically at the end of the cultural process—to use his own metaphor, his words are the nudge that makes the old idol topple over. But the "secret" he reveals is that in the world of actuality there is no escape from contradiction. We can pass over to "pure thought"; but when we overcome the estrangement of that sphere from the actual world, we shall find that we have only made the logical estrangement of universal thought from singular existence completely explicit. The truth of Spirit remains inarticulate.

One thing that Hegel is *not* doing is the psychoanalysis of society. It does not belong to the phenomenology of spirit to talk about what is *really* hidden from view. The perfect shape of the Contemptuous Consciousness, is found in a literary work that does not enjoy the canonical recognized status of the *Antigone*. But we can grasp its significance (and justify it logically) through our judgment of the judgments.

Here, if anywhere, is a case of the imposition of concepts upon reality—for the imposition of concepts is logically what *must* happen in the Estranged World. Most of those who charge Hegel with a *priorism*, or with forcing the facts into the strait-jacket of his theories, are logically bound to read him the way they do, because they are themselves children of the Enlightenment, and they cannot conceive any relation between concept and fact except that of estranged “application”. In the case of the dialectical movement of their own conceptual world there is logically no answer to them; they must be allowed to laugh at Hegel if they want to, just as Hegel’s world laughed at the Young Rameau. One who is convinced that the concept of the Contemptuous Consciousness is elicited from the interaction and sequence of the explicit self-conceptualizations of those undeniable cultural facts which we call the Universal Church, the Feudal System, the Reformation, the Enlightenment, the Ancien Régime, and the Revolution, can only do as the Young Rameau does: have the last laugh by cocking a snook at the naive “honorableness” of these enlightened defenders of the True, the Good, and the Beautiful. So if I end by striking the solemn attitude of Diderot’s Philosopher, and declaring that Hegel’s interpretation of *Rameau’s Nephew* is one of the greatest strokes of the only philosophical genius who ever came near to rivalling Plato, I trust the reader will know how to take that pronouncement.

- 19./502. The alternatives form the disjunctive judgment about what State-Power and Wealth are for consciousness, not what they are in and for themselves. For us the two are both posited and superseded. For them this has yet to happen. Just as the alienated thought and actuality of the two essences generated the two judgments, so as *Gestalten* they must come together as a syllogism (in which self-consciousness is the missing middle term).

Everything that has happened so far in this subsection (a) has happened for us, but not for the world we are observing. The section is called “Culture and its Realm of Actuality”; but we have so far only reviewed it in our thought. In fact, all we have done is to state the Concept of it (as a “Judgment,” which the whole world of Estrangement properly is). This is different from the “thought” of the Estranged World itself, because our thinking is the speculative insight and comprehension that has been formed by the whole process of Culture.

For the cultural world itself, its “judgment” is only fully conscious at the end of its historical development. The world of “Culture” is a bourgeois world, in the sense that it is run by the bourgeoisie; but its political unity was made by the Nobility, who survive in it as “clients”; and they are faced in the end by a bourgeois who has taken up the same “client” relation to the private bourgeoisie. So our observation of the *experience* of this world records the judgment of history upon the Noble attitude and values. The bourgeoisie (who have taken over the State-Power that the nobility bequeathed to them and have given to it an “upside down” but stable interpretation by making it the instrument of Wealth and the pursuit of finite happiness) are not structurally involved in this judgment at all. We shall see how their values come into play in the syllogism of Faith and Enlightenment, which is

the movement in which the Fire-Mass consumes this self-estranged World. What actually perishes in the fire is the nobility; what is before us already is the logical reason why the bourgeoisie will *not* perish, and the logical Concept of the Noble Consciousness. We are now about to observe how that concept inverts itself in experience.

The judgment expresses what the two essences (State-Power and Wealth, or “the common good” and “the pursuit of happiness,” to give them their familiar commonsensical names in the bourgeois world) are “for consciousness.” In order for the bourgeois world to come into existence, there must first be a Noble Consciousness that devotes itself to the “common good” and actualizes it as State-Power, while enjoying Wealth (which it receives as a given “estate”) as the means for securing its own actual freedom. Here in paragraph 502, just before the “experience” actually begins, we learn a bit more about the contradiction in noble-mindedness.

State-Power (or the existence of a centralized administration) and Wealth (or the enjoyment of private happiness) are simply essences to begin with—i.e., goals that personal judgment can set for itself. They are not actualized in any conscious institution; they do not have any enlivening consciousness. But we can see already that if a true noble has to receive his wealth, then there must be another consciousness that gives it to him; and it must not come to him as his pay or he will not be a noble at all, but a bourgeois public servant whose relation to the essence is compromised and “abstract.”

This other consciousness—the noble’s “benefactor”—is the middle term of the syllogistic movement through which the opposition between noble-mindedness and contempt emerges. The noble achieves his goal; he establishes the State-Power. But the conscious spirit that he gives to the essence is then revealed to be identical with the spirit of Wealth. This is a continuation of the movement by which the “pure thoughts” of Good and Bad were transformed into instruments for the personal judgment of individual Reason. What emerges from the syllogistic movement will be the recognition of the social whole as a divided image of the freedom of personal judgment. The two “sides”—the posture in which the noble mind begins, and that in which it ends—become what they implicitly are: moments of one self-consciousness that knows itself, and its world (experientially) in the way in which we know it (logically) already.

This unified consciousness in which the two sides coincide as an “infinite” (or contradictory) judgment is Young Rameau. Rameau is the self of Absolute Culture, the self-consciousness of the whole motion. The Contemptuous Consciousness as a sundered moment of the judgment, a separate self-consciousness unto itself, opposed to Noble-mindedness is the “noble courtier” who takes the place of the warrior noble whose function is fulfilled once the absolute Monarchy has been established. The judgment “falls apart into two consciousnesses” because noble-mindedness transposes its attention from one “predicate” (Power) to the other (Wealth). The King is the “spirit” of both.³⁷ The way that the noble courtier relates to the Monarch, is the way that Young Rameau relates to the world as a whole; but

Rameau is the self-conscious Concept of what is only *vorgestellt* in the triad of Noble—Monarch—Courtier.

Since Hegel himself refers to the whole logical movement through which the world of the free rational choices of personal goals develops, it is worth pointing out that Young Rameau's choice is a "return" to what is categorically imposed by the "determinate thoughts of Good and Bad." As an option for personal choice, the Church and the cloister still exist; and as a personal goal of life this choice expresses "contempt" for both State-Power and Wealth. But it does not express the rational egoism that emerges when the Noble becomes a courtier.

(f) *The Syllogism of Cultural Values i: Mute Service*

- 20./503. The noble consciousness initially confronts State-Power as a substance that is not self-conscious. But it is aware of it as its own essence and end. So it lets its own particular concerns vanish, and devotes itself to the service of the public good. It is the *Knight*.

We are now embarking on an account of how the Ancien Régime emerged historically.³⁸ But Hegel's first sentence does not look very historical. The Noble Consciousness that confronted State-Power was always actually faced by some "self." In Hegel's analysis this self is not the State-Power, but only the agent of it, who administers Wealth. The noble is "gratefully obliged" to this "benefactor." He swears fealty in return for the gift of his land; but it is God whom he properly serves. God is the Monarch over himself, and his feudal Lord equally. We can see the ideal of "noble service" best in the great religious orders of knighthood: the Templars and the Hospitallers. The Crusades are the right cultural context in which to begin the concrete exposition of Hegel's argument, because there the whole community of Western Christendom (i.e. the Estranged World of Culture) was united in forming a State-Power that had no self. Setting aside the younger sons who aimed at fiefdoms in the land "beyond the sea" (*Outremer* as they called it), the Crusaders who were on a pilgrimage, and expected to come home to the lands they had left behind, *did* (for the time being at least) "behave negatively towards their own ends . . . and let them disappear."

This attitude was part of the general ideology of *knighthood*. The knight was devoted to the service of God, and under God, to the service of the Lord to whom he personally swore fealty. By joining one of the great Crusading orders, one could avoid fealty to a human Lord; but outside of the orders, one could hardly be effective as a disinterested champion of the Good, whose own concerns were forgotten, unless one gave one's allegiance to a Lord who took care of those personal concerns. The "heroism of service" requires someone who is served; but that someone is not the State-Power. The "State-Power" means the constituted and effective sovereign power of a Nation.

- 21./504. Thus the universal good becomes interlocked with existence generally, and the (knightly) consciousness forms itself into an essential function. Because it makes the

purpose [the “in-itself”] of life visible it gains respect; and the thought of “common good” becomes an existing power. It is a *true* existence [cf. 444] and the true is made valid.

In paragraph 504 and paragraph 505 the transitional character of feudalism is explained. The noble consciousness faces a State-Power that is not just an *essence*, but a *substance*—i.e., there is a customary way in which everything is done. But the custom is estranged because it is not “our way” (as in the Ethical Substance); it is God’s way. Knight-service makes one the agent of this Heavenly sovereign. This has the double result of “linking the Universal with what-is-there generally” because someone is upholding the custom; and of “estranging the servant’s (pure) consciousness from his natural consciousness.” The knight is socially respected because he is seen not to be pursuing his own happiness. This is an estranged form of happiness itself since the natural life from which he is alienated in his “heroism of service” is “the *Ansich*.” The in-itself here refers to the Earth-Mass—i.e. to “earthly life” as the *Ansich* of all actuality. This *Ansich* is the Substance from which “State-Power” and “Wealth” are abstracted by thought as “sides.” Of those sides, it is the State-Power that is now the *Ansich*; and the noble consciousness moves towards that, not away from it. Its service constitutes the State-Power as a “Universal in being” instead of a “Universal in thought.”

The *service* relation (*Dienst*) indicates that unlike the heroism of the *Ethical Substance*, the heroism of service is devoted to a Universal that is always an *alien* object (whether as a thought or as a being). It is not the Substance of the consciousness that serves it; it is the “will of God,” translated from Heaven to Earth. So we have a situation that looks exactly like the one involved in the serf’s service. There is a doubled actuality. There is knight-service as the self-realization of the knight; and there is the State-Power as divinely ordained. The knight’s service is done according to his own judgment; it has “*true* actuality.” The State-Power is ordained by God: it is the true or valid standard.

But the situation of the one who is ordained to exercise the State-Power—any one, for just who it is can become a matter of personal judgment—is ambiguous in the extreme. On the one hand, he is God’s vice-gerent; but on the other hand, he is just another knight, another heroic servant. The State-Power confronts all true nobles. It is a present power, without question; but it is not a self. So it is always a matter of judgment to decide who can exercise it, and how it should be exercised. The substantial customs are there: and one of them, for instance, says that “the King (being God’s ordained vice-gerent) can do no wrong.” But the King may be very ill advised; and then he needs to be rescued from his evil counsellors—and they need to be punished for treason.

- 22./505. This service of self-estrangement does not make the State-Power self-conscious. There is law, but no executive; no person has alienated his *personality* [*Ansichsein*] for that. Personality, on the contrary, is just what has gained respect (*honor* for honoring the law). He is a haughty vassal of the State who can give counsel.

Since Hegel uses the word “vassal” for the relationship of “service,” it is clear that he understands that feudal service rests upon the oath of fealty. But he now makes clear that personal fealty is a very slippery relationship. Feudal monarchy is not yet *sovereignty*. The law of the land (which is partly custom, and partly made by the King in Council) is acknowledged to be authoritative, but not the King’s interpretation of it. Every one of the King’s “vassals” retains the right to decide what his oath means. This is the meaning of “peerage,” the equality of *Ansichsein*, i.e. of law-recognition. The *Sein* or *Dasein* that is put at the King’s disposal, is the legally stipulated and custom-bounded feudal service. The vassal must appear (with his definite or indefinite following) and follow the King to war. But the King has no certainly acknowledged right to interfere with the Baron’s court of justice, or with his administration of his estates. The Baron’s personal judgment is a “being-in-itself” that he has not “offered up”; and there is as yet no recognized distinction between political authority and property rights.

The baron’s *lordship* is unitary; his identification with State-Power and with Wealth are not separate. As the King’s “peer,” each baron is just as much the executive *will* of the State-Power as the King is. If their wills clash, “common opinion” (*der allgemeine Meinung*) will be what prevails—unless one of them (and in particular the King) can make his will prevail by force. Thus the “haughty vassal” is not just Noble-mindedness but Contemptuousness (as the antithesis contained in the resting Concept) because whenever his honor is offended, the baron can show that he despises both worldly authority and worldly wealth, by fighting to the death for honor’s sake. His own authority over his people and things—the immediate identity of political and economic control, governed only by *his* interpretation of customary justice—is for him the principle of an “honor” that is essentially “contemptuous” of everything, and everybody, else.

But if someone outside the jurisdiction of his court “touches” the baron’s honor in a way that offends him, the battlefield is not the only or the immediate recourse. The universal law of the land, to which he has sworn fealty in the person of the King, is guarded as a matter of honor by all the peers who have sworn the same oath. So either the King or the offended baron can appeal to the whole parliament of “peers” to recognize his right, and to aid him in obtaining proper redress for his honor. The Baron can appeal to his peers even if the offender is the King (although, of course, he will make his appeal by proxy, if he is afraid that the majority will support the King and that his person would then be subject to seizure).

The baron’s “honor” depends upon this general recognition of his peers; it is what *they* generally regard as essential, that makes him honorable, not the fulfilment of the oath that he swore when he was given his lands. That “gift” is what he is “grateful” for; but the bond of gratitude does not create any categorical obligation of submission. Hegel does not say anything yet, about the ultimate vindication of honor by the sword; but what he says about the baron’s “speech” is unintelligible unless we take the next paragraph into account.

“His speech . . . would be *counsel*.” Outwardly the contrary to fact conditional is very peculiar, because the feudal monarch did have a Council, and the barons gave

their “counsel” in it. But Hegel is claiming here that their speeches in the Council were not what they pretended to be, because the monarch was not yet recognized as the “own will of the State-Power.” When the monarch is absolute his Nobles can give him “counsel”; but at the moment they cannot properly be said to do that. Later on (par. 511) Hegel will contrast the “heroism of mute service” with the “heroism of flattery.” There again he is intimating that an “honorable servant” cannot speak. “The noble consciousness defined itself as one who could approach the universal power in an *equal* way” (par. 513). So the speech of “noble service” is only a pretence until we see how it relates to the Noble’s *mute* behavior with his sword.

The Noble speaks to God’s anointed representative; so he uses the rhetoric that his courtier-successor will use. But he is the King’s Peer. Whenever the King chooses to disregard what the Noble pretends to offer as his “counsel” it becomes an open question whether he will draw his sword in service or in rebellion (or more prudently *not* draw it at all). In our own logical perspective, the true noble “speaks” only with his sword.

This is the situation that we find in Shakespeare’s history plays (from *King John* to *Richard the Third*; *King Henry the Eighth* portrays a new situation). That Shakespeare is one of Hegel’s sources is certain. Certainly he was not the only one, but, except for Montesquieu, I cannot securely identify the others. For the *Gestalt* of the “proud vassal,” I think that the Percy family (and especially the young Harry Percy surnamed “Hotspur”) in *Henry the Fourth* and *Henry the Fifth* offers the most graphic model.³⁹

- 23./506. The sovereign will is lacking. Every estate can give “counsel” through its representatives, but it has a distinct will to pursue its own interest in spite of its talk of the *common* good. Barons do die for the nation; but as counsellors they have their own interest and can fall away into the attitude of contempt.

The State-Power is not yet *government*. The King receives “counsel” from all sides, but none of it is simply the loyal advice that it pretends to be. There is *no* constituted will that brings the deliberation to an end decisively. The bourgeois world (of the abstractly mixed judgments) organizes itself into the great parliament of the estates; and even here we meet with the same obstinacy (in the shape of a refusal to vote any money if the king does not heed their “advice”). All parties talk about the “common good” (*das allgemeine Beste*, what is best for everyone). In the bourgeois world that means “what is most profitable for most private interests”; and although the Barons do their knight-service in war, and so prove that they are sacrificially devoted to the Universal, they are just like the bourgeoisie when they come to Council: they have a reserved “particular will.”

There is a difference, however, between the “abstract judgment” of the bourgeoisie, and the concrete judgment of the baron. The bourgeois Estates will only put continued talk about “what is best” in the place of action (whether it be the action the King wants, or the one they want). The offended baron, on the other hand, may actually decide to rebel. Like the bourgeois Estates he will talk about his “honor,” and his legal or customary rights, when he does so; and it will be quite ambiguous

whether he is genuinely acting in the public interest, or in some private interest of his own. That does not matter, because when he decides to “speak with his sword,” the “No” that he says is a No to “State-Power” and “Wealth” alike (just as he says “Yes” to both when he follows the King to war, though he may have spoken against it in Council, or he may have supported it there for reasons of self-interest).

When the barons *generally* vindicate someone’s “honor” (or their collective honor) and the King has to concede what they want (as in the signing of Magna Carta at Runnymede) it is plain to view that “noble honor” is the real sovereign power; and it is necessarily in harmony with “common interest” (or Wealth). But when the offended baron takes it upon himself to vindicate his own “honor” with his sword it is equally obvious that “honor” is the principle of “contempt.” Thus “honor” is implicitly an “absolute contradiction.” So the “sovereignty” of this principle must be sublated; the State-Power must have a personal will and judgment of its own.

Hegel was a Württemberger and his father was an important financial administrator. Württemberg was still, at this date, officially a Grand Duchy within the “German Empire” (which claimed to be the constitutional successor of Rome). But by this time the Empire was no more than a legal fiction; and in 1808, Napoleon abolished it and made Württemberg into a Kingdom. As a Grand Duchy, Hegel’s homeland still had serious constitutional problems, because there was no universal agreement about the exercise of sovereign executive power. The “Estates” of Württemberg (which, oddly enough, did not include a “nobility”) claimed the right to exercise various liberties which in normal parliamentary constitutions reside only in the executive power; they had their own independent delegation at the Congress of Rastatt (1797–1798) for example. This is part of the background for Hegel’s sarcastic comments about the “chatter concerning what is best for the community (*die allgemeine Beste*)”; and his direct observation of the government of Württemberg was, no doubt, one of the things that convinced him that every healthy community must develop a strong central executive. One thing that he meant when he called himself a “Lutheran” was that he believed absolutely in popular sovereignty; but that is not the same as believing in parliamentary sovereignty.

Parliament in Hegel’s view cannot directly make itself sovereign. The “sovereign” must have the support of the Nobility; and there are always at least two sides in any discussion, so in any decisions reached by vote nothing can oblige the “noble” minority to accept the result; in the House of Peers, where everyone represents himself, a single baron can stand out against all, if he thinks his own power will suffice him in the life-and-death “judgment of God.” This is the situation that has to be changed.

In the evolution of parliamentary sovereignty in England, it was *bourgeois* support of the royal authority that effectively changed it. The barons in their home-castles were like little kings; but in every town the sheriff was an officer of the King—and as long as the King had the support of the Commons he could get enough money from them to support an army that would put any “proud vassal” in his place.

It is in the bicameral form of Parliament that the two aspects of the Good, polit-

ical authority and wealth, for the first time go asunder. It was not in the interest of Sir Richard Whittington M.P. (and by that time, already “thrice Lord Mayor of London”) that the wars of petty barons should interfere with the peaceful flow of commerce. But rather more than two centuries later his fellow-mercenary (for he had no actual descendants) were eager supporters of the cause of “Parliament” against “the King.” Between those two moments (1416 and 1642) there occurs in England the stabilization of executive sovereignty that interests Hegel. But Hegel is not interested in the evolution of the English Constitution after 1485 because it does not exhibit the logic of popular sovereignty clearly enough. The Absolute Monarchy, the Revolution and the Terror formed a sequence in which the advent of popular sovereignty in its rational form could be clearly recognized. The Napoleonic future would be dominated by the bourgeois imperatives of equality of opportunity and “the career open to the talents.” The British Constitution was still an aristocracy in decline, as Hegel viewed it (and since he was a firm supporter of Napoleon he did not view Pitt’s England very kindly).⁴⁰

- 24./507. Even in service unto death the contradiction is there, but in a different form. Death produces *unconsciousness* and so denies further service. Being-for-self must be alienated yet survive. It must surrender itself to another self; so the common good must be a self. Otherwise the ambiguity of serving a *particular* interest remains.

If a baron, or his son, follows the king to war and dies on the battlefield we cannot deny that he was true to his oath. But it is simply a fact that he fought, and that his body, his *Dasein*, now lies there dead. From the world of spirit, in which he took the oath, he has simply passed over to its “unreconciled opposite,” the world of nature. Back at home, the father or son (whichever did not go to the war) may be as stiffnecked as ever about his right to interpret what his oath means, and his right to give *authoritative* “counsel.”

What is needed is the universal acceptance of a more radical interpretation of the oath. The oath-taker must surrender not just the *Dasein* of his body (and those of his men-at-arms) but the *Fürsichsein* of his warrior-will. His self-will is *abgeschieden*. This can mean either “departed into seclusion” or “departed into the realm of death”; the first meaning must be replaced by the second. The “language” of absolute sovereignty (or “divine Right”) is the means by which this is achieved. The view that “honor” can justify rebellion against the King must become impossible, because all honor dies and passes over to him. The secluded self must come forward and *speak* its oath of commitment absolutely. Otherwise the free-will of the baron is like the secret resolve of a serf to run off and become a free townsman by hiding out for a year and a day.

(g) *The Syllogism ii: Self-Surrender through Speech*

- 25./508. Language is the means by which the surrender of all personal self-will to a universal actual self is achieved. For the self *is* its language. Speaking is an absolutely

transient motion which passes away at once. But the meaning of what is said is absolutely abiding.

Hegel wants to use the evolution of the *language* of Royalty as the middle term for a syllogistic transition from a world of free public service to a world in which the public service is a system of salaried public offices, maintained by the King's Treasury. The French monarchy is his model for this (and that is natural and necessary, because in the political sphere it is the *French* Revolution that he has to comprehend). In England, the centralized monarchy and the bourgeois Revolution came before the full onset of the Enlightenment. The commutation of all kinds of feudal dues and services from their "kinds" to money; and the increasing importance of the Commons (or Third Estate) who *never* served with their bodies from the first, enabled the monarchy to enforce its own absolute interpretation of the Coronation Oath. But in both developments the performative function of language—for an oath defines and *constitutes* a legally enforceable obligation—was vital from the beginning.

The obligation of the feudal oath is a *personal* one; it holds between the two natural self-consciousnesses who are parties to the swearing of fealty. The performative function of the language of insight, which is what Hegel is talking about in par. 508, is a universal or conceptual one. At this rational level, language has so far been either imperative (providing the *form* of the content that has to be realized, whether universally or particularly—i.e., laws and decrees) or optative (giving the form of what is regarded as desirable by a counsellor). But now language is going to be *definitive*. So in this paragraph Hegel begins a short summary of his philosophy of language to show how this is possible.⁴¹ The point that he makes here was implicitly referred to at the end of Sense-Certainty. Language is the free expression of what the pure self is. It is the element in which subjective spirit exists. It constitutes a new world (or level of *Dasein*), because what I say is perceived and understood by everyone. My speaking is a completely transient and singular phenomenon; but the knowledge of what I said—the conceptual meaning of it—is universal and abiding. Thus, in the matter of the oath, what counts is how the assembly that hears it takes it. The linguistic formula that makes the return to this paradox of Sense-Certainty relevant for us at this juncture is the famous definitive declaration by Louis XIV: "L'Etat, c'est moi." If a claim made in this form can be true, then all who speak of their devotion to State-Power, have passed over into another actual self "that has been heard and is universal."

- 26./509. Spirit can be actualized simply as speech now, because the sides [noble-mindedness and State-Power] face one another as selves that are purified into the unity of pure self-consciousness. This unity immediately exists; it is the *Sache selbst* as a *real* formal category. The two sides are implicitly sublated and broken up in it. It is the *concept* of both sides together articulated as a *Spirit*.

The basic theory of the performative function of language as constitutive of the self is now applied to our present situation. It is virtually unintelligible—or at least

I find it so—unless we read on over the next four paragraphs. The difficulty is that there are only the two actual selves (sovereign and vassal); and through what they say, their spiritual unity is to become incarnate in *one* of them.⁴² The word “State” means the whole community; and yet Louis XIV can truthfully say “I am the State” because the whole of the ruling class confirms this. Hegel’s theory of the rational self as the Thing Itself, the actual Category of experience, shows how this is possible; since Reason is incarnate in the personal judgment, it can alienate itself into another person verbally.

The Spirit (which is actual only as language, i.e. it is here simply subjective Spirit or Reason) achieves actuality because the extremes are broken up into “rigid sides.”⁴³ If we look at paragraph 510 we see that these rigid sides are (in the case of the King) “the abstract Universal that is obeyed” (the Law) and the executive will; in the case of the vassal they are honorable obedience to the law, and natural self-will unaffected by culture. These sides are now “conceptualized,” linguistically formulated in such a way that they match perfectly, they are recognizable as identical.

This involves a conscious separation of the two sides. The rebellious vassal has already learned to distinguish sharply between the two sides of royal authority. He never admits that he is rebelling against the sovereign principle to which he swore allegiance, because his own honor, which he is defending, is identical with his oath; but the King’s will is ill-advised and accidentally oppressive. What has to happen now is that the two sides of the vassal’s noble-mindedness must go apart in the same way into service and self-interest. Just as the King’s identity with Law already matches the vassal’s honorable oath, so the King’s will must match the vassal’s interest. The political good (State-Power) must be conceptually distinguished from the economic good (Wealth). The honor of service must be consciously dissociated (*zersetzt*) from the private interest of the estate holder; and the particular *will* of the monarch must match that particular economic interest as perfectly as the universal sides already match. Otherwise the undifferentiated unity of noble-mindedness (as honor) necessarily turns it into contempt (and the readiness to die in self-assertion) whenever private interest conflicts with Royal will.

What is significant about the establishment of “absolute monarchy” in France is the clear insight into this conceptual matching. There is a “sell-out”; the integral unity of noble honor is broken up into its two sides. The Monarchy is recognized as the middle term for these sides (service and wealth). The nobles leave their estates and come to the sunlight of this spirit which is the real power that unites their nobility with their wealth. They have to be completely *rational* in order to do this; the primitive impulse (which dictates that the integrity of the self should be *fought* for) has to be completely sublated. The nobility has to be able to see rational self-determination (the realization of Reason as the *Sache selbst* or the Category) as the true “shape” of human freedom. This is what distinguishes the Sun King from the Roman Emperor Elagabalus. Elagabalus identified himself with the Sun as a God, but a rational Stoic Senator would know that he was insane. The discipline of culture has now produced a monarch and a governing class who

all accept the authority of the social order because it pays off; and it is better to be a prosperous courtier, than to be a soldier and die.

This makes the Monarchy *absolute*: it is the “pure self as *immediately valid* actuality,” because the battle to the death is now seen to be irrational. The moments that are thus purified are the Universal (the State) and the Individual (Happiness or Prosperity). The language of the Court, which now replaces the military oath of the Camp, expresses the insight that State-Power is the source of all Wealth. This identity of public and private interest is “the spiritual whole breaking forth between them.”

- 27./510. Noble-mindedness dissociates both State-Power and itself into the public good and the pure self; thus purified by Reason, the extremes are identical. But the pure self gets only “honor” as the essence, not enjoyment; and the essence gets only customary service, not actual obedience as a will. The language of the feudal oath expresses only this inadequate conceptual unification; it is not yet the language of self-conscious spirit.

This paragraph simply recapitulates the feudal situation; but now the language of insight is used to describe it, instead of that of faith. On the one side there is the general good (which everyone admits to be sovereign) and the Royal Will (which does not yet belong to that sovereign power). On the other side there is honorable commitment to the service of the general good, and the unregenerate will of natural self-assertion.⁴⁴ When the two sides are rationally purified it is clear that the “pure self” that gives itself to the service of the good has to be the executive will of the sovereign power; this was what the language of service was too one-sided to express. It did not yet envisage the sovereign good as a self, or its obedient self as a sovereign will. So the process of identification and exchange described at the end of paragraph 509 could not take place. The mediating power of an adequate conceptual insight and language is the unity that “brings forth the fact that both extremes are already *implicitly* sublated and dissociated; and this unity is the process that locks both together syllogistically, exchanges their determinations, and locks the determinations together syllogistically in both extremes, what is more” (par. 509).⁴⁵

The extremes of nobility and State-Power are implicitly sublated because each is conceptually broken up or dissociated into the two sides (of public good and private interest). The motion of the concept of absolute sovereignty exchanges the determinations (of Good and Bad) both between the extremes and within them. This will give rise to the language of pure or absolute culture; there we shall finally have “the spirit in the mode where it completely knows and expresses itself.” The middle term for this syllogistic transition is “the State-Power spiritually enlivened into the self,” i.e. the monarch who can say “The State, that’s me.”

A few details should be noted: the noble consciousness has “self-respect and honor” as its being-in-itself; it is estranged from all natural enjoyment, and it is “respected” for that (par. 504). It receives wealth, and is “grateful”; but so far as it actually cares about that, enjoyment is only the object of the “will in ambush.” That the State-Power should pass over to it actually “is precisely what conscious-

ness lacks.” The State-Power, on the other hand, needs to be obeyed as the decisive self of “what is best for everyone,” not just as an “essence” to which everyone pays lip service. There must be one determinate will that is recognized as the State-Power, but which shares out the actual exercise of State-Power in the way that a feudal monarch shared out the land. The actual administration of the State is to be enjoyed by the noble estate as a community; if the King is recognized as the source of honor, he will be the real dispenser of both the power and the wealth that ought rightfully to belong to the honorable. The noble consciousness is where this movement has to occur; it must put itself into its language, instead of into battles. “The State is me” is not true because Louis XIV says it, but because everyone who hears him, agrees.

(h) *The Syllogism iii: Linguistic Absolutism*

- 28./511. It is in noble consciousness that the change occurs. The monarch becomes sovereign because the nobles tell him he is sovereign. The middle of language sets the extremes absolutely apart spiritually, but thereby reflects both will and essence completely into self. The monarch is now the *absolute self*. Everything is done in the *King's Name*. This absoluteness is the end of all “thinking for oneself.”

In the parliament of the Peers (with the King first, but equal) all selfhood belonged to the noble-consciousness; the nobles were the “extreme of the Self.” But now they heroically give that up and become courtiers. The nobility of the Roman Empire had already done that. But their surrender of nobility was not the same, because they were not the “extreme of the Self.” Self-assertion was natural, and it was the legions (quite common folks, not cultured into noble service of the Good) who expressed it. So the natural hunger for reward turned the sovereignty of law into military dictatorship.

But now the heroism of flattery creates a middle term between itself and the common good. The pacification of the Realm is important here; as soon as the sacrifice of life was not seriously involved, the oath could be taken literally. The noble consciousness reflects its self-will into its service (so that it no longer has a will of its own); and it reflects the State-Power into the self that it linguistically creates or establishes. Instead of the universal power, we have an “unlimited monarch”; but this unlimitedness is not the tyrannical arbitrariness of the Emperor of whom the jurists said that he was *legibus solutus*, free of legal control. The “unlimited monarch” is free of constitutionally identified counsellors, but he is the *Sache selbst* of Reason—the purely formal identity of singularity with the universal. The sovereignty of the Law is what he represents. His singularity is identified by his name alone; anyone who has a piece of paper with the King’s name “sealed” on it, has the Royal authority. Such a situation can only exist in the context of a completely reliable legal system.

The “refined universality” of the State-Power is produced by the language of flattery. The Royal authority is cleansed of all limiting rival powers. Louis XIV can

say “L’Etat, c’est Moi”; the moment of *Dasein* refined into spirit by speech is a purified self-equivalence. Louis XIV with his seal is the rational will of the stable system (the “self-equivalence” of Substance).

This “heroism” exalts singularity to the limit. “What the noble consciousness divests itself of on this side of the simple spiritual unity, is the pure *in-itself of its thinking*, its very Ego.” The free rational self gives up its absolute right of judgment; decisions cannot be critically revised. This is an act of conceptual “heroism” that puts the positive extreme into the Monarch, and leaves only the contemptuous (and contemptible) extreme to the Noble.

But the contradiction is only a formal one now, because the Monarch is only “absolute” in *name*. The name is what survives from Sense-Certainty as what is universally valid. It is a spiritual *Dasein*, a pointer that is valid for every consciousness; it “exalts singularity into its *daseiende Reinheit*.” The King is the pure will of the community. He has no “Peers” now; instead there are his courtiers, who adorn his Court, and continually tell him he is “the State.”

Because it is only the authorized use of his name that matters, this king can be a minor (which would certainly occasion civil war in the Empire, or in the feudal monarchy). But when he is adult the King can announce to the world that he is the State, because he has heard that for years; and the Nobles are coming to him for warrants appointing them to offices of State. That is their “service” now.

- 29./512. Thus language is the Spirit that interlocks the extremes into a self-conscious State-Power. Now the dialectical ambiguity of the State-Power reveals itself. The Sovereign shares out power as wealth. He is the absolute lord in thought, because he delegates the State-Power to the courtiers (with appropriate rewards). All *self* is his; the *essence* must go to those who alienated selfhood to him. The making of the monarch is the means for superseding the sovereign power; it exists now as wealth and as the instrument for distributing it. So the monarch, the supremely noble consciousness, becomes everyone’s servant.

This “unlimited monarchy” existed plainly in France in the long period during which the Estates General was not summoned (1614–1788). Louis XIV’s famous remark “L’Etat, c’est moi” was made to the Parlement of Paris in 1655. At that moment England had recently executed the last king who claimed to be God’s vice-gerent (Charles I); and was making its one experiment in republicanism. But it was in the *French* Revolution that the enlightened consciousness of the “rights of man and citizen” was properly realized. Protestant England might seem to be ahead in 1655. But in 1807, it was France who was leading the world. In the ideology of the “unlimited” (but enlightened) monarchy, Hegel identifies the conceptual middle through which the aristocracy managed its painless transition from feudal knighthood to plutocracy. The “third estate,” which intervened so decisively in English history in 1642, stays out of the political picture in France until 1789—except for its integration into the nobility as the *noblesse de robe*, a development which is paralleled in England under the Tudor and Stuart monarchy. That is the reason why the Enlightenment became a revolutionary force in France,

whereas—after the perishing of the feudal monarchy in the Wars of the Roses—the evolution of the English constitution was a conceptually muddled and confused affair, logically quite unclear.

In France the aristocratic constitution moved through the whole cycle of its conceptual development, perished dramatically between 1789 and 1793, and was in the process of being replaced by the new Napoleonic order. That was how Hegel saw the cultural situation in 1805/1806. After 1815 the story of France, and of Europe, turned out to be conceptually muddier than he expected. But, as far as I can see, that does not affect the validity of his interpretation of the “unlimited” monarchy and the Revolution.⁴⁶

Hegel’s interpretation of “unlimited monarchy,” which is now at last clearly stated, is that (as courtiers) the aristocrats let their “inward certainty flow together into the singular selfhood of the monarch.” They began consciously to rely upon the monarchy as the guarantee of their existence as an estate of *privilege*. The absolute Monarch is a “self-estranged independence.” His absolute power is exercised by others. He is only a symbol of the State-Power, and the “service” of the Nobility to the Monarch becomes a purely ceremonial activity. Like the Unhappy Consciousness, the Nobility surrenders its freedom of thought; to think outside of, or against, the Monarchy is not permitted, because the whole system of their privileges depends on it. Their privileged existence is the “actual universality” that they receive in return for founding the theoretical universe of social discourse upon the institution of the Monarchy. Unlike the Unhappy Consciousness, they do not do and say things under an authority of which they have themselves no understanding. They do not even do what Hobbes thinks necessary, and set up the will of the actual Sovereign as a *Sache selbst*, an *arbitrary* standard of “right Reason,” for it is they who hold the offices of state. Instead of quarrelsome and ambiguous service to an “essence,” they now have an actual State-Power; and it is they who actually exercise it. The whole process of self-surrender takes place in thought. The establishment of the sovereign is the symbolic middle term through which the Nobility as a community is enabled to exercise the State-Power.

To exercise State-Power, as opposed to serving it, is to realize the actual identity of State-Power (the common good) and Wealth (the private interest). The Noble administrator is paid a salary, or makes a monetary profit. The Nobility always were rich, because of the lands and estates for which they were politically responsible in the old system before the central State-Power became a proper sovereign; but at that stage they devoted their independent wealth to the service of the State. Now they receive wealth in return for their service (which is all too often courtly and symbolic, or what vulgar honesty calls a *sinecure*). Louis XIV did manage to subject the Nobility to some forms of direct taxation; but exemption from certain direct taxes was, in general, the most important of their “privileges.” So that (as Lefebvre puts it) “under the Old Regime the richer a man was, the less he paid.”⁴⁷ It is by becoming the great bastion of privilege that the State-Power “goes over into its opposite.” A French noble “derogated” to the Third Estate if he engaged in commerce, or followed a profession other than that of arms; so the public service was

his only recourse if his ancestral estate was small or decayed (as many were). Hence the monarch was the target of endless petitions, and the focus of a perpetual competition and tug of war for offices. It seems exaggerated to speak of Louis XIV, who clearly had a strong will of his own, as “the prey of every more powerful will.” But one of his most famous remarks was “Every time I give someone a vacant place, I create a hundred grievance-nursers, and one ingrate.”⁴⁸ Hegel is probably thinking of his successors, but even the Sun King was conscious of being manipulated.

- 30./513. The truth is that Noble Service was always self-willed, and involved a rending of the Substance. But now the Noble is not inwardly an equal Peer. Noble-mindedness has disappeared, and contempt with it. Contempt has achieved the subordination of Power under the Self.

The ideal of service has become completely corrupted. The peers of France are eager to be personal servants of the King (and of his mistresses). Originally the noble was always on the brink of rebellion in his “service”; self-will kept company with the “honor” of his oath. And since his honor mattered more than his life when he rebelled, he was really “contemptuous.” Now he is in conflict with himself in the opposite way. For he continues to think of himself as “noble” when he has abdicated his right of independent judgment, and is doing everything for the sake of material comforts and rewards, just like a bourgeois. When he had his own right to judge, because his life was at risk, he was a Peer. Then he was an unconscious contradiction, because his honor committed him to “service,” and the maintenance of his honor contradicted his service. Now he continues to maintain his honor but it is a fiction; his honor comes to him from the King, to whom the judgment of honor has been surrendered.

The Peer is now a subject outwardly, and a contradiction inwardly. There is no difference now between being “noble” and being “contemptuous.” Therefore, says Hegel, “the latter has disappeared too”; and on the surface, this is true. The Nobility are still visibly there, but there is no longer any possibility of a rebellious Noble.

But it is also true (as Hegel says) that the contemptuous consciousness has reached its goal. It said “No” to the independence of the “essence” (in both shapes) as a standard by which its selfhood could be measured. Now the opposite reduction of the “essence” under “selfhood” has been completely achieved; and what this means is that there are no longer any Nobles, there are only successfully Contemptuous Consciousnesses, selves who have made their denial of the essence *effective*.

This reading accords much better with Hegel’s *logical* account of Culture as “singular judgment” than a simple acceptance of the claim that “contempt has disappeared.” The first sentence of paragraph 500 says: “The mode of this connection is that of opposition: the one is the relating to State-Power and Wealth as to an *equal* [i.e. the Peerage], the other as to an *unequal*.” This “relating to an *unequal*” is exactly what has now appeared rather than disappeared. What has disappeared is what we can fairly call “*noble* contempt.” Contempt proper is now present; and in paragraph 499 Hegel said that “both of these modes of connection are to be held fast henceforth as *divergent shapes of consciousness*.” In the “noble contempt” of the

rebel the “divergent shape” is not “held fast” in any consciousness but ours (and we recognize it as the “secluded self” of Nobility, not as a distinct shape). The *shape* that has been “held fast” so far is that of “noble honor” as defined by the “general opinion” of the Nobility; and it is precisely this “general opinion” that has been transformed in the “heroism of flattery.”

What has disappeared, therefore, is “noble contempt” because the two words have coincided in meaning. Only the word “Noble” has effective use now, not “Noble in revolt” (or “Vassal who has renounced his oath”). But the coincidence of meaning entails that what has appeared is “Contempt under the name of Nobility” because Contempt has achieved its goal. We shall now see Contempt become both socially universal (which, by definition, Nobility could not do) and completely self-conscious. That will be “absolute Culture.”

- 31./514. Self-consciousness has absorbed State-Power and exists as universal beneficence. Only Wealth exists as an objective essence. *Gratitude* for free subsistence is all that remains of Nobility.

In one of his memoirs Louis XIV wrote “His good graces were regarded as the sole source of all possessions; one thought of raising oneself only to the extent that one might approach his person or rise in his esteem.”⁴⁹ This is the monarchy as “universal beneficence.” But wealth is still an *objective* not a subject. We have reached the world of the pursuit of happiness, but not yet the universal concept of Reason as Utility; we are still dealing with a self that despises finite utility, but takes wealth for granted as a natural right. One does not work for it, and one despises those who do; but one needs it. Wealth is what maintains one’s proper dignity. The feudal noble was publicly “grateful” just once for his estate; his “mute service” was the real expression of his gratitude. But now he is a lobbyist, and he must pretend to be “grateful” every day. The *Fürsichsein* of the noble, his consciousness of being independent, is now identical with his privileges (for instance, his being exempt from the basic tax called the *taille*). He has to be “independently wealthy” in order to maintain his noble status; so he recognizes the necessity of the monarch’s sharing out the public treasure, and is “essentially” grateful for it. But Louis XIV’s claim that even the successful applicant for a place was not grateful, indicates that “contempt” is now the “firmly held” shape of consciousness. The privileged class is only really “grateful” for their “privilege”; as the bourgeoisie comes to share in the privilege and rewards of government, the Nobility becomes openly and simply “contemptuous.”

(i) *The Spirit of Wealth (Arrogant Contempt)*

- 32./515. Wealth (as public office) is self-willed; it is the *power* that is fought over, clung to. In becoming a self wealth turns over from a means of enjoyment into something in-and-for-itself, a true essence.

Wealth, as the objective of one's life, has the moment of "being for self" in it by definition. It is the private good. The noble wealth that comes from public office is the State-Power privatized. The State-Power is no longer "selfless"; and Wealth is no longer a landed estate—"the naïve inorganic nature of Spirit" (cf. par. 519). The Monarchy sold offices of all kinds; and those who bought them had to be sure of a profit. Wealth is "the State-Power in the mode in which it holds fast to itself against those who want to take it over for their enjoyment." This makes sense if we take it to refer to the wealth that derives from public office held by noble privilege. The nobility could not engage in commerce; and those who went to Court could not manage their own estates (which was not usual in any case).

The problem about the enjoyment of wealth is easily stated. The enjoyment of material comforts lacks the "essence" of free rational activity, just as much as it lacks the more primitive "independence." The noble who schemes and petitions for (or scrapes together from his ancestral rents the means to buy) public office is turning the Monarchy over from being the spirit of State-Power to being the spirit of Wealth.

The Monarchy is Wealth as the "State-Power holding fast to itself." But wealth is the "sublation" of power as the "in-itself." It is essentially "for-itself" because it must be spent and enjoyed. The baron always did "hold fast to his wealth against anyone who would seize it." But now he does not have to, because the Monarchy pours out power and wealth steadily, so that the "for-itself" of enjoyment can become the "in-and-for-itself" of power enjoying itself, and what was originally only the sublated essence (the instrumental means) of noble life can become the true essence of "happiness." Wealth becomes the living "spirit" of the whole system. Hegel says that "the form of the movement" is the same (as it was for the State-Power). So we shall deal only with the new content.

- 33./516. The noble consciousness, as courtier, has to receive even its nobility from the monarch. As privileged, it is necessarily a *client*.

It is the *bourgeois* who relates to wealth as the "essence" generally. For her the "pursuit of happiness" is the end, the goal of life and liberty. For the true aristocrat the goal is "nobility," the devotion of being-for-self to the good of the whole. But now his being-for-self is estranged: his noble status, as well as the wealth that makes him free to devote himself to the noble life, is something foreign conferred on him by the decision of the monarch. The paradox of the absolute estrangement of self into service is now explicit. The self has to receive its own independent selfhood at the discretion of another self.

When the noble lived on his estate, the wealth that he needed to maintain his free noble status was directly his own. Now there is the King to be petitioned; or, worse still, one must deal with those "vile bourgeois" servants to whom the King, by his "unlimited" royal power, has given patents of nobility. At first the old nobility (the *noblesse d'épée*) despised these upstarts (the *noblesse de robe*). But soon economic pressure led to intermarriage. The fact that one could in effect buy one's

way into the nobility is the clear indication that Wealth has emerged as the estranged “for-itself” of noble consciousness.

- 34./517. Accidental dependence need not affect the noble awareness of independence. But the courtier is estranged from his own personality; he is not stoically indifferent but outcast and rebellious. The essence both of the world and the self has become contradictory.

Self-Consciousness is free and independent in its essence. Even the serf, who is subdued by bodily fear, must be contemptuous of himself in his self-knowledge. But now, in the consciousness that makes itself a “client” of the fount of riches, we have a self-made serfdom. The *universal* shape of this consciousness is Young Rameau, a bourgeois who becomes a “client,” just as those successful in commerce have become “nobles.” Rameau is the universal consciousness of the Water-Mass; and he has nobility in the rational mode of “universal human dignity.” Just as anyone could be a Stoic, so anyone can be “absolutely cultured.” But now the sense of rebellion keeps company with degradation, not with honor. The logical capacity of the rational self to abstract from any and every moment of action has been pushed to the limit. The self has consciously accepted its very being from another. But it remains the recognized *Sache selbst* of rational free agency in doing so.

We should look at this climax, first, as a “noble” achievement. So let us consider the difference between the courtier consciousness and that of Marcus Aurelius or Seneca. The Stoic retreat is not possible now, as it was for Marcus or even for the slave Epictetus, in the world of simple Right. Then it was Fate that put you where you actually were in society, and Fate that made you helpless (even in the Imperial Purple). Now, the noble mind lives in the world that it has itself made. It has voluntarily reduced itself to the dependent status which it despises. It does not accept bourgeois values; and it will not work for private profit like a bourgeois; but its freedom from that vile servitude is purchased through the servility of a personal servant.

On the one hand, the freedom of him who has money and does not work for a living, is true human independence. So the rational but self-estranged noble will defend his privileged status as the only condition that makes public service possible. On the other hand, he knows that he is no better than a beggar, he depends on handouts. This is what the “aristocracy” has come to. To die for honor no longer makes any sense; so how can one pretend that one’s estate in life is honorable? “The pure [i.e. rational] Ego is absolutely dissociated [*zersetzt*].” What a member of the old Nobility like the Duc de Saint-Simon perceives as the dissociation of his order into true nobility and “vile bourgeoisie” is the inner truth of consciousness.⁵⁰

- 35./518. The consciousness of privileged status is not only incomplete (like noble independence). It is a conscious contradiction. But the self now rebels against receiving its objective independence from another, and asserts its independence in the very receiving of it.

When we reach paragraph 518 we can recognize that paragraph 517 was a review of what *we* can observe in the Court of Versailles. The purpose of paragraph

517 was to show logically that a Stoic retreat from this world would not be valid. The Nobility is to blame for its own decadence and self-contradiction. They did it to themselves; and the world that they made by a self-surrender that has been pushed to the limit, is now visibly just a façade that covers a rational self-contradiction. It is waiting to be swept away.

Before that can happen, however, there must be a retreat into the realm of pure thought that is different from the Stoic retreat. The consciousness that recognizes the self-contradictory pass to which the world of Culture has come, must turn and despise *itself* (instead of despising the objective world which it has mastered by its self-destruction).

The self that despises itself, gets free from the contradictory situation that it has created. Instead of congratulating itself on escaping from the driven character of natural life, like the Stoic, it becomes an active drive to liberate the empirically trapped self. Everyone must be made to see and understand the contradictory character of aristocratic freedom and its values.

The consciousness that has this “pure insight” into its “disrupted” state, and into the contradictoriness of aristocratic values, is not an aristocrat, but one who has experienced “contempt” as his own relation to the whole world of culture. What Hegel declares as the truth “for us” in paragraph 517 about this *Zerrissenheit* in which “the pure Ego intuits itself outside itself and disrupted” and “at the same time everything that has continuity and universality, everything that is called ‘law,’ ‘good,’ and ‘right’ has come apart and gone to the ground”—none of this is consciously true for the courtier. At most, he may be conscious of *Empörung* when he has to beg (and when his petitions are rejected he is *verworfen*). The consciousness that clearly recognizes that it is rationally free and independent, but that it is freely accepting its independence from another, is the one that is at the end of the line, the bottom of the pyramid of privilege.

- 36./519. Here nobility and contempt coincide; and this happens to the benefactor as well as the client. It is not just wealth as means of subsistence that is handed out. Wealth is now status, imparting social position, nobility itself. The pride of status appears as arrogance; blindness to the fact that the status and subsistence that can be given is *not* the self of the recipient, hence blindness to rebellion. It stands on the brink of the inmost abyss (Absolute Freedom).

The immediate inversion of noble honor was into the contemptuous defiance of the rebellious baron. That was only the Concept spinning on its own axis. But now State-Power has been comprehensively inverted into Wealth, and service into status. So now we have, on the one hand, nobility that exhibits itself as arrogant contempt, and on the other hand a rational contempt that comprehends the falsified nobility. The “spirit of Wealth” (the benefactor), unlike the rational recipient, does not recognize what has happened. The Royal self which gives out patents of nobility along with the offices that bring in the wealth required by noble status, is now *arrogant*; and everyone who receives wealth and status, is arrogant likewise. They

ought to feel degraded, but they identify with the benefactor by becoming benefactors in their turn. The bourgeoisie who obtain the patents of nobility for their civil service, imitate the royal arrogance in relation to those who are not noble. They believe—as Hegel says with evident reference to Young Rameau’s patrons—that with their good dinners they can buy the client’s very ego.⁵¹ Why should they not think this, since they have already used their money to purchase what counts for them as their ego? The self has given itself up to create the monarchy; and the monarch is this spirit of universal beneficence. But he remains an alienated self—a mere shell—and so do all of his imitators.

“Arrogance” is the comprehensive inversion of “honor.” Honor was the recognition received for service, arrogance is that which is demanded for status. Here the distinction between “nobility” and “contempt” really has finally fallen away completely. But we should notice that Hegel does not *now* say that “contempt has vanished.” Instead, it has become universal. “Arrogance” is a contempt which, having surrendered its “self,” is without foundation; but on the other side, there has now arisen a contempt that is founded in Reason—and a “self” that is truly *rational*. Like the old noble contempt, this new “shape of consciousness” is rebellious. Selfhood is not concordant with, or “equal to,” any of this world of “status.” Selfhood is the abyss of “Absolute Freedom” into which this whole world of aristocratic privilege will be cast.

The whole spiritual world of aristocratic values has been torn up [*zerrissen*]. The view of the universal benefactor, the arrogant aristocrat, has been conceptually undermined: “He stands at the brink of this inmost abyss, this bottomless depth . . . and he sees in this depth, nothing but an ordinary thing, a plaything for his whim, an accident of his caprice. It is his spirit to be mere opinion without essence [i.e. truth], the outer surface that spirit has forsaken.” The subject of the sentence is properly “Wealth” (*Reichthum*)—for it is the *living spirit* of “wealth” that Hegel is explicitly discussing. But by ignoring that, and considering the Royal benefactor and all of his imitators together, we can uncover how Wealth can become a living spirit at all. Wealth came to life, not in the peasants, or in the acquisitive bourgeoisie; but in the aristocrats who perish on the guillotine, because they thought that the free self can be bought.

I have not hesitated to call this arrogance “contempt.” But Hegel does not call it that, and the reason is simple: “Arrogance” is an inverted, self-estranged, misdirected form of contempt. It is the “Spirit of Wealth”; having identified itself with wealth, the arrogant self naturally thinks that everything, the self included, can be bought. It is, of course, “contemptuous” of all the other selves that it can buy. But it does not realize that this is just an alienated contempt for itself, the self that has *willingly* allowed itself to be bought. Proper Contempt is directed at State-Power and Wealth. Only the *unwilling* “client” self can now find (in the negative will of its rebelliousness) a new selfhood which is properly contemptuous of the spirit of “State-Power as Wealth,” the “essence” that has taken over selfhood.

Wealth was always the passive essence that shares itself out. So whereas the Spirit of State-Power could only be an “unlimited One,” the Spirit of Wealth can

be a “many without limitation.” In the world of Wealth, the Monarch is, once more “first among his Peers.” Everyone who is rich, can be arrogant and have “clients.” That is why Young Rameau, whose patrons are rich bourgeoisie, can comprehend this whole world.

The pleasure of being “beneficent”—of sharing one’s wealth with “clients”—is the universalization of singular enjoyment. As the means for one patron to make everyone happy (like the King) Wealth has now become the essence “in itself.” It gives all happiness-seekers their “being-for-self.” But, of course, the patron is an arbitrary, independent self, who knows that she can do as she likes with her wealth (which is merely an external thing). Thus the arrogant self is “contemptuous of the essence” but not rationally so. The arrogance of Wealth is a kind of “Lordship” that has forgotten the Life and Death struggle altogether; this self does not know that its own life is now at risk, because only the fear of death could keep the supposedly dependent self in its subservient relation.

- 37./520. The language of this negative self-consciousness of wealth is an ignoble flattery which pretends that instrumental goods are essential beings. This misuse of heroic flattery leads on to the language of *disintegration*, used by the consciousness that rejects the whole system. The principle of Identity (“I am I”) now takes the (infinite) form “I am not any of this” (even though I know that “this” is my world and that I could not exist without it). This consciousness is *pure* self-formation, pure *culture*.

We turn now from the side of the “universal benefactor” to that of the client. There is, of course, a language for this spirit of Wealth. When the noble courtiers confirmed Louis XIV’s insight that “L’Etat, c’est moi,” their “heroic flattery” finally completed the task and destiny of the nobility. But when they now fawn upon him or his ministers, to obtain pensions or offices, they have become a social façade in which there is no truth. The consciousness that matters now is the inward one that they do not express, the contempt that they should feel for the ignoble pass to which they have come.

The noble consciousness that performs the service of flattery is a one-sided spirit. Like the serf in the world of natural self-consciousness, it recognizes a lord who has no equal. The Monarch’s “name” on a warrant (his “pure existence”) controls State-Power (pure being-in-itself), and is thus the source of all Good. But both he and his noble flatterer know that what is controlled is an “essence” without a self; and the outwardly subservient self is the one who will enjoy that essence. The Nobility with their guaranteed monopoly of the public service are “pure being-for-self,” they do all the business and enjoy all the rewards “in the King’s Name.” But it is all a matter of arbitrary decisions, and of privilege. There is no self-conscious awareness that this is the realization of human Reason. The pure Concept (of Reason as the *Sache selbst*, or of the Self as Category) in which the rational self and the public Good are known to be identical, is lacking. The King is *another* self, not the self of his “obedient servant”; and the same applies to the wealthy patron and the “ignoble” flatterer.

(j) *The Linguistic Disintegration of Values*

The rational identity of the Self as the *Sache selbst* comes to consciousness in the language of contempt and rebellion against the “client-status” of the Self. The nephew of Rameau is the “true, existing spirit of this whole world of culture.” Young Rameau says (in the true spirit of nobility) that “A certain dignity attaches to the nature of man that nothing must destroy.”⁵² This is the piece of “good sense” that makes it impossible for him to be contented and successful at the game of “ignoble flattery.” So he has become a jester, because in that role everyone can accept his quite unflattering truth. But because of that piece of good sense, he also suffers from a self-contempt which he says is “the cruelest form of remorse. Better a man had never been born.”⁵³ So this knowledge is “absolute self-equivalence in absolute disruption [*Zerrissenheit*].”

When Louis XIV says “I am the State,” he utters a tautology; but it is also an absurd infinite judgment, a category mistake, if the self that is the subject, is taken in the unique sense in which it has a “proper name,” and is rigorously opposed to all other selves. This infinite judgment is the absolute estrangement of the rational self from the actual world of culture. We return at the end to the simple judgment of *monkish* contempt: “this world is Bad.” But now we have the divided consciousness of the Unhappy Self. For “this world” is the object-side of “I = I.” This will provide us with the logical transition from the world of actuality to the world of thought; and the self that identifies with “thinking comprehension” will necessarily be an imperative drive to change the world.

- 38./521. Pure culture is pure self-estrangement. The essences (whether as actualities or as thoughts) are self-contradictions. The State, as represented by the Monarch, exists only in *name*; and, as such, it turns directly into Wealth. Nobility turns into contempt, and contempt into the new noble-mindedness of “pure culture.” Everything is inwardly estranged, and is not what it seems. The true spirit is the self that sees the dialectical character of the essence, and shows the honorable consciousness the truth of its world.

The spirit of contempt for noble wealth is “the absolute and universal inversion and estrangement of actuality and thought.” This second inversion is a comprehensive estrangement from the actual world. Rational insight confirms the primitive judgment of piety regarding the world of actuality: “Vanity of vanities, all is vanity.” There is no truth in this actual world. Neither the objects, Power and Wealth, nor the concepts, Good and Bad, nor the consistent conscious attitudes towards the objects, the noble-minded attitude that says both are Good, or the contemptuous one that says both are Bad, have any truth.⁵⁴ At every level, one opposite turns into the other. State-Power, when it is finally spiritualized as the Monarch, turns straight into Wealth. Surrender turns into selfishness, and service into enjoyment, because the Monarch is only the *name* in and through which the privileged status of nobility is secured and enjoyed. But this transition of noble service into courtly self-serving, through which the self becomes a thing (Wealth), this is the

moment of self-recognition, the birth of spirit for the world. What is born is the pure insight that despises the whole business.

In the birth of this Spirit the original judgments of Culture are reversed. What was determined by the noble mind to be Good (the public service) is Bad, because it now produces self-contempt; and what was determined to be Bad (Wealth) is Good, because it secures freedom, being-for-self. But this simple inversion is not the end of the matter, for the truth is that the noble and contemptuous consciousness have each become *both* noble and contemptuous. *Self*-contempt is the last reaction of the noble mind; and the freedom that comes from the enjoyment of wealth is the eternal and irremovable source of self-contempt. Thus none of the moments will stand still at all. What looks like flattery of the monarch is, for the noble mind, the very service that it owes. But this service is the surrender of the noble's own rational selfhood, the loss of a rational standard of judgment. On the other hand, this self-alienation secures wealth, and that is the means for doing good, and for being an enlightened benefactor. Thus the standard of rational self-maintenance, the standard of universal Utility, emerges from the wreckage of the noble ideology. But this new standard does not properly belong to the *Ancien Régime*. Absolute culture is a whirling cycle of rationally necessary dialectical transformations. The opposite moments "execute a universal justice upon one another."⁵⁵

The spirit of this absolute dissolution of the essential structure of the old aristocratic order is a bourgeois music teacher portrayed by a bourgeois "enlightener." Diderot, being the general editor of the *Encyclopédie*, has a good claim to be identified as the spirit of universal Utility. But his subject here is the model "outsider" of this aristocratic world. He was the nephew of Jean-Philippe Rameau, the greatest French composer of his time (which was the reign of Louis XV, and in music, the generation of Bach, Handel and Domenico Scarlatti). Goethe (and I suppose Hegel also) took "Rameau's Nephew" for a fiction, but in actuality he was Jean-François Rameau (1716–1767). The fictional conversation is supposed to occur in the summer of 1761. Diderot wrote it then, but revised it several times until about 1775. Goethe's translation (which was the only form in which the piece was publicly known until 1823) appeared in 1805. So this sceptical dissolution of the *Ancien Régime* is about the latest cultural phenomenon of his world that Hegel's "recollection" comprehends.

The young Rameau is not a *philosophe*⁵⁶ (still less a systematic philosopher in the German fashion). He is a *mit*. His talk is full of *esprit* (*geistreich* as the Germans say). Whenever Hegel speaks of his "spirit" there is apt to be a pun upon this sense of *Geist*. It is this witty insight which Hegel calls "true and invincible . . . the only veritable thing with which one has to do in this world." Against it Hegel sets "the honorable consciousness." He tends to treat the Philosopher in the dialogue as "the honorable consciousness," simply; but in reality that is the position from which "Diderot" seeks relief in the company of Young Rameau. He calls it "that tedious uniformity that we have introduced through our education, our social conventions, and our customary proprieties."⁵⁷ Diderot is certainly not the naïvely honorable consciousness that "takes every moment as an abiding essentiality, and is the uncult-

tured thoughtlessness of not knowing that it is equally doing the reverse.” In terms of the analysis of that “tedious uniformity” of culture which Hegel has given, the position presented by “*mein Herr Philosoph*” (as Goethe makes Young Rameau call him) is generally an intermediary one; and we can assume that what Hegel expects *us* to observe here is an insight that can be ascribed, at least partially, to Diderot himself as the author.⁵⁸

- 39./522. This discourse is about our values *being* a self-deceptive *sham*; and it is shameless because it sees that there is no alternative. This is the only *honesty*, the only way to say what is true. *Rameau's Nephew* is the model. His speech embraces *all* sentiments but with a ridicule that denatures the naïve ones and gives reconciling value to the rebellious ones—for the speaking self is almighty here.

The language of “disruption” [*Zerrissenheit*] need not deceive us, except so far as we let it do so. But since Hegel says that the “deception of itself” is included in the content of this discourse we must be careful. Young Rameau is torn between his sense of human dignity, and his own sense of degradation. Does the evident truth of the latter make the former a self-deception? Hegel’s analysis puts them at different levels, making Rameau’s fundamental honesty the condition of his self-contempt. Diderot seems to agree, making his Rameau say that since his wife’s death “I have taken minor orders and wear a skullcap.”⁵⁹ But for Rameau himself, it is only honesty to say that he deceives himself, and that he cannot help himself. He is not simply the “self” of “pure Insight” who wants to enlighten the world. He wants to be free in the aristocratic way; and for this he lets himself be bought. As for us, we do let him deceive us, because we take him for a buffoon, we laugh at what he says. This is true at all levels of sophistication, from the people who entertain him on condition that he shall talk only when they want him to, through the Philosopher in the conversation, to Diderot, Goethe and ourselves. “Shamelessness” is the inevitable concomitant of the honesty that seeks to disrupt both the conventional values, and the normal proprieties. Diderot associates Young Rameau with the Cynic Diogenes; and Rameau accepts *this* philosophical identity.⁶⁰

That the younger Rameau was a musician becomes more clearly significant in the *Phenomenology* than it was in Diderot’s dialogue. Diderot makes it evident that Young Rameau’s torment arises partly from the fact that he recognizes his uncle’s genius, and knows that he does not himself have it.⁶¹ If he did, he would be able to despise his patrons without having to despise himself as well. But Diderot’s Philosopher brings in other kinds of genius—especially playwrights—and Young Rameau shows the same envious admiration of them. So Hegel is quite right to pick out Diderot’s description of Young Rameau’s talk in operatic terms for quotation.⁶² The quotations that Hegel marks are partly paraphrases, and to some extent he has distorted the context in Diderot. One of the evident purposes of this distortion is to maintain the musical metaphor that interests him.⁶³

It is the Philosopher who describes Rameau’s talk (approximately) as a “mix of equal parts of cleverness and baseness, of Ideas as much right as wrong, of a perversion of feeling as complete and a shamelessness as unabashed, as the frankness and

truth is total.”⁶⁴ But, as I have said, the Philosopher is not really “the placid (*ruhig*) consciousness which honorably posits the melody of the Good and True in an equality of the tones, i.e., in *one* note” and which “will not be able to avoid shifting into all these tones, and from running up and down the whole scale of feelings, from the deepest contempt and dejection, to the highest admiration and sympathy.” The “placid consciousness” belongs to the community as a whole; for Hegel gets the “melody of the Good and True” from a prophecy by Young Rameau, and everyone in the café audience is obliged to go up and down the whole scale, when they all stop talking and playing chess etc. to watch the great display in which Rameau goes from Hell to Heaven, mingling thirty arias and imitating a whole orchestra.⁶⁵

The prophecy about the triumph of the Good and True is interesting because it is more sincere than Hegel’s use of it would lead us to expect. Rameau is speaking of the triumph of Italian fashions in music, and prophesying a return to the native French tradition. He speaks tongue in cheek, but at the same time he ambiguously prophesies a *romantic* revival (both musical and political) about which he is quite serious:

The good souls! They have given up their symphonies to play the Italian ones. They thought they could accustom their ears to these new instrumental pieces without the vocal music getting in too . . . That they could once experience and feel how easily, softly, gently, the Italian tongue, with its natural harmony, flexible prosody, easy ellipses and inversions, suited the art and motion of music, the turns of song and the measured pace of sounds—and yet still overlook the fact that French is stiff, heavy, pedantic and monotonous? Well, well, well, they persuaded themselves that after weeping with a mother bewailing the loss of her son, and shuddering at the decree of a tyrant committing murder, they would not be bored with their fairyland, their insipid mythology, their saccharine madrigals, which show the poet’s bad taste no less than the sterility of the music matched with it. The good souls! It could not and cannot be. The true, the good, and the beautiful will prevail. Their rights may at first be challenged, but in the end people come to yield their admiration. What is not stamped with this mark may be esteemed for a time but the end is a great yawn. Go ahead, gentlemen, yawn away, yawn to your heart’s content, don’t be afraid! The Kingdom of Nature has established itself quite fast, the Kingdom of my Trinity in Unity against which the gates of Hell shall not prevail. The True which is the father, engenders the Good, which is his son, whence comes the Beautiful, which is the Holy Ghost. The foreign god takes his place humbly on the altar next to the native idol. Little by little he asserts himself, and one fine morning, he gives his fellow a shove with the elbow, and bang! crash! there’s the idol on the ground. They say that’s the way the Jesuits introduced Christianity into India and China. And the Jansenists can say what they like, the political method that goes straight to the goal, without bloodshed or martyrdom, or so much as a queue of hair cut off, looks the best to my eye.⁶⁶

Young Rameau himself would be a soul saved out of his contradictory existence if he could write this new music. Hegel quotes the political prophecy (about the new Trinitarian God taking over from the old idol) later on in the chapter (par. 545). He agrees perfectly with the enlightened programme for the replacing of the

Trinity of faith by that of Reason; and it is plain enough that, by projecting Rameau's musical metaphor back to a supposed point of origin in "*one note*," he means to remind us of the simple "Goodness" of the naïve judgment of "Faith."

We should recall that Hegel described the Unhappy Consciousness as "a musical thinking that does not arrive at the Concept, which would be the only immanently objective mode [for its object]." The devotion (*Andenken*) of Unhappy Consciousness is a "pure Consciousness" that is the singular *feeling* of the "pure heart." It gets only as far as the threshold of thinking. But then, in the primitive "judgment" of Culture—the division between God's Heaven as Good, and this world as Bad—we move from feeling to thinking proper. It is true, of course, that this *objective* thinking is unselfconscious; it is a thinking that can only picture its own objectivity as another world, the world of faith. So in comparison with speculative thought, it was still only a kind of intellectual "music."

But now it has become the thinking music of the Concept, whereas the *Andenken* of the Unhappy Consciousness was the feeling music of simple faith. With the language of *Zerrissenheit*, we pass over from the objectivity of Faith to the subjectivity of Pure Insight. The simplicity of Faith is not quite lost; for in repose, Young Rameau has a mournful aspect. The Philosopher regards him as an object of pity; and he is looking for solace—not very hopefully—in religion.⁶⁷ Thus it is entirely appropriate for his gamut of all human feelings to be based on the monotonous keystone of divine Goodness; and quite natural for him to prophesy the eventual emergence of the "melody of the Good and True." But the actual "melody of the Good and True" will be something quite different from the *one note* to which the "placid consciousness" would like to confine it. This is clear as soon as we know that it is Young Rameau who forecasts its eventual triumph.

In Rameau's "shattered" discourse the Good and the True have lost their essence. Language is all "torn up" (*zerrissen*) into contradictory judgments in which every value is combined with its opposite. Rameau is both the disconsolate spirit of Faith (*dummpfes Wesen*—pars. 573, 574) and the spirit of dialectical Insight. He cannot articulate the unity as anything but a contradiction; but in his contempt and dejection we can feel the touch of the omnipotent Reason "that restores spirit to itself."

- 40./523. The simple spirit cannot argue with this cultured one. It can only strive to avoid the dialectic by appeals to the *wisdom of nature*. But since this "wisdom" makes evil the necessary condition of good etc. this defence concedes what the cultured critic is saying.

The "simple consciousness" opposed to this "torn consciousness" is Faith as opposed to Insight in the division of Culture to which we shall soon come. As I have already argued, it is a mistake to identify this "monosyllabic simplicity" with *mein Herr Philosoph*, who retails the conversation for us in Diderot's dialogue. *Mein Herr Philosoph* knows far too much about the cultural world to be reduced to any monosyllabic "Credo." He strikes the conventional attitude of pious disapproval at the beginning when he says "I cannot set much store by 'originals' of this kind."

But the irony of his conformity to convention is revealed at once by his claim that “originals” of this kind “break the tedious uniformity (*Einformigkeit*) that we have introduced through our education, our social conventions, and our established proprieties.”⁶⁸ Young Rameau points out to *mein Herr Philosoph* that he has himself experienced the situation of a social outsider.⁶⁹ So when he gives the “simple” verdict on Young Rameau at the end: “You are a no-good, a greedy-pig, a contemptible cur [*Niederträchtiger*], a shit-soul [*Kotseele*],” we can assume that he is quite prepared for the response “I have already told you all that myself, I believe.”⁷⁰

The “simple consciousness of the True and Good” is *foolish*, because it does not realize that the cultured consciousness, which it condemns as “contemptible,” is already contemptuous of itself and of finite happiness generally. The simple consciousness which takes itself to be faithful and pious is really only conventional and superficial. In the world of the “unlimited monarchy” of Mammon, the “honorable” values have become mere abstractions. These abstractions are one-sided. They *need* to be inverted, because only the recognition that each is directly identical with its opposite can restore any serious content to the concepts. Otherwise, the “simple consciousness” evolves into a *conventional* form of Enlightenment. The contrast that Hegel makes here is between the self-contemptuous hedonism of *Rameau’s Nephew* and the comfortably conventional wisdom of Robinet.⁷¹

Of course, the “wisdom of Nature” is by no means absent from Diderot’s dialogue—it is the Stoic philosophy which the Young Rameau loves to make fun of.⁷² But the Critical Editors are surely right in connecting what Hegel says about this wisdom here with enlightened platitudes such as the following: “the harmony of nature is the perfect accord of good and bad; its variety equals the sum of the combinations of these two essences which are contrary but always united”; and especially “the idea of its beauty is composed of the two notions of good and bad. The constant picture of this precise equality has made us suspect the necessity of it . . . we have become convinced that there [in the natural world] where one cannot have pure goodness, the good is necessarily allied to a bad that equals it in number and quality.”⁷³ It is only fair to point out that *mein Herr Philosoph* is as far from this sort of useless “wisdom” as Young Rameau himself; and we must suppose that Hegel was as conscious of this as any other intelligent reader of Diderot. This sort of stuff is cold comfort, indeed, for the faithful believer; and, as Hegel says, it is only an unwitting confession that what the “shattered” consciousness asserts is really the truth.

41./524. A particular case of naïve goodness (story or real) is one more “type” [cf. par. 489] in the whole picture offered by the cultured consciousness. Since one can’t get out of the world, one can only be a “type” in it—even Diogenes. We can’t go back to any pre-cultural “innocence”—only forward from here.

Both the fictitious and the real case of excellence that Hegel posits here can readily be found in Diderot’s dialogue. Voltaire’s rehabilitation of Jean Calas provides the “true anecdote,” and the story that *mein Herr Philosoph* tells about an anonymous acquaintance (the younger son who makes his own fortune, and rescues

his parents and sister from the ill-treatment of his elder brother) looks very like a fictional inversion of the parable of the Prodigal Son.⁷⁴ The philosopher's admiration for these examples astonishes Rameau; and the way that his own momentary assertion of his human dignity cost him his supper demonstrates for him the folly of believing that anyone who is consistently "virtuous" will be happy. One might as well be what one's nature allows one to be, and not deceive oneself with the dream that moral effort can make one better. *Mein Herr Philosoph* is only an idealistic enthusiast.⁷⁵

The conventionally "good"—who are not "good" at all, but only complacent because they are rich—call those who see through the social charade "types" (*espèces*).⁷⁶ But conventional morality itself is a mass of excuses and exceptions like the personal idioms in the essays of a good stylist.⁷⁷ The new Diogenes, who has understood what the gospel of a "return to Nature" really means, is certainly an *espèce*. He may seem to deserve contempt for not trying any longer to achieve a universal ideal of human nature. But he is also the Spirit of Culture itself now that its work of educational reformation is completed. His "worthlessness" achieves *greatness*; and in that perspective he is not merely an *espèce*.⁷⁸ For what is universally the case is necessarily the case; and it is folly to talk as if it could be different. While on the other hand, to preach that everyone must save her own soul, and let the world take care of itself, is the opposite of rational ethics.

Young Rameau, as the Diogenes of the time, is a rational critic of Rousseau. The "nature" we must follow is precisely the rational insight that *culture* has produced; it is not the "simplicity of the natural heart," any more than it is "the wildness and proximity to the animal consciousness which is called 'nature' and even 'innocence.'" Here, where the "simple consciousness" is represented by Rousseau, it is not Diderot but Voltaire who speaks for culture. For it was Voltaire who responded to Rousseau's *Discourse on the Sciences and Arts* with an *Open Letter* protesting that a return to primitive "innocence" was impossible.⁷⁹

- 42./525. The spirit of culture is now ready for this advance. The unity of singular and universal, the thinking self, has been formed. On its singular side it looks towards this world [as Insight]; but on the universal side, the thinking self looks not only inwards but towards the Beyond [of Faith].

The universal contempt (and especially the self-contempt) of the satirical consciousness, which all the simple "judgments" of the *Ancien Régime* regard as vile and contemptible, is, in fact, the implicit dissolution of the confusion. The whole social order, which claims to be a system of noble devotion and service, but is in fact a system of plutocratic privilege, is about to collapse. The spirit that the discipline of Culture has released is the spirit of critical thought. Rameau expresses the rational *comedy* of the Enlightenment. Hegel calls this "the doubled reflection of the real world into itself." On the one hand, it is strictly an experience of personal *insight*. It belongs to the singular outsider, Rameau; on the other hand, the insight is *pure* and universal, i.e., it is still the Faith that there is an inner world above this actual realm of hypocrisy. On its comic or critical side it produces one more moment of the

world of actuality, the *Gestalt* of the satirist laughing at everything. But the laughter is serious. it is aimed first at the critic himself. As I have already argued, the survival of the religious consciousness in the Young Rameau is important.

In fact, he is not reconciled with himself or his world. The shame of his selfish life haunts this universal comedian just as persistently as it haunts the tragically Unhappy Consciousness that found solace in the Beyond of Faith at the beginning of the movement of Culture. When we take our leave of him, Rameau is talking of his return to religion, since the death of his wife; and yet (like the Abbé de Canaye) he takes the Vesper bell as the signal that it is time to be on his way to the Opera. Here we can recognize the symbolic significance of the musical context in Diderot's dialogue; and it throws light upon Hegel's use of the same symbolism when he described the devotion (*Andenken*) of Unhappy Consciousness as a "musical" approach to thinking (*Denken*). Young Rameau is well aware that the Beyond of the religious tradition is empty. But he still has the religious yearning for the Beyond, and he finds in the Opera a "Heaven" that is still valid for him.⁸⁰ The crucial point is that he still needs to look beyond both this world and himself. He is not just the shape of Insight, but the shape of Faith disconsolate. He "looks heavenwards, and his object is the Beyond of the actual world."

- 43./526. This consciousness that all is vanity is itself vain. It understands the dialectic of language, so it knows how to express and judge every substantial moment in its contradictory aspect; but it does not know how to grasp the unity. It is the soul of this dialectic which it generates as its self-consciousness. It seeks power and wealth, which are the recognized powers, over which it has power. As the self of these powers, it is beyond them in its talk. This singular self becomes what is spiritually valid. The pure I is the positive object.

The "double reflection of the real world into self" is double, because the self that is the conscious controlling power of the world knows itself to be finite and mortal. The emptiness of things is its own emptiness. All is vanity. What everything is *in itself* is what it is for the human judges. That means that everything is a contradictory mass of possible judgments; but also the real world *in itself* is estranged from itself, sundered from this mass of judgments which is reality *for itself*. Rameau, the self for whom things truly are as they are universally, is just as much a finite moment in the whirl of vain opinions as any of the naïvely arrogant nobles and bourgeoisie whom he laughs at. He must live just as they must; and he will die just as they will. Only the truth of his thought survives.

Rameau laughs at everything; his part is that of the Fool. But that means that he is laughing at himself too. He sees and expresses the vanity of all the values in his world; yet he sees also that he belongs to that world, and that he cannot stand outside it. In his own eyes, he is as *vile* as anyone in his world; all that distinguishes him from those whom he most despises, is his open-eyed honesty about how everything in the cultured world is and must be. So when *mein Herr Philosoph* claims that it is his own "honesty" that distinguishes him from Rameau, Rameau retorts that it is not the philosopher's "honesty" that he envies, but his capacity to tell

lies.⁸¹ The one lie that Rameau himself will have nothing to do with, is the pretence that he is better than his world. But how he knows that this lie is what must be avoided he cannot tell us. He can only say that everything is vanity, including his own witty commentary upon the sycophantic world (a world which in all its vileness is preferable to any “possible world” that does not include him).

What Rameau (and Diderot) can express adequately is the *contradictory* character of actuality. Anyone who does not understand what Hegel means by his insistence that finite reality is based on contradiction, is directed by this paragraph to study *Rameau's Nephew*. Nothing simply is what we say it is. It turns round into its opposite, and this “contradiction” is the deeper truth about what it really is. Everything is “estranged” from itself, because it departs from its given definition (and, of course, it can be seen otherwise in the first place). The logical impossibility of any postulated stabilization is the *reality of contradiction*. Even if everything seems harmonious to us, and we cannot see any good reason for the harmony to be upset, there must be another point of view from which disturbance appears as necessary.

In this world of vain opinions, the freedom of the self that sees the truth must be maintained by the control of “power and wealth.” The political authority of the State has vanished from paragraph 526, because in the inversion of the “noble” world-view, the State-Power ceased to be the substantial end of rational activity, and became simply the means for guaranteeing the free possession of Wealth.⁸² We have now gone beyond the simple inversion that was involved in court-existence. We have reached the comprehensive inversion in which Wealth is not an end in itself either. All of substantial reality—private as well as public life—has been inverted into the free existence of the self. This self does not work for a living. It knows quite well that wealth could never constitute its substance, its “worth” in the world. Wealth is necessary, but it has no selfhood. It exists *for* the self; and it must be got freely, without the sacrifice of the self’s freedom. Rameau gets it by the “power” of his linguistic freedom. He gets it by his wit. He is not arrogant about possessing it, but there is a sublated arrogance in his laughing behind his mask at those who have it, while he gets it from them by making them laugh.

Even this sublated arrogance of wit, however—the superiority of seeing the vanity of the whole rat-race and its self-confident but contradictory judgments—is only another moment of vanity. The freedom that gets beyond social arrogance, goes to the same death as arrogance; and it is just as vainly selfish in struggling against that fate. How can the freedom of the truly universal insight into the cultural relativity of all positions and all values establish itself as *objective*? How can it be made stably visible as the abiding truth of this flux, the unity and oneness of the whirl of contradictions? This self knows that it is beyond all this contradictory relativity. The seriousness of all that effort to maintain actual values is an enormous joke. But how can the truth of this insight become something more serious, less evanescent, than laughter? The “pure I” is its only positive object. How can its insight become objective? The other aspect of the “double reflection”—the “reflection into thought” or “towards Heaven”—provides the answer.

Notes

1. J. Loewenberg (1965, 211) believes that Hegel's transition from the Roman Empire to the French Enlightenment is not a historical one. R. C. Solomon (1983, 495) takes the same view. My reading will show, I hope, that they are mistaken. (See S. Dellavalle [1992], chap. V for a reading that agrees with mine.)

2. I have followed J. B. Baillie in using "estrangement" always for this term. I use "alienation" for *Entäusserung* (and occasionally also "emptying out"). In most of the non-German literature, "alienation" (and its cognates) is used regularly for *Entfremdung*—and frequently for both words without distinction. For a study of the two terms in the *Phenomenology*, see J. Gauvin (1962). J. Robinson (1977, 23–26) provides a good brief survey for Anglophone readers. There is a fuller discussion by L. Dupré (1972). See also J. McCumber (1989, 55–58) and note 7 below.

3. In the *Phenomenology* the word *Bildung* has a general and a special sense. The whole book is our *Bildung* for comprehending the *Weltgeist* (see pars. 28–29). F. Chiereghin (1968) interprets *Bildung* as the perfect development of the Understanding. I believe there is a logical connection between the social task of *Bildung* in this section, and the "inversion" of the Understanding from the standpoint of Necessity to that of Freedom. "*Reason* operating as Understanding" is what we have in the Enlightenment.

J. H. Smith (1988, 399) is right in saying that *Bildung* is the key-concept of the whole book, but that the concept evolves. In Hegel's chapter VI B we are observing it in its own stage of self-estrangement. W. van Dooren (1973) provides a useful survey of the concept's uses. Many interpreters—U. Müllges (1972), Q. Lauer (1976, 194–199), J. L. Navickas (1976, 222ff.), R. C. Solomon (1983, 552–559) for example—discuss estranged *Bildung* only in the "demythologized" shape that it assumes in the Enlightenment. P.-J. Labarrière (1968, 128–134) avoids this mistake, but only by summarizing in Hegel's own terms. As is often the case, J. Hyppolite (1974, 376–425) makes the best showing. See also the essay of C. Hauser (1987). H.-G. Gadamer (1975, 11–12) is certainly right in connecting *Bildung* with the theological concept of the "image" (*Bild*) of God in every human. Heidegger offers a "purification" validated by paragraphs 77–78—cf. P. C. Smith (1971, 64).

4. Gibbon (Everyman, I, 132) calls Caracalla "the common enemy of mankind."

5. I have chosen him because the powerful echoes of Eteocles and Polyneices (and even of Jocasta) in the story as told by Gibbon, make it certain that Hegel would notice him. Gibbon even presents Septimius Severus as a wise and prudent monarch (like Oedipus)—see *Decline and Fall*, Everyman, I, 109–134.

6. Hegel says "*its* substance is its alienation itself, and the alienation is the Substance." This is *not* (I think) mere rhetorical repetition for emphasis. The two formulas refer to two successive phases in the historical evolution of society, or at least to two different aspects of the evolving world. "*Its* substance" is the social structure of the actual world of the Empire's "decline and fall." "The Substance" (capitalization is mine) is the ideal world of the Universal Church. *Entäusserung* is the process through which the transition from the substantiality of "actual consciousness" to that of "pure consciousness" takes place.

7. The words *Entfremdung* (estrangement) and *Entäusserung* (alienation, emptying out) both occur in this paragraph. *Entäusserung* first occurred in the Unhappy Consciousness (see par. 229). The fullest discussion of the terms in English is that of Richard Schacht (1971). His views are ably summarized by M. Inwood (1992, 37–38) who disagrees with them in part. (I do not perfectly agree with either of them.) There is also a book in French by C. Boey (1970).

Entfremdung was the problem in the *Phenomenology* with which the young Marx was most concerned (see C. J. Arthur, 1986, chapter 7, for a good account). Since the publication of his “Paris Manuscripts” in 1932, the concepts have been much discussed. See for instance, G. Lukács (1948 [1975, 537–68]); J. van der Meulen (1958); M. Franklin (1960); A. Massolo (1969); C. Boey (1972a); R. Racinaro (1975, chapter 8); J. McCumber (1989, 55–58). J. Torrance (1977, chapter 2) has put the historical development of the concept into its natural order.

8. The “knowledge” of Faith begins with the reconciliation of Unhappy Consciousness in the Confessional. It is actually “given” to us by the *mediator* who *advises* us about the Will of God. Thus, the *reconciled* Unhappy Consciousness is the axis upon which the world-concept of Faith spins (while it is at rest). Compare chapter 2, note 70. In Pure Insight the estrangement of “consciousness” from “self-consciousness” is overcome, but that between self-consciousness and actuality (“thought” and “matter”) is accentuated—compare Dupré (1972, 220).

9. The word *Bildung* has several meanings in Hegel’s usage (compare first *Pilgrimage* chapter 1, note 115). For a brief history of the evolution of the concept in Hegel’s thought see O. Pöggeler (1980). There is a more detailed discussion in F. Nicolini (1955). R. K. Maurer deals with the concept helpfully several times (1965, 49, 61, 160–161 etc.; 1980, 49). See also C. Boey (1972b), W. van Dooren (1973) and C. Hauser (1987).

I shall take the word in the sense of “self-formation” and let the context of the historical interpretation determine the specific sense. The general movement is from a “self-disciplinary” activity to a “self-expressive” (and absolutely critical) thought. (*Bildung* in the *System of Ethical Life* has the positive sense of self-enjoyment—compare *Night Thoughts*, 114–116. This sense occurs in the Preface (par. 4)—but even there the “laborious working out” and the critical “result” are dominant in Hegel’s mind.)

10. The word which Miller twice translates as “takes possession of” is *bemächtigen*. His translation is correct, but the sense of *active control* does not come through as clearly in English as it does in German. I have used “master” because in the world of *Bildung*, Self-Consciousness is divided between God and humanity in the same way that it was divided between Lord and Serf. God’s servants are moving from pure consciousness (of Him) to pure insight (of their own). Since no one in the world of *Bildung* is hamstrung by the unhappiness of her sinful consciousness, everyone is implicitly in the world of autonomous Reason. But this *implicit* rationality is only the stabilized shape of the Unhappy Consciousness—i.e. it only means that everyone goes to Confession regularly. *Bildung* is essentially “justification by works”; but it grows out of, and rests upon “justification by faith.” That foundation in Faith is what Insight will take away from it; for rational insight makes us aware that our *work* aims to transplant Heaven here on earth. Once we have “taken possession of” ourselves and our world we do not need the “leading strings” of the divinely authorized order. That is what the Enlightenment points out to Faith.

11. Hegel would certainly be delighted with the hypothesis that the *Characters* of Theophrastus were planned and written as part of a treatise on *Comedy* (see P. Vellacott’s introduction to his translation of *Theophrastus and Menander*, Harmondsworth, Penguin, 1967).

12. Compare especially the following early fragments: *Ausser dem mündlichen Unterricht* (Nohl, 30–32; Fuss and Dobbins, 59–61); *Christus hätte zwölf Aspostel* (Nohl, 32–35; Fuss and Dobbins, 61–65). These are from 1794, Hegel’s first year in Bern. But from the same year comes *Jetzt braucht die Menge*, which states in slightly more moralistic terms the thesis of the “Condition of Right” and “Culture” (Nohl, 70–71; Fuss and Dobbins, 101–103). So

perhaps the more reconciliatory view suggested in my *Toward the Sunlight*, 163–164 is correct—compare *inniefeln ist Religion* (Tübingen, 1793, Nohl, 355–357). In any case these Bern fragments should be reexamined in the present connection.

S. B. Smith (1992, 105–106) is correct in arguing that it is not the educational lesson of enforced labor, but the Christian ideology of life that leads to the abolition of serfdom.

13. *Paradiso* III, 85, and IV, 28–63. It is certain that at some stage Hegel excerpted *Paradiso* IV; he quoted lines 124–130 in his Berlin lectures on the *Philosophy of Spirit* (sec. 440 Zusatz; Wallace and Miller, 180n.).

14. This is from the Victorian hymn “All things bright and beautiful” written by Frances Alexander in 1848. The substitution of “rich man” for “noble” makes it a perfect expression of the climax of Culture where all distinctions have been quantified as Wealth.

15. The main fault of L. P. Hinchman’s treatment (1984, 107ff) is that he ignores this and interprets the whole movement of Culture as if “Absolute Culture” were present from the first. That is a bad mistake (which he ought to have avoided because he can see (1984, 112) that the “proud vassal” (of par. 505) is a “medieval” *Gestalt*.

16. Indeed, this is true at every stage of Spirit, because we are dealing with “ideologies” that can always be cynically manipulated by the natural self, rather than substantially adopted or identified with. But in the *estranged* world this option is explicit. (Hegel’s political understanding of the Middle Ages has been expounded by P. Hindler [1979].)

17. The Earth of Spirit is not explained; but it logically has to be the *actuality* of the Family, and of Divine Law. What the social structure of it is can be discovered in paragraphs 493–494.

18. As we shall soon see that is a *self-alienated* name for it. But an unambiguous “immediate” name for it is hard to find; it is the immediate “life-community” of paragraphs 169–172.

19. This is a sign that we are on the right path of interpretation. If we seek to connect the *masses* of the Substance directly with the four Estates then “the Earth” has to be the peasantry (who were certainly involved in the upheaval of 1789, and were affected by it). But the two masses of the Ethical Substance were the whole community seen as natural (families) and as spiritual (*polis*) respectively; and if we follow that analogy we can see how the Earth stands not just for those who cultivate it, but for the “living” that everyone has to secure, and for the natural life that must go on even in revolutionary times (the “fast knot of this articulation”).

20. In Hegel’s theory of the Earth-Process the place of Fire is at the centre of the Earth itself; and this is where Hell Fire is, in the popular mythology of the Universal Church. So we might think of the universal Unhappy Consciousness of our fallen condition—our Earthly City destined for damnation in Augustine’s image—as the “extant, still unspirited” universal community of Fire. Hell is the *fixed* value that drives the engine of Faith as long as the fire of thinking is confined to the Clergy. We shall soon learn (par. 494) that it is the “aether”—the comprehensive “heavenly fire” of the classical philosophy of nature—that is the “animating unity” of the whole. At that stage the dialectical character of the “fire of faith” will become apparent. Faith turns into “Insight” because its real objective is not the other world, but the establishment of a rational society in this world. Even the ideal community of the Church Triumphant is comprehended within the sphere of the *Staatsmacht*.

21. Miller mistranslates this as “Spirit is itself at once the essence and the actuality of the whole.” (Baillie is even worse.)

22. The doctrine of Earth as the “body” in which the *Logos* is permanently “incarnate” is stated in the “Triangle of Triangles” (1802?). For the full text of this fragment see *Hegel-Studien* 10, 1975, 133–135; a translation will be found in *Night Thoughts*, 184–188.

23. The prototype of *Entfremdung* in this form was the actualization of Stoicism in Law (the Good) and of Scepticism in Military Anarchy (the Bad). That was a complementary relation of simple “otherness.” It has become “estrangement” because of the explicit sun-dering of the world of pure Thought from the world of Experience.

24. Hegel changed his mind about this under the impact of the Revolution of 1830 (and by then he had been using Prussia as the best model for ten years). So the hypothesis that when he decided to revise and reprint the *Phenomenology* just as Revolution was raising its ugly head again in Paris, his planned apologia for the book as “an early work, peculiar [to my formation?]” and “relative to the prevailing time of its composition” (*G.W.* IX, 448) was a deliberate accommodation with the *Staatsmacht* of his own Prussia is very attractive. (Even if he was perfectly sincere, his supposed change of heart about the scientific status of the book, was based on an evaluation of his “experience” that has no *absolute* status and need not be valid for us.)

25. Calling it “the Good” (rather than “the One”) indicates that its immediate status is not *final*, and that its logical unchangeability will be *enriched* by development. We are following that logical development (in an alienated form) now. Faith and Insight *together* are “the Good” as Reason.

26. My judgment is determined by the object in which I *find* myself. So there need not be a conscious decision involved, because I find myself already in a certain “estate of life” when I am born. One could hardly enter the First estate without a *choice*; to *choose* the Second would be unusual (though it is quite possible to have entry into it as one’s goal). The case that shows up the problematic character of the “choice” language best is the judgment of the outsider who becomes “contemptuous.” Does Young Rameau “choose” his judgment of life? He seems rather to be *driven* to it. A rational choice for him would be the independence of Pure Insight (which he cannot achieve).

27. Students of the Introduction should note the recurrence of the terminology of paragraphs 82–87, and observe the following development carefully as an illustration of what it means.

28. Women could not get into the public service in Hegel’s world; but the imperative of Subjective Reason has put them there. And of course, the categorical force of the “mixed” judgments is “dispositional” as compared with the ethical knowledge of True Spirit. In Civil Society no one is required to *die* for what they “know.”

29. When Hegel says “the doubled judgment . . . presented the principles separately [*getrennt*]” he means that only the judgment of what is *good* is serious in each case; what is called “bad” is *ignored*.

30. The significance of the *reine* in “*reine Ansichsein*” is that the administration must be “rational” (i.e., just and evenhanded).

31. The original of Dick Whittington was only a “poor boy” in a very relative sense; and he was never a nobody. Born about 1358, he was the youngest son of Sir William Whittington of Pauntley in Gloucestershire. So he came from the landed gentry, but he had no estate of his own. His father died when he was thirteen, and at that point he went to London as apprentice to a rich mercer, Sir John Fitz-Warren. In view of his birth and background, his subsequent marriage to Sir John’s daughter Alice is not as remarkable as the folk-myth makes it appear. Eventually he became Mayor of London *four* times (1397, 1398, 1406, 1419); and he was an M.P. in 1416. He died childless in 1423, and left his considerable estate to charities. (The myth of the poor boy whose cat aids him in making a fortune appears in

German, Italian, Russian and Danish tradition; the English version has simply become attached to a suitable historical subject.)

32. Not simply *edel* but *edelmüthig*—compare the *megalo-psychia* of Aristotle (*Ethics*, IV, 3).

33. “Morally base or vile” is one of the meanings of *niederträchtig*—and it will apply here. The “arrogant” courtier who despises the “vile bourgeois” is himself morally contemptible. But he does not recognize the fact; and Rameau’s Nephew, who recognizes his own vileness, is not *simply* vile or ignoble. He has a new kind of nobility that derives from his clear-eyed honesty. L. P. Hinchman has fallen into this error (1984, 111); and so has S. Dellavalle (1992, chap. 5) who possesses the signal merit of having recognized the medieval aspect of *Bildung*. The right road was indicated in De Negri’s translation.

34. Miller mistranslates this. Baillie (525) had it right.

35. One might think it fair to object that (as in the case of the simple Cynics) there is nothing *secret* about Rameau’s malice, and that his rebellion is already explicit. But he masks his seriousness as a *joke*. So his real commitment *is* secret.

36. Compare Goethe, *Werke* XXI, 620; Bowen, 51. The world of *Bildung* is atomized, and abstractly reflective. But even in its return to itself as “absolute Culture” it remains intuitive at the level of *Vorstellung*. Hence even its best “philosophy” can be done in a literary mode; and therefore Diderot’s dialogue is its ideal *Gestalt*.

37. We are still anticipating, but we can now begin to understand Hegel’s prophecy at the end of paragraph 496.

38. J. Loewenberg (1965, 217–218) wants to maintain that the reference is not specifically to the Ancien Régime, but is generalizable to all regimes of that type. I think that Hegel was always interested in the *individuality* of social systems, rather than in “typing” them. But in any case, he regarded the French Revolution as *uniquely* significant; and in this section of his text he wants to understand how it came about.

39. This is an *openly* military world, so the rights of a female hardly ever amount to full “peerage.” Whatever rights law or custom may give her must usually be mediated in actual exercise through the will of some male representative.

40. For Hegel’s view of Pitt see N. Waszek (1986).

41. For a first approach to the *systematic* significance of Hegel’s conception of language see J. Burbidge (1982); for a systematic development of Hegel’s Logic on this basis see J. McCumber (1993). A useful discussion of what the doctrine means, at the level of Absolute Spirit, will be found in S. Deguchi (1984).

On Hegel’s philosophy of language in general see D. J. Cook (1973), M. Züfle (1968) and J. Simon (1966). On the focal importance of this paragraph see especially T. Bodhammer (1969, 94ff), C. Boey (1972a, 1972b). Flay’s note (1984, 360–361, n. 10) gives some other useful references. But the literature is expanding rapidly.

42. See the first sentence of paragraph 512 (two sentences in Miller’s translation).

43. A. Klein (1973) distinguishes between the *Dasein* and the *Wirklichkeit* of Spirit in language. This is an important distinction; and in the dialectic of the *Werk* (pars. 405–415) we have seen how speech can be a mere *Dasein*. But Hegel is showing here how it can become effective (*wirklich*) simply as spoken words heard by witnesses (or sealed with royal seal etc.). The comment of D. J. Schmidt should be remembered (1988, 181–184): “language must be recognized not merely as the expression of Spirit but as the embodiment of Spirit” (183).

44. Baillie’s translation of “welcher ihm aber noch nicht selbst zukömmt”—which, however, does not yet belong to the universal itself—is preferable to Miller’s “which, however,

does not yet conform to the universal”; and the “secluded inner spirit, the self as such” (par. 507) is now called “the will still remaining in ambush.”

45. Both Baillie and Miller translate as if the subject must be what precedes the verb (as in English). But it is more credible that the “unity” is the active agent throughout.

46. Perhaps his admiration for Napoleon affected his conceptual claims about “Monarchy.” But fortunately that difficult problem does not enter into our “Science.” The lesson of the “Science of experience” is clearly that no philosopher can legislate for another age (or even for his own).

47. *The Coming of the French Revolution* (trans. R. R. Palmer), New York, Vintage, 1958, 21.

48. Voltaire, *Siècle de Louis XIV*, chapter 26 (compare the translation by M. P. Pollack, London, Everyman, 1961, 278).

49. Quoted in E. R. Tannenbaum, *European Civilization since the Middle Ages*, New York, Wiley, 1965, 163 col. 1.

50. It was Saint-Simon, I believe, who said that Louis XIV surrounded himself with nothing but “vile bourgeoisie.” L. de Saint-Simon’s (1675–1755) *Mémoires* was published (garbled) in 1780—see Lucy Norton (ed.), *Saint-Simon at Versailles*.

51. Compare Rameau’s *Nephew*, Goethe, *Werke* (Berlin Edition), XXI, 583; Bowen, 20–21.

52. Goethe, *Werke* (Berlin Edition), XXI, 583; Bowen, 21. J. Hyppolite (1972, pp 404–417) is very good on this whole transition. Onay Sözer (1981/1982) asks whether the language of “Absolute Culture” is the model for Hegel’s language. He does not give a definite answer; but the answer is: No. (This is the triumph of *dialectic*, but not yet the language of *speculation*.)

J. L. Navickas (1976, 229–130) does partly follow the logic of the movement here. The natural self creates in its language a new “cultured” self. But then the grasping of linguistic freedom becomes the gateway for a comprehensive inversion of nature and culture through a breakaway into an inner world that belongs no longer to God but to the self. *Thinking* is liberated from its conscious mode of Faith into Self-Consciousness.

53. Goethe, *Werke* XXI, 586; Bowen, 23.

54. The “mixed” judgments would already be contradictory, if they were not “abstract.”

55. Compare the fragment of Anaximander (D.-K. 12, B 1). I suppose that Hegel did not know this in 1807. But the coincidence of expression is “providential” because the “honorable consciousness” of the Understanding is here witnessing the birth of Reason.

56. He is firm about this himself (see Goethe, *Werke* XXI, 578; Bowen, 16). This is at the very point where the *philosophe* says that he is the kind of critic who ignores the fact “that he is repudiating his own *Dasein*.” (Young Rameau soon makes it clear that he is *not* blind to this. But if he were in any sense a representative of the proletariat—as M. Westphal suggests [1978, 165]—the accusation would be absurd. One thing he will never do, however, is work for a living.)

57. Goethe, *Werke* XXI, 569; Bowen, 9. J. Hulbert (1983, 284) is quite right in saying that Hegel does not give the “Moi” equal treatment with Rameau. The interaction of concepts in Hegel’s dialectic requires a far more naïve respondent than “Diderot.” But when H. R. Jauss (1984, 173) says that Hegel “supremely disregards the rules of the game of citation,” one knows that this “game” must be too new for Hegel to be guilty of any sin by our familiar standards. Those who think that true dialogue *disappears* in a dialectical philosophy of Spirit, must be left to their sceptical sense of superiority—unless this commentary as a whole can persuade them to take another look. Hegel is not writing dialogue; he is only

observing a logical *dialectic* which shows us why rational life must always continue to be dialogue. But life is not this pseudo-dialogue in which *Diderot* (not Hegel) presents an unhappy Cynic as necessarily triumphant.

58. The author's own position comes near to the surface at least in his introductory judgment: "When someone of this kind comes into a social circle, he is like a bit of yeast that works in the whole, and gives everyone part of his natural individuality back. He shakes and stirs us, brings praise or blame to the lips, drives the truth out into the open, makes us know the upright folk, and unmasks the rascals. That is when a rational man pays heed, and sorts out (*sondert*) his company" (Goethe, *Werke* XXI, 569; Bowen, 9). But the relevant "uprightness" in this sorting is the possession of the rational insight that enables one to appreciate Rameau's "yeast."

59. Goethe, *Werke* XXI, 665; Bowen, 89. Apparently this was not historically accurate. J.-F. Rameau's wife died shortly before the supposed conversation. But he was an Abbé already before his marriage (which took place in 1757, and was not the social triumph that Diderot speaks of earlier in the text [Goethe, *Werke* XXI, 569; Bowen, 9]).

60. Goethe, *Werke* XXI, 571, 622–623; Bowen, 11, 86–88. But it is the "royal Dog" (as Diogenes called Aristippus of Cyrene—Diogenes Laertius, II, 66) whom Rameau most resembles. He comments negatively on Diogenes' austere diet; and his ideal of following nature is to keep the stomach and bowels functioning well (cf. Goethe, *Werke* XXI, 587, 615, 622, 663; Bowen, 24, 47, 53, 87).

61. See especially Goethe, *Werke* XXI, 578–579; Bowen, 16–17. (Pure Insight, when we reach it, does not suffer from any self-contempt.)

62. The fuller context of Hegel's first quotation is as follows:

He heaped and jumbled together thirty different airs, French, Italian, comic, tragic—in every style. Now in a deep bass he goes right down to Hell, then straining in falsetto he tore to shreds the heights of the air, imitating the while the stance, walk and gestures of the characters; being in succession furious, mollified, lordly, sneering. First a damsel weeps and he reproduces her kittenish ways; next he is a priest, a king, a tyrant; he threatens, commands, rages. Now he is a slave and obeys. He calms down, is heartbroken, complains, laughs; never overstepping the proper tone, speech, or manner called for by the part. (Goethe, *Werke* XXI, 640–641; Bowen, 68).

63. Only the conclusion of the passage which Hegel marks as his second quotation is actually quoted verbatim from Goethe's translation; and the context in Diderot is the following:

One could not wish for more—in a delicacy of voice, expressive strength, true sorrow. He dwelt on the places where the musician had shown himself a master. If he left the vocal part, it was to take up the instrumental, which he abandoned suddenly to return to the voice, linking them so as to preserve the connection and unity of the whole, gripping our souls and keeping them suspended in the most singular state of being that I have ever experienced. Did I admire? Yes, I did admire. Was I moved to pity? I was moved. *But a streak of derision was interwoven with these feelings and denatured them.*

Yes, you too would have burst out laughing at the way in which he aped the different instruments. With swollen cheeks and a somber throaty sound, he would give us the horns and bassoons. For the oboes he assumed a shrill yet nasal voice, then

speeded up the emission of sound to an incredible degree for the strings, for whose tones he found close analogues. He whistled piccolos and warbled traverse flutes, singing, shouting, waving about like a madman, being in himself dancer and ballerina, singer and prima donna, all of them together and the whole orchestra, the whole theater; then redividing himself into twenty separate roles, running, stopping, glowing at the eyes like one possessed, frothing at the mouth. (Goethe, *Werke* XXI, 641–642; Bowen, 69).

Hegel quotes only the sentence I have italicized.

64. The “quotation” begins with a paraphrase of the following passage: “I was overcome by so much cleverness and baseness, by Ideas so accurate [*richtig*] and at the same time so false, by a perversion of feeling so complete, a shamelessness so unabashed, and a frankness so uncommon” (Goethe, *Werke* XXI, 586; Bowen, 23). (D. W. Price [1991, 226] has pointed out that Hegel makes the triumph “self-inverting” by adding this comment from what he calls “the Pimp scene.”)

The “melody of the Good and True” and “the whole scale of feelings” are discussed in the text. The expression “a hotch potch (*Faselei*) of wisdom and folly” seems to be all Hegel’s own.

65. Much of this is described in the excerpts cited in notes 62 and 63. But the whole passage should be read and studied in context.

66. Goethe, *Werke* XXI, 638–640; Bowen, 66–68.

67. Compare the philosopher’s description of him at the beginning of the dialogue with his own account of his situation at the end: Goethe, *Werke* XXI, 567–568 (Bowen, 8); and *Werke* XXI, 665 (Bowen, 88–89). In Goethe’s rendering he is called first “eine Zusammensetzung von Hochsinn und Niederträchtigkeit” (568). The modes of Hegel’s cultural consciousness are *edelmuthiges* and *niederträchtiges* Bewusstsein.

68. Goethe, *Werke* XXI, 569; Bowen, 9. L. Trilling (1972, chapter 2) discusses Hegel’s use of the dialogue, and faults him for not recognizing that a critique of conventional morality was Diderot’s *own* intention. But he ascribes to Hegel himself the view that “moral judgment [is] nothing but retrograde” (33); and this is, of course, a mistake, because the overthrow of “utilitarianism” is necessary in Hegel’s view to the *birth* of the “moral view of the world.” It appears to me that Hegel fully recognizes how *radical* the intention of Diderot as author was. But that, of course, is a matter of subjective judgment. (C. Boey [1972] says that Rameau is *implicitly* the moral self; this is the valid insight on which Trilling depends.)

69. Goethe, *Werke* XXI, 590–591; Bowen, 26.

70. Goethe, *Werke* XXI, 663; Bowen, 87. Compare especially Goethe, *Werke* XXI, 580, 584, 596–597 (Bowen, 18, 21, 31). But we should note that the final word of contempt—“Kotseele”—refers back to Rameau’s earlier characterization of the pursuit of wealth thus:

He: . . . I have put something by, the time has passed, and that is so much gained.

I: Lost, you mean.

He: No, no, gained. Every minute one gets richer. One day less to live, or one more dollar in the bank is all the same. The main thing in life is just this then: to go to stool freely, easily, pleasantly and copiously every night. *O stercus pretiosum!* That is the great outcome [*Resultat*] of life in all of its estates. At the last all are equally rich: Samuel Bernard, who by dint of stealing, swindling, and fraud

leaves twenty-seven millions in gold is no different from Rameau who leaves nothing. Rameau who will have a shroud from public charity to be buried in. The dead man hears no bells toll. A hundred priests making themselves hoarse in church are wasted on him, and so is the long procession of burning candles. His soul is not walking in step with the master of the ceremonies. (Goethe, *Werke* XXI, 587–588; Bowen, 24).

In this passage, the point that money is saved in order to be spent is only the material ground of the deeper claim that the real form of human riches is in the experience of life, lived, remembered, and appreciated. This is the comic *Aufhebung* in enlightened culture of the tragedy symbolized for Unhappy Consciousness by Luther's constipation (par. 225).

71. The "wisdom of Nature" is found in Robinet's *De la Nature* (Amsterdam, 1763). We shall learn more of it later on (see pars. 557, 578). But we have already encountered one form of this development in Virtue and the Way of the World, where the ideal of political and religious freedom declines into the political obedience doctrine of the enlightened despot of *Sans Souci*.

72. See, for instance, Goethe, *Werke* XXI, 577–578 (Bowen, 15–16); XXI, 606 (Bowen, 39); and XXI, 629 (Bowen, 58–59).

73. *De la nature* (Amsterdam, 1763, 67–68, 138).

74. Goethe, *Werke* XXI, 603; Bowen, 37. Diderot actually wrote the same anecdote to Sophie Volland (12.x.1760) as the story of his Scottish friend, Hoop. But I think that Hegel would take it as a fiction, just as I did before I knew this.

75. Goethe, *Werke* XXI, 606; Bowen, 39.

76. Goethe, *Werke* XXI, 628; Bowen, 58.

77. Goethe, *Werke* XXI, 597; Bowen, 31–32.

78. Goethe, *Werke* XXI, 647; Bowen, 74.

79. Rousseau, "Discours" in *Oeuvres* (1782) XIII, 33, 37–38, 50, esp. 59–60; Voltaire, *Oeuvres* (1784, LV, 238). (When Rameau remarks that he will not give his own son the education of an ancient Spartan as a preparation for life in the culture of Paris, he is commenting on Rousseau's *Discourse* [Goethe, *Werke* XXI, 650; Bowen, 76].)

80. Goethe's text (XXI, 665) gives only the name of the composer, D'Auvergne, for the performance to which the bell summons Rameau. But his note (XXI, 667) conveys the further important information that D'Auvergne's opera *Les Troqueurs* (1753) was the first French opera in the new Italian style. Thus the connection of Rameau's musical "Beyond" with the hope of a political revolution—which was already made clear earlier—is recalled at the end again; and we can be sure that Hegel would be sensitive to this.

81. Goethe, *Werke* XXI, 651; Bowen, 77.

82. L. P. Hinchman (1984, 274, n. 1) saw that the disappearance of the qualification "State-Power" is significant. But he was not able to say why it was justified.

Chapter 6

Faith and Reason

VI B.I(b): Faith and Pure Insight

We are now leaving the actual world of Culture, and entering its world of thought. This sublates the actual contradiction of consciousness—its self-contempt; and that is the key to the phenomenological transition here. The shattered consciousness inverts the judgment of the noble mind. State-Power and Wealth are not “good” but “bad.” That is the first or simple inversion, the substitution of contempt for noble-mindedness. But this contempt has to admit that it is part of the contemptible world; and the self that can turn both against itself and against its world in contempt, is necessarily beyond its worldly self. This knowledge is a second inversion, the reinstatement of nobility at a higher level. In the comprehensive assertion of the identity of Good and Bad, what is implied is that the world of actual finite things has to be comprehended within a wider concept—the universe of pure thought.

Even the perfectly cultured consciousness cannot formulate this proposition consistently. Rameau knows that everything is what it is judged to be; and he knows that opposite judgments are necessarily valid. But he cannot get beyond this contradiction. Yet he knows that as a free thinker he is beyond it somehow; his problem is that although he has these pure thoughts, he does not yet know what thinking is. So in this next phase the two sides of the contradictory Concept go apart; and they are contemptuous of one another. Each side is safely beyond the world—and hence it is not self-contemptuous.

The advent of Faith as “the shape of a world” was with the Lutheran Reformation. Hegel treats “Faith” and “Pure Insight” as the complementary opposite sides of the Begriff because he held that the French Enlightenment completed the ideological programme of the Reformation. Luther abolished the distinction between clergy and laity in the religious community; the Enlightenment required that the subordination of “this world” to the “other world” (i.e. the leading strings of a supposedly higher Reason) should be abolished.¹

(a) The Transition to Pure Thought

- 1./527. Beyond the estranged world of culture lies the world of *pure* thought; but initially it simply presents itself. Even the disrupted consciousness still operates at the level of presentation. We can see it as the principle of *thinking*, but it cannot grasp itself so.

For itself it is only an actuality. The forms of pure thought previously encountered do not involve *actuality* in the way that this one does: Stoic thought was formal, the ideal of virtue was not yet actual, nor were the law or the standard of practical Reason. The “essence” of which estranged consciousness is *purely* conscious [the Kingdom of Heaven] is actual, but it is outside the actual world of this life.

Pure consciousness—the universe of thought—is the “substance” that “absolute culture” has put in the place of the actually contradictory world of nature and culture. We have seen how the simple Faith of Culture presupposes its “other world”; now, the contradictory nature of the actual world has made the transition to that “other world” necessary. And because Culture is *consciousness* (the subjective awareness of an object other than the self) this substance retains the character of “actuality.” For consciousness, true thoughts are “ideas” that we have, which “represent” a reality that subsists on its own account, and in its own independent place—a world of “eternal objects” or “essences.”

This Faith-Consciousness is rational, not empirical; but like empirical consciousness it is “presented,” *vorge stellt*. Because the presentation is only in thought (“in the mind” as we ordinarily say, or “within the self” in Hegel’s language) it can be contrasted with the empirical presentation of the world of actual experience. Ordinary experience has its ultimate point of reference in something sensory so that it is never “pure”; and in the terms of the contrast between the sensible and the mental, the whole world of “pure consciousness” is non-actual (*unwirklich*). But “overall” (*überhaupt*) this mental world is “still in the sphere and determinacy of actuality.” It remains the same sort of thing as the ordinary actual world, and has only “been elevated into another element,” the element of thought. So it has a rather paradoxical status: it exists only for thought, and can only be thought of, but the community that posits it thinks of it as having an actuality which, like that of sensible things, is other than any thoughtful awareness of it.

This is exactly what distinguishes it from the “pure thought” of Stoicism, the ideal to be achieved by Virtue, or the laws and testing standard of pure critical Reason. It is a “supersensible world” that exists already, and is quite independent of the thought that is conscious of it. The true thinking of the Stoic sage is directly identical with the pure thought of the Divine Reason; and that Reason is here present in the actual world as the Spirit that sustains its life. Similarly, the standard of Law-Testing Reason is identical with the rational consciousness (even more completely); and it is the essential character of the ideal of Virtue and of Reason’s Laws that they are *not yet* actual, but ought to be actualized. The thought-world of Self-Estranged Spirit, on the other hand, is actual, and is quite other than my thought of it; it is only “non-actual” in the sense of not being *perceptible*. It is not Here, it is Beyond. At this stage there are two levels of actuality—the actuality that is here and now, and the one that is *not actually accessible*, but which must be sought in a flight to another *world* from the world of here and now.

If we ignore the reference to “the shattered consciousness” the paragraph makes perfectly good sense, in spite of the opening reference to the “world of pure consciousness” as *unwirklich*. The world of sense-perception is actual for us, but the

eternal world of Heaven and Hell is the *comprehensively actual* world for the pure consciousness of Faith (even though it is not actually present).

But there is a serious problem still, because for most of this paragraph Hegel is explicitly talking about *das zerrissne Bewusstsein*; and that is what he must start from if he wants to maintain the *logical* continuity of his Science of Experience. So we have to understand how what he says about the *necessary actuality* of the “world of pure consciousness or thinking” is true for Pure Insight. For even if, as I have maintained, the shattered consciousness still contains the moment of Faith, it embraces it only in the *disconsolate* form of the faith which has learned that it has no access to the Beyond, and no certainty of its actuality at all.

This enlightened form of “unhappiness” illustrates the difference between Unhappy Consciousness and Faith proper. The “Vesper bell of the Abbé Canaye” summons both Rameau and the Abbé to the Opera, not to Church; and they both know perfectly well that the world of the Opera is not an “actual” world. It is the “Heaven” only of this evening’s escape from boredom and self-disgust. If we try to pin Rameau down to his expressed faith in the eventual triumph of the True, the Good and the Beautiful, he will cheerfully contradict himself and have the last laugh on us. For he is well aware that no “triumph” (either in musical taste or in politics) can be the advent of the Kingdom of Heaven; everything in this world is essentially contradictory and self-inverting, including every hope for the future. Furthermore, this operatic Heaven of the imagination is quite consciously *imagined*.

The surviving aspect of Faith in the shattered consciousness is not an *actual* Beyond. The Faith of the *zerrissne Bewusstsein* is itself shattered. Rameau has a conviction that the salvation of his soul is worth more than the securing of “natural” happiness and the comfortably regular movement of the bowels. But he does not know where to look for this salvation. How does he actually visualize the world of pure consciousness, in which “the dignity that nothing must destroy” subsists? This is just what he does not know. There is something “supersensible,” and its nature is of a purely intelligible kind. It is an order of “natural law,” and of “natural rights.” One can call it “God” (and be a “Deist”); or one can call it Matter (and be an “atheist”). But it makes no difference because in any case this purely intelligible entity, upon which our actual world of contradictory judgments is founded, is beyond the grasp of our minds. This is the fundamental “shattering” or “disruption” of Rameau’s world—the conviction that all knowing activity is directed towards something that is necessarily *actual*, but equally necessarily *unknowable*. It is Rameau’s concept of *knowledge* that is shattered; and because of that his open-eyed rationality is just as much a form of Faith as the religious confidence of the most simple-minded believer. There is a Beyond that he thinks of as “actual” too. But he does not know how it can be actual as anything except his free “self.” He has a kind of “rational faith”—or at least he knows that he needs it. He *postulates* his own rational *dignity*.

The fact that Rameau’s faith itself is shattered, so that he has returned to the unhappiness of consciousness, is what gives *us* a different perspective upon his situation.² Thanks to the circle that we have made from the Sceptical overthrow of

Stoic rationalism to the consciousness of “pure culture” we can see that the shattering of enlightened rationalism into absolute contradiction arises from the shattering of the concept of knowledge itself into the form of “consciousness.” Pure thought knows *itself*—and the shattered consciousness that recognizes the universally necessary contradictoriness of all finite consciousness of “actuality” must still accept itself—as the “self-equivalence of pure thought.” That is what it already is “for us,” and we must now watch the whole process by which it comes to be so “for itself.”

We have been observing the process by which the simple commitment of the “noble mind” is transformed into the noble-minded self-contempt of rational insight. But now this antithesis must be syllogistically mediated into a self-conscious identity. The whole syllogistic process happens in the same cultural world; and it happens precisely because Insight does not know that it is a phenomenological *outcome* of the movement of Faith. We had to follow the cultural dissolution of Faith as the sustaining power of the actual social order first, in order to become clearly aware of this.

- 2./528. This is *Religion as Faith*. In the Unhappy Consciousness Religion was without *substance* [see par. 217]. In the ethical world it was part of the present world (family cult). Now it is consciousness of substance as estranged (being elsewhere).

The whole world of self-estranged Spirit rests on the *fulfilled* Shape of Self-Consciousness in chapter IV. “Faith” is primitively the *reconciled* shape of the Unhappy Consciousness. In this aspect it is the acceptance of an immediate revelation of the “Kingdom of God”—the supersensible realm of pure consciousness. The Unhappy Consciousness is unhappy because it knows itself to be cut off from the objective substance of reality; this knowledge is for it the rational self that is Beyond. All of its efforts to achieve unity with that self are failures; and the logical inevitability of the failure becomes ever more apparent. It comes in the end to the comforting knowledge that its own endless struggle is absolutely necessary, and hence rationally justified; and for this comfort, the intervention of another finite consciousness like itself is essential.

“Faith” proper is the *rationalized* shape of this empirical reconciliation. Faith does not need the external third voice as its mediator; it thinks for itself, but it still does not realize that it is doing that. Far from being cut off it is perfectly secure in its access to the Beyond. It does not need to express the essential truth of its situation by the use of an alien tongue that belongs to a world of the past, a tongue that is understood only by the external mediators. On the contrary, it knows that the real mediation between the finite self and the absolute (or Unchangeable) self is within the finite self, and is the work of Reason. So it expresses itself instinctively in the vernacular. That is why Dante’s *Comedy* is the perfect *Gestalt* of “the world of Spirit in self-estrangement.”³

In Dante’s poem, death is the abolition of empirical actuality, and the gateway to the eternal world of the higher actuality. In the *Antigone* or the *Eumenides*, on the other hand, death is only the passage to a new actual status in *this* world. The Furies that pursue Orestes are the spirit of vengeance that governs the natural

world of family feuds. The Furies are recognized and given their proper place within the community of the immediate consciousness of natural Reason. There is no rupture in this community between “empirical” consciousness and “pure” consciousness. The unity and self-equivalence of thought is mirrored perfectly in the variety and multiplicity of nature. Daughter succeeds to mother in the course of nature, and sons die for the City in the course of politics; but the unity of the City abides safely with the statue in Athena’s temple; and the identity of this generation with its forebears abides similarly in the shadowy, hearth-lit darkness of every home. The harmony between the Sky Father and Mother Earth is everywhere plain to view. In the justice of the daylight “war is the Father and king of all”; but the “unwritten right” of the darkness dictates that even our enemies are our brothers and must be returned reverently to the Earth. Here, beneath our feet, on the very battlefield where they fell, is the “underworld” to which they now belong; it is in the earthly homes from which they came that the reverent memory of them will maintain their presence in the ethical “substance” of which they were, still are, and will remain, individual moments.

In Dante this Underworld becomes the place of eternal torment. But even the direct inversion of the harmony of nature is only a symbol of the estrangement of pure and empirical reality. In Dante’s faith, the heaven and earth of this present world will pass away; but the real Heaven and Hell are eternal (only Purgatory belongs properly to this transient world). Dante’s Heaven and Hell have “gone forth out of the substance,” and the souls that he sees are *essences* estranged from their *Dasein*, their embodied being. He, the poet, *gives* these thought-worlds, and these intelligible essences, a *Gestalt* that makes the vision present to us likewise. But that, again, is only a symbol. The blessed and the damned, whom we see only “through a mirror and in a riddle,” are radically different from visible things generally, and from our embodied self-consciousness in particular. Dante embodies his faith in unforgettable pictures. But Faith itself asserts—and Dante shows brilliantly in his last Canto—that the *real* beatific vision “face to face” is something quite different. Faith is the *belief* in a knowledge that we cannot *now* have.⁴

- 3./529. Pure Consciousness seems only to be opposed to the actual world; but because opposition is thus essential to it, it is equally opposed to itself. This internal opposition is between its two shapes: Faith, and Pure Insight. Pure consciousness is rationally *universal*; it is the universal self as the negative might of the Concept. The *simplicity* of the thinking self, to which absolute culture reduced all social differences, is (for Faith) the rational soul in its union with God as a positive universal being. But the same dialectical movement that dissolved the social world into the thinking substance now dissolves the many souls into the identity of the pure self. Faith, or the pure consciousness of the thought-world, has a content that is shown to be imaginary; its objectivity is dissolved into the spiritual process of the self of Reason (which has the certainty of being itself all truth).

The definition of Faith as the belief in a knowledge that we cannot now have, is just what Pure Insight will drive into contradiction and *Zerrissenheit*, by forcing the

faithful believer to take it seriously. My explanation of what Hegel means by saying (at the end of par. 528) that "Religion here . . . is essentially *only* a faith" is concordant with the description of the primitive stance of pure consciousness: "This pure consciousness seems initially to have only the *world* of actuality opposed to it; but since it is the flight from this world, and hence the *determinacy* of the *antithesis* [to this world], it has this [determinacy] with respect to itself, and Faith makes up only one side of it." The pure consciousness of Faith seems at first to be the consciousness of the *other world*, and to have only *this world* opposed to it; but because it is defined as *not* of this world, the *pure* consciousness of Faith cannot in itself be like the consciousness of this world. It has itself the determinacy of antithesis with respect to itself; it is estranged *from itself*, and not just (as Faith naïvely assumes) from the world. Faith takes itself to be a kind of *knowledge*; but it also insists that it is *not yet* knowledge, that all of its expressions are merely symbols. Thus it flies not only from the world, but from its own self; and this is *necessary* because it knows (in a purely intellectual or thoughtful way) what it is not. It is *pure* consciousness; and just for this reason it knows that it cannot be what we call consciousness in the ordinary sense at all.

This alienated shape of Faith, this pure consciousness which knows that precisely because it is *pure*, it cannot be a proper consciousness at all, is the naïve form of the "shattered consciousness" (which knows all the substantial realities and values of the social world of culture to be contradictions). "Simple faith" already knows everything that Rameau can tell it about "the things of this world." It knows that the Good Samaritan is only an *espèce* at best; but it sees the motion of the substance of the actual world, and its "masses," as part of the Divine Plan. The faith in "Providence" is identical with Rameau's "prophecy"—and both sides know that the vision cannot literally come true here in this world.

The self of Absolute Culture is precisely the *Begriff*, the Concept of Reason, appearing for the first time in a self-conscious shape. It appears in its dialectical phase, as the absolute self, the simple thinking consciousness for which all the distinctions of the Understanding exist; and it appears "in the might of its negativity." It makes all the fixed distinctions (especially that of clergy and laity, which is resolved in universal literacy) reveal themselves as merely moments in the process of culture. Rameau and the Abbé Canaye meet at the Opera.⁵

This pure consciousness of the self as thinker is the "absolute distinction" of pure consciousness from empirical consciousness, and of every thinking consciousness from every other one. It is the Concept, it is "pure thinking," but like Faith it is self-estranged. It cannot *conceive* its own (unified) "being." Being, for it, is the world of *Vorstellungen*—but the actual world, not another one. The distinction is absolute here, because everyone must think for herself; and *mein Herr Philosoph* certainly claims to think quite differently from Rameau. But this absolute distinction is at the same time *no* distinction, because as thinkers we are all equal, and the truth of Reason is what is equally valid for all of us. It is in this sense that Reason is "the certainty that knows itself immediately as all truth." Rameau's "insight" is "the *absolute movement* and *negativity* of Spirit's own appearing." Hegel has already

shown why the nullification of all finite differences is the distinctive characteristic of the “absolute difference,” so Rameau’s contention that no one can really think differently about the social substance and its masses is a true rational insight. The way Rameau thinks is the way that the *vorgestellt* “essence” *is* for all thinkers. The thinking Concept will have to be self-consciously in control of itself, before we shall “know any better” than this.

But the “simplicity” of the absolute distinction is equally directly affirmed in the fundamental positive claim of Faith (“the inwardly *satisfied* essence and positive *rest* of Spirit’s appearing”). Faith says that every thinker is a soul, and that the salvation of the soul (in a resting union with God) is to be preferred to the gaining of the whole world. The world of pure consciousness is where everyone is recognized equally as a child of God. When Rameau insists that although he may willingly degrade himself, he will not submit to be degraded by someone else, he is asserting this fundamental position of Faith. The Spirit of culture is “driven back into itself out of the essenceless merely self-dissolving world of actuality” just as Faith is; and the cultured spirit knows that all selves are “rational beings” (or essences), just as Faith knows they are unique immortal souls.

Thus there are necessarily two shapes of pure consciousness: the simple consciousness of Faith, and the *self*-consciousness of Pure Insight. Spirit is the unnumbered unity of both, but in its present dialectical phase, they are necessarily separate, because of “estrangement” (their common conviction that “to be is to be *vorstellbar*” applied in opposite ways). Pure Insight concentrates on the necessary identity of all self-consciousness, and Faith upon the absolute “being” of all rational essences in God—their positive community. We can see already that in any conflict between them, the self-conscious moment which comprehends Spirit as a moving process must triumph. But we can see also that no simple triumph will be final, since Pure Insight, being “pure,” has no content. Its only concern is with the Concept of rational Self-Consciousness as the living and moving *form* of universal Reason. That is why Hegel’s careful account of the properly *rational* status of Faith is important. The content of Faith is the proper content of Reason.

Faith is a mode of thinking; and since it is “pure consciousness not pure self-consciousness,” it is a form of the Understanding. It takes itself to be thinking about a world outside or beyond the thinking consciousness itself: God’s Kingdom of “rational beings” or “essences.” We know already, however, that *Vorstellungen* are interpretations that exist only for the rational self-consciousness that formulates them. When Faith projects its thoughts in the *Vorstellung* of a substantial community of “rational essences” (i.e. Heaven) it is thinking with an impossible intention; it is trying to think of a *world of self-things*. This world can exist only “in the element of pure Self-Consciousness.” It is not, and cannot be, something other than self-consciousness.

Faith does, indeed, know that it is operating “in the element of pure self-consciousness,” for it asserts that “in God we live and move and have our being”; and by “God” Faith means precisely the absolute self-consciousness—or the “element” in which we live and move. But Faith does not know what the universality of Self-

Consciousness is (i.e., how it can “be”). That is what it has to learn from Pure Insight. It does not realize that “thought-essences” cannot be *presented* in the element of pure consciousness, in the way that things are presented in the element of empirical consciousness. We have seen that that mode of presentation is itself absolutely contradictory. Heaven and Hell are as “imaginary” as the beautiful world of the Opera.

Pure Insight resolves all the objective differences of the world of pure consciousness into the identity of the absolute Self. But as a concept of God this absolute Self of Pure Insight is completely inadequate, because it is a pure form, and hence completely empty.⁶

- 4./530. Both faith and insight are modes of thought and of retreat from actuality. So they are (1) in and for themselves; (2) related to the actual world; (3) related in thought to one another.

This paragraph sets the agenda for the discussion that follows. Perhaps the only point to be explicated in it is the way in which Pure Insight is withdrawn from or “returned out of” the actual world of Culture. Jean-François Rameau is very much a part of his culture. This has the important consequence that his absolute contempt for it is equally contempt for himself. The withdrawal from the cultural world into pure consciousness overcomes the contradiction of this self-contempt. Rameau insists that “a certain dignity attaches to the nature of man that nothing must destroy.”⁷ This is the self that is contemptuous of the ignoble flatterer and the world of flattery. Rameau’s departure to the Opera signals the withdrawal of this self from both flattery and contempt. His insight is necessary and universal. The conversation with *mein Herr Philosoph* is the beginning of the active transformation of the world that has produced it. Contempt turns into the project of salvation through enlightenment. Young Rameau would laugh if we took his revolutionary hope seriously; but Diderot—the thinker who comprehends both Rameau and *mein Herr Philosoph*—was serious enough. His is the “pure consciousness” that is now the “subject.”

Faith always insisted on the need for withdrawal from the world, and Rameau’s claim that every day is another dollar in the bank of experience is an enlightened rendering of “laying up treasure in Heaven.” So the two shapes of thought-withdrawal stand together in opposition to the actual world. We must observe first, how each of them “sets itself forth” (*sich darbietet*) as “in and for itself”; then how each relates to the world of ordinary actuality; and finally how they relate to one another. We shall begin with Faith; and as soon as we reach Pure Insight we shall find that our Judgment-Concept has completed itself, and the new phase (of “experience”) must begin.

(b) *The Gestalt of Faith (Pascal)*

- 5./531. (1) The self-sufficient Being of Faith is the real world raised into the universality of pure consciousness [i.e. God in his Kingdom]. For us God’s three persons are stages

in the evolution of the actual world; but for faith, he simply is and reveals himself by stages.

That Faith “does, of course, have its content in the element of the pure Self-Consciousness, in the same way [as Pure Insight]” (par. 529) is powerfully underlined when Hegel says here that “the side of *being in* and *for self* in the *believing* consciousness is its absolute object.” The assertion that Faith in and for itself is its own absolute object has to be interpreted in the context of the doctrine that “we live and move and have our being” *in* God. If we start from there we can make sense of the very peculiar assertions that follow.

“According to the concept of Faith its object is nothing but the real world raised into the universality of pure consciousness.” This is certainly the concept of pure consciousness that we have methodically arrived at. But how can it be reconciled with any familiar concept of the object of Faith? The answer is that it is a philosophical translation of the main article of the Faith: that God became Man “to the end that all who believe in Him may be saved.” This entails that the *Gegenstand* of Faith is not just the “other world,” but “this world, raised into the other world.”⁸ And when we reflect that the reduction of all finite experience to contradiction produced the transition to “pure consciousness” by rolling up all objective reality, all of the “actual world,” into the finite judging consciousness, we can see that the “world” of “pure consciousness” is the universe of mutually contradictory (and self-contradictory) judging selves inverted into the unity of the absolute consciousness that is both the “Body of Christ” and the universal self of Pure Insight.

On the side of Insight this universal Self is no longer self-contradictory or self-contemptuous, precisely because it knows itself to be universal; it embraces all judgments equally in the last judgment of rational Enlightenment. On the side of Faith, God is the absolute Self “in whom we live and move and have our being”; identifying the God of Faith with the “Kingdom of God” in thought, is Hegel’s way of distinguishing Faith as “consciousness” from Insight as “self-consciousness.” Our living and moving in God accounts for the claim that Faith “has its content too in the element of pure Self-Consciousness, of course” (par. 529); and this enables us to recognize the underlying identity between Faith and Pure Insight (which would otherwise not be at all obvious). “Pure Self-Consciousness” is both the Church Triumphant in Dante’s Rose, and the Brotherhood of Man brought to fruition by the Enlightenment.⁹

The rest of the paragraph is a programme for the interpretation of the assertions of Faith in accordance with the logical relation between the world of actuality, and that of “pure consciousness.” It is the identity implicit in self-estrangement that is the determining factor. There are not really *two* worlds, there is only one world *doubled*. This “doubling” is exactly what distinguishes Faith from Religion proper, just as it distinguishes Insight from proper rational comprehension.¹⁰

It would not be sensible to discuss the “organization of the world of Faith” in abstraction from the concrete details given in the next paragraph. But the comment that for Faith the moments form an eternal triad which has mysteriously

happened to move in its relation to the actual world, whereas for us the sequence is *necessary* (and therefore the motion is *essential*) makes a logical connection with the Unhappy Consciousness (see pars. 214–215); so a very brief review of the relation between Faith and Unhappy Consciousness is needed here.

The designation of the Body of Christ (the community of the faithful in God) as the object of Faith “in and for itself” makes Faith into the *third* relationship of the Changeable Consciousness with the Unchangeable. The Unhappy Consciousness reached its stably reconciled shape in the maintenance of the second relationship (voluntary dependence on the living Savior) through the “apostolic succession” of Peter and the Popes. Anyone (and specifically Dante) who can at need dispense with the mediation of a divinely ordained priesthood, is in the *third* relationship.¹¹ In theological terms, the crucial distinction is between those who rely on the chain of direct connection with the “shaped Unchangeable” and those who put their faith in the “witness of the Spirit” present always in the community here and now. One does not need to know the history of the Church in any great detail, to be aware that this distinction is not directly reducible to a historic succession of different confessions.¹²

- 6./532. First, God is absolute being as Substance; but secondly, he is the Son who sacrificed himself. Third, he is the Spirit of the Risen Christ.

After the difficult identification of God with the thought-world, the specification of the moments of the Trinity is relatively orthodox. But we are given a clear indication that the three Persons are to be identified with the moments of Culture, since Hegel begins by making an explicit parallel between God the Father and State-Power or the Good. This implies that the Son is analogous with Wealth. Hegel may well have wanted to point this out without saying it. What the Spirit as Third Person is analogous with is not obvious; but both the sequence of the three “moving masses,” and the history of Power and Wealth imply the right answer.

Here (as in par. 531) the ontological *priority* of Spirit is insisted on. God *is* Spirit, and His three Persons are all “spirits that have returned into themselves.” This directs us back to the parallel between the “masses” of Culture and the four elements. Spirit is not really *third*, but rather both first and fourth as it was there (par. 492). We should think of the Body of Christ as the whole, for which the Father represents the unifying *authority* or law of its public or substantial being, the Son represents the cycle of private life (and death), and the Spirit represents the universal diffusion of Insight as Enlightenment.

When we make this parallel we are already embarking upon the second “side” of Faith in the agenda set out in paragraph 530; and Hegel is now almost ready to pass on to that. What he says in paragraph 533 shows that he regarded the scholastic-theological doctrine of the Trinity as the strictly estranged mode of “pure consciousness.” In this aspect, the content of Faith is a mass of purely objective thoughts. This provides a justification for characterizing Faith as the “world of pure consciousness”; but it is also the reason why the assertion that the world in

question is just the *actual* world is so disconcerting. The universe of theological doctrine is about as far removed, or as radically *estranged*, from the actual world as it can be. But the sundering of the actual world from “the Beyond” belongs to Unhappy Consciousness in its “*second* relationship.” *Faith* (though it is estranged from *itself* as knowledge) is not estranged in that *actual* way. As a mode of thinking it mediates the radical sundering of “this side” from “the Beyond,” and because it involves actuality it does achieve “objectivity” in its own way.¹³

- 7./533. As the eternal Trinity the being of these Essences is the *thinking* of their oneness. But beyond that this Trinity of Spirits lives and moves in the actual world.

According to Aristotle, the life of God is the intuitive knowing of intuitive knowing.¹⁴ Hegel’s articulation of the formal doctrine of the Trinity (“changeless, eternal spirits whose being is: to think the unity that they constitute”) makes this peculiar formula a bit less intuitively opaque than it has always seemed to me to be in Aristotle’s text. But I do not think it is a really sound formulation of Christian doctrine (and it is certainly not an adequate one) because the New Testament puts far more emphasis on loving than on knowing, so that the early Fathers who formulated the doctrine of God’s Trinity naturally envisaged it as an eternal *love* relation, rather than a relation of knowing.¹⁵

The relation of perfect knowledge and mutual recognition, however, is logically involved in the Divine Love (and sublated in it). As I read him, Hegel thinks that the doctrine of Divine Love can only be explicated at the level of Religion proper. It is only the Aristotelian God of pure self-knowledge who does not need the finite world absolutely, so that the movement of his love towards it is a mere “happening.” Thus the World of Self-Estrangement is not yet logically entitled to a God whose essence is Love. That essence cannot be adequately comprehended by Faith (as a mode of knowledge at the level of “pure consciousness”). Faith does indeed speak of God in that higher way, but that uncomprehended concept is the moving force of further progress. Our task as logical scientists of “experience,” is to observe accurately both what Faith understands and what it does not understand.

The fundamental position of Faith is that God is completely self-sufficient as the *necessary actuality* of pure thought. But in this self-sufficiency he could never have become known to the finite selves who know themselves in him—“the essence . . . would remain foreign to self-consciousness.” It is only by Faith that we know that God has acted and does act to maintain the actual world of finite experience: “The *kenosis* (*Entäußerung*) of this substance, and then its Spirit [in the Church] has a moment of actuality.” The absolute estrangement of what can be understood (God’s self-sufficient perfection) from what is certainly known by Faith, but not understood (the realization of his love in the movement of finite self-sacrifice and return to self) is the divided or alienated character of Faith itself.

Faith is a species of “knowledge” because it is genuinely existential (or actual) thinking. All of its terms have reference to actual experience in this present world, and this actual life. The Unhappy Consciousness was *Andacht*, Devotion; it thinks

abstractly about another world, and another life. In its *Andenken*, its reverent commemoration of the One in whom that other “Kingdom” and that other life were once present here and now, it comes to the verge of actual concrete thinking, the thinking that begins with self-certainty. Faith has that self-certain foundation; it knows that the Kingdom of pure thought, and the life of true salvation, is “within.” But it remains a “species” of the Unhappy Consciousness too. It still has an estranged concept in which the “inner and outer” worlds, the “Kingdom of God” and the “life of this world,” are opposed. The Kingdom of “pure thought” is self-sufficient, the inner life is enough. But that is contradictory, because living is acting, and doing God’s work here and now is the happiness of Faith. The “third relationship” of the Unhappy Consciousness has replaced the second one; but the “first relationship” remains the “element of the whole” (see par. 210). Faith lives in this contradiction between its “unhappy” concept and its “happy” experience. The Insight that appears as its enemy, is its own thinking motion (in which the contradiction is resolved through the self-realization of speculative Reason). “Faith” and “Reason” (the subjective Reason of Hegel’s chapter V, which appears here as Insight) are simply the opposite sides (the content and the form) of actual Spirit. The contradictory situation sketched in this paragraph, and made explicit in the next, is the key to the helplessness of Faith in its struggle with “Enlightenment.”

- 8./534. (2) God is *in* the world, but also the world is fallen and opposes him. Faith does not *laugh* at this (like pure culture) but strives to *conquer* the world by *devoting* itself to God [cf. par. 228 second half and par. 217] unceasingly in “service” and “praise” [pars. 219–222]. The community is “saved”; but the singular consciousness cannot experience complete fulfilment in this life now and here. God came and *died* for me, but far away and long ago [cf. par. 217]. Still he rose again and he is present even now in the inner world of Faith.

Now that we have arrived at the second stage of the agenda sketched in paragraph 530—the relation of Faith with the actual world—we can see that it is precisely Faith that Rameau’s insight has to turn into, in order to become active in the salvation of its fallen world. Faith makes the very same appraisal of the world that Rameau offers. The actual world is a great mass of vanity. Rameau’s witty spirit must turn inwards and recognize that its human dignity comes from its destined unity with God. Absolute Culture must stop laughing and admit its own “unhappiness.”¹⁶

The continuity of the present discussion with the section on Unhappy Consciousness—the identity in difference signalled, for instance, by the description of the three Persons of the Trinity as “changeless (*wandellose*) Spirits” in paragraph 533 (whereas *das Unwandelbare* in par. 208 was an “essence”)—becomes even more evident here. This second “side” of Faith corresponds to the moment of “desire and labor” in the Unhappy Consciousness. We have already dealt with the desire of the Noble Mind for the Good, and its labor for the State-Power. In the realm of pure consciousness Faith overcomes the inversion of desire and labor into selfishness—that principle of Wealth which was evident enough in the actual world of Culture, and which tormented the Unhappy Consciousness. But as far as the actual

world of culture is concerned, Faith is still recognizable as the Unhappy Consciousness without its despair; what it now “knows” gives it confidence that the goal will be reached.

Otherwise, the singular consciousness is in the same situation as before. The doing of God’s Will is an endless labor, and the Kingdom of God is always coming, it is never here. Faith “serves and praises God” just as the noble consciousness serves and praises the State-Power. But whereas the Unhappy Consciousness needed a human mediator, the faithful consciousness knows that God is present in the community; and the community (not as the voice of an Other, but as the sustaining “universal self” of pure consciousness) is already in communion with the Church Triumphant. Every Christian can be her own priest.

But it is only in the *inner* life that this blessedness is experienced; Faith cannot pretend to itself that the actual world is in any way sanctified. Actuality is “spiritless”; there is no sensory intuition of union with God. Faith is in perfect agreement with Pure Insight that *pure* consciousness must *be* pure; there must be no sensory impurity in its pure thinking. Again we can see why the triumph of Enlightenment is inevitable, since it is still taken for granted that the actuality of thought is in *Vorstellungen*. And since the Enlightenment triumphs in France, we can also see that it would be a mistake to think that Faith is only a Protestant phenomenon. The whole world in which the Enlightenment triumphs accepts both the primacy of the “inner life” and the essential alienation of the inner from the outer life. Faith is the Unhappy Consciousness that “has the joy of finding itself in Spirit, and becomes conscious that the singularity is reconciled with the universal” (par. 210). But its goal is not reached perfectly in the present life.

This alienated conception of the inner life of thought is exactly what makes Faith superior to the contemptuous consciousness of “absolute Culture.” Rameau is in a state of *self*-contradiction, because he cannot recognize any actuality except the life that Reason obliges him to despise. Faith despises the world, and the self that is in the world, just as much; but it has found a place to stand in the other actual world, the world of pure consciousness.

So Faith is not the “honorable” consciousness that is reduced to speechless silence by Rameau; for it agrees with him from the first about “this world.” But it has a “doubled world,” and it can stand firmly on the other side. Logically, Faith’s thought-world is the “experienced result” of the estranged world of Culture. Historically, however, by the time that the cultural experience is complete, and Rameau appears, Faith has been reduced to speechless silence (not by Rameau but) by Pure Insight. Pure Insight demonstrates that Faith cannot say anything positive about its *other* actual world either. The nemesis of Faith is that its own direct access to the inner life, and to the saved community of that life, is through Pure Insight. For Pure Insight is the thinking Self, the active Concept of pure consciousness. Rameau is the *appearing* of “pure thinking” in “actuality.” The return into thought is the logical result of his “experience.”

- 9./535. (3) Faith is the *object* of Pure Insight. Insight is the actuality of the *Begriff* as inner. We must now look at the same three sides of Insight.

Faith is conscious of its thinking status negatively, for it does adopt the policy of rigorously rejecting what is *not* “thought.” It keeps itself “unspotted from the world.” We can recognize this attitude, for instance, in Pascal’s *Pensées*, as well as in the iconoclasm of Cromwell’s Puritan army breaking the statues and whitewashing the walls of churches. Pascal is more likely to be in Hegel’s mind than any English experience, but it seems clear that the consciousness-raising policy of the New Model Army belongs to the level of Faith rather than that of Culture. Both Faith and Pure Insight are the “result” of Culture; but the cultural process has to reach the limit of absolute contradiction, before we can clearly observe their logical connection. In experience the two extremes of Faith and Insight are born independently, without any clear awareness of their relation either to Culture or to one another. *We* need to observe “absolute Culture” in order to comprehend that Pure Insight is the living soul of Faith, and that the realization of Faith’s “content” is the goal of Insight.

Salvation *from* the world is just what Faith wants, because it rests on the “pure insight” that spirit and matter are absolute opposites. Faith *has* Pure Insight. This is a logical truth, for without the sharp intellectual sundering of spirit from matter in actual experience, it would not be Faith but still Unhappy Consciousness. But Faith does not know what the “purity” of its insight is. The one who has Faith knows, for example, that “having faith” is a matter of insight into God’s Word; and that no matter how much help one may get from others, one must achieve this for oneself in one’s own thought. But she has no clear concept of the self-conscious universality of this thought.

Faith holds hands with Reason on the right; and with Unhappy Consciousness on the left. The *book* that it must use its own insight upon, is still an external “counsellor.” So the “pure thinking” that has come to clarity about itself comes down upon naïve Faith (which itself makes a rigorous separation between the salvation of inward thought and the damnation of outward actuality) “like a wolf on the fold.” The story of this Assyrian onslaught—in which the “gleaming of purple and gold”¹⁷ will not be lacking, since the Enlightenment in its “truth” gains control of the power and wealth of the cultural world—is the topic of the next section of Hegel’s discussion.¹⁸

(c) *The Gestalt of Insight (Diderot)*

- 10./536. (1) Insight is the selfhood of Spirit. It seeks to turn all other forms of independence into *Begriffe*. it is self-conscious Reason [cf. par. 233] and it knows that [cf. par. 394].

As the universality of all selves in the Self of Reason, so Pure Insight is the selfhood of Spirit. It is bound to take a negative attitude towards Faith, because Faith is the simple consciousness of Spirit as Substance. According to the Preface (par. 17) the main thesis of Hegel’s book is that Spirit must be comprehended “*not* as Substance, but equally as Subject.” So this paragraph effectively tells us that the Enlightenment is the emergence of Spirit as Subject in *opposition* to Substance; and

that the task of speculative idealism is to integrate the opposites properly. The most important lesson of this paragraph is the clear identification of Pure Insight as the “certainty” of Reason; for this implies that the “truth” of Reason is to be found in the evolution of Faith rather than in the scientific conquest of Nature, as Reason naïvely supposed.

Reason becomes “Insight” when it ceases to be “instinctive” and becomes the self-conscious Category (par. 394). Insight “aims to sublimate . . . the independence both of what is actual [Nature and the Ancien Régime], and of what subsists *in itself* [the world of Faith].” But the concept of Utility—which is the guiding light of the Baconian scientific revolution that the Encyclopedists sought to bring to fruition—is the only full-fledged *Begriff* that the Enlightenment manages to formulate. The enlightened concept of God as the Supreme Being is only the final shape of thought’s *estrangement*; we must recognize Utility as the first phenomenal shape of the “pure Concept.” This means that Hegel’s own philosophy is genetically (and practically) rooted in the Enlightenment.¹⁹

- 11./537. But it is only a project when it first appears. It is a singular insight that has to be shared by everyone. It is “pure” (i.e. it can only be *rationally* communicated). Everyone is to know himself as and in the universal Self. That *everyone* must do this is a result of the actual revolution made by culture. The world of actuality retains the aspect of a spiritual animal kingdom in which every animal has its own place and special genius [cf. pars. 401–418]. But individuality claims more than a specific functional significance [cf. par. 489 and par. 403]. It has to *form itself* [as image or child of God]. This is the absolute task that “pure culture” has bequeathed. “Pure insight” reintegrates the disrupted world as the simple essence of universal enlightenment, the simple substance of Reason [cf. par. 446 and especially par. 447].

Pure Insight is the result of *Bildung* (as the discipline of Faith). The balance will now shift, and a new *critical* phase of *Bildung* will begin. As far as its actual appearance is concerned, Pure Insight evolves gradually. At the level of ordinary discourse, we can say that Faith evolves with it; for it is really the (reconciled) Unhappy Consciousness that provides the thought-world of Culture in its early stages. But Hegel has now shown that Faith and Insight are the antithetic moments of a Judgment-Concept. So he will now concentrate our attention on their fully developed opposition.

Faith is always a communal experience, if only because it is by definition the awareness of Substance. The best cultural marker for the transition from the “second relation” of Unhappy Consciousness to the “third” (Faith) is the vernacular translation of the Bible. I am not sure what “*fortuitous* and *singular*” phenomenon Hegel has in his eye as the first appearance of pure Insight. Looking back from the *Encyclopédie* as its universal realization, we might be tempted to pick on Bacon’s *Novum Organum*. The *one concept* to which Insight reduces everything in all consciousnesses is certainly that of Utility—which points back to Bacon’s dictum that “human knowledge and human power meet in one.”²⁰ But Hegel’s insistence that the only content of Pure Insight is the Self, and that Faith is the “object” of Pure

Insight, points towards Descartes' concern with the thinking self and its relation with God, rather than to Bacon's concern with power over nature. Certainly it is Descartes' *Meditations* that have a "fortuitous and singular" air. Both Bacon and Descartes show the same missionary urge to make their insight universal; they typify the "two sides" of Pure Insight as a *project* (*Absicht*). Bacon's scientific instrumentalism really does give "everything objective the significance of the *being-for-self*, or of self-consciousness"; and Descartes, who cheerfully admits the estrangement of thought from extension (or of pure consciousness from ordinary actuality) is anxious to make entry into the world of thinking self-consciousness as universal as possible.

Certainly it is Descartes whose *Meditations* have "pure Insight as content." Cartesian doubt leaves us with the pure thinking "that has no antithesis with an object"; and when it reaches "God" it is "not limited in itself." But the "second side of the intention" is more completely illustrated in Bacon. Descartes was not concerned with reducing the objective world to "*being-for-self*" (i.e. to utilities); and he explicitly denied any intention to transform the structure of society. But Hegel's "pure Insight" is set against "the distinctions of originally determined nature as well as those of objective spirit." These do not literally "tumble to the ground" until 1789, but in pure Insight's thought-project they have already done so.

It is interesting to see that Hegel clearly identifies the cultural world of naïve Faith as the "spiritual animal kingdom" of the Real Individuals; and at this point the "mutual violence and confusion" of real social life is allowed to enter the picture. The universalization of Pure Insight in the Enlightenment overthrows the conservative religious view (which can certainly be found in Luther) that God has ordered us in our "estates" by giving us all our different gifts. The Encyclopedists agreed with Bacon that there was a great mass of real knowledge hidden away in the secret lore of the different mechanical arts and crafts. Diderot wanted to collect as much of it as possible, and *publish* it. Differences should be sublated, and the common patrimony of Reason should be available to all.

In the normal evolution of English speech the Latin word *ministerium*, which covered every type of service needed by and offered to the general public, turned into "mystery" upon the Elizabethan tongue of Shakespeare's groundlings. This accident of language was also conceptually appropriate because every calling for which special knowledge and training was needed had become a closed fellowship with its own trade secrets.²¹ The *Encyclopédie* aimed to turn the "mysteries" back into public ministries. I have availed myself of this historic pun produced by the *Weltgeist*, in order to make clear the connection that exists between the conversion of government from noble service into salaried ministries, and the ideology of the wider world of bourgeois economic life. The irony of Rameau is directed at the conception of a public service that is confined to a privileged class, but well paid for; and this critical attack embraces every guild member who contributes something distinctive in the way of professional service or products for sale in the marketplace.

In its relation to the actual world of Culture, therefore, Pure Insight is directly continuous with the evolution of the *noblesse d'épée* into the *noblesse de robe*; and

“absolute Culture”—in everything except its self-contemptuous aspect—is the final stage of the work of Insight itself in the cultural world. The downfall of the word *espèce* into an expression of contempt, and the emergence of the “absolutely qualitative” distinction between the dignity of the self and the insignificance of things, the distinction between mind and its instruments—or Faith’s original distinction between “Spirit” and “flesh” clearly understood—is the active work of Insight. All of the differences between Estates are reduced from divine ordinances to accidents of fortune. The only differences recognized are in levels of rational capacity and understanding. The social ideal of Insight is that of “the career open to the talents.” The only “other” that Insight recognizes is *intellectual capacity*—i.e. the “other” is itself.

It is clear that “equality of opportunity” and “the career open to the talents” are the *Sache selbst* with which Individuality is satisfied as “something universally valid, namely as [fully] cultured.” What the “non-actual *Sache selbst*” is, we must discover by inference. If we were allowed to give it a *religious* interpretation, we could identify it as Mrs. Alexander’s God who “made us high and lowly, and ordered our estate.” But “Reason” has no religion; so we must identify the “non-actual *Sache selbst*” as the conventional attitude. It is that “wisdom of nature” to which the “honorable consciousness” appeals, in its attempt to prevent the downfall of the “actual world” of the privileged classes.²² People like Mrs. Alexander—who are plentiful in every social world—will of course use the older religious language of Faith; but that is now dismissed by the enlightened self-consciousness as “superstition.”

Pure Insight lives in the kingdom of man, and recognizes “the perfectibility of man.” The Reason that *knows* it is “all reality” is what sets Mary Wollstonecraft’s *Rights of Woman* beside the “Rights of Man and Citizen.” It is as active and as unselfishly committed, as it is optimistic and confident. In this respect Insight is at the opposite extreme from Rameau’s laughing hopelessness. Rameau does part of the work of Pure Insight; but his “absolute Culture” is only a sublated moment in the gospel of Enlightenment. It has to go through the double inversion which makes it first a genuine *faith* in the Beyond, and then turns it into the insight that the Beyond is simply that *inward* life of thought which all rational beings share equally. But the overarching presence of “Self-Estrangement” makes the basic thesis of Insight into the “infinite judgment” of Observing Reason: the universal Self identifies itself directly with the universe of finite things.

Insight can formulate the “infinite contradiction” *purely* because (unlike Rameau) it is no longer caught up in it. It is the spirit of universal Enlightenment which received its most famous definition from Kant:

Enlightenment is man’s release from his self-incurred tutelage. Tutelage is man’s inability to make use of his understanding without direction from another. Self-incurred is this tutelage when its cause lies not in lack of understanding but in lack of resolution and courage to use it without direction from another. *Sapere aude!* “Have courage to use your own understanding!”—that is the motto of enlightenment.²³

VI B.II: The Enlightenment

The formulation of the Concept of Insight “in and for itself” is what results from the dialectic of Bildung. The Concept of Bildung is now complete, and its experience as a Judgment can begin. Pure Culture found its simple inversion in Faith, and its comprehensive inversion in Pure Insight. Now therefore the experience of this result can begin. This experience is the evolution of a different kind of Bildung in which the Pure Concept reforms Actuality; previously it was the conscious self-reformation of the actual self that formed the Pure Concept.

At the methodic level of continuous conceptual evolution we have only arrived at the formal Concept of Pure Insight. This must complete itself by comprehending its own antithesis (the “impure insight” of actuality). Only when that “struggle” is complete, shall we reach the comprehensive Concept of the Truth of Enlightenment. Our commentary aims to display the methodic continuity of Hegel’s Science as fully as possible. So we shall continue to focus attention upon the immediate flow and sequence of the argument. We do not need a new section heading of our own at this point because the exposition of Insight continues in direct parallel with that of Faith.

- 1./538. (2) Insight’s relation to actuality must be characterized before we turn to its [battle] relation with Faith. The insight of actuality is inverted, and its projects are impure.

There is a natural temptation to regard paragraph 537 as the beginning of Hegel’s discussion of the “second side” of Pure Insight. But it is clear from what Hegel says here that that paragraph is the climax of the discussion of what Insight is “in and for itself.” “In itself” Pure Insight is the rationally courageous project of an individual thinker; “in and for itself” it will be the universalized awareness of human rational equality and perfectibility. All of the references to the actual world in paragraph 537 are contributions to the negative definition of Insight, by contrasting it with what it is not. For the most part, the aim is to show that in its fully developed shape Insight is the “Reason” of chapter V.

The actual definition of Pure Insight “in and for itself” is the climax and result of the first stage of “B. The Self-Estranged Spirit: Culture.” That first stage was called “The world of Self-Estranged Spirit.” The estranged world had two “sides”: cultural actuality and pure consciousness. Pure Consciousness itself also has two estranged “sides”: Faith and Pure Insight. The methodic progress by double inversion continues at every stage. “Absolute Culture” is directly inverted in Faith, and doubly inverted in Insight. Faith is directly inverted in Pure Insight as a project, and doubly inverted in the realization of Insight as universal Enlightenment. Hegel is careful to show us that the universal realization of Pure Insight *envelops* the “bad infinite” breakdown of Faith: the “Truth of Enlightenment” brings the Heaven of Faith down to earth.

With the definition of Enlightenment, the double inversion of Faith has been completed at the conceptual level, i.e., in the sphere of “pure consciousness.” The Enlightenment is an ideology that calls upon us all to be for ourselves what we are in ourselves: to do it now and here, and not wait for Heaven to unveil for us the

pure essences that we really are. This is the logical climax of “pure consciousness.” But in the evolution of the total Concept of Culture it is both the moving point at which the Concept splits into a Judgment, and the agency that brings about the rupture. Faith itself, on the other hand, is what holds the world of the Self-Estranged Spirit together.

Thus the two sides of pure consciousness serve to explain, on the one hand, why Culture is a stable world-shape, and, on the other hand, why it must give place to a new one. The Enlightenment and the Revolution are the real process by which the new world-shape arises.²⁴ So, in order to display the structure of the total world-concept of Culture properly, the “phenomenology” of Pure Insight must be interrupted after the simple statement of its Concept. The aesthetic “insight” of the actual cultural world must be characterized briefly before we study the experience of pure consciousness. Why the “second side” with which the new phase of Culture begins is a relation with what is “impure” and “inverted” we shall see in the next paragraph.²⁵

- 2./539. We have already mentioned the *peaceful* consciousness of pure culture [522]—this is pure insight. It has no *partisan* insight, but it is a *third* in the dialogue in that it puts the whole story together and tells it to us all.

Hegel himself tells us here that the model spokesman for Pure Insight is Diderot as the *author* of *Rameau's Nephew*. The insight of Rameau's “pure culture” is the sum of all the “impure” and “inverted” insights in the world. All views are valid, because all are possible for some rational self. But a peaceful, *non-partisan* view of this world of partisans, is possible for the consciousness that is no longer one of the “clients” among all the competing interests. This consciousness has no “particular” or “sundered” (*besondere*) insight. It apprehends the whole picture unselfishly, and so turns the struggle into the insight that the world is there for us to use and share rationally. Our Reason should be directed towards the general interest. We can all be brought to see this, and our *Bildung* should lead us to it. Reason will then be the actual *Sache selbst*. This “tranquil,” non-partisan consciousness, and this unselfish goal, is what Diderot himself has. His standpoint is the comprehensive grasp (and consequent inversion) of the “experience” of Culture that Young Rameau has.

Rameau is tormented by the recognition of how inevitable self-interest is. But it is his *world* that is undergoing Crucifixion. As far as Rameau himself is concerned it is an exaggeration to call this torment “the feeling of being on the rack at every moment of being [*Dasein*] and of having every bone broken.” In the world of triumphant Enlightenment there will be no Faith left to experience “pure culture” as if it were a torture. Rameau himself is an india rubber man; he stretches to fit the rack and his bones do not break. He does say at one point that the torment of his self-contempt is such that “It would almost have been as good not to have been born”; but in the next moment he is telling *mein Herr Philosoph* “not to take my condition too much to heart.”²⁶ This inconstancy, which Hegel here calls

“the raving of this instant,” is his *real* despair; and he *is* in despair, just as Diderot’s consciousness is really tranquil.

Mein Herr Philosoph produces *Kotseele* as his last word for Rameau. *Kot* is a nice basic monosyllable that can be used for any kind of “muck”; but just as English farmers use “muck” as a regular synonym for manure, so the Germans use *Kot* typically for excrement. To call Rameau—with all his musical appreciation—a “shit-soul” seems exaggerated. But all of that operatic enthusiasm is “muck” compared with the editing of the *Encyclopédie*. Diderot means it, and Rameau’s only response is that he said it first; this both shows that self-contempt is his final stance, and establishes his agreement with Luther at the limit of Unhappy Consciousness. Diderot, as the author who put the ravings of all the moments together in this pattern, recognizes that Rameau’s insight is absolute (though inverted); if it is translated back into a *universal* insight it can become an engine for change. So Diderot is tranquil precisely because his indignation as a participant is a pretence, while his indignation as author is the self-certainty of Reason. This paragraph demonstrates clearly the difference between Diderot (in or out of the dialogue) and the “honorable consciousness” of someone like Robinet.

- 3./540. This will resolve all the confusion. For culture has already resolved itself into this critical whirlwind of talk; and the individual talker knows he is as vain as the world founded on all these verbal distinctions. By writing the dialogue Diderot turns the wit of the single critic into universal enlightenment.

- 4./540a. Faith in the essence, however, remains to be overcome.²⁷

Pure Insight is so far in agreement with “absolute Culture” that it can declare that “the interest of having a content for this arguing and chattering, alone preserves the whole and the masses into which it is articulated.” Hegel is writing with the advantage of hindsight, and he wants to present the *ancien Régime* as a mere social façade that was rotten to the core. But we must remember that we are observing how this world of culture appears to itself and why. No actual society exists simply in order to make a cynical conversation among the chess players in a café possible. People who could believe that will find themselves riding to the guillotine; for they themselves are just part of the café conversation.

But the speech of pure Culture does present the whole existing structure of society as a system of irrational privileges in which only money talks; and it condemns its own irrational selfishness likewise; and the (ideal) perishing of the whole babble of conflicting judgments about society makes room for the genuinely “pure” Insight of the Enlightenment. This is what is achieved by Diderot in writing the dialogue. But the belief that revolutionizing and reforming the world of pure thought is enough to reform the actual world is mistaken.

We might even wonder whether the recognition that all *actual* judgments are subjectively biased affords any *valid* transition to the insight that in universal Reason we have an objective standard. This is simply a matter of logic; if we can *see* Rameau’s point, then Reason *is* the actual *Sache selbst*. To hold that the objective

truth is only the formal concept of a reality to which we have no genuine access is to circle back to Scepticism. What may still be doubted (and what has indeed shown itself to be false) is whether the absolute standard of Reason can be embodied (or “realized”) in the singular consciousness. In that respect, Rameau will eventually prove to be wiser than his tranquil author.

All that Hegel does in paragraph 540a is to make the transition from the second to the third aspect (see par. 535) of our consideration of Pure Insight: its relation to Faith. Pure Insight takes its own realizability to be intuitively obvious—in spite of Rameau, and partly because Rameau’s self-contempt is successfully conceptualized in Diderot’s dialogue. It is Diderot’s self-possessed self-concept that advances into the realm of thought to overthrow the God and the Heaven of Faith.

We can see now, that the world-progression by “determinate negation” is from the Noble’s World to the Courtier’s World; and from the Courtier’s World to the World of Contradiction and Self-Contempt. This is determinately negated by Enlightenment (which has Faith as its “estranged” internal *Gegensatz*); Enlightenment actualizes itself as a Concept in the “Truth of Enlightenment.” Only *then* does its “experience” take place (in the Revolution and the Terror). The problem in following the methodical sequence arises from the estranged character of this “world-shape.” Faith holds on to a speculative identity which it cannot conceptualize properly; and Insight is the Concept that still contains the “infinite judgment.” This contradiction must be resolved before Faith can be conceptualized successfully (in VI C).

VI B.II(a): The Struggle of Enlightenment with Superstition

Hegel has articulated his “B II” and “B II a” in two conflicting ways. The headings themselves are coordinate with “I” and “I a.” But according to the programme of paragraph 530 they are both stages in the unfolding development of I b (Faith and Insight). We have organized this chapter of the commentary in accordance with this implicit logic. So in this note we must examine the explicit logic of Hegel’s own headings.

The simplest and clearest analysis is: First position: Struggle; first inversion: Peace; second inversion: Revolution. But this analysis proceeds at too high a level of generality, and the concepts are simply “actual” not “actual-theoretical” as they ought to be. So the object-level sequence of concepts will not fit neatly under this schema. The concept we have reached is “Universal Insight” as the result of the actualization of Culture through the discipline of Faith. That concept contains within it the antithesis of “pure and impure” Insight. We are now embarking upon the “experience” of that antithesis within the Concept. First, we shall have the formal experience, i.e., we shall watch the Concept clarify and explicate itself for itself; then, in “The Truth of Enlightenment” we shall have the real experience: the clarified and self-realized Concept will divide internally. At that point—where its emptiness is fully apparent—the “second inversion” of the whole process of Culture can ensue (in “Absolute Freedom and Terror”). The Concept of Universal Insight reaches back and envelops the whole system of “the World of Self-Estranged Spirit.”

When the “Battle” begins, the Concept of Faith, which has Insight as its necessary internal antithesis, has just turned over into the Concept of Reason, i.e., the Concept that can successfully mediate and comprehend this inner contradiction. That gives us the appropriate title for the next section of the commentary.

(d) *The Concept of Universal Reason*

- 5./541. (3) Scepticism, Observing Reason and Self-Actualizing Reason are subordinate shapes of pure Insight. For it is born of Substance, and *knows* itself to be Reason. Hence it has the self-confidence to attack Faith and the God of Faith. This attack is only on the *form* of Faith, since Faith is consciousness of the Substance and Insight is the Substance as Subject. The struggle will give Insight a content.

At the beginning of his discussion of the “relationship of Insight to Faith” in their own world of thought (par. 530, par. 535) Hegel confirmed that Insight is identical with the *mature* Reason of Real Individuality. Scepticism, Observing Reason (“theoretical idealism” here) and Self-Actualizing Reason (“practical idealism”) are the immature forms. Reason is now a World-Spirit. We are no longer dealing with a singular *Gestalt*, but with a universal community of Insight. This is “Enlightenment”; all the thought-substance of the older world of the “masses” with their “essences”: the Church, the State-Power, the Estates, etc. has been recognized as mere “superstition”—the left-overs of the Medieval “age of Faith.” When Insight is universalized, the substance of Faith disappears. All of its content becomes superannuated rubbish that has to be swept away.

The struggle to clarify this situation, is a “battle” in the realm of thought. Enlightenment has to avoid confrontation with the actual Church, State and social order. In its negative relation with them, it is bound to appear just another “partisan” (or “particular”) insight; but its project is just to be “universal light.” I have already said that if we refused to go on to use the standard of pure Reason positively (once we recognized that it is implicit in the “contemptuous” standpoint of Rameau) we would be circling back to the position of Scepticism. Rameau differs from the Sceptic in his unhappy awareness that being rational is a practical imperative that he cannot live up to. He has already come to grief at the first step on the path that Hegel sketched for “practical idealism” (i.e. Self-Actualizing Reason). He married a naïve young girl, led her a dog’s life for some years, and now she is dead.

One thing that one might do in the modern world on the foundation of a complete pessimism about the inescapable irrationality of practical life, is to become an observational scientist. But the rationally collaborative vision of scientific inquiry got its inspiration, its power of attraction, and its control of the necessary social resources, from the promise of a practical transformation of life. So any such scientific pessimist would willy-nilly become part of the optimistic forward drive of the Enlightenment. The rational observation of *human* nature, however, was the experience of a defeat just as radical as the experience of the “absolutely” cultured consciousness. So a return to the point of transition from Scepticism to Unhappy

Consciousness might prove inevitable. In one way or another the shattered consciousness of “absolute culture” must make the leap of Faith. The Enlightenment is a Faith.

Rameau’s doctrine that every moment of experience is another dollar in the bank of memory reveals how Insight can match the traditional Faith; but initially they are simply opposed. Faith has the whole bank of memory, and Insight is consciously spring-cleaned and empty. Bacon declares that “the wisdom of the ancients is the wisdom of boys and has the characteristic virtue of boys: it can talk but it cannot generate.”²⁸ But Bacon, like Hegel himself, valued experience in every shape. He is a Faustian thinker; he wants to move from theory to practice. It was the systematic attempt by Descartes to clear his mind of everything he had hitherto believed that uncovered the principle of Pure Insight: the Cartesian thinking self knows itself to be a “substance”; and its intuited finitude and imperfection refer it to the absolute thinking substance, God, as the necessary origin from which it was, as Hegel puts it, “born.” Both Bacon and Descartes would have agreed that “Faith and Insight are the same pure consciousness”; both wanted to establish the true Faith as a matter of Insight. Neither foresaw that Insight would fight a battle against Faith, insisting that it was really “superstition” and must disappear. If Descartes was the inventor of the criterion of Pure Insight, it was Bacon who forecast the rational content that Insight would generate for itself out of this clash with its “substantial” opposite. The “struggle” generates a rational content for Insight that appears to both parties to be independent of Faith altogether; and, indeed, it is independent. But just for that reason it will show itself to be quite inadequate.

- 6./542. The *battle* arises in the absence of this self-recognition however. Insight sees Faith as superstition, propagated by hypocrites in order to maintain political despotism (which unites the actual world with this ideal realm of error artificially).

The conception of the Enlightenment as a battle against the traditional religion (regarded as a mass of mere superstition) was by no means universal. But it was neither exclusively French, nor was it confined to the generation of Voltaire, Diderot, D’Holbach and Helvétius on which Hegel chooses to focus our attention. The earlier leaders of enlightened thought such as Thomas More, Bacon, Descartes and Locke were *reconcilers* of rational insight with the religious tradition. Historical circumstances even made More into a saint and martyr, though one can hardly suppose it was really the Apostolic Succession that the author of *Utopia* died for. But Hobbes was older than Descartes; and Spinoza, who was universally recognized as the greatest leader in the “battle,” was an exact contemporary of Locke. Hegel’s insistence on a French model—for it is D’Holbach from whom the conception of the existing order as a great conspiracy between kings and priests comes—is determined simply by his concern with the *ancien Régime* as the particular social order that ended so visibly in the Revolution.

Enlightenment is bound to *appear* as a partisan, because in Rameau’s world, the social order is run by partisan interests. D’Holbach’s *Christianity Unveiled* (1767)

speaks of an “eternal alliance” between “superstition and despotism”: “the priest subdues the subjects by the terrors of religion, so that the sovereign may be able to devour them.” In his *Common Sense* (1772) he quotes Montaigne’s analysis of the psychology of superstition: “‘Some,’ says Montaigne, ‘make the world think that they believe what they do not; others, in greater number, make themselves think that they believe what they do not, not knowing what belief is.’”

Montaigne’s distinction is the key to the “conspiracy theory of history.” The priests and kings, who have the “inverted insight” of Young Rameau, create the illusion that they are pious believers. But they only organize the “universal mass” of consciousness—the beliefs that everyone shares because they do not know what “purity” of consciousness is—in the way most advantageous to themselves:

Oppressed by the double yoke of spiritual and temporal power, it has been impossible for the people to know and pursue their happiness. As religion, so politics and morality, too, became sacred things which the profane were not permitted to handle. Men have had no other morality than what their legislators and priests brought down from the unknown regions of heaven. The human mind, confused by its theological opinions, ceased to know its own powers, mistrusted experience, feared truth, and disdained reason, in order to follow authority. Man has been a mere machine in the hands of tyrants and priests, who alone have had the right of directing his actions. Always treated as a slave, he has contracted the vices of a slave.²⁹

Hegel has already pilloried this conspiracy theory of history as the ultimate arrogance of the pure Heart—the “Frenzy of Self-Conceit” (par. 377). Here he treats it as the extreme form of the estranged intellect. In order to be effective in history at all the polemic had to have both an emotional and an intellectual side. For it is the pure *heart* of Faith that is misled by the priests according to the Enlightenment (and misled by the Enlightenment itself in the Frenzy of Self-Conceit). D’Holbach gave the properly alienated intellectual account of how the universal deceit operated. He insisted with his typical brashness that the human “conscience” could accept *any* customary content—the killing of aged parents for example.³⁰ Any reader of his *Common Sense* can soon discover that D’Holbach was sure that (precisely because the human conscience is so absolutely plastic) an enlightened education can make it perfectly rational. The difference between the Heart’s Law and Enlightenment is all in the “estranged” point of view of “Reason as Understanding.” D’Holbach does not have Rousseau’s faith in natural feeling, but he is perfectly certain that rational government can secure a perfect harmony between natural self-interest and the universal interest of Reason. The “honorable” desire for the approval of our fellows gives every rational atom this universal interest.

- 7./543. Enlightenment distinguishes the three aspects of its enemy. Stupidity and Superstition it can enlighten. *Selfish* insight it cannot touch, so it does not directly attack priest and despot. It must develop the natural Reason and love of honor of the bourgeois mass generally, and so take their power from its insightful enemies.

D'Holbach's works were published abroad (mainly in London). There are obvious reasons why a frontal attack upon the priests and kings united in this authoritative synthesis of politics and theology was not possible. The "enlightened despotism" of the *Ancien Régime* is a "synthetic conceptual unity" (par. 542). As we saw earlier Louis XIV's dictum, "L'Etat, c'est moi," is the same "infinite judgment" as "the Spirit is the skull." There is no living Concept here; there is only the *Vorstellung* of Reason that is offered by the authoritative resolution of the problem of the Unhappy Consciousness in the Confessional. Reason does not set itself up directly against this.

For the most part the Encyclopedists (of whom D'Holbach was one) spread their political and social doctrines by indirect methods. Their appeal to the educated audience—who are clearly the *spiritual* "mass" of Culture (in par. 492)—was intellectual and theoretical. Hegel calls the insight upon which Enlightenment operates *willenlose*. It is passively conventional. Pure Insight addresses the "honorable" insight of the cultured mass that prides itself upon its good sense and rationality; this respectable Insight is the self-deceit of the spiritual animal kingdom, where every Real Individual concentrates attention upon her own contribution to the public good. The Real Individuality of Culture (par. 489) has not yet risen into the sphere of pure thought. The "reality" of individuality there would be the conceptual comprehension of oneself not as this or that *espèce* of "worthy," but as a rational human being—a self possessed of enlightened common sense. This conceptual comprehension of one's own universal humanity is the "individuation" that Enlightenment produces. The Real Individuality of Culture is the *Dasein* of rational Individuality without its concept. The "rational self-consciousness that is not yet present as Concept" is the plain "common sense" that has to be "wrenched away" from its moorings in tradition—which is a mass of "prejudices and errors." "Being-for-self" is identical with "having a will of one's own." The honorable insight of the general public has no individuated will, but is content to maintain the whole system of ecclesiastical and noble privileges in a spirit of simple obedience to God and the anointed monarch. Thus the already cultured mass only needs *theoretical* Enlightenment in order to take possession of its own rational will. It is only a matter of "raising consciousness" to use a current expression that has its origin in the Enlightenment.

"Honor" is simply the enjoyment of the good opinion of one's community. D'Holbach's conception of rational education rests upon the capacity of everyone except those who are very stupid to appreciate the moral approval of others. This enjoyment of approval is a self-centred pleasure that makes every rational atom a member of the enlightened community. Thus "honorable insight" is conceived very differently from a community of the "Heart"; but they are "sides" of one "judgment."

- 8./544. .Insight and faith both know that the absolute essence is the Good. But faith thinks that the Good has its own realm, and renounces its own activity. Insight has to make it *realize* its own ideal self.

The relation between Insight and Faith now becomes *double* because of the “non-conceptual” character of Faith. As the sense of being substantially founded in a traditional community, Faith is mere “superstition”; but as the “naïve consciousness of absolute essence” Faith is implicitly identical with Insight. “Living and moving in God” has to cease being a condition of *resignation*, of not having a will of one’s own; for it is precisely this willing resignation that the selfish insight of the priesthood can manipulate in the interest of “despotism.”³¹

The faithful self *is* a self. It *has* a will of its own, and it has knowingly resigned it to God. For Faith, only the Will of God is properly rational; its own will is sinful. Implicitly, therefore, Faith is identical with the rational will of the Enlightenment; but its voluntary resignation is a surrender to superstition. If the deceit can be unmasked by Pure Insight, the faithful will can be moved to take possession of itself. The agreed rationality of “God’s Will” is the “element” in which Pure Insight can make itself real in place of the falsified otherworldly insight upon which the priestly deception operates.

- 9./545. So communication between them is easy. Insight spreads irresistibly and insensibly. One is only aware of it when it is well established; awareness comes then because of its revolutionary character. Faith only starts to resist when it is already too late (and anyway nothing can be done). The revolution need not be bloody, if insight has had time to spread properly, so the repression of isolated outbreaks is in its interest. Wisdom *is* a serpent.

From the point of view of Insight, what Faith regards as the “will of God” is just the universal community of Reason. This is our point of view, too, even though we agree with Faith about the *positive* character of human community (or “Universality”). So we can readily understand and agree with Hegel’s memorable description of the diffusion of the Enlightenment. Faith is already a memory by the time there is any resistance to Insight. Those who resist are conscious that in the triumph of self-consciousness as a *form* they have lost the content of Faith, the “essence” that gave a substantial unity to their old lives. But the loss must be suffered, before it can be felt. The rational selves receive their own Reason (“the simple self-equivalent essence”); but then they are *alone* in the world. This is what Hegel refers to as the “simplicity of the negativity that is reflected into itself.”

The sense of loss is well founded, but there is no going back. The self of Faith, the self that knows “the Kingdom of God is within,” must accept the consequences of this knowledge; which means first that it must accept the rational identity of the self that it is. The Enlightenment knows that it is proclaiming God’s advent as “Man.” The Kingdom of God will become our human kingdom. Bacon’s vision is especially important in Lamettrie. This return to the Garden of Eden is how the “simple knowing . . . knows its counterpart as sublated within it.” But the implicit doctrine of the natural goodness of man is also how “the self-equivalent essence develops into something opposed to consciousness, and reminds it of its former state.” Hegel uses the story of the brazen serpent raised up

by Moses in the wilderness to symbolize the impending repetition of the Fall and the expulsion from Eden.³²

In the meantime, the Calvinists may burn Servetus at Geneva in 1553. Giordano Bruno may be burned at Rome in 1600 and Vanini at Toulouse in 1619. But the suppression of these “isolated eruptions against the content of Faith” only has the effect of teaching the Enlightenment to be as cunning as the enemy. It learns to go underground, to hide itself from the priests and kings, and not to attack the established order of the actual world directly. The revolution in the actual world will come secretly and silently.

The existing order is to be taken by surprise. Rameau’s clowning is part of it; but the enlightened use of laughter is older than Diderot and Voltaire. It was Shaftesbury (1621–1683), I think, who suggested that some opponents should be laughed out of countenance rather than argued with. Laughter sheds no blood; so Rameau naturally hopes for a revolution that will come in that way. He foresees “the foreign god” giving the native idol

a shove with the elbow one fine morning . . . and bang! crash! there’s the idol on the ground. They say that’s the way the Jesuits introduced Christianity into India and China. And the Jansenists can say what they like, the political method that goes straight to the goal, without bloodshed or martyrdom, or so much as a queue of hair cut off, looks the best to my eye.³³

But what actually emerged from the cast skin of this “serpent of wisdom” was the Revolutionary Goddess of Reason; and she presided over the guillotine. So poor Rameau did not get the last laugh after all. The sight of this serpent brought death (not life like its Mosaic original).

(e) *The Negative Enlightenment*

- 10./546. But apart from this secret spreading in the dark, there is a great uproar in the daylight.

Since Faith has a double aspect (par. 544), Enlightenment has to have a double aspect likewise. Inwardly, it silently infects the faithful with self-consciousness. But outwardly this hidden operation of Enlightenment is accompanied by what Hegel calls (in *Faith and Knowledge*) a great “flurry” (or “hubbub”) in the cultural world.³⁴ It is only the flurry that can bring what has happened inwardly to light. All the *propaganda* of Enlightenment (of which D’Holbach’s works were a notable part) belongs to this hubbub. Thus it was obviously the *shock*-value of *Rameau’s Nephew* that made it significant. Voltaire’s ever-active pen was largely devoted to the making of sensations. All of this must be distinguished from the secret penetration of the vitals and members of the old idol itself.

Hegel gives an important hint as to how to identify the works in which the *secret* penetration of the idol is accomplished by calling it the “silent onward-weaving

(*fortweben*) of the Spirit.” This is the first appearance of a metaphor that he will soon use in an apparently opposite sense. Here he applies it to the penetrative activity of Enlightenment; soon he will use it to refer to the melancholy—and outwardly passive, or at least ineffective—brooding of Faith after its defeat in the open by the “flurry.” His point is that these seeming opposites are really identical.

For the understanding of the paradox it is helpful to recognize the source of the metaphor. Goethe used this same word (*Weben*) to describe the primordial activity of his Earth-Spirit: “In floods of life [*Lebensfluten*], in the storm of action/ I range up and down,/ I weave [*Weben*] back and forth!/ Birth and Grave,/ An eternal ocean [*Meer*]/ A changeful weaving [*Weben*]/ A glowing life,/ Thus I create upon the humming loom [*Webstuhl*] of time/ And fashion the God-head’s living garment.”³⁵

Hegel is here following in Goethe’s footsteps—I think the reference to the “Serpent” shows this. But the “new serpent of wisdom” is invisible to the worshippers of the old idol, because it is identical with the “Spirit of God” moving upon the waters in the primordial darkness before the creation of a new cultural world. What this means in concrete terms is that the agents of the secret spread of Enlightenment are writers like Malebranche and Pascal—writers who were quite sincerely and indisputably pious, but who certainly helped to raise Faith to the level of rationally critical self-consciousness. It is in Pascal, perhaps better than anywhere else, that we can see the confident weaving of Reason united with the melancholy weaving of Faith. Of course, there were also others, like Montaigne, who were not orthodox believers, but serious cultivators of the “inner life,” not propagandists in a noisy and flamboyant war upon superstition.³⁶

Rameau is a warrior in the noisy war. But his music—about which he is unmistakably serious, in spite of all the clowning and miming through which he expresses his own sense of failure—is the symbol for him of the inner life; and it is a musical revolution that he is actually speaking of when he prophesies the downfall of the old idol. He represents not a simple “inversion” of Faith but the moment when the comprehension of the “Truth of Enlightenment” begins.

11./547. In this uproar Insight negates itself and becomes merely sophistic criticism.

Once we recognize Pure Insight as the development of self-conscious responsibility, and Faith as the religious cultivation of the inner life, it is clear that the identification of Faith with a superstitious reverence for ecclesiastical traditions and structures is an error. Thus the *propaganda* of the Enlightenment—and especially D’Holbach’s sustained attack on the alliance of Church and State—involves a falsification of Pure Insight itself. The polemic is a direct *inversion* of what Pure Insight actually is in its silent and secret diffusion. In the public flurry, “the naïve consciousness of absolute essence” (par. 544) can recognize “something opposed to it” (par. 545) that is in fact just a libel upon it—the most “impure” Insight that is possible.

- 12./548. The insightful critic takes seriously the view that he is attacking something external (rather than a moment of his own being). The actualization of Insight is partly the clarification of this mistake and so the gaining of true *content* for Insight, and the overcoming of its alienated relation to actuality. This is the replacement of Faith by self-conscious actual Reason. But before this happens Faith can counter-attack against Insight as false and evil-minded sophistry.

In the overt “battle” relation against “superstition,” the Enlightenment becomes *partisan*, and so violates its own essence. As usual, Hegel approaches the self-contradiction of Insight on its formal side first—i.e. from our standpoint as scientific observers. This makes the argument harder to understand because it involves the use of a conceptual framework that the Enlighteners did not use. So the “contradiction” appears to be imposed on them by our way of looking at things; and what is worse, the contradiction or absurdity seems to be precisely in *our* way of thinking and talking, because the position of the Enlighteners is that of the most ordinary “common sense.”

But if we read this paragraph in the light of the next one, we shall see that the contradiction of which Insight is accused is not an ordinary one at all; and further that it is inevitable. The commonsensical belief in ordinary contradiction is exactly what is mistaken about the procedure of Pure Insight. The belief that Faith can simply be contradicted is just what is “contradictory” in the concept of Insight itself. The polemical Enlighteners do not have the concept of “determinate negation.” They do not realize that what is “wiped out” must also be preserved.

The enlightened attack on “superstition” is an attack on a certain kind of “thought.” But the idea that there is a purely critical or “free” thinking that is not a thinking of something—i.e. a kind of “belief”—is a logical error. This does not mean that belief cannot be suspended about some empirical question. To take the assertion that way is to look in the wrong direction. What is meant, rather, is that self-conscious thinking—the activity of “Pure Insight”—occurs in the context of some *categorical* beliefs; and Faith is the “consciousness” of these same beliefs. Faith, therefore, must not simply be denied, but reconstructed as the self-conscious formulation of these categorical beliefs. The struggle with Faith makes Pure Insight clearly aware of what its own categorical beliefs are; and it will turn out that, at this categorical level, the “impurity” and the “self-interest” are all on the side of the Enlightenment. For it is the pure rationality of the Enlightenment, its devotion to universal human welfare and the “perfectibility of man,” that is essentially this-worldly, secular and utilitarian. It is essentially negative towards the “inner life” of spirit and of pure thought. All of the self-interested manipulation of the cultured “mass” of the faithful, which it denounces as the bad intention that perverts the insight of the priests and despots, belongs also the Enlightenment itself. It is unwittingly denouncing itself.

By adopting a polemical attitude against the *bad* (otherworldly) insight of the people, and the perverse (selfish) intention of the despotic ideologues, Pure Insight actualizes itself. First, it makes Faith conscious that Insight is essentially identical

with its declared enemies. Neither Faith nor Insight can recognize itself in the other, so the actualization of Reason as the categorical identity of both sides comes into being quite slowly. At the end of this present “battle” each side will recognize itself in the other as “nothing.” Only after that, will the positive identity begin to emerge for Faith and Insight themselves. “Insight’s own self-recognizing Concept” is, in the first instance, the Guillotine.

At their first encounter, Faith can only recognize the *impurity* of the polemical Enlightenment. Everything that the Enlightenment says about Faith, Faith directly knows that it is *not*. The polemical accusation itself is a stimulus that spurs Faith to this self-knowledge, thus contributing to the secret or silently imperceptible diffusion of Enlightenment which is the side of its original “purity.” But the real spread of the Enlightenment, and the growth of the *categorical* identity, is not perceived by either side. Faith recognizes just that side of Enlightenment which the Enlightenment does not grasp—its identity with finite self-interest, with lying and bad intention. The content that Enlightenment itself finds in Faith, the errors and prejudices that appear to be an alien body of “thoughts” that must be cancelled and got rid of, are the content of enlightened insight itself—that natural selfishness is evil, and the love of our neighbor good, and so on.

This does not mean that there are *no* hypocritical priests or bigoted laymen. Who is a “hypocrite” or a “bigot” is a matter of ordinary empirical judgment where the concept ranges over good and bad instances. But the view that *all* priests are hypocrites, and all pious laymen are benighted fools, has its truth *only* within the perspective of a pamphleteer whose “insight” is perverse, and whose “intention” is bad.

- 13./549. Enlightenment treats the content of faith as pure insight, and on that basis declares it to be a simple error. Faith has *invented* this Divine Mind. But the existence of Reason is Enlightenment’s own truth, so Faith does not find the new gospel enlightening. The faithful one already knows himself in God; so Insight cannot “save” him. The faithful believer even knows that his salvation is *by* his faith. He does not see that it is his own faith that *produces* the saving power; but it is only through that faith that God becomes the saving “spirit” of the community: and this faith is only *one* moment in the process. It does not produce God, or the Absolute, which is in and for itself.

That the Gospel of Reason is identical with the concept of Faith is what Hegel seeks to show in this paragraph. Reason is the one “shape of consciousness” that has nothing analogous to Religion (par. 673). It knows *itself* to be “all reality” (pars. 233, 235). So when the (wo)man of Pure Insight (i.e. mature subjective Reason) meets someone who says that God is a spirit in whom we live and move, but who is “above and beyond” our world, she has to dismiss this sort of talk as a simple mistake. This divine spirit is just an alienated *projection* of the faithful believer’s own thinking. Thus, according to D’Holbach, the “God” of Faith is an imaginative projection of the human mind on a grand scale. But Pure Insight is itself the recognition of Reason as the universal community of self-consciousness; so the only real problem concerns how we ought to understand this “projection” of the universal community of the faithful in God.

“Insight” is the realization of the project of Reason. Reason experiences or encounters only itself in the object—i.e., in the world-order of other selves and things. “Faith” (as the experience of living and moving in God) is just this mode of experience expressed objectively (or as a mode of “consciousness”). What is distinctive in this “objectivity” of Faith is the characteristic of *trust*. Faith experiences God as another (greater) self in whom the believer has perfect confidence. The certainty of God’s self is a confirmation of my self-certainty. Looking forward to Absolute Freedom, we may notice that the certainty of identity with the Revolutionary Goddess of Reason is an experience of absolute *distrust* or of universal Hobbesian suspicion. This shows us why the experience of Faith is regarded by Hegel as a necessary aspect of the concept of Spirit as the concrete existence of Reason. But just how the identity between Faith and Insight that is here asserted is to be understood, remains unclear.

The word *Erdichtung* applied to the God of Faith points fairly definitely to D’Holbach. But he would certainly have disputed the identity of the fictional divinity with the universal insight of Reason to which he was appealing; and I suppose he would hardly have found the claim in the first sentence of this paragraph that Enlightenment grasps Faith as “Pure Insight” intelligible. He did not grasp it that way himself at all. So it may help to go back more than a century and consider Pascal’s critical reaction to Descartes. This is certainly justified in the present context, because the concept of “rational self-certainty” is unmistakably Cartesian.

Descartes agreed that God was the necessary object of “Pure Insight.” It was one of his most earnest concerns to demonstrate this. Yet Pascal (who shared the Cartesian spirit and understood it as well as anyone) found the demonstration “useless and sterile”:

The God of the Christians is not a God who is simply the author of geometrical truths and of the order of the elements; this is the concept of the pagans and of the epicureans . . . All those who seek God apart from Jesus Christ and who stop at nature, either find no light to satisfy them or arrive at forming for themselves a way of knowing God and of serving Him without a mediator; and thereby they fall either into atheism or into deism, which are two things that the Christian almost equally abhors.³⁷

Pascal’s language here is the authentic voice of “Faith”; and his forecast of the outcome of the pilgrimage of Pure Insight agrees exactly with Hegel’s analysis of the “Truth of Enlightenment.”

What Pascal did not find in the God of an enlightened philosopher who was far removed from D’Holbach’s aggressive atheism is the encounter with the humanly incarnate self of the Risen Christ. This is the God in whom Faith achieves the confirmation of its own self-certainty. Only the tiniest glimmer of this self-recognition can be ascribed to “Pure Insight” (which is, after all, not just *theoretical*). Insight is “conscious of itself as *doing* and producing”; and in Faith “*obedience and doing* form a necessary moment.” But what does it mean to *see* the identity of this divine “other self” with the rational universality of Pure Insight? The injection of that one word “obedience” makes a great barrier.

Hegel himself insists on the differences between Insight and Faith. Insight involves not merely the “self-recognition of intelligence in the intelligible other” but the awareness of the recognizing self that it *is* the source of the whole movement, that it “produces the object”—the “other” in which it recognizes itself. “Producing the Object” is just what Faith does according to D’Holbach’s “anthropomorphic fiction” theory of religious experience. But it is certainly not the way a faithful believer is aware of the experience; and Hegel insists that Faith is right. The *eternity* of God, his “being in and for self,” ultimately *comprehends* the moment of “production.”

Faith, however, is a knowledge of God as “spirit.” That is to say it is not the unconscious projection or postulation of an object that is simply “other.” God is the “spirit of the community.” My own real being is involved in, and sustained by, this “Spirit.” The God of Faith does not exist by Himself (or in Heaven). He exists here and now in my voluntary recognition of membership in his community. Faith *does* know that “the spirit of the community is the essence *only through its being produced* by consciousness;—or rather *not without* having been produced by consciousness.” This is what has to be “comprehended” within God’s “being in and for himself.” Neither Insight (i.e. Subjective Reason) nor Faith has achieved this. D’Holbach’s theory is one-sided; but what the whole truth is, we cannot yet see. We can see, however, that Descartes’ “grasping of Faith as Pure Insight” was not enough.

- 14./550. Insight is essentially *other* than its object. So the *otherness* of the faith-world misleads it. Faith knows that the talk of priestly deception is nonsense. For the supposed hocus-pocus offers as truth what insight itself teaches [that we must achieve the community of Reason]. Before we ask whether it is permissible to deceive a people we should ask whether it is possible (especially about its own rational essence).

What leads Insight to reduce Faith to “superstition” is its own structure as an “infinite judgment,” its willingness to identify Spirit as a “bone.” But Insight is the *truth* of Pure Culture: that the traditional world is a self-contradictory system of selfish “clients” produced by “impure insight.” The validity of this opposition between *pure* and *impure* insight is not in dispute. The Monarchy and the Clergy *do* use the “noble essences” to mislead the “simply honorable” consciousness about the wealth-driven social order. The question that arises, is whether the “essences” are *inverted* by this misuse. This is not yet consciously recognized in the case of the *actual* values of Government and Honor. But in the case of God, Heaven etc., the Enlightenment says it is so. This essence, however, was identified long ago in the process of culture as the Good; and that is the living force of the Enlightenment itself. So the naïve consciousness knows that Enlightenment itself is lying when it claims that God is only a “noble lie.”

The absolute “otherness” of the object of rational consciousness is precisely what defines the “purity” of Pure Insight. We can see why Hegel chose D’Holbach, the most outspoken atheist among the *philosophes*, as the voice of Pure Insight.

Only the materialists maintain the otherness, the alienation of thought from its object, consistently. This may seem to make the defence of Faith easier for Hegel, because the resulting misrepresentation of Faith (which articulates the identity of thought and object) becomes quite obvious. But the reference to the Berlin Academy's Prize Question of 1778—"Whether it is useful for a people to be deceived?"—makes an indirect comment on the famous dictum of Voltaire: "If God did not exist, it would be necessary to invent him."³⁸ Hegel's response is that the people's God never could be "invented." The God of Faith is the necessary being that rational consciousness itself needs; even the account that philosophical atheism gives of the origin of "superstition" reveals this. On the other hand, when the Deists try to defend their Supreme Being as "useful," they only confess both their own implicit unbelief, and their complete misunderstanding of what they are talking about. The atheists (or materialists) at least avoid the error of supposing that what is not true could be universally useful.

The remarkable success of anti-rational ideologies in our own century might lead us to dispute Hegel's confidence that a community cannot be deceived about what everyone needs to believe. But at least his argument is free of any dependence upon the wish-fulfilling aspect of Faith. Enlightenment will take Faith's dearest *wish*, and demonstrate that it cannot be fulfilled, and that Faith does not even know what the wish means. After that, the wish will be reformulated (in VI C) as the necessary knowledge which its faithful form only disguises. Hegel's argument that the people *cannot* be deceived, only applies properly to this necessary knowledge which (according to his historical analysis) is directly implied in the rationality espoused by all parties to the discussion about the potential usefulness of ideological deception. If he underestimated the power of wish-fulfilment to inhibit the evolution of Reason—as I think he did—we must note first, that everyone else in his time did likewise, and secondly that he deliberately framed his argument in the terms set by the opposing view that rated both the force and the danger of irrational wish-fulfilment at the highest limit then conceivable.

On behalf of the Deists, however, it should be noticed that they do recognize the logical problem created by the necessary *otherness* of Insight's object. The one thing in the world of physical necessity which rational insight cannot explain, is its own presence; and if we make rational insight one of the functions of matter itself, as the Materialists did, then the rational universality of theoretical consciousness in a world of necessarily self-preservative motions remains an uncomfortable article of blind faith. This shows why the Truth of Enlightenment is bound to break up into a *Gegensatz*. One reason why Enlightenment is presented in the absolutely estranged form that it assumes at the extreme of Materialism is that the Materialist hypothesis (in its developed hylozoist form) is closer to Hegel's own spiritualism, than the Deist hypothesis of the Supreme Being. The unitarian monism of the Materialists can readily be shown to have a trinitarian spiritualism logically implicit in it.³⁹

15./551. Let us now consider in detail how the Enlightenment perverts the moments of faith: God, his presence to me, my worship.

Pure Insight *inverts* Faith. We shall not learn very much that is novel from Hegel's detailed discussion of this inversion, but we shall get a clear view of what he means by "Faith." There is no need for further commentary at this point. We should only notice that "the absolute essence" is the object of my "pure thinking"; and that God's presence in Faith is called a "*connection* with the essence as a knowing."

- 16./552. *God*: Faith says the Absolute Essence is an objective reality. Insight takes it, therefore, to be guilty of idolatry. But it condemns its own object here, not the God of Faith (or the Mass).

Under the name *absolute essence* Hegel describes God in the terms of his own Logic. The God of Faith is "pure thinking posited within itself as object or as the essence." We can see from paragraph 551 that the active thinking is that of the believer; the believer becomes united with God in thinking of him. But God's thinking far transcends the believer's faithful thought; and in that aspect (of being "more") God acquires "the form, but also only the empty form, of objectivity." God's thinking is what creates and maintains the believer's self and world. The believer *represents* God as an objective essence (because the thinking of Faith has the form of "consciousness"). But Faith never forgets that this projected object is really the comprehensive Subject who truly does the projecting. Faith *uses* the structure of sense-consciousness; but it no longer needs the external sensible mediator of the Unhappy Consciousness.⁴⁰ God is within its thought, and it is within God's.

The whole relationship of Faith to God is in *pure* thought. The experience is all inward. It does not involve the sense-world at all. Faith itself appeared in a polemical shape as the iconoclasm of the Puritans; but just as Hegel argues that Insight falsifies itself in its polemical concern with external objects, so he means us to see that iconoclasm is a falsification of Faith. The best *Gestalt* for Faith that I can discover is Pascal—hardly more of a Catholic than a Protestant, but critically wary of all extremes. He formulates the sublation of all actuality in thought perfectly: "Man is only a reed, the frailest thing in nature; but he is a thinking reed . . . Were the Universe to crush him, man would still be nobler than what slays him. For he knows that he dies and that the Universe has the better of him. But the Universe knows nothing of this." Or again: "By its space the Universe comprehends and engulfs me like a point. But by my thought I comprehend it."⁴¹

So when Insight interprets Faith as concerned with visible things, this is a direct falsification and inversion of what Faith is. D'Holbach knows that the *Vorstellung* of the "thinking reed" is not meant literally; but his fundamental ontology does not supply him with a *real* referent for the implicit "wind of the spirit" that shakes that "thinking reed." The reed certainly needs an Other to shake it; but the "Other self" of Pascal's religious consciousness is not other than the thinking reed in the way that the wind is other than the reed on the shore of the Sea of Galilee. Pascal must portray (*vorstellen*) that other self (the Risen Christ) for himself in thought; and the thought-models (*Vorstellungen*) of pure *Denken* are among the most untranslatable entities in our experience. When we formulate them in terms of

Locke's theory of "ideas" we are already guilty of D'Holbach's inversion of their nature. We should remember instead, Hume's discovery that he has no "idea" of his "self"; for then we are on the trail of "the Concept."

- 16./553. Enlightenment, which pretends to be pure Insight, here degrades itself into sense-certainty. The object of faith is not a crucifix, statue, or bread. It is *also* that, but that is not relevant. What matters to faith is the *meaning* of the sensible sign.

At the end of paragraph 552 Hegel explicitly admits that Faith must "anthropomorphize" the "absolute essence." The "world" of Faith is a world not of *things*, but of *conscious interpretive processes*. This is a deliberate concession to D'Holbach, and an implicit criticism of Puritan iconoclasm. The necessary "anthropomorphism" is exactly Pascal's point in his criticism of the God of Descartes. The Risen Christ is far removed from the Divine Mathematician and Architect. But apart from the image in stone or wood which expresses this, Hegel specifically mentions twice the "dough" of the Mass. Much more vividly than the sculpted or painted image—which is most naturally taken as a permanent "thing" of Perception—the dough that is cooked into Communion-wafers typifies the transience of Sense-Certainty.

Unlike the Unhappy Consciousness, Faith is not caught up in the problem of the long-dead Savior; the Savior is living and present. But in its harvesting, milling, baking, eating of the bread, its excreting and returning of the night-soil to the earth, it presents the enlightened atheist with an important lesson about the thought-status of her own "Matter." The language of sense-certainty and Perception cannot be given the protocol status that the materialist wants to give it; for the matter that truly *is* throughout the whole cycle of transformation from soil to soil, is a "universal" of the Understanding—"the essence of pure thought." Even the materialist (who supplies the thinking in her own scientific Understanding) needs the "essence" as a conceptual object.⁴²

The symbol of the dough also deepens the significance of Faith's anthropomorphism. Hegel's insistence (in par. 552) that the consecrated wafer comes from and returns to the cultivated land (*Acker*) recalls Luther's terror of "eating and drinking damnation." But Faith has overcome that; the "anthropomorphism" of the Mass implicitly returns the spiritual reference of Faith to the life of this world. The Risen Lord is not a pure intellect, but the reconciled wholeness of actual life and death. The iconoclasm of the Puritan Reformers would seal off the inner life of pure thinking in a way that falsifies the real meaning of Faith. The falsification of Faith by Enlightenment does, at least, have the merit of pointing towards the truth.

- 18./554. *God's Presence*: For faith God is present immediately. But there is also a *mediation* through the "witness of the Spirit." Enlightenment reduces this to belief in the historic testimonies. Faith however is the knowledge of Christ risen in me. For Enlightenment this "Spirit" is another known thing, because only things can be known. Pure Insight does not yet know itself as a motion. This knowledge of Spirit is something that it must develop, but which Faith has. The Gospel story is less certainly

established than an average newspaper report; the records have survived by accident, and subject to copying mistakes; anyway the meaning requires interpretation. Faith however depends on the inner witness, and the communal witness. When it starts arguing about the testimonies etc., it has been corrupted by Enlightenment.

The Concept of God is immediately present to Faith, as the absolute thinking that comprehends and sustains both the world and its own thought. But there is also an experience of God. This is the “witness of the Spirit with our spirit”⁴³ of which St. Paul speaks. It is a mediated knowledge of God, that comes especially through the reading of the Scriptures. But the enlightened critic finds it hard to understand how this strange record of partly fabulous events can be the ground of a knowledge of God. The answer is that, for Faith, what matters is not something that happened (or did not happen) in a far away place at another time, but what happens to the reader here and now. For Insight this is incomprehensible. The Book is only an external testimony about certain events (including, for example, at the point where the reference to the “witness of the Spirit” occurs, the curious psychology of a small community who thought that “living after the flesh” was evil). Some of the “witness”—the testimony about this bit of social psychology perhaps—is highly plausible; but the record also contains factual assertions that simply cannot be “true”; the miracle stories, for instance, can only be significant in a psychological sense.⁴⁴

“The Spirit” here is the divine Spirit; and its relation with “our spirit” is the same comprehensive one that the absolute thinking as an “immediate essence” has to our finite consciousness. But pure Insight takes this “simple self-knowing Spirit” to be an alien being once more. In so doing, it fails to recognize itself. Insight takes itself to be not a motion of interpretation, but the immediate activity of intuiting “objects.” In that intuitive shape, as we know, rational Insight can only be cognizant of the so-called “laws of thought,” and of a ragbag of faculties and psychological phenomena; but the interpretive experience of a believing mind in reading the Scriptures is what Insight really is.

What appears to Insight to be only psychology is just that; but this “mere psychology” is the medium of the *inner* life, the life of the spirit.⁴⁵ The identity between Faith and Insight is important here. For Faith this psychological experience is the presence (in “hope” to use Paul’s word in that same context) of the world of pure thought. The felt reality of that other world (the vital importance of it which motivates the attack on “the flesh”) has nothing to do with the factual truth of any stories, and does not depend on the exact empirical meaning of any text, or on any supposed perfect reliability in the transmission of the record (which would be empirically incredible). The psychology is reliable. We can confirm that empirically now if we want to. And the historical record shows—at least to Hegel’s satisfaction and to mine—that the most important (empirical) witness, the best testimony to the “events” that we have, did *not* take the most crucial of the “stories” to be the account of an ordinary empirical event. Paul’s encounter with the Risen Christ was “psychological.” No one else on the road to Damascus with him would

have seen what he “saw.” But that was, for him, exactly what made his vision into “the witness of the spirit”; and anyone *nom*, reading the text, can have *that kind of* experience.

Behind Hegel’s argument in paragraph 554 lies the most famous of Lessing’s polemics, the little essay “On the Proof of the Spirit and of Power.” “Accidental truths of history,” said Lessing, “can never become the proof of necessary truths of reason . . . that is the broad, ugly, ditch which I cannot get across.”⁴⁶ But this difficulty applies both ways. If there are any “necessary truths” made manifest in the Christian experience, then the fallacies involved in their first discovery are irrelevant (just as it would not affect the validity of a powerful mathematical theorem, if its discoverer was led to it initially by some logically invalid psychological process). The supposedly historical Resurrection is for Lessing the invalid step in the historical “proof” of the metaphysical truth of Faith. It is clear that Lessing himself did not (and could not) accept it, though he did not say so outright. But he recognized the Resurrection story as the mythical shape under which an inward conversion experience was expressed by a culture that did not possess his concept of “historical truth,” and for a mass audience which could only think of eternal truths, by *pic-turing* another “world.”⁴⁷

This interpretation of Lessing’s position is based on my reading of “The Education of the Human Race.” Whether it is the correct reading of Lessing himself or not, I am certain that it was Hegel’s reading of him. At the level of Faith Hegel cheerfully accepted the “ditch” between the empirical facts of history (which are essentially “uncertain”) and the eternal truths of Reason; he only insisted, like Lessing, that Faith was a kind of rational knowledge, and that it was already on the “eternal” side of the ditch. The problem of “Lessing’s ditch” is for Hegel the problem of reconciling the eternity of the “necessary truths of reason” with their historical appearance; and I believe Lessing’s “Education of the Human Race” was in fact the first important clue for Hegel’s eventual solution of that problem.

The acceptance of the “ditch” means that the truth of Faith does not depend in any way upon the historicity of Jesus, or of the Crucifixion. The truth of Faith is simply the rational interpretation of the “myth” that expressed a rational truth appropriately for an earlier time; the myth itself is a fact of present experience, not of history at all. We have to insist on this very rigorously, because we cannot (in any case) accept the Resurrection as a historical fact, without sacrificing all of our fundamental canons of historical evidence. If we take the whole story as a myth, then no questions about its historical origin as a myth can affect its rational significance—fascinating though such questions are bound to be to at least some of the believers who are conscious of its significance.

But if Faith allows rational truth to be confused with historical truth,⁴⁸ then its “inwardness” will be “infected” by the Enlightenment; and as soon as that happens Faith itself will cease to be universally present. That is what happens to Faith under the impact of the enlightened falsification of its content. Being unsophisticated, Faith is easily led into misunderstanding itself. Lessing pointed out that by being willing to fight upon the historical field at all, the defenders of the historicity of the

Gospel were inflicting serious wounds upon religion itself. He asserted that Pastor Goeze was “*not uninfected* by the heterodoxy of the enemy.”⁴⁹

- 19./555. (3) *God's Service*: Faith disciplines itself in various ways to testify as well as possible to its awareness of its union with God (and its independence of everything else). In its criticism of this, Enlightenment falls into *practical* impurity. First it does not recognize what Faith's aim is. Secondly it claims that the only rational end is to be happy in finite terms.

The abstract conceptual expression here needs to be interpreted in terms of the concrete examples supplied by paragraph 556. Once this is done, little commentary is needed. The examples refer us once more to D'Holbach, so it is still he who is the voice of Enlightenment—whereas Lessing has now emerged as the voice of the Faith that has achieved self-conscious Insight (and the tell-tale word *Ansteckung* directs us to *his* presence as the self-conscious voice of Faith throughout the “struggle”).

The distinction of “purposiveness” from “purpose” in the active relation of Faith to the life-world is the way in which the Unhappy Consciousness is preserved within it. What appears is the seemingly unachievable and hence irrational purpose of “self-denial.” The perfectly rational goal of serving God does not appear, but remains in the inward sphere of pure thought.

In the active life of pure Insight, on the other hand, there is a perfect harmony of appearance and intention. But that harmony reveals the contradictoriness of “pure intention” on its own account. The rational goal of Insight is “happiness”; but the pursuit of happiness is a worldly end that contradicts the pure rationality of Insight itself. Insight is not caught in Rameau's situation; it is not selfish, so it is not obliged to despise itself rationally. But the rational will for the happiness of everyone generally (in pursuit of which the insightful agent may sacrifice herself as readily as any martyr of the faith) is a will for the worldly happiness of everyone distributively and singularly; and that contradicts the rational unity of everyone in pure thought (which is, on the contrary, the consistent goal of Faith). The opposed inadequacies must be reconciled in a resolution that does away with them both. But the simple triumph of Enlightenment will only bring the contradictoriness of the purely secular goal of “happiness” to light.

- 19./556. So fasting is absurd, and giving one's goods to the poor is quixotic—though the one demonstrates spiritual freedom, and the other spiritual community. These goals are right, but really pursuing them is wrong. Being comfortable is what really counts.

When Hegel carries his defence of the rationality of Faith into detail, all of the above points become fairly clear. The problem of the Unhappy Consciousness is overcome, when he argues that the regular practice of self-denial is as rational as eating. The self is not denied by any one act of discipline; but neither is life maintained by any one meal. The rationality both of fasting and of eating depends on their being comprehended as life-*policies*. The only response I can think of on behalf

of D'Holbach is that resigning one's goods *to the Church* might not have the piously intended effect (and I suspect that, whether he said so or not, that was in his mind). But according to my reading, Hegel does not mean to defend the piety that depends on authority. D'Holbach, on his side, cannot deny that self-discipline and the charitable assistance of those in need will continue to be rational virtues in the enlightened world to which he looks forward. The temptation to make people laugh at the impulses of benevolence, is an excess of enlightened insight in which we can detect a secret (or half-conscious) identification of rationality with natural self-preservation; and that would pitch us back into Rameau's rational self-contempt.⁵⁰

(f) *The Positive Enlightenment*

- 21./557. *Positive Enlightenment* (1): Pure Reason. Enlightenment gets into this bad light because it becomes negative through its relation to finite things. But the finite world is where it becomes actual. What, then, is its positive doctrine of reality? That all objects are finite human "ideas" [Locke] and Absolute Essence is a void. So the riches of Insight are a bad infinity of limited moments and an unknown.

Hegel now turns our attention from the negative side of the polemical Enlightenment to its positive side. This is not yet the proper truth of Enlightenment; it is only the other side of the polemic of Insight. But the reasons for the silent triumph of Enlightenment will now begin to emerge. We are still dealing with the radical humanism of D'Holbach and La Mettrie; but Hegel will now derive their practical utilitarianism from their theoretical position—i.e., he will show us how their rational ethics of universal Utility is the final end of their polemic.

But before we examine that fairly straightforward "positive reality" we must take a last look at the "negative reality" that Enlightenment gives itself. There is no conflict between Enlightenment and Faith in the silent and secret "infection" of all minds; one can (like Lessing) be both "faithful" and "enlightened" without strain. But when Enlightenment becomes phenomenally visible ("actual" in the full sense) it becomes a polemic against "superstition"; and in this guise it is "the contrary of itself," both because it ought not to be one-sidedly polemical (partisanship destroys its "purity"), and because Faith is *not* superstition (only an *impure* intention, or a *perverse* insight can take it in that way). This self-contradiction is necessary because, in order to be "actual," Insight must be different from naïve Faith, and must show itself as such; but the "contradiction" is only a stage in the realization of the concept.

The positive reality of Enlightenment, is its third moment in which the "good" inward essence, and the "bad" outward appearance are reconciled. The argument is simple and easy to follow, because the whole position was commonsensical. In the self-explication of Real Individuality, the dialectical motion is of the harmless, unparadoxical kind that we are all quite used to. The noisy Enlightenment brings the triumph of the silent Enlightenment to consciousness.

This is all plain sailing; but we shall soon be faced with a new section of chapter

VI that seems only to repeat what is said here. At that point we shall have to look very hard to find the dialectical progression that Hegel *must* want us to see. The “comprehensive inversion” of the silent and the noisy Enlightenment together is what is happening here. What happens *there* must be something else. What it is, we must decide when we get there.

Here we must consider first the injustice that Enlightenment commits against Faith. The “*positive reality*” of Enlightenment appears contemptible to Faith precisely because of its rejection of all “other-worldly” values. Pure Insight itself belongs to that “other world of pure thought”; so the essential worldliness of the Enlightenment looks very bad. But the truth of Enlightenment is precisely that that other world is empty, that the only content for pure thought is to be found in this world, the world that is “other” for pure thinking. This was the principle upon which the shameless reduction of Faith to idolatry was based.

Our thinking, says Enlightenment, is a strictly human function, the formation of “ideas” à la Locke. The “Absolute Essence” is Locke’s “Substance, I know not what”; nothing can be said about it. All of the monstrosities of superstition have arisen from the pretence (of the evil-minded priests, who do know better rationally speaking, because they all admit that it is unknowable) that we can talk about it. The proper behavior of Pure Insight is to recognize itself as *human*, and hence as having its proper objects in *this* human, finite, and sensible (non-rational) world. “Agnosticism” is the enlightened way of dealing with the Absolute.⁵¹

- 22./558. (2) Sensation: All actual cognition is *singular*; the universal is unknown. Sense-certainty is the ultimate truth to which Insight *returns* (as distinct from the natural consciousness that starts there). Everything beyond sense-certainty has been reduced to nothing. This is the merely negative proof that Insight can offer. The positive truth is the certainty of the finite self that it *is* [there] among other actual things outside it. This situation is the absolute truth.

Whereas the God of Faith is immediately present in the thought of the worshipper, the Absolute Essence of Pure Insight is immediately *absent* in thought. “Presence” is all in the external, non-rational, mode of sensation. In Pure Insight we have the completion of the great cycle of singular consciousness; Reason returns to the starting point of simple Consciousness in Sense-Certainty. The closing of this circle is important for Hegel’s “Science,” because it makes the rebirth of “speculation” in post-Kantian idealism a spiritual rebirth. Paragraph 558 directs us to the commonsensical empiricism of the Enlightenment as our philosophical model for Sense-Certainty. And since we ought to seek a naïvely unpolemical or theoretical example for it (and not see it initially as part of a battle between Faith and Reason), the Common Sense philosophy of Thomas Reid is probably the best philosophical *Gestalt* of the “natural consciousness” that we shall find.

This rational philosophy of Common Sense is very different from the “naïve” common sense from which our Science began. It has won its way back to self-possession as the reflective *theory* of “what there is.” The knowledge that it has escaped from all “supernatural” assumptions is essential to it. The world of Sense-

Certainty is its “truth” in a very sophisticated sense. It can distinguish between simple “being” and “essence” successfully; so it does not cycle round endlessly from Sense-Certainty to Perception and back like the natural consciousness. It is Reason operating as Understanding.

This Common Sense is an absolute certainty of “being in and for itself.” We shall see what that means in paragraph 559; and we shall soon discover how woefully inadequate the truth of this “absolute certainty of being” is. But the completion of the circle here, confirmed by the application of the adjective “absolute” to the commonsense conviction that “I am here,” and “the external world is there,” implies that the Baconian applied science of this world is the solid foundation upon which Hegel’s ladder of *spiritual* experience rests. The Terror will teach us that this sense-world, and this kind of scientific comprehension, is not enough. But we are never going to leave this world behind again; our return to it here is decisive. The Understanding is now about to draw the curtain (referred to in par. 165) and to take possession of its “real world.” It is the ordinary empirical world that is turned over into the world of Spirit proper. The world of naïve common sense is “just the *unmediated* being-for-self of the Concept as object.”⁵²

- 23./559. (3) Utility: What is the relation of this finite certainty to the Infinite? The infinite Beyond is the Void, so the decision about finite reality is open: Finite knowers and objects can be either Being *or* Nothing; whatever is actual can either be or not be. There is no value judgment here, but just the identity of being-in-itself with being-for-another.

Pure Insight *comprehends* the finite human reality of this world of Lockean ideas. The world of sense is known to rational insight as the finite appearance of the absolute *Void* that is beyond. Here, for the first time, Hegel uses the unmistakable language of Materialism. He is not dealing with “matter,” however, but the relationship of finite persons and things to the Absolute; still, his model is provided by the Atomist theory of bodies moving in the Void. This is how finite being must be conceived if it has *no* being in and for itself—which is the purely instrumental or utilitarian view of it. The truth of Enlightenment (at this stage when it still exists as the antithesis within the Concept of pure consciousness, or Faith) is found in the Baconian doctrine that “knowledge is power.” *Human choice* is the truth-criterion of this world; the “perfectibility of man” (and of woman too, for Mary Wollstonecraft and William Godwin were among the most perfectly articulate voices of the Enlightenment) is the “purpose” of Pure Insight.

If we remember that the actual world has all been comprehended (Locke-fashion) in the finite self, we can see that Hegel means the “Void” literally here. He does not need the hypothesis of dogmatic materialism yet; the only “atoms” moving in this Void of Pure Insight are the human selves. The relation of these finite selves to Pure Insight as the infinite void of free thought can be whatever you like. Free thought contributes the determination; and free beings are what is determined. Hegel gives us several “identical opposites”: “*Being* as well as *Nothing*; *In-itself* as much as the counterpart [i.e. For-another].” He formulates *perfectibility* in

the claim that “the connection of *Actuality* to *In-itself* as the *Beyond* is just as much a *negating* as a *positing* of it.” Nothing human is actually “perfect,” but everything is perfectible; this is the Faith of the Enlightenment.

We are no longer in Faith’s cultural world of Good and Bad. The standard of perfection now is “usefulness”; and like everything she comprehends, the singular human being exists to be useful to her fellows. The alternative of Being and Nothing is the permanent aspect of the third moment, because the “being” of the finite rational self is identical with its self-annihilation in the service of others.⁵³ But that is the empty Beyond of death; it is the positive being of our sensory existence that Reason “makes, fosters and cherishes.”

- 24./560. In fact we have to assert both sides of the in-itself/for-another identity because everything is both useful and exploitive. The world of Insight is a universe of mutual exploitation, and the self is both instrument and user. We are once more in Eden, but we have eaten the apple; we know Good (measure) and Evil (excess), but we can use Reason to stay within our proper bounds. In that way we can universalize pleasure. The determining aim of rational measure is the measureless.

With its concept of universal Utility, the Enlightenment makes a successful transition from rational Sense-Certainty to rational Perception. The human being is the finite “thing” (*Ding* means a perceptible object here) that is aware of Utility as the relationship of the finite to the infinity of Reason; and although she uses non-human “things,” she is the only “thing” to which the relation applies indifferently in both directions. That is why we must read “Wesen” comprehensively as referring to “persons” in paragraph 559, rather than to ordinary “things.” For although the world of sensible things breaks loose from the world of pure thought at this point, it does so only in the context of a new Garden of Eden in which Adam and Eve give everything its name, and enjoy lordship over all they survey.⁵⁴ This is not the original Garden of Nature, but a new Garden in which the Tree of Knowledge is no longer forbidden (another symbol of the overcoming of the priestly conspiracy); and the Serpent in this Garden is the “new serpent of wisdom” made by Moses himself upon God’s instructions (par. 545).

The breaking loose of “things” from the unity of pure thought is a further step in the emergence of Materialism. One result is the reappearance of the concept of Good. Good and Bad are not God-given but humanly determined; and this means that the human being as an embodied perceptible thing is *naturally good* (a direct inversion of the thesis of Culture [cf. pars. 484–486]). Human happiness (the harmonious satisfaction of all natural desires) is Good; and human unhappiness is Bad.

There is a close connection between the world of Universal Utility and the rational self of Pleasure and Necessity, just as there was between the battle against Superstition and the Frenzy of Self-Conceit. But the “reflective” character of Enlightenment makes a crucial difference. The identity of “Pleasure” was immediate, emotional and singular. It is a mistake to read utilitarian hedonism in at that stage; but that is what we have now arrived at. Enlightened eudaemonism is universal and rationally mediated; everyone knows that they must give as well as take. All

must desire and work for the happiness of everyone. Hence this is the world of Virtue rather than of Pleasure; and at this stage, the word Virtue invokes the shadow of Robespierre. Reason is the eyes, and the instrument, of the passions here. If we are rational, we shall live (and help others to live) the longest possible life as happy pigs; the identity of self-enjoyment and service need not be a painful contradiction (or an encounter with incomprehensible Necessity). Everyone can enjoy themselves while being useful to everyone else; and one can do this anywhere in the rational social system.

Because the natural life of sensation is a direct identity of Being and Nothing, our “naturally good” nature must actually comprehend evil within it as its own “Beyond.” If we follow our spontaneous impulses we shall destroy ourselves. “Reason” is our instrument for avoiding this; so it is not our passionate nature that is good, but the *comprehensive* capacity of Reason. This capacity distinguishes us from other animals; and it gives us the knowledge that, in the end, we shall die anyway. So as rational beings we must not only aim to be happy for as long as possible; we must be as useful as possible in the maintenance of the universal continuum of happiness and utility. We control the excesses of “nature” rationally in order to secure the continuation of this “excessive” nature *ad infinitum*; and the universal continuum should have no essential (or natural) distinctions of functions. The concept of rational utility is modelled by our two hands which must wash one another reciprocally.

The conception of a new Garden of Eden comes from La Mettrie; but the supposed perfect harmony of enjoyment and service is more evident in the work of Helvétius.⁵⁵ But the whole argument is also in D’Holbach; and the basic thesis that humanity is “naturally good” was common to virtually all of the Enlighteners (except Hobbes at the beginning and Kant at the end).

- 25./561. In this world of universal utility our religious relation to the Absolute is *most* useful (as the spreading of this gospel).

D’Holbach seems to have been the only important leader of thought who was openly *anti-religious*. Even the outrageous La Mettrie makes a solemn bow in the direction of Deism:

Not that I call in question the existence of a supreme being; on the contrary it seems to me that the greatest degree of probability is in favor of this belief. But since the existence of this being does not prove that one form of worship is more necessary than any other, it is a theoretical truth with very little practical value. Therefore, since we may say, after such long experience, that religion does not imply exact honesty, we are authorized by the same reasons to think that atheism does not exclude it.⁵⁶

But La Mettrie shows his materialist tail and cloven hoof even here, in his absolute rejection of Voltaire’s claim that God is a “useful” hypothesis. Hegel makes the transition to Deism (or rather to the division of the essentially agnostic Enlightenment into its theistic and its atheistic wings) through the extension of

the two-sided concept of Utility to the Absolute. The relation of the finite self to the Absolute *as a self*, provides a *religious* relation of the Spinozist kind. The “love of God” in the rationalist sense makes the identification of enjoyment with service simple. That is why it is “the most useful of all utilities.”⁵⁷ For as the Self that gives us all room to exist (in his Void) God is the incarnation of the principle of Utility itself.

Again we should notice that humans (or, at the widest, living organisms) are the only “things” that are “useful to one another.” But even inorganic “things” have the double relation to the Absolute. This is what Bacon means when he says that “We cannot command Nature except by obeying her.”⁵⁸ Even in the universal instrumentalism of the Enlightenment, everything must be known as it is “in and for itself,” before it can be *used* properly.

- 26./562. This gospel of universal goodness and expediency is an abomination to faith. Everything is good just the way it comes from the Supreme Being. This self-confessed platitude is the highest knowledge.

The God of Deism, the *être suprême*, thus emerges from the necessary two-sidedness of Utility as the absolute concept of enlightened Reason. The “absolute essence” now has *two* names. As the “in-and-for-itself” aspect of Reason it is the Supreme Being; as the universal means at the free disposal of all finite thinkers, it is the Void. This Religion of universal Reason and universal happiness is fairly safely identifiable with the views of Helvétius.⁵⁹ But Hegel’s contemptuous comment on the Prize Question of 1778 (par. 550) has already shown us what he thinks of Religion as the most useful of all fictions.

This eudaemonism is abhorrent to Faith. When Hegel says that Faith regards it as a platitude that openly confesses itself such, I am not sure that he is not confusing the proper verdict of Faith (that this is the “pride” of Lucifer) with the verdict of La Mettrie (and himself); but it does not take a great deal of rational insight to see that the only *object* behind the useful fiction is an unknowable identity of Being and Nothing, in which a worshipper could never recognize herself. The “religion of humanity” can have saints, but it has no real divinity. The knowledge of the finite is known to be the highest knowledge that we can have.⁶⁰

(g) *The Triumph of Enlightenment*

- 27./563. Faith has the divine right [of the essence—see par. 467] that arises from thinking this absolute opposition [God and Man] as a true identity. Enlightenment has twisted all the moments of Faith out of shape. It has only the human right to disagree with itself, and to change its thoughts. But this is the absolute right of self-conscious freedom; and Faith, being consciousness itself, cannot deny it.

At this point another “reversal” begins. Enlightenment has come to a reconciliation between its “essence” and its “appearance.” Faith condemns the reconciled

“positive reality” (par. 557) as being just as bad as its “negative behavior” (par. 562). But now the “negative behavior” is about to be reexamined (pars. 564–572), and found to be quite well justified after all. Enlightenment, with its “positive reality,” will then be triumphant in its “truth.” Enlightenment has comprehensively inverted itself, and come to the self-possession of its impartial silence in its partisan speech. Now it will comprehensively invert its rejection by Faith; the silent identity will become visible.

The judgment of Faith upon Enlightenment is justified. Enlightenment does distort Faith; and the Insight that it puts in place of Faith has been shown to have *no* absolute content. It is both theoretically and practically empty of any absolute significance; yet Faith is the loser in the struggle.

There is an interesting contrast and parallel here with the conflict between Antigone and Creon. Both of them were asserting the “absolute right of self-consciousness” against “the divine right of the essence”; and both had to learn their error (par. 469). Now it is Faith that has the *divine* right; it grasps the identity of the finite and the Infinite, or of God and the human worshipper, truly; but Enlightenment has the *absolute* right. The human right to finite self-expression is absolute. As justified “rights” the “absolute” right and the “divine” right are equal just as the rights of Antigone and Creon were. But dialectically—or as a conflict in process of resolution—it is Insight that is “absolute” and must first prevail. Then a catastrophe follows; and whereas what came forth before was the “self-conscious Right” that both Antigone and Creon asserted, what will come forth now will be the divinely self-conscious Right of the substantial Spirit. Hegel’s concern in both cases is with the inevitability of the tragedy, and with its “result.” The right of Self-Consciousness (or of the daylight of universal insight in the finite world) is absolute, because it already comprehends the divine substance potentially. Only through its catastrophic triumph (in making the substance move) can a self-conscious identity, a stable balance of Substance and Subject, be established.

The mythic model that is followed in the downfall of the True Spirit, and repeated in that of the true Faith, is the story of Adam’s disobedience and Fall. Hegel agreed with the orthodox theologians that the Fall of Man is real; but like them he aims to show why it was “fortunate.” He differs from them, however, in wanting to show also that the category of “fortune” does not properly apply to it. The Fall is logically necessary; the right of finite self-consciousness sublates the wrong, and emerges as “absolute” because it is the right of Reason. It is in that negative character, or as the thought that cannot be satisfied with anything less than the “actual cognition of what truly is”—i.e. of the divine Substance—that it comprehensively envelops its opposite. Notice that according to this programmatic pattern it is the finite that must envelop the Infinite, the temporal experience that must comprehend the eternal truth.

The struggle of Faith with Enlightenment differs from that between Antigone and Creon (at least in Hegel's analysis of the latter) in the degree of self-consciousness involved. Faith is logically obliged to admit its own defeat, because what Enlightenment insists on is one side of what Faith itself asserts. Faith acts like the perceptual consciousness, attending to one side of its experience at a time, and ignoring the fact that in its different stances it contradicts itself. Pure Insight acts like the critical Understanding in pointing out the contradiction. When Insight points out that the Crucifix is only a piece of wood, bone, metal or stone, the criticism may seem to be merely a perverse misunderstanding; but in its own positive insistence that the worshipper is a finite consciousness of flesh and blood, the relevance of its objection to the inwardness of the life of Faith becomes clear. Faith itself can do away with, or do without, the Crucifix; but it cannot get away from the flesh and blood.

It is the "identity of principles" that is crucial. Faith itself asserts that we experience salvation here and now. It wants to insist that this is an *inner* experience. What Insight points out is that "inner" and "outer" cannot be sundered, that "the outer is the expression of the inner." This is what Faith asserts too, so it cannot disavow it. When it insists on the "inwardness" of its experience, it cannot forget that the faithful life is to be *lived*. That is why it can justly complain against the perverted interpretation that the polemical Enlightenment gives of everything that it does in the outer life. But it can only pretend to itself that the outer life is not "essential," by confiding in the promise of another life in the Beyond. Even that life is to be a "resurrection of the body"; and the Enlightenment has shown that the merely *intellectual* Beyond is an empty Void. Faith concedes this; otherwise it would cease to be a "kind of knowledge," and would fall back into the "Unhappy Consciousness." So it is here and now in the context of the "otherness" of the sensible world, that the "inwardness" of spiritual life is to be experienced. The "otherness" is essential to the inward life of the Spirit. Of course, the immediate identification of the "outer" with the "inner" which Insight blindly asserts, is an "infinite judgment" that can only bring death in its train; but there *is* a conceptual "identity" here, and Faith has to admit it. So there is no choice but to go forward and let the "infinite judgment" articulate itself into a comprehensible shape.

- 29./565. Enlightenment, however, becomes purely negative and ignores its own other side (the rational content of Faith). It does not recognize itself in the enemy, but remains one-sided. The Concept arises as an Other for it, and is simply found to be present by Enlightenment (which is the isolated moment of motion or *dialectic*). The two sides of the Concept meet as activity and being; and Faith must recognize the violent authority used against it.

Faith does not share the blindness of Antigone regarding its own defeat. But Enlightenment shares, to the full, the blindness of Creon regarding his own injustice. It keeps itself rigorously separate from the content of Faith; its own "religion" is a pure fiction of Reason. It "excludes Faith's content from its purity," by refusing to treat Faith as a form of thinking, and hence as implicitly rational. That is how it

is able to regard the content of Faith as “superstition,” the irrational negative of its own rationality. So while it does bring the sides of Faith together, it does not bring the thinking of Faith together with its own thinking. In choosing the “outer” side of Faith for assertion, it reduces Faith to contradiction; and in denying the “inner” side of Faith, it denies and contradicts itself.

Faith and Insight are like the two sides between which the perceiving consciousness skips back and forth. But it is Faith that must understand what is happening, because Faith is the unconscious “identity” of Thought and Being, while Insight is their absolute (self-conscious) estrangement. So instead of the perceptual stasis, the situation that arises is that of Lordship and Bondage (or unequal recognition).

The Enlightenment brings Faith to self-consciousness, without realizing the significance of what it is doing. The objective Concept arises before it as an alien essence that it must sweep away. Enlightenment itself is the moving force of this alien Concept. As in Lordship, this commanding violence is directed at an “other” which is not recognized as one half of the acting subject itself. The whole process takes place within one shared self-consciousness, but only Faith recognizes the sharing. The right of Insight over Faith is acknowledged by a self-consciousness that recognizes its Lord as a free self. Faith knows that Insight must triumph. But Insight does not recognize that it is Faith itself that is admitting this. It takes Faith’s defeat as a simple triumph of light over darkness in the hitherto unenlightened mind. Thus (again like the Lord) it does not recognize that Faith in defeat is actually wiser and more insightful than it is itself. Enlightenment will realize its Truth, and recognize its own absolutely contradictory, negative character in the Terror. What will emerge from the Terror is a higher mode of Faith; the “Goddess of Reason” will perish. Paragraph 565 brings out the dependent status of Faith; it is Insight that has the *independent* consciousness.

- 30./566. Enlightenment makes the believer see that the Concept is an *act* of consciousness, that the essence is the self-produced essence of myself, not an inexplicable revelation to me. Faith lives, moves and has its being in God, because it manifests God in its own active life. But Enlightenment goes further and makes God’s essence *only* a product of action. This reduces the production itself to the creation of a fiction. On the other hand, God exists as the Unknowable Other—Enlightenment and Faith agree on that point.

What emerges here is the problem of how an absolute Other can be known. The Insight that says God is a “fiction” implicitly assumes that the Other is an unconscious object; but that is not known. So the sense in which God is a product of “pure consciousness” (or of thought) requires further meditation. It is I who must read the Bible for myself, and make my own interpretation of it; and the experience of the Risen Christ that comes from this purely theoretical effort will become the genuine experience of salvation (which belongs to the “third relation” of Unhappy Consciousness) only if I can live in accordance with it. It is only in my active life that I can “be conscious that my singularity is reconciled with the universal” (par. 210).

Faith is hardly conscious of its active life as a “production” at all; but Enlightenment triumphs in the cultured mind because of the indubitable truth of this claim. Faith holds that God *reveals* himself. He is always primarily in and for himself; and my very capacity to experience the “witness of the Spirit with my spirit” when I read the Bible is a function of my recognition that “God is there” in my inner life. I live and move in God, and my being depends on his (not vice versa); but the actions that confirm the validity of this intuition are inalienably *mine*.

Now let us put the same point in the language of Insight. I do not produce Reason, when I think; but I do produce my own rationality. And that is not as easy as it sounds, as we can recognize when we reflect that the call to “have the *courage* to use your own understanding” was by no means rhetorical. Courage was required. In the language of Pure Insight, the word “production” (*hervorbringen*, bringing forth) is not at all the same as “creation.”⁶¹ No one creates rationality, or even makes herself rational by her own efforts alone. But there will not be any actual rationality unless we “bring it forth” together; and similarly, what is meant by the “bringing forth” of the community of Faith, from the inner world into the daylight of this world, is something *necessary*, something that Faith cannot deny to be its own act.

But then the Enlightenment goes wrong about this “production.” It claims that the subjective producing is all that there really is to Faith. The “Being in and for itself” that is inwardly experienced, is just a fictional reality; for Enlightenment takes that to be the only kind of existence that mere thoughts can have. This radical reduction ignores both the fact that thinking itself is something objectively valid, and the fact that Pure Insight is itself conscious of something more, something beyond mere thought, something alien to it and unknown. Each of the adversaries experiences the “essence” both subjectively and as a completely mysterious and alienated “object.” That is why Faith must yield; but it is also why the movement of rational thought cannot stop here.

- 31./567. Enlightenment does have a right to insist on the finite, anthropomorphic moment in Faith; for Faith combines with its spiritual experience the claim that certain “happenings” express the Absolute. Enlightenment, for its part, envisages this world as spiritually forsaken, as neither being nor not-being, but becoming.

The problem of “anthropomorphism” is more complicated than the simplistic attack of D’Holbach allows; but there is a problem nonetheless. Both Faith and Insight are involved in it, and neither can handle it properly, because both give to the Beyond, or to “pure thought,” an absolute priority which it cannot have. Faith can reject the accusation of idolatry with a good conscience; but it cannot deny its own historical origin and character. It makes its entrance into the eternal presence of God through its experience of “the witness of the spirit.” But that “witness” is mediated for it by a historical record. If Lessing is the voice of “Faith,” for instance, then the virtuous pagans (whose fate was such an agonizing problem for Dante) are just as surely a part of the community of the blessed for him, as they are for Helvétius; but how this can be consistent with the historical character of Faith is not clear.

The attitude of the Enlightenment towards historical transience (as summed up in the last sentence of this paragraph) is fundamentally mistaken (so Hegel will argue later); but Faith cannot explain *how* the dead man has “risen.” Faith itself (like the Enlightenment) thinks of the actual world as a “forsaken” unspiritual world that must be left behind.⁶²

- 32./568. As for the contingency of revelation, faith acknowledges that too. Salvation is an incomprehensible mystery, that is only imagined not known. The saved soul forgets this in the experience of the “witness of the Spirit.” Enlightenment concentrates on the aspect of mystery and the authoritative mediation, ignoring the *inward* structure of the salvation experience.

Dante, with his problem about the virtuous pagans, and the time before the Gospel came, is the *Gestalt* that we need here. Hegel is now dealing precisely with the bad logic of revelation (which Lessing insisted upon as much as Spinoza). No historical record can establish “eternal” truths; and Faith itself does not claim to have any rational insight into what it says it knows.

Faith is an ambiguous, two-sided phenomenon. Lessing gives precisely the interpretation of Faith’s “spiritual immediate knowledge of the Absolute Essence” that Hegel accepts. But for Faith itself, the fact that I have read the Book and seen the light, is a contingent fact of grace—an unfathomable mystery of “Divine election.” The polemical Enlightenment, which is mainly concerned with the social authority of the priesthood, degrades the “spiritual immediacy” of Faith’s knowledge back into the relation of external mediation by which the “unhappiness” of the natural consciousness was finally sublated (the channeling of Divine Grace through the priest as an “alien third”). What makes this possible, is precisely the fact that Faith can give no rational account of how it comes to be on the eternal side of “Lessing’s ditch.” The faithful consciousness does not even properly understand that the ditch is there, until the Enlightenment pushes it over the edge, and claims the eternal side just for itself. Both sides forget the immediate inner “witness of the Spirit.” Only at the end of chapter VI will it be properly remembered.

- 33./569. As for asceticism, faith acknowledges that God meant us to be happy. It is all the more grasping and hedonistic in its secular existence because its religious sacrifices are procuring its freedom on the other side; and therefore it is hypocritical.

As far as the discipline of asceticism and charity is concerned, Faith is in the same contradictory situation in which the Unhappy Consciousness found itself. Faith is not in despair about the fact that sacrifice can only be symbolic, because it admits that we have to make ourselves at home in the world. So it is satisfied with a religious renunciation that has real effect only in the inner life of thought. I am not certain what target Hegel has in mind in his ironic comment about Faith being all the more grasping in this world because of its religious confidence in its own pious intentions. But since the main representative of the Enlightenment is D’Holbach; and since the main battleground is France, I suppose the reference must be to the

acquisitiveness of the French Catholic Church, and to the stout defence of its “privileges” by the First Estate. In that case, this paragraph does not anticipate Max Weber’s thesis about the association between Protestantism and Capitalism.⁶³

This material acquisitiveness on the part of the Church makes Faith guilty of exactly the same hypocritical corruption of intention that it found Pure Insight to be guilty of earlier (par. 555). Hegel is clearly setting up a parallel in the whole sequence of topics and criticisms from the two sides. The establishment of a perfect equality in assertion and action means that the Enlightenment must triumph, because it has admitted the necessary identity of its thoughts with their singularized “otherness” in the secular world of sensible things.

- 34./570. As for the proof of its freedom being a fake, Faith knows that its symbolic action stands for a freedom that it does not have, and cannot achieve. A single action, no matter how radical, cannot adequately express a universal purpose. The pretence is too naïve.

The symbolic actions that express the inner purpose of Faith are logically absurd, just as Insight says they are. Faith escapes from the contradictory misery of the Unhappy Consciousness by distinguishing between “essence” and “existence,” and withdrawing into the “inner life” for its religious experience; and this means that it must logically admit that all of the “symbols” through which the Unhappy Consciousness was reconciled with the external world (and could even come to see it as “reconsecrated” or saved) are foolish. But such actions as fasting (or abstaining from most kinds of flesh) on Fridays are equally irrational. Here the agreement of Faith with Enlightenment becomes denominational, because D’Holbach was following in the footsteps of the great reformers in attacking the disciplinary *rou-tines* of Catholic piety.

The practice of priestly celibacy in particular is the target of the sarcastic reference to Origen. That great Church Father probably threw away his chance of sainthood, by having himself castrated in an excess of zeal. He made sexual intercourse impossible for himself, but he certainly did not free himself from the desire for it; and this says something important about “disciplined” abstention. On this point, D’Holbach has the most important of all the *Gestalten* of Faith on his side. When Luther left his monastery, he devoted time and effort to the finding of husbands for nuns who followed his example; and when one of them proposed herself as a wife for him, he married her, and fairly promptly fathered a child.

The dogma of the Atonement itself involves the same “infinite judgment” that Insight and Faith discover in all practice of ascetic discipline. How can a singular action of self-sacrifice be identical with the universal purpose of guaranteeing the forgiveness of all repentant sinners? Insight is quite right in pointing out here that “the Spirit is not a bone.” But it will go on to make the same absurd identification positively.

The standpoint of Faith is by no means exclusively Protestant; but Pure Insight became a social polemic against “superstition” (and ecclesiastical authority) largely because the Reformation did not triumph in France. The identity of itself with

Faith which Enlightenment perverts is more evident in the case of Protestantism, because the Enlightenment makes the Unhappy Consciousness its target, just as the Reformers had done earlier. Both the Reform and the Enlightenment are aspects of the evolution of Faith as the “third relation” of Unhappy Consciousness to the Unchangeable.

- 35./571. Here Enlightenment fastens on the unachieved inward ideal. For itself it does not even try to transcend its natural desires. Doing what comes naturally from within is self-justifying.

Faith clings to the inner life; and the more it becomes clear to itself, the more it becomes self-consciously hypocritical in practice. It is no *use* trying to do the impossible in the way of self-denial, as the Unhappy Consciousness did. So Faith becomes reconciled with the “bad infinite” of actual life in practice, precisely because it is estranged from it in theory. Insight cancels this hypocrisy by bringing the theory into harmony with the practical surrender.

When we study the agreement of D’Holbach with the great Reformers about the follies of penitential “discipline” we get an interesting insight into the “irresistible” authority of Enlightenment over Faith to which Hegel will very soon recur (compare par. 563 with par. 572). But before we go on to that we must explain the difference between the inner life of Faith and that of Insight. Insight can establish a perfect harmony of theory and practice because it “knows” that the inner life of its desires is naturally good. So when it holds fast to the “intention” as what counts in all active life, there is for it no opposition between Reason and Nature.⁶⁴

The inner life of Faith is not so simple and harmonious. Faith is still involved in the process of Culture—the process through which the Unhappy Consciousness is overcome. Pure Insight is the Reason that results from Culture; so it is the immediately “Happy Consciousness.” But it is actually a much more radical form of hypocrisy than Faith; so it will promptly turn over into a universally actual (or secular) experience of unhappiness. The final resolution (or better, the self-conscious reconciliation) of Unhappy Consciousness will begin from that experience; but for the moment, the rationalization of Faith by Insight produces the pseudo-religious Eudaemonism that Hegel castigates in *Faith and Knowledge*. In this second examination of Insight’s “negative behavior” the battle is over. Faith is forced to accept the “positive reality” of Enlightenment: the “comprehensive inversion” of the struggle is a familiar type of rational *accommodation*. This is the “Truth of Enlightenment.”

- 36./572. Enlightenment triumphs by Faith’s own confession. It seems that the “beautiful” harmony of Faith is being rent asunder by the demands of Understanding [cf. par. 32] in its vanity. But actually Enlightenment just makes Faith think, instead of living in two worlds at once with different standards and senses for each. Faith wakes up and admits that it cannot carry on in that way.

The “negative” Enlightenment did not triumph over Faith, but only over a straw man which it put in the place of Faith. As Hegel reminded us in par. 571 it

“maintains the externality of thinghood”; and since Faith quite consistently agrees with it about that, no genuine triumph over Faith was involved. But in its positive aspect—or as a doctrine of the “inner life”—Enlightenment is more consistent than Faith; and it is this logical consistency that constitutes its “irresistible *Gewalt*.” The great “flurry” appears to “*shatter the beautiful unity of trust*.”⁶⁵ All the “happiness” of this life is summed up by Rameau in the essentially *ugly* image of the night-stool and the regular, copious and easy bowel-movement; but it is Beauty that is the object of his meditation (both active and contemplative) and the symbol of his revolutionary hope. He is a failed musician who expresses the *Zerrissenheit* of actuality by mixing all the modes of music in a great display of miming. He is the figure of despair, but he does not yet violate the alienated thought-world of his “Faith.”

That violation is exactly what Enlightenment is guilty of, once we have decisively passed over into the world of thought. The monotone of the bell that sounds at the crucial moment of the Eucharist on Sunday morning is, for the absolved Unhappy Consciousness, the moment when the whole world is redeemed and sanctified (par. 219). Dante passes in his *Comedy* from the unclimbable mountain in the dark wood on this side of the world, to the climbable one on the other side (with Paradise, Earthly and Heavenly, at the top). And his poem is an act of *self-absolution* (that is what makes it properly an act of *Faith*). The *Comedy* expresses perfectly the “beautiful unity of *trust* and of immediate *certainly*.” Dante’s salvation needs no priest, but only the “witness of the spirit” in his memories. But back into this vision of “the love that moves the sun and the other stars” Insight now drags the night-stool, and all the ugly but unavoidable self-love and self-preservation that it stands for. That, after all, is the blind world that Dante is instantaneously whirled back to by the divine love in his last line.

Dante was certainly not devoid of “the vanity of Understanding and of selfish will and accomplishment.” I suppose he would have agreed completely with the characterization of Faith as having “two kinds of eyes, two kinds of ears, two kinds of tongue and speech.” He would have agreed, too, that the two kinds of speech must use the same content—the “*Vorstellungen* of the sensible world.” But that this can be taken as what determines which kind of consciousness is “awake” and which is “asleep” he would not have agreed; and Faith universally is on his side. The “waking” consciousness is the one that is aware of the “witness of the spirit.” At this point, the Enlightenment is the direct inversion of Faith.

Dante, however, is the logical prisoner of his own act of self-absolution. The two worlds *are* one world, and the two languages belong to one self. The self that can “absolve itself” is “the indivisibly *simple* self into which Faith has passed.” Dante would recognize the Enlightenment’s Faith that humanity is naturally “good” as the pride that led to Adam’s Fall; and that is what it will show itself to be. But the new Fall is what must follow from taking the act of self-absolution seriously; for if the absolution is real then all of nature is, indeed, redeemed by it. Moreover, this new Fall of rational Insight will be a “fortunate” event like the primitive Fall of the natural “consciousness.” It is the proper beginning of conceptual thinking (which

involves the “knowledge of good and evil”). The thinking that is now set in motion will be the final sublation of the separation of the “two worlds” in which Faith has lived. What Insight already sees and says is that there is really only one world; what the conceptual thinking that now begins will learn is that the “Fall” into two worlds was not a “fortune” at all—either tragic or comic—but a rational necessity. That knowledge is the real “good fortune” of salvation.

- 37./573. The dream-world of faith is now lost. All the furniture of Heaven has been restored to its proper use on earth. Faith is now an unsatisfied yearning since Earth offers only mortal seekers after natural happiness. Enlightenment is satisfied. Faith is not. The stain of that dissatisfaction mars Enlightenment’s perfection in all three of its moments (thought, action, and fulfilment). But it will rid itself of this blemish.

Faith does not “lose its content” because the negative Enlightenment shows that it cannot transport all of the furniture of this world to the “other” one; but rather because the positive Enlightenment shows that it is precisely this world that is transported thither. This world is the only actual world there is. The only world of “pure consciousness” is the world of here and now. “Heaven” is not critically “negated”; it is plundered. The apostles of the “perfectibility of man” and of the “religion of humanity” take Faith seriously. They want to see it realized in works. The Faith that is left disconsolate and unhappy, yearns for something beyond this heaven on earth in which nothing but the happiness of finite individuals can come to pass. Helvétius and even Rousseau’s Savoyard Vicar (if we are right in taking his “faith” as an enlightened Faith in the future) typify the “satisfied Enlightenment.” But who speaks for the “unsatisfied Enlightenment”?

We ought to find someone who spoke before the Terror revealed to all eyes that the simple transportation of Heaven to Earth is not possible; and if we go back to the account of Reason, and compare its climactic moments with the way that the “yearning” of Enlightenment is characterized here, it becomes obvious that *Kant*—who gave Hegel his definition of Enlightenment—exemplifies the necessary “dissatisfaction” of the Enlightenment also.

Reason broke down because (as Lawgiver) it could not effectively define an ideal society. Indeed, it cannot even solve the fundamental problem of whether the ideal society should be a liberal or a communist one. In its Kantian critical shape, Reason was shown to be merely formal; the “satisfaction” of the Enlightenment is now said to lack exactly what the Kantian practical Reason “postulates” in its Faith. First, the “pure object” of Enlightenment is “void.” We have not, so far, got beyond the “matter” of D’Holbach and La Mettrie; we have only a fictional God. Secondly, “as action and motion,” the objective of the Enlightenment is unfulfilled; and it was Kant who insisted that the rational goal of history must remain simply a goal. A world of “Perpetual Peace,” a world of perfected legality, is possible (and Kant’s little treatise is one of the most notable expressions of the humanist vision of a Heaven on earth). But the moral perfection of mankind is an “infinite beyond.”

Finally, the world of perfected Utility would be “selfless.” Robespierre is the negative self of the Terror; but the positive ideal of “absolute Freedom” is as “selfless” as

the Ethical Substance. This is where we must remember Rameau's triad of the True, the Good, and the Beautiful, and Kant's corresponding triad of "Critiques." Kant's Kingdom of Ends, if it were realized, could have only "Beauty," not active selfhood. The useful exists for the sake of the useless. If Insight itself is to be satisfied, it must restore to Faith the "beautiful unity" that it has "defiled." It was Schiller who completed Kant's republican ideal in this respect.

Schiller's ideal of the "aesthetic State" appeared in the shadow of the Terror. But Kant's essay "On the Radical Evil in Human Nature"⁶⁶ actually anticipated that dramatic verification of his thesis. So it seems only fair to emphasize the Kantian inspiration of Schiller's *Letters on Aesthetic Education*, and to count Schiller's violent polemic against the coglike fragmentation of the Enlightened world of "Real Individuals" as an expression of the "unsatisfied Enlightenment." Even in 1795 he published the *Letters* with the concluding promise that a "first essay" about the "State of Beautiful Semblance" would shortly follow. Like Kant, Schiller belongs to both sides of the great divide marked so dramatically by the Terror.

This "yearning of the gloomy spirit that mourns for the loss of its spiritual world, lies in ambush." Virtue took comfort in having an ambush ready for the World's Way (pars. 386, 388); and here we find the real ambush in which Faith will indeed catch the worldly Enlightenment. But that victory will come from the rebirth of the "spiritual world." Before that can occur, the Enlightenment must divide into Virtue and the World's Way, and bring defeat upon itself. At the moment, it is the perfected shape of Virtue triumphant. It possesses the whole kingdom of this world, and we must now go on to see how even the blot represented by Faith's yearning is sublated in principle (*an sich*) in "the positive result that is for it the truth."

We are going to have to give "closer consideration" to this "positive result"; and we must expect it to change its aspect in that closer view. To discover the change will not be easy. But the significance of the claim that "the blot is already sublated in principle" is easy to see and to state: whatever happens to the "positive result" of Enlightenment in the rest of Hegel's argument, the return of "pure consciousness" to this world is final. This world is our home. Whatever "satisfaction" is possible for our heart's desire, *must* be found here. It is on the foundation of this sensible and material world that the unified world of the Spirit will be reborn.

Notes

1. See the *History of Philosophy* (Haldane and Simson) III, 379, 385, 390, 398. Not all of these passages are found in *T.W.-A.* XX, which reprinted the *first* edition of the Lectures; but compare XX, 287, 293, 297. Compare also the *Philosophy of History* (*T.W.-A.* XII, 523; Sibree, 441–442). The actual "estrangement" of Faith and Insight was culturally costly in Hegel's view—compare chapter 7, note 32 below. For valuable discussions of the relation of Faith and Reason in the *Phenomenology* see L. W. Beck (1976) and M. Westphal (1984c). We should remember here the report that Hegel coupled Luther's 95 Theses with his toasts to the fall of the Bastille. Political and religious freedom went hand in hand in his mind (compare J. Ritter [1968] 1982, 184–185). There is a good discussion of Hegel's interpretation of

the Lutheran Reformation (and of “the Protestant principle”) in J. Yerkes (1983, 147–155). (The most comprehensive discussion of the relation of Luther and Hegel is probably that in U. Asendorf, 1982.)

2. M. B. Foster (1929, 69n.) is right when he says that Faith is the “departed spirit” that remained in ambush all through the realm of cultural actuality; and C. Boey (1972) is right when he says that Rameau is implicitly the spirit of the Moral World.

3. On this view, the *authoritative* tradition in Christianity, whether Catholic or Protestant, belongs to the Unhappy Consciousness; and the conciliar or *consensual* tradition belongs to Faith. Papal Infallibility, the Inquisition, excommunication (in all denominations), the burning of freethinkers (Bruno, Vanini, Servetus) and of witches, all belong to the Unhappy Consciousness. But Abelard, Dante, Bruno and Pascal belong to Faith just as archetypically as Luther and Servetus. At the other end of the cultural cycle—in the opposition of “satisfied” and “unsatisfied” Enlightenment—it is the Unhappy Consciousness that embraces the “better” half: the Young Rameau, Jacobi, Schleiermacher and so on. In this final stage it is the conventional “faith” of the community that is *authoritative*, but the authority no longer has the serious self-certainty marked by the invocation of the death penalty.

4. When we reach “Religion *in and for itself*” we shall *have* the knowledge that Faith “believes” in. But since we shall have it now and here, the experience will be radically different from what Faith expects. The God of Faith is “determinate” (being *opposed* to this world). That of Religion is “infinite” (reconciled with this world in comprehension).

5. This is a very appropriate *Gestalt* for the way in which the first two “masses” of the substance flow together into the third, the fiery subjectivity of absolute culture (par. 492).

6. It is the pure Concept in its strictly negative shape; it has no positive content. In the “Truth of Enlightenment” it will acquire “absolute matter”—its own alienated empty shape—as its content.

7. Goethe, *Werke* XXI, 588 (Bowen, 21).

8. The statement of Paul to Timothy: “God our savior . . . will have *all* men to be saved and come unto the knowledge of the truth” (I Timothy 2:3–4) falls neatly into place here. But we must not fall into the logical rigorism that made this text such a grave problem for the orthodox. In the logic of the Understanding it was inconceivable that “God’s Will” would not be completely fulfilled (God knows who is saved and who is not—and that is how he *wills* it). Faith, like Insight, holds (commonsensically) that everyone in this world *can* (but *may not*) “come unto the knowledge of the truth.” This is the “raising of the actual world into the universality of pure consciousness.”

9. Hegel’s quite unorthodox presentation of “the Earth” as the permanent *Gestalt* of the Unchangeable is the middle term for this “identity.”

10. Insight is always what Hegel elsewhere designates by the name of “Reason operating as Understanding”; it applies its universal Concept to its singular *Vorstellungen*. But it is in transition because it is consciously *dialectical*.

11. This means that Insight is identical with the “Reason” of chapter V. “Faith” and “Reason” go hand in hand towards the recovery of their lost identity in “Spirit.” A perfect illustration of the *rationality* of Faith is supplied by the damnation of Guido da Montefeltro in Dante’s *Inferno* XXVII. He is in Hell because he relied *absolutely* on the “counsel” of his “mediator.” He *ought* to have had better “insight” (and the “courage to use it”).

12. The selection of Pascal as the paradigm of “Faith” is meant to underline this; and Calvin’s view of the Bible as a divinely given law-book looks (to me at least) like a resurgence

of the *first* relationship. So the historic succession of identifiable confessions is not directly identifiable with any logical series (at least not with any series that I find it easy to recognize).

13. "Objectivity" in this second use has become a "good thing," whereas "objective thoughts" in the earlier use were "bad things." The objectivity that the Unhappy Consciousness does *not* achieve, is that of *experiencing* its objects in actual life here and now. The theologians of the Unhappy Consciousness think abstractly about an Object which they have already stipulated to be "incomprehensible." (See, for example, the Athanasian Creed, or the "Proslogium" of Anselm.)

14. *Metaphysics*, λ (= xii), 5.

15. Even for Augustine and the Medieval period (from Erigena to Ockham and Suarez) my direct knowledge is rather patchy. About the Patristic period I have *only* a second-hand knowledge—and that is not very extensive. But there is, at least, an important *strand* in the Patristic tradition that can be appealed to in support of what I have asserted here: see especially Lawrence Dickey (1987, Introduction).

16. Rameau certainly does not deny that. But his "faith" is incapacitated by its own contradictoriness. Pure Insight has made the inward turn, and escaped from contradiction. But it loses its "content" in so doing; the recovery of content is long and slow.

17. Byron, "The Destruction of Sennacherib," opening lines. (Hegel's view of the Terror makes the comparison fully appropriate. It is the Assyrians of the Enlightenment who are vanquished at the end of the day.)

18. Our commentary will proceed as "methodically" as possible. We have seen why Hegel needed to discuss Faith and Insight together as the logical completion of the actual world of Culture. Now we shall observe that the account of Pure Insight "in and for itself" is logically continuous with the account of their "struggle"; and the chapter-structure of our commentary is designed in deliberate counterpoint to Hegel's, in order to highlight that fact.

19. We shall see in due course, that this is more than an innocuous "historical" observation.

20. *Novum Organum*, 3.

21. In *Measure for Measure* (Act IV, Scene 2, lines 29ff.), Abhorson the executioner complains that he cannot accept Pompey (a Clown, tapster to the bawd Mistress Overdone) as his assistant: "A bawd, sir? Fie upon him! He will discredit our mystery." (A short debate ensues between them about the "mysteries" of bawdry and hanging.)

22. Thus, Robinet provides the missing link between the "honorable consciousness" of the "spiritual animal kingdom," and the one that is caught in Rameau's whirlpool. Robinet is certainly a proper "shape of Reason."

23. "What is Enlightenment," *Berlinische Monatsschrift*, IV, 1784, 481. I cite the translation of L. W. Beck in Kant, *On History* (Indianapolis, Library of Liberal Arts, 1963, 3). Beck adds the interesting intelligence that the "motto" (which comes from the *Ars poetica* of Horace) was adopted in 1736 by the Society of the Friends of Truth, an important circle in the German Enlightenment. Both Hegel's concentration on *religious* enlightenment, and the essential distinction that he draws between Unhappy Consciousness and Faith, derive from this article of Kant's. (Kant's use of *Verstand*—which Beck translates indifferently as "understanding" or "reason" but which I have regularized here—is also Hegel's paradigm for "Reason operating as Understanding.")

The best short survey of Hegel's view of the Enlightenment and the French Revolution in English is that by L. W. Beck (1976). For Hegel's attitude to the French Enlightenment in particular, see also J. D'Hondt (1978). (This is a topic that C. Taylor [1975] discusses

insightfully several times—and because of his interest his disgraceful apology for an Index is here useful.)

24. Only the Concept of the new world has arisen at the moment when the “science of experience” becomes possible (see pars. 11–13) and the science itself shows us why we must not try to *anticipate* the experience of its “realization.”

25. As R. K. Maurer says (1974, 398) “Protestantism makes rational political universality possible because (already within subjectivity) it orients the will towards a Reason that is comprehensive.”

Hyppolite was correct in maintaining that the Reform is part of the “battle” of Faith and Insight (1946, II, 410–411; 1974, 423–425). But, by the same token, he was wrong to say that there is no clear allusion to “the Revolution of the Germans.” The whole of chapter VI C is concerned with this.

26. Goethe, *Werke* XXI, 586–587; Bowen, 23.

27. The last sentence of Miller’s paragraph 540 is actually a *separate* paragraph in Hegel’s text. So I have called it 540a for Miller-users, and given it its own (section) number for other readers.

28. *Novum Organum* I.

29. For both this and the preceding quotation, see *Les Philosophes*, ed. N. L. Torrey, Capricorn, 195. H.-G. Gadamer (1975, 239–240) says that “the fundamental prejudice of the Enlightenment is the prejudice against prejudice itself, which deprives tradition of its authority.” This is an enlightened way of formulating Hegel’s own view. (For a good discussion of it, see M. Westphal, 1986.)

The opposition between the “political character” of the Enlightenment and its “spiritual disintegration” which S. Rosen sets up (1974, 183) is a false one. It is the French Revolution that we are trying to comprehend. Admittedly it is a *political* failure (and Hegel wants to see why). But it provides the foundation for a new political world. (It must be granted, however, that much political interpretation of this section is only “enlightened chatter.” P. C. Ludz [1961] appears to me to be a good example.)

30. See his *Universal Morality* (1776) (Torrey, 193).

31. “Despotism,” we may notice, is the sublated or inverted shape of the “unlimited monarch” who is the “universal benefactor” of Culture in its transitional phase.

32. The “new serpent of wisdom raised on high for adoration” is not the serpent of Eden, but the one that Moses raised up in the wilderness as a magical cure for snake-bite (Numbers 21:6–9). Hegel applies the allegory very neatly to the Enlightenment’s curing of “superstition” (so that the poisonous bites of priestly cunning have no effect). But he adds his own barb to the story—for when the “new serpent of wisdom” cast its skin, it was Madame La Guillotine who emerged. The casting of the skin was by no means *schmerzlos*!

Hegel’s use of the brazen serpent image may very probably have been inspired by the controversy about “Crypto-Catholicism” that centered round the figure of J. A. Stark in the 1780’s. See Jacobi, *Werke* II, 460–461; and further G. di Giovanni (1994) and the book by Jean Blum (1912).

33. Goethe, *Werke* XXI, 639–640; Bowen, 68. D. W. Price (1991, 227) remarks that Hegel saw this passage as appropriate for quotation here because his whole book is an idol-smashing expedition. (For the context of this quotation, see chapter 5, p. 313 at note 66.)

34. See Cerf and Harris, 56–59 (*G.W.* IV, 316–318).

35. *Faust, Ein Fragment* (1790, lines 147–156). The speech appears unchanged in *Faust, Part I* (1808, lines 501–509). I have based my rendering on the prose translation of Barker Fairley (University of Toronto Press, 1970, 10); but I have maintained Goethe's punctuation, and have tried to be even more literally precise than Fairley.

36. Pascal is a good paradigm for the standpoint of "Faith"; and it is clear from Hegel's occasional references (especially *Faith and Knowledge*, *G.W.* IV, 414; Cerf and Harris, 190) that Hegel was aware of this. How much he knew about French scepticism I do not know. Nor do I know enough about it myself to make an informed estimate of its contribution to the silent Enlightenment. But I think that the effort of "recollection" should embrace all of the movements of thought that are recognizably important.

37. *Pensées* (ed. L. Brunschvicg, 1914) 9, 581.

38. *Epîtres*, xcvi.

39. The claim that there is a certain affinity between D'Holbach's materialism and Hegel's idealism is supported by Hegel's sympathetic critical evaluation of the *Système de la nature* in the *Difference* essay (see Harris and Cerf, 177; *G.W.* IV, 80). But it was *Spinoza's* naturalistic Deism that posed the problem of "necessity" for the post-Kantian speculative philosophers generally (and for Hegel in particular).

40. On one side, Faith is the *third* relationship of the Unhappy Consciousness. The *Andacht* that *must* focus on the external image—or the wafer and cup—becomes pure *Denken*. But on the other side, this *thinking* is the *first* relationship of Absolute Spirit. In its theological aspect, Hegel's *Phenomenology* is a completely *rational* exposition of the doctrine of the Trinity.

41. *Pensées* (Brunschvicg, 1914, 6, 347 and 348).

42. This takes us back to the "wisdom of the animals"; and it constitutes the connection with the Eleusinian Mysteries.

43. Romans 8:16: "The Spirit itself beareth witness with our Spirit, that we are the children of God."

44. Hegel's "Life of Jesus" confirms his agreement with D'Holbach on that point.

45. As the "element" for rational living things, Spirit *envelops* our external life too; and its existence is as puzzling as that of the "aether," until we recognize that it is the "real Concept."

46. *Gesammelte Werke* (ed. P. Rilla, Berlin, 1956, VIII, 12, 14; Chadwick, 53, 55). On the problem of Lessing's ditch see J. W. Burbidge (1992, chapter 1). Behind this polemical position we can clearly perceive the argument developed at length by Spinoza in the *Tractatus Theologico-Politicus* (see especially *Chief Works*, ed. Elwes, vol. I, 61):

The truth of a historical narrative, however assured, cannot give us the knowledge nor consequently the love of God, for love of God springs from knowledge of Him, and knowledge of Him should be derived from general ideas, in themselves certain and known, so that the truth of a historical narrative is very far from being a necessary requisite for our attaining our highest good.

47. I base this hypothesis about Lessing's unexpressed real position on the explicit statements in "On the Proof of the Spirit." On the one hand:

To jump with that historical truth to a quite different class of truths, and to demand of me that I should form all my metaphysical and moral ideas accordingly; to expect

me to alter all my fundamental ideas of the nature of the Godhead because I cannot set any credible testimony against the resurrection of Christ: if that is not a *metabasis eis allo genos*, then I do not know what Aristotle meant by his phrase.

But on the other hand, what can bind Lessing to accept the teachings of the Christian faith is:

Nothing but these teachings themselves. Eighteen hundred years ago they were so new, so alien, so foreign to the entire mass of truths recognized in that age, that nothing less than miracles and fulfilled prophecies were required if the multitude were to attend to them at all. (*Werke*, VIII, 14–15; Chadwick, 54–55).

If we read this second passage in the light of the evolutionary theory of truth stated in “The Education of the Human Race” it seems clear to me that the “requirement of miracles and prophecies” was (in Lessing’s mind) the necessity of a certain form of *presentation*, appropriate “to the entire mass of truths recognized in that age.”

48. This is a confusion that the very form of “myth” invites, because it is inherited from a culture that did not know how to distinguish clearly between historical and eternal truths.

49. See *Werke* VIII, 37. Hegel uses the word *Ansteckung* at the end of this paragraph; and his general use of this metaphor for the Enlightenment (par. 545) probably derives from Lessing. (The opposition of “spirit” and “letter” in this paragraph is another pointer to Lessing’s presence and influence here.)

50. This does not imply that there is anything absolute about the virtue of personal benevolence. When Bernard Bosanquet and the Charity Organization Society opposed “socialist” welfare policies on the ground that the *opportunity* for the development of personal virtue must be preserved, they were thinking in an estranged way, and not using a properly Hegelian argument (as Bosanquet no doubt believed). The *Phenomenology* is neutral about the ethical shape of individual virtue.

51. The critical editors refer us forward to the discussion of Deism and Materialism here. But at this stage Hegel does not want to bring that division in, because he does not want to speak about the “content” of the Beyond. When that later division is made, the strictly humanist position that leads the attack upon Faith will be identified as “Materialism”; but for the present it is simply “agnosticism.” At present, it can comfortably embrace the polemical activities of many, like Voltaire, who were dogmatically Deists. Whether sincerely or from motives of policy, many leaders of the Enlightenment were agnostics. Diderot and D’Alembert seem to belong to this category; and Helvétius adhered to it officially (though it seems clear that it was only a cloak for outright Materialism in his case).

52. H. Boeder (1977, 170–171) takes note of the fact that this self-possessed common sense is the fulfilled meaning of “natural consciousness”—cf. P.-J. Labarrière (1968, 134).

53. The identity of the *in-itself* with the *for-another* was first encountered in this shape in the willing self-subjection of the other self that is the highest object of natural Desire (par. 175). Again we are made aware of a *circle*. The educational philosophy of the Enlightenment returns self-consciously to the ideal of the “natural” self.

54. For Hegel’s interpretation of the original myth see especially *Enz.* section 24 Z3. It can be applied readily to this new doctrine of a return to the primal innocence.

55. We shall soon come to some relatively indisputable references to Helvétius.

56. *L’Homme Machine*, Torrey, 176–177.

57. Baillie refers us, very aptly, to I Timothy 4:8: “Godliness is profitable to all things.”

58. *Novum Organum*, Book I, Aphorism cxxix.

59. See *De l'esprit*, 2nd Discourse, chap. 2; and *De l'homme*, section 5, chap. 3; also section 9, chaps 4, 6.

60. In *Faith and Knowledge* this "absoluteness of the finite standpoint" is called "the fixed principle of this system of culture" (*G.W.* IV, 319; Cerf and Harris, 60); and Locke is clearly identified as the point of origin for it (*G.W.* IV, 321–322; Cerf and Harris, 63). Hegel's main concern in that essay is with the philosophers of the moral world-view; but the introductory discussion of enlightened eudaemonism deserves careful study at this point (*G.W.* IV, 316–324; Cerf and Harris, 55–66).

61. L. P. Hinchman (1984, 129ff.) deals with this problem very well.

62. This insight into the transience of the finite is just what Enlightenment forgets when it sets out to realize its "Truth."

63. Something more like an anticipation of Weber's thesis can be found in *Faith and Knowledge* (*G.W.* IV, 316, line 33–319, line 3; Cerf and Harris, 57–60). There Hegel is explicitly talking about German Protestantism; and we can see that the "subjective beauty" of that philosophy belongs to the Moral World-View rather than to the Faith that is attacked by Enlightenment.

64. Here we can see why the rational Heart also adopts the "conspiracy" theory of "Culture" so readily, as soon as it is proposed by the rational mind (compare par. 377 with par. 542).

65. *Zerreissen* is the word here, and it should infallibly remind us of Young Rameau with his "language of *Zerrissenheit*".

66. Written in 1791 as "Book I" of *Religion within the Bounds of Reason* and passed by the Prussian censor for publication in the *Berlinische Monatsschrift* (April 1792).

Chapter 7

Reason Triumphant

VI B.II(b): The Truth of Enlightenment

The great puzzle posed by this section is that both the title and the content appear to be directly repeated from above (pars. 557–561). Hegel certainly does repeat himself, but he never does so elsewhere in the book upon this scale; and it is completely implausible to suppose that he would deliberately dignify a simple repetition as a new movement of thought. (See par. 592 and note 25 below for clear evidence of how significant the new movement of consciousness in this section really is.) Logically, the topic of this section has to be the sublation of the “blemish” represented by Faith’s unhappiness. The “Truth” of Enlightenment therefore has to be its validity as Religion. Hence the title of the next section of the commentary.

(a) *The Mundane Religion of Pure Insight*

- 1./574. Apart from this silenced yearning, Consciousness sees itself clearly. Insight actualizes itself by positing pure Thinghood as its intellectual object. The absolute Concept posits itself as the pure thinking that is a pure thing. On its subjective side (as a movement into the Beyond) this concept is the brooding feeling of Spirit. But the identity of the two sides is unrecognized. The knowing consciousness is finite, the thing infinite (absolute).

The “truth of Enlightenment” is “pure metaphysics” (pars. 580, 583). The “blemish” remains behind in the “other world,” but “true thought” is now actual in this world. Faith “has gone into itself on the yonder side of consciousness.” So the inversion of Enlightenment is here quite simple and straightforward. The pure theory of the Enlightenment now “actualizes itself” (practically). This is a direct transition from “Logic” to “Nature” (but we are still stuck in the first triad of the speculative Logic when it happens). From the actuality of Culture we moved into the world of pure thought; now we move back to actuality again thoughtfully. But it is not the actual world of Culture that we return to, but an understandable world of Nature in which there are no distinctions, and in which everything is “good,” because whatever is natural is good. The “beyond” of the enlightened spirit is just the thought-project of the earthly paradise; and the emptiness of this “pure thing-

hood” is logically identical with the nothingness that Faith sadly contemplates. The “identity” consists in the *emptiness* of both concepts.

The positing of Nature as what is *not* thought, is the first step of the Concept (or of *speculative* thinking) towards its own actualization. This positing is a pure thought, but it is precisely the thought of what is “*not*-thought.” It is the thought of a “pure thing,” i.e. a universal and non-sensible thing, the thing that is the inward, purely intelligible, “essence” of all sensible things. Pure Insight (or the “absolute Concept”) posits itself as its own negation. When we spoke of Insight before, during the battle with Faith, we were considering it as an “activity”; now we are considering it as a “being.”

This is a distinction without a difference. Insight is the same thing, the thing that necessarily thinks of itself as other than itself. The distinction between the pure activity of Insight and the thing that it posits as “beyond,” is only maintained by the movement of distinguishing or positing which is the very movement of Insight itself. To put it another way (which may, I hope, make it a bit more perspicuous) I *am* my “nature”; yet if I do not posit “nature” generally as other than me the thinker, I cannot be or do anything; and this has to be understood universally—i.e. there is simply “thinking” on one side, and “nature” on the other.

For pure Insight, the active positing of “Nature” is completely unselfconscious. In the estranged standpoint of “consciousness,” thinking and being are quite alien to one another, and are opposed in character. Nature is simply there; it is what is beyond thought. Insight itself is simply a finite consciousness that is rationally aware of it. On the other side, the “gloomy weaving” of Faith rests in its yearning identity with the “Essence that is beyond consciousness.”

The identity of the *object* of Faith and Pure Insight is not too hard to recognize and to grant. The empty “Other” is what the Victorian positivists christened “the Unknowable.” But the identity on the side of the subject may not be so obvious. Insight is a “self-conscious movement” that is identical with the “unconscious weaving” of Faith. This weaving which can no longer make any valid thoughtful distinctions, is what Hegel calls “feeling”; the identity exists at this level because “self-feeling” is the immediate identity of all consciousness with its “nature.” This identity appears to be differently structured on its two sides, because Faith is the unhappy feeling of being estranged from the Beyond for which it yearns; while Insight is the happy thought for which the Beyond is absolutely alien. But as “happy” and “unhappy” the two opponents are just opposite sides of the same Concept. It is these two attitudes (of feeling and thought) toward the “absolute Essence” that must now be comprehended in the Concept of “Absolute Freedom.”

- 2./575. Enlightenment now splits into two warring parties. It has to be against something, so it turns against itself since it always had the other in itself. But now the battle is not in the dark; it is not an unhappy but a happy schism.

In the warfare of enlightenment with superstition we were concerned only with the subjective attitude of Pure Insight. Now we are concerned with what appeared there as Insight’s “other.” We could not help referring to that sometimes, because

universal Insight takes its singular real object for granted in such a spontaneous and unselfconscious way. But we treated it as having *no* determinate character. D'Holbach was in fact a dogmatic materialist, but we dealt with him only as a humanist critic of "man's self-incurred tutelage." The only "absolute essence" that we have encountered so far is the God postulated in the humanist religion of Helvétius, the God who is essentially a subjective fiction.

But now, in the (objective) "truth of Enlightenment," we are dealing with the "physics" (or the "natural philosophy" of the Enlighteners). All of them shared the commonsense certainty that their rational insight was directed upon a real object which was in itself a unified order of Nature. But some of them assumed that the unity derived from a divine "Self"; while others maintained that it was a "not-self" (though it was certainly "self-moving"). Many stood firmly by their subjective agnosticism, holding that no strictly rational insight was possible about this; but all admitted that the two options were open. Thus the conflict between Faith and Insight was always present within the victorious party of the Enlightenment. The Truth of Enlightenment contains the sublated battle; and this, as Hegel rather obliquely says, is fortunate rather than a misfortune. Enlightenment can resolve the problem of Faith's unhappy yearning, because it does not stand still in a sceptical position. It knows the "Essence" in both ways.

- 3./576. The absolute essence is thought of in two ways [cf. par. 559]: as pure *thinking* and as sensuous *thing*.

The question is how the Understanding should conceive of the "Force" that is "behind the curtain" of sensible awareness; or how "Observing Reason"—the *instinctive* Reason that "operates as Understanding"—should conceive of "itself" objectively. There is no way in which the object (which is "beyond" both thought and sense) can be differentiated "in itself." The two possible answers arise from the duplication of the stances of consciousness (as Understanding and as Observing Reason). Those who "understand" the world will assume that "Force" duplicates itself somehow, so as to be self-aware; while those who understand their own understanding as the comprehensive concept of "Reason" will postulate an absolute *mind* to account for the necessary self-doubling aspect of the Concept of Force itself. Our relation with this "absolute Being" is entirely constituted by the experience of Sense-Certainty and Perception. We can regard what lies "behind the curtain" as a "thing" or as a "self." But in any case it will be (negatively) a Being that does not *think* in the way that we do, and is not a *thing* like those that we know. It is the problematic *Ding an sich*.

- 4./577. Abstracting the sensuous aspect we can get either *Matter* as the purely conceptual moving power; or the Supreme Essence of thinking itself.

In paragraph 576 Hegel mentioned first the Deist hypothesis of the "absolute thinking." But the "absolute thing" arises more naturally in the "experience of Consciousness" because Sense-Certainty is primitively a relation to an *external*

object. The most elementary common sense tells us that an “absolute thing” is “out there.” We know that our experience is finite; and this finiteness has its origin in the givenness of sense-perception. Thus the object is taken first as the pure thought that the Understanding posits when it reflects upon sense-certainty and perception. In other words, it is the unknown ground of the order of nature, the most ultimate (and purely intellectual) object of Consciousness as Understanding.

The matter of Materialist theory is not an object of sense or perception. One cannot establish its existence by “striking his foot against a large stone, till he rebounded from it” as Dr. Johnson did in his famous “refutation” of Berkeley by appeal to simple perception.¹ As we say now, pure Matter is a theoretical hypothesis. This is necessarily the case, because we have to abstract from every sensible condition, or perceptible order, in the supposedly material things that we are directly aware of.

Secondly, it must not be conceived as the passive or inert substrate that Berkeley did show to be a superfluous, unverifiable, and indeed inconsistent, hypothesis. It is a moving force. In his chapter on the Understanding, Hegel replaced the hypothesis of the “unknown” with the actual Concept of Nature as we know it; but he acknowledged the “Beyond”—that which is “behind the curtain” (par. 165) even then. That unknown “substratum” is the “predicateless Absolute” either as Matter or as Mind.²

- 5./578. The Enlightenment splits therefore into Deists and Materialists; the Absolute is abstract thought either as subject or as object. Matter lacks the “wealth of unfolded life” that Nature has; and the Supreme Being lacks self-differentiating consciousness. So the battle is about nothing. The Deist’s God is what is *beyond* our consciousness, so that He is a negative “thing” like Matter. Matter, on the other hand, is a pure concept, i.e. something that can only be thought. Descartes had already realized that to think is to be (for oneself). Conversely “pure being” can exist only for thinking.

The God of Deism is the same purely conceptual entity as Matter—but regarded as an active Concept. The “pure concept of the non-conceptual” involves “pure conceiving.” This “pure conceiving” for which the order of Nature is, is God. This was the absolutely simple formulation of Deism that Hegel found in Robinet.³ He now wants to keep Deism and Materialism as close together as possible now, because in their “truth” they are just the opposite sides of the empty “pure concept” which we have been calling “Insight.”

The most famous Deist was certainly Voltaire; and he attached great importance to the belief in God. Hegel is anxious to show how little difference it makes. Both D’Holbach and Robinet presented their views in works *On Nature*; and in so far as they stuck to the exposition of the order of nature as it is apparent to us, they were obliged to say, and did say, much the same things. But they thought that they were radically disagreeing. Hegel’s point is that the concept is empty whichever way one takes it; and therefore the disagreement, about which both sides waxed hot, is actually quite pointless. In both directions we are dealing with “the Unknowable.” The God of the Deists is “beyond”; yet in the order of nature He is

here; and the Matter of the materialists is certainly “here”; but as a pure concept it is essentially a “beyond.”

Hegel thinks, plausibly enough, that the Deists have inherited the rationalist certainty that “pure thought (essence, rational substance) *is*”; and the Materialists have inherited the empiricist certainty that “things are” (matter, extended substance). But neither party has fully comprehended the significance of the Cartesian proposition: I *think*, therefore I am. This does not provide a guarantee of the separate existence of two kinds of “substance,” but it does illustrate the double aspect of “being.” The thinking self posits itself as an object, and that object *is* (for it); but this positing itself simply *is*, i.e., it is the thinking activity that posits itself as an object. The guarantee of the being of what thinks applies of course to Pure Insight in the universal sense; and that is not even logically separable from the being of the truth that Pure Insight knows. What is logically guaranteed is that Being and Truth are necessarily the same (which is what Parmenides meant). How this can be “absolutely” known (as something more than a formal conceptual necessity) when all actual knowers are finite, is what Hegel wants to articulate. Descartes found the right first step, and the dogmatists of the Enlightenment have lost hold of it. But if they have lost hold of it, that is a direct result of the “two substance” theory which Descartes developed out of his primary certainty.⁴

- 6./579. Essence [the truth of what is] must have this subject/object difference in itself. That is why these opposite views are possible. Pure inward oscillation or self-thinking are the common universal. But all the content is left out. The simple alternation of perspectives (being-in-itself, being-for-another, being-for-self) is *Utility*. This bad infinite cycle is actuality as it objectively is for Pure Insight.

The thinking self *is* in two ways: it is conscious of itself as a living thing in the world (which is *not* thought and is “negative of self-consciousness”). In this sense “Thinking is thinghood.” But on the other hand, the thinking self is aware that this consciousness of itself in the world is for it simply. In this sense “Thinghood is thinking.” “Thinghood” is a concept, and my own “thinghood” in the world of things is continually evolving. “Pure thinghood” (or Matter) is the most abstract of all concepts (next to, or together with, “pure thinking”). The identity that Hegel states both ways is not a simple conversion. The universal shared between self as world (which Descartes miscalled “extended substance”) and self as self (miscalled “thinking substance”) is best characterized in ordinary language as Life. This is the Concept through which Hegel himself makes the transition from Consciousness to Self-Consciousness; and his use of the “spinning axis” metaphor here, seems to be a reference back to that (see par. 169).

The expression “pure thinking of itself” reminds us directly of Aristotle; but the alternative expression “pure vibration within itself” points towards physical experience in a way that is quite unAristotelian. The material expression is necessary, because the material world is necessary. The pure selfhood that Hegel is talking about, is necessarily plural (and hence necessarily finite, necessarily faced by a

Matter that is the “negative of self-consciousness”). The reason why the “Supreme Being” of the Deists is not properly God (i.e. the God of Faith) is that it lacks “the consciousness that distinguishes itself within itself” (par. 578). The conscious life that rises to Pure Insight must be a community that has both an organic and an inorganic natural context; for when Hegel says that it “leaves behind the unmoved” this implies that “the unmoved”—that which does not think or feel—must be there in order to be “left behind” in this way.

Now that we have united the finite and the infinite aspects of rational consciousness (or sense and Reason as we met them in the subjective “truth of Enlightenment” [pars. 557–558]) in the speculative “identity” of thinking and being, the third moment (Utility) shows its sinister side. It is the finite, or embodied, selves that are useful to one another. The ordinary rational consciousness (the one we are observing, the one that has *not* arrived at our comprehension of the “Cartesian metaphysics”) posits itself outside the speculative identity of rational life. Against the background of the inorganically material world it enters into a “bad infinite,” that is to say, an endless continuum of “means” and “ends.” This continuum of utility does not complete a circle which brings it back to the self-consciousness that enters into it. It is broken negatively by death. It is not just the cycle of the “in-itself” and the “for-another” (which constitutes the process of Perception and the identity of the “thing”). The final “purpose” of the cycle is the “for-itself,” the agent who is *outside* of the “unity” using things for her own free ends.

- 7./580. Utility may look bad to faith or formal speculation, but it is the realization of *pure* insight, for it is Insight as an object. Rational Utility is the Concept in being as a community of equal persons. It is the activity that is in itself what it is for another, the *being* that vanishes in a means-ends continuum; and it is the “thing” whose whole meaning is in its use. Utility, however, is not the subject of insight, but the represented concept. Being-for-self does not comprehensively include the end and the means aspects. It is the awareness of the world as useful, not the comprehension of that world as the real self. Self and world are antithetic, and must now collide.

The subjective standpoint of Enlightenment is now the actual truth. The world is a mass of rational utilities. Faith has retreated into melancholy yearning, romantic feeling (*Empfindsamkeit*) into appeals to the Law of the Heart, and even formal idealism (like that of Fichte) is reduced to “virtuous” rhetoric.⁵ But all of them are mere *talk*. Enlightened Utility controls the actual world. The *Grande Encyclopédie* sets before us the realization of Bacon’s dream. The whole world is one great scientific “personality” and we are all equally “moments” in it. We last for different times, and we do different things, but we can all recognize our absolute equality, our “identity,” in that realized dream.

The “being-in-itself” of each of us is our purely transient activity of expressing the rational selves that we are (compare pars. 400–404). But all of our rational saying and doing passes over directly into the bank of objectified activities upon which others draw for their self-expression; and we ourselves drew all of our raw material from that bank in the first place. So the “in-itself” is identical with the “for-

another." They vanish into one another, back and forth, and what is permanent is just this process of "becoming," just the "vanishing" (cf. pars. 408–409).

This "vanishing" is a simple and immediate "identity" of being-for-self with being-for-the-other. I do not comprehend and possess myself in this "comprehensive concept." It is an objectively correct description of "what is there"; but Dewey's "means-ends continuum" is not concrete selfhood. I am "useful" (or for that matter, I may be a "problem") in many ways; but Pure Utility is nobody's self. It is not a "negative essence"; it spreads out in the world, and justifies all the agents who contribute to it, so that Rameau cannot laugh it away. But Pure Insight is just an observer outside it all. The difficulty with the Baconian dream is that there is no real personality at the centre of the web. As a "negative essence" the "vanishing" of being-in-self into being-for-another (and vice versa), is bound to be an *active* form of Rameau's self-contradiction. It will emerge as Madame La Guillotine, Reason's instrument for abolishing the "being-for-self" that aims to exist as the unity of these antithetical moments.

Let us try now to *comprehend* the "metaphysics of rational selfhood" that is only "pictured" (*vorgestellt*) against the material *tabula rasa* of the "world of Utility." "Pure Insight" is the immediate consciousness of God in the Cartesian self: "I think therefore I am." But one of the first things that I think rationally—the very first truly rational discovery according to Hobbes—is that I am mortal. God thinks in me, but not for long. Whatever I do for "humanity," I must do for others. This holds reciprocally. My rationality is just as much a human end ("in-itself") as it is a human means ("for-another"). Only in the continuing, shared life of the rational community are the moments successfully unfolded: my nature is developed into human rationality as the endless continuum of means and ends. The "thing"—and this means, first of all, my animate body—is a tool. But it is also something whose health and freedom others must both respect and foster. The being-for-self of the rational person (the "rights of the man and the citizen") is the unity into which both of the opposed moments return (the "in-itself" and the "for another").

But this "tool of Reason" is not "pure Insight as such." *He* (for, after all, the Revolution did not make the "rights of woman" effective in fact, though Charlotte Corday and Manon Roland went to the guillotine with many other Girondins for the "rights of Man") is only the objective *Vorstellung* of Reason. The freedom of the rational tool does not properly envelop the moments of human dignity (the *Ansich*) and utility. The moral conception of human freedom will appear only in the *Critique of Practical Reason*; it requires a resurgence of the Beyond, and the comprehension of this world of "natural rights" within the "moral world-view."

For the moment we have a Freedom (a "for-itself") that is "infinite" only in a bad sense. The "in-itself" does not subsist as an abiding object of *respect*; like the things of Perception it turns over directly into the "for-another" (the tool of Reason). There is only a "pure self-consciousness that is just as much *for-itself* as *in-itself* in an immediate unity."

Take Charlotte Corday for example—partly because she demonstrated that the "rights of man and citizen" could be exercised by the forgotten sex.⁶ At her trial,

she justified her assassination of Marat thus: "I killed one man to save a hundred thousand; a villain to save innocents; a savage wild beast to give repose to my country." She was a great reader of Rousseau, and a self-conscious martyr for virtue and justice. But the thought that the personal freedom either of her victim or of herself ought to be treated with *infinite* respect did not enter her mind at all. "Freedom" for her means the willingness to kill (and to accept being killed) if rational calculation dictates that the killing is useful to the community. A martyr of the Faith might have done what she did; but the memory of Caiaphas counselling that Jesus be condemned because "it is expedient that one man should die for the people" (John 18:14) ought to keep such a one from *arguing* as she did. "To the Priest they send her," writes Carlyle, "she [Charlotte Corday] gives thanks; but needs not any shriving, any ghostly or other aid from him."⁷ I dare not go bail for the historical accuracy of this. But the phenomenological logic of it is perfect.

Faith has been liquidated finally and completely. If Jesus or Charlotte Corday (or the "savage wild beast" Marat) were simply passing over to another sphere of "existence" when they are put to death, why should the termination of their existence "here" not be regarded as a "utility in itself" (however much our judgments of the "utility for us" might vary both from one another, and from those of the actual agents who terminated those lives)?⁸

It is precisely because the finite self is really finite that it has an "absolute" value that is infinite. Charlotte Corday's act was the moment when the whole world of "human utilities" collapsed into "the pinnacle of the Concept." Pure Insight is that "pinnacle" precisely because the new spiritual world into which the Concept will unfold when subjective Insight comprehends the Substance of the Spirit, comes back to this moment of pure self-consciousness that says "Here am I in my world" and brushes away all need for evidence and argument, just as Charlotte Corday did at her trial.

- 8./581. *Actual* culture culminated in *absolute vanity*. Now the concept of self-culture (Enlightenment) has absorbed Faith, and realized pure Insight as Deism/Materialism and the world of utilities. Utility is the truth of both aspects. The actual world of culture created the self-certain spiritual kingdom of animals; the thought-world of Faith developed the genus [universal identity in God], but left it sundered from the self-certainty of Insight. Now Faith and Reason have been actualized together as Utility. Faith should be satisfied, for we are now in a position to create Heaven on earth.

Naturally enough, the last paragraph of the section (VIB II: "The Enlightenment") offers us a review of what has happened. Hegel goes back to Rameau's Pure Culture and surveys our progress since then.⁹ As the emergent self-consciousness of the world of "cultural actuality" Rameau revealed how "vain" all of its pretences were. The ideal of "noble service" finally reached a form in which it could be universalized. But in that form it was a system of *privilege* maintained by all the office-holders for the sake of the wealth it would give them; and Wealth displayed itself as the universal Good through the client-systems established by office-holders and

the privately wealthy on the model of the Kingpin of the whole system. The world became a mass of contradictory judgment in which every singular choice was equally valid.

That world of rationally singular selves “returned into itself” as the “pure Insight” of the Enlightenment. Insight recognizes itself (i.e. subjective Reason) as what is universally human in the cultural free-for-all. Faith (the saved shape of the Unhappy Consciousness, which had similarly “returned into itself”) had recognized this positively already. Faith knows that we are all directly in the presence of God, and we must all forget the petty selves of Rameau’s rat-race world. But now Insight presents Faith with the free universal self of Reason which makes the real achievement of that otherworldly dream possible. So Faith (in its “believing” aspect, its reference to another world) necessarily perishes. Its own claim to be autonomous, or to be in the immediate presence of God, takes over.

In the Truth of Enlightenment the moments of “positive” and “negative” are reversed. Faith sets the positivity of thought (the community of God in Heaven, with the faithful as “pilgrims” here) against the negativity of the actual rat-race. But in the world of thought the Self of rational Enlightenment is the universal negativity of “pure thinking” which completes Faith, by turning it into actual Insight (knowledge). This does away with the positive thought-world of Faith (the “inner world”) altogether. The empirical world is what is positive; but it is positive only as a blank slate—the concept of Matter. The *actual* Truth of Enlightenment arrives when rational Insight takes over the actual world and sweeps away all the distinctions that have shown themselves to be “vain.” This Truth of Enlightenment (as distinct from its negative polemical activity in clearing away the thought-world of Faith) is the world of universal Utility. This is the one world into which the doubled (and redoubled) world of Culture and Faith has collapsed.

In the world of actual Culture we had a Spiritual Animal Kingdom of fragmentary humans. Reason was nowhere realized as the human “Genus,” but every “type” enjoyed Reason’s self-certainty (as the Category). In the world of Faith, the Category was substantial as the Genus. Faith has the Truth of Reason without its Certainty. Salvation comes by faith in God. Dante imposes a marvellously intricate moral order on his *Comedy*; but he also denies its rational absoluteness. The typing of Sin and Virtue is all “for us,” or to be quite precise it is for him, and for the sake of *his* salvation. He is of course Everyman, and his *Comedy* says that every man or woman will be saved or damned by their own decision. The “saved” and the “damned” are the “species” that we meet in the world of Faith and Insight. But these rational species transform themselves dialectically, because each party is “saved” in its own eyes, and “lost” in the eyes of the other.¹⁰ In the battle of stand-points it is the salvation of the Enlightenment that must triumph at this moment, because it is saved in this world, and it restores the unity of the doubled world of Culture. The blot of Faith’s unhappiness is removed “in principle.” A lot of further development is necessary. But salvation will take place *here*.

The world of Utility is the actual world of Culture clearly seen as the Paradise at the top of Dante’s mountain. In the world of Culture, enjoyment—the experience

of being-for-self—must be postponed. Being-for-self is in the heavens where we cannot go without supernatural help. The Enlightenment has to win its war, so that this fable of postponement can be eliminated; the “true” world of Enlightenment is the world from which the fables have been banished. Paradise is here, the mountain has been climbed, we have only to cross the last river. But the experience of Dante in the Earthly Paradise of Faith will now repeat itself in the Paradise of Insight. Paradise Regained turns directly into Hell. It is the whole of Dante’s pilgrimage that must be brought to this world. We cannot leave anything out, because the “other world” really *is* “eternal,” and we have to comprehend all of it within the consciousness of our mortal “being-for-self.”

I called this section “the Mundane Religion of Insight.” But Hegel says that Reason has *no* religion, because it is fully satisfied in the present world of actuality (par. 673). This paragraph confirms the identity of Reason’s world with that of Self-Estranged Spirit. The “Spiritual Animal Kingdom” is the stable world of the “mixed judgments” in which the drama of unmixed Nobility and Contempt is played out. In this tragicomedy Faith perishes. But the transfer of the Beyond to the actual world of Reason’s quest (as the “bad infinite” of *perfectibility*) does turn even the secular Enlightenment into a “mundane religion” (or a kind of secular Faith). Many have died, like Charlotte Corday or Manon Roland, for the *hope* of “Heaven on Earth.” It is an ideal in which both the “satisfied” and the “unsatisfied” Enlightenment are united. Lessing’s famous “choice” (of the quest in preference to the fulfilment) even shows us how the necessary “comprehensive inversion of the concept of Happiness” takes place. “Reason *has* no Religion”; but we must admit that there are some for whom it *is* one.

VI B.III: Absolute Freedom and Terror

The Truth of Enlightenment has overcome the estrangement of the cultural world between actuality and thought, in the sense that what is thought about is now the actual world. The “otherness” of thought and world (which is the form of estrangement involved in Pure Insight) remains absolute. But it seems that the two sides (Universal thinking and Singular things) have been coherently articulated in the Concept of Utility. In the last phase of Self-Estranged Spirit, when the rational Concept enters into actual possession of the cultural world that developed it, we shall find that this is not so. The project of an Earthly Paradise turns directly into Hell on Earth, because the immediate identity of the moments of Utility is another shape of the “infinite judgment.” The dream of a world in which “thought uses things” comes to grief upon the fact that the thinkers are themselves the things to be used.

(b) Reason as Absolute Freedom

- 1./582. Consciousness has found its concept in Utility. But this objective Concept is a *project* that has to be realized, and “be for itself.” The revolution of *absolute freedom* came forth from this.

The first sentence of the new section contains a deep truth. Consciousness has *found* (not made or developed) its concept in Utility. "Finding" is what Reason as Observation (i.e. as subjective consciousness) does. But now the "finding" is clearly understood to be Reason's finding of *itself*; and we know from chapter V that Reason can only find its own *objective*. What consciousness has found in the Enlightening phase of its Culture is the right perspective upon the observable world, as the repertory of tools for its self-making.

We must always remember that the world of Insight is the world of *human beings*. It is not the inorganic world of tools in the ordinary sense, but the world of cultured living nature. When Charlotte Corday called Marat a "savage wild beast" she was not violating the general faith of the Enlightenment that man is naturally good. She was saying that through some "cultural" failure Marat had fallen out of the naturally rational human condition, his nature had become twisted. In the perspective of universal Utility that we have reached, this might equally be expressed by saying that, on the contrary, the process of culture had not domesticated him enough to become the tool of Reason, and the *persona* of Pure Insight. He was not properly useful to the human world, and so he had to be eliminated.

Utilities must be utilized. A hand cut off, or even a hand paralysed, is not really a hand. The hand of which G. E. Moore could say "this is *my* hand" was the one he wrote with; and when it was writing it was "nothing else than the self of consciousness"; and what it put on the paper was Moore's "being-for-self," the being (or thinghood) of thinking in its most elementary sense. But what we are concerned with now is not just a mortal person expressing and possessing herself in some small part of the material world; our concern is with the Pure Insight that has recognized itself as the universal Concept of Utility, and is now organizing and possessing the social order. This is not just the Concept of the singular thing in Perception (the unity of being-in-itself and being-for-another). It is Self-Conscious Reason, so it has to "be for itself." In ordinary language this means there has to be a *government* that operates upon the principle of rational Utility. This was the goal or *Zweck* of the Revolution as expressed in the "Declaration of the Rights of Man and Citizen."¹¹

The Truth of Enlightenment as achieved in "pure Consciousness" is the truth about Nature from a practical point of view; so what follows from it directly is an action-programme. But the programme is the unrealized End; or in other words the Truth of Enlightenment is now the End existing as the *means* to its own fulfilment. The community that has achieved insight into its rational goal must now go ahead and carry out this programme; Rational Utility must become Absolute Freedom.

The Truth of Enlightenment is the climax of *Bildung*. It can (and indeed it must) be produced in actuality by individual action. Social convention, social action and social authority were crucially involved in the first phase of *Bildung*; but from the moment when "pure Culture" emerged, the further development of the Concept was a personal responsibility. The use of Insight to spread the Truth of Enlightenment was an act of personal courage, because Faith has all the resources of conventional authority behind it. This truth is now universally spread and universally

recognized; so it is time for the community to be active again. This is the sense in which the third moment of Estranged Spirit is the comprehensive unity of the first two. The structure of Utility as the *pure* self-estrangement of the Concept now becomes crucial. Utility is a universal predicate of singular objects for singular subjects; and the objects that are socially useful are precisely those which are themselves singular subjects. It is easy for there to be a universal *consciousness* of this; but even when the consciousness is universal the subjects that have it remain obstinately singular. The moments of singular being-in-self (user and tool), universal being-for-an-other (general usefulness of tool) and singular being-for-self (user employing tool) that are logically involved in Utility remain separate. What is needed is a universal-singular (or singular-universal) being for self which can comprehend the other two moments within itself. That is the Substance—the social agency—which has not yet been shown to exist.

- 2./583. Everybody and everything (on Earth or in Heaven) is now to be interpreted in terms of this metaphysics [of rational Utility]. The conscious being exists to serve his fellows; Nature exists for our use. The user of it all is not the single but the universal self; so Utility is social utility, the utility of the community; and Insight knows this.

Implicitly the takeover by the active spirit of “public Utility” has already happened. Every existing institution already appeals to the selfless objective Concept for its justification. Only a “show of objectivity” stands between the Concept and its “absolute freedom.” The Estates of the Realm (even the First Estate which has charge of the nation’s Faith) are all acknowledged to be founded upon “public utility.” The objectivity of the physical world simply means that it is a repertory of tools for use by the rational self. This rational self is Pure Insight; everything belongs to it as its instrument. Nothing belongs to a particular self or group. This pure Insight is not embodied, and singular embodiments are not significant to it.

We have here both the rational basis of the Terror, and the decisive evidence that Hegel’s own ethics is not “totalitarian.” The Terror happens because the self of “pure Insight,” being abstractly utilitarian, does not “return into itself” in the proper sense: “The *being-for-self* into which the being-for-an-other returns, i.e. the self, is not diverse from the Ego, not the own self of what is called object.” The rest of the chapter will show that the spiritual return to self is, and must be, a return to the “own self of what is called *Gegenstand*.” The universal self of Insight, the Ego, is disembodied; but every “own self” is embodied.¹²

The “certainty of self is the universal subject and its [self]-knowing concept is the essence of all actuality.” The Self of Absolute Freedom is the Self of Reason (pars. 233, 235). The difficulty that this raises is obvious. *Any* self that has this *certainty* is equally entitled to make absolute judgments about the utility of the other animate bodies of reasoning beings. That is how and why the Terror comes to pass.¹³

“Terror” is endemic in political relations. What makes 1793 unique is the fact that the claim to be the universal self of Pure Insight does not involve any identification with or subordination to an objective social order at all. Charlotte Corday said (and her act surely testifies) that “I was a Republican before the Revolution.”

But this was not Antigone's self-identification with the *Dike* of Zeus, an immemorial custom which has always been observed, and always will be. It is quite likely that everyone among Charlotte's judges would have said what she said. Everyone could recognize themselves equally in the universal *public thing*, the *Respublica*. This identification of every self with the "public utility" overcomes the bad infinity of Pure Utility. The abstract "rights of man" become the concrete "rights of the citizen" in the world of Absolute Freedom which we have now reached. All being (whether "in itself" or "for another") returns into this pure knowing that is "for itself." This is Reason's "certainty of being all reality."

- 3./584. This rational community of free and equal selves knows itself to be the essence of all the social differences that exist in it. All rights reside in the rational self as person. The will of the rational community is the "general will" to maintain the rights of Reason. *My* will is not expressed silently, or by an authorized representative [e.g. the *monarch* of Culture] but by *me*. What the community does everyone does (and they know it).

The self-consciousness that comes to be as a result of this return of Utility into Pure Insight is "the People." The people is *sovereign*, and the will of the people is absolutely free. In the "Declaration" we read: "3. The principle of all sovereignty resides in the Nation. No body, no individual, can exercise authority which does not emanate expressly therefrom." The authors are prepared to say what "natural and imprescriptible rights of man" all political associations must aim to conserve: "liberty, property, security and resistance to oppression." But the right of "resistance to oppression" is an awkward one, when it is the "political association" itself that must conserve it. The sovereign Nation has overthrown the old order. It knows itself to be the essence of all "masses"—i.e. of Church, Civil Society, and Enlightenment (the Community "in-itself," "for-another" and "for-itself"). The "people" is conscious of its "pure personality"; it has a *will* that defines everything and lays down how everything is to be interpreted. In this sense, what Hegel says is true: "for it the world is simply its will, and this will is the general will." The "Declaration" tells us what this means:

6. The law is the expression of the general will. All citizens have the right to take part in person or through their representatives in its formulation. It must be the same for all, whether it protects or whether it punishes. All citizens being equal in the eyes of the law are equally eligible to all honors, offices, and public employments, according to their abilities and without other distinction than that of their virtues and talents.

Of course, the authors of the "Declaration" took their concept of the "General Will" from Rousseau's *Social Contract*; and I shall not hesitate to appeal to that in elucidating what they meant where it seems helpful. But although the "Declaration" itself was an act of the General Will, and became part of the Constitution of 1791, it is not radical enough. Hegel says that "spirit present as absolute freedom . . . is the Self-Consciousness which grasps for itself that its self-certainty is the essence

of all spiritual masses.” So far there is no problem. The Absolute Freedom of the Nation need not entail any simple civic equality. The spiritual masses can have their distinct agents. There is still room for the Clergy and the Nobility as distinct orders of society: and the “Declaration” says that “all citizens have the right to take part in the formulation of the general will either *in person* [like the Nobility] or through their representatives [with the Clergy distinguished from the Third Estate in this category].”

But this is not yet the fully explicit concept of Absolute Freedom. The Absolute Freedom of Pure Insight is the freedom of the self-certain Cartesian Ego and the rationality of Helvétius’ “greatest good of the greatest number.” It has to be *absolutely* democratic before it can properly express the sublated Truth of Enlightenment as an actually universal self (i.e. a national self) in the actual world. Hegel’s formulation of the Concept is as follows: “It is not, indeed, the empty thought of willing which is posited in tacit or represented consent, but real universal will—the will of all *singulars* as such.” But now we have a problem about what he means by “represented consent.” For there was no Revolutionary Assembly of the whole French Nation; and the “general will” could not (at least in Hegel’s world) be the direct sum of all singular wills.

Once we admit this, and ask what *else* Hegel can mean, it becomes clear that “tacit or represented consent” refers to the way the old order worked, with the peasantry “tacitly represented” by their landlords, and the other orders “represented” by various methods in which the consent was generally less tacit, but in which what was “represented” was always some *specific* aspect of the social whole. In the National Convention of 1792 this sort of “representation” vanished. The deputies (chosen by universal male suffrage, but by a process of indirect election) represent, not their electoral constituencies, but always and only the Nation. They are all of them equally citizens chosen by other citizens to express the *national* will.¹⁴

The National Convention abolished the Monarchy and established a new calendar for the official acts of the French Republic (22 Sept. 1792). This is the moment at which “absolute freedom ascends the throne of the world” (par. 585). The votes of the Convention express the will of the Nation, because every legal person participated—if he wished to—in the choice of “electors” who chose the seven hundred and forty-five deputies by whom the Republic was actually proclaimed. By the time the Convention met in Paris, the “September Massacres” had already given the first spontaneous foretaste of the Terror. The “Nation in danger” had become the “Nation in arms,” the Marseillaise with its ethic of a citizen army was on every tongue, and after the early setbacks, the actual citizen army had turned the tide at Valmy a day or two before the Republic was proclaimed. It is the immediately felt identity of every patriot with the Nation that Hegel is formalizing in the doctrine that the national will is “the *self*-conscious essence of each and every personality, so that everyone undividedly does everything, and what emerges as the deed of the whole is the immediate and conscious doing of each.” The perfect *Gestalt* of this individualized *national* consciousness is provided by the Marseillaise.¹⁵

- 4./585. This sovereign freedom assumes the throne easily because everyone knows that rational insight is the element of all social substantiality, and all the substantial social distinctions (which gave the Concept its own objective status) have collapsed. No one speaks now for his estate or corporation; everyone participates in the National Convention simply as a citizen, making laws for all; and in the new, democratic Army too.

It is the universal awareness of the “Nation in danger” that makes “Absolute Freedom” into an “undivided substance.” “The principle of all sovereignty resides in the Nation” (as the *Declaration* said). So, with everyone thinking and speaking for “the Nation,” there is no power that can offer resistance: “No body, no individual, can exercise authority, which does not expressly emanate therefrom.” The “social distinctions” which “can be founded only on public utility” are no longer seen to have any utility. The social system of the “spiritual essences or powers” (i.e. the Estates and “corporations” of all kinds) has collapsed into a homogeneous democratic community. The King is on trial as “Citizen Capet,” and all patriotic citizens are thinking of the “national safety.” In the old order there were “separately constituted masses” [*abgesonderte bestehende Massen*]: Clergy, Nobility, Third Estate, Peasants.¹⁶ Because of this socially differentiated Constitution, the Concept (of the community) was an “object,” i.e. there was an actual social substance. Now the Concept is a “subject” immediately—every patriot is “the Concept absolutely.” No one participates in the national life now as a member of his “estate,” or of his professional or craft-organization. There are only “citizens.” Among adult males there are no longer any passive citizens—as there still were in the Constitution of 1791—though the adult females, who are all called “Citizen,” must still be put in that category. All citizens (whether male or female) must think and work with equal and total dedication for the Nation. But what “work” can the Nation do (apart from fighting for its life)?¹⁷

- 5./586. Society and its members are not now an objective system of *utility*. There are just single *citizens* and the Nation. But every citizen *is* the Nation, and “God” is just a bad smell, that lingers over the corpse of the old Constitution.

“The object and the *distinction* has here lost the significance of *Utility*.” The singular verb indicates that “object” and “distinction” are one and the same. The “object” is soon identified as “consciousness itself,” and “the distinction” is that between singular and universal selfhood. These two are no longer related as end and means. The Nation is the “universal consciousness” because every citizen is conscious of him or herself as a simple citizen. Hence the “distinction” between singular and universal consciousness is only the *semblance* (*Schein*) of an antithesis. There is no “essence” within which a standing distinction between being and appearance can be made. The God of the old order, which had this independent being as the doubled world of Actuality and Faith, has been “blown off” from the corpse, and survives only as the bad smell of Deism.¹⁸

We can readily see what all this refers to in experiential terms. The “Declaration” of 1789 defines the aim of political association generally as the preservation of

certain rights. Under “liberty,” particular prominence is given to the freedom both to hold and to express any opinion; also everyone is to be secure against arbitrary arrest, and presumed innocent until found guilty by due process of law. The meaning of “liberty, property and security” is spelled out in terms that appear to constitute a reciprocal contract between society as a “public force” (for which all citizens must contribute democratically according to their means) and the citizens who enjoy those benefits.

But in the experience of the “Nation in danger,” the immediate identity of every patriot’s will with the national will washes out all this rational utility. The “speech” of the National Convention is the “universal law” (as Hegel put it at the end of par. 586); and the definition of the singular rights of citizens gives way to the preservation of “*absolute* freedom.” The “universal work” is now the survival of the nation; and the *identity* of the citizen with the community in “resistance to oppression” becomes the crucial criterion of citizenship. “The object for consciousness is consciousness itself”; if the Republic perishes, my free selfhood perishes with it. The community is the living God who is identical with my self-certainty.

Charlotte Corday’s declaration that she was “a Republican before the Revolution” was a way of saying that for her this *subjective* identity was what mattered. She was not a worshipper of the “Etre Suprême,” any more than she was a loyal subject of “His Most Catholic Majesty.” The “Catholic Majesty” of the old order was already dead for her; and the “Supreme Being” was something she could well do without. The living God was here already.

All the “utilities” of finite existence are summed up in Rameau’s night-stool. To take the “Supreme Being” (who stands above and beyond nature) seriously, is like supposing that there is something sacred about the smells that accompany the regular completion of the cycle of self-preservation. On the contrary, the imperceptible diffusion of the Truth of Enlightenment has passed over from that perceptible stink of Rameau’s self-contempt, which still mars its perfect satisfaction, into the sound of a song in the street outside. There *is*, after all, something *absolute* to live and die for: here, in the song, is my absolute *self*.

- 6./587. When the old order is wiped out, only the reciprocal interaction of universal and personal consciousness remains. The universal will becomes a citizen who is both subject to Law and authority and aware of himself as both legislative and executive.

By the time the King was deposed and the Republic proclaimed, the whole of the old social order had been “sublated.” The three stages that Hegel mentions are easy to identify. Let us begin (because the Revolution itself began) with the sublation of the “two worlds” of the old “restricted life of individuals.” In their *separation*—which Hegel here acknowledges for the first time—these are the world of the *Church* and that of the *State*.

The nationalization of Church property in November 1789 was followed by the Civil Constitution of the Clergy in July 1790. The monastic orders were dissolved, and the parish priests had to be elected by their “communes.” The old dioceses

were abolished, and replaced by one bishop for each of the eighty-three new “Departments” of the country. Bishops also were to be elected. Most important of all, the clergy both higher and lower had to take an oath “to be faithful to the nation, the law, and the king; and to maintain the constitution with all their power.” This was the final stage in the dissolution of the *ancien Régime* (until the abolition of the Monarchy itself and the advance of “Absolute Freedom” to the throne). Not surprisingly Pope Pius VI condemned it (April 1791); and Louis XVI, who bitterly regretted his approval of it, took a “non-juring priest” as his confessor.

Sandwiched between the material and the spiritual sublation of the “First Estate” came the official abolition of noble status in the spring of 1790. That was when it was decreed that French men and women were all “citizens” and were to have no other title of address. The same civil rights were accorded to resident foreigners (so that Citizen Tom Paine could, in due course, sit among the Girondins in the Convention); and even (after some heated discussion) to the Jews.

This—together with the Civil Constitution of the Clergy—was the “sublation of the distinct spiritual masses.” The abrogation of noble land-tenure rights and restrictions, and the corresponding liberation of the peasantry, actually began in August 1789, but we cannot here go into the complex story of the material sublation of the Second Estate. What Hegel calls the “sublation of the restricted life of individuals” was also complex and many-sided; but the crucial event was the Le Chapelier law of February 1791 which abolished the guilds. It was the bourgeoisie that profited most from all of this—since it was they who could set up new business enterprises freely, and buy up the Church lands or the noble estates freed from entail restrictions. But the military organization of the new Republic was the one aspect of the new social system where the equal eligibility of all citizens for “all honors, offices and public employments according to their abilities and without other distinction than that of their virtues and talents” really existed; and it was the Army that actually did the “universal work” of Absolute Freedom.

Hegel’s attention is focussed, however, on the work of the National Convention, and on the identity of will between citizen and Nation in that body. Every citizen of the Republic is a “singular will” to which the law, and the great struggle for national salvation, stands opposed. In the Convention—which *all* have elected—the laws of the social whole are made, and the policies are determined by which the salvation of the Nation is to be secured. This is the “universal self”; and there is one article of the Declaration that sounds a note of deep foreboding for this homogeneous universal subject which recognizes no objective boundaries, or *substantial* social structures: “16. Any society in which the guarantee of Rights is not assured, nor the separation of Powers determined, has no Constitution.”

The bourgeois leaders who had tried to make over the Monarchy into a new constitution, wanted a decentralized government with a fairly weak executive. The emergency of foreign invasion produced, as a result of the Paris insurrection of 10 August 1792, an executive driven by the overwhelming fear of internal subversion. The Monarchy, the Nobility and the Church had all emerged unmistakably as enemies of the Revolution. So, in this crisis, no basis for a real “separation of powers”

existed. The community must have one actual will, and it must have dictatorial power. To begin with, therefore, the Convention itself becomes a dictator. Its laws and policy decisions apply to all, and are quite impersonal; but now a struggle begins over the designation of the agency that is to execute these “absolutely free” decisions—for everyone in the legislature has the same direct consciousness of his own personal will as the “universal will.”

(c) *The Tyranny of Reason*

- 7./588. The universal will cannot *release* an object (which would set limits to its absolute freedom). But this is what the establishment of any finite freedom requires. There have to be distinct social estates, and separate legislative, executive and judicial powers. Then there is a social substance [i.e. a Constitution] which is free, without being singular; but then, too, the individual person must stay within the bounds set by the Constitution. The universal subject we have reached cannot suffer that. It must be absolutely *actual*.

Here Hegel follows out the logic of section 16 of the Declaration by showing first what is involved in the existence of a “Constitution,” and then what it means for a community of equals not to have one. The sovereign Nation which exists only in the enlightened minds of its patriotic citizens—minds like Charlotte Corday’s—does not “release anything in the shape of a *free object* that stands over against it.” Our “absolute Freedom” does not “release itself as a free object”; so, unlike the absolute Idea, it cannot recognize itself in the objective structure of the real world; and it cannot raise itself out of this externality to become Spirit (and the philosophical self that does logic).¹⁹

The constitution of a rational community is like the order of Nature in that it must have an objective structure informed by its own *law*. The “absolute Freedom” of the new Republic cannot release itself as an objective constitution because of the threat posed by the old order still existing outside its borders. It cannot commit itself to the maintenance of a properly articulated Constitution, because the *substance* of the Spirit has perished. A social substance must have what the actual world of Culture had in its traditions. What Hegel calls “the laws and institutions of conscious freedom” are the judicially mediated aspect of a social structure in which the different activities of life are articulated in ways that are spontaneous and self-determined. There must be “constituted (*bestehende*) spiritual masses” (such as the clergy, the nobility, the commons and the peasantry in the *ancien Régime*)²⁰ which are instituted, regulated and governed by an authority in which the legislative, executive, and judicial powers are separated.

Hegel enumerates here a whole series of social “masses” of different types. To articulate itself in these “masses” is (and will become) the proper task of the freedom that is achieving self-consciousness. To begin with the three “powers” that Hegel took over from Montesquieu, the legislative, executive and judiciary are “thought-things,” created and defined by the law. But there are also “real essences” both universal and particular. We have seen the concept of public service as an

independent “noble estate” liquidate itself in the cultural process. But the Church, Civil Society, and the community of enlightened Culture are the three “universal masses” that the new society is bound to inherit from the older world of Christian culture; the “particular masses” of labor, trades and professions, the new political world will define more freely for itself. The executive who eventually did this “work of the will” was Napoleon. He operated not by simple decrees, but by the use of a complex system of legislative acts and judicial commissions. He understood, and accepted the fact that the governing authority has to be differentiated. The legislative and executive institutions have to cohere with, and proceed on the basis of, the judicial recognition and maintenance of those real life-structures that the cultural process and traditions of the community have actually produced.

This social articulation must all be founded in (and legally recognized or authorized by) the State Constitution. This is what Hegel means by the “universal works of speech” or the “laws and universal institutions of conscious freedom”; all of this is what “absolute Freedom” cannot achieve.

A Constitution founded upon acceptance and recognition of the “real essences” created by and inherited from cultural tradition would be free from “singular individuality.” The singular individuals would be distributed into different social functions; and it would be the functional communities that are represented in the legislative assembly. The executive will—which must by definition be “singular” in execution at least—would be hedged by the legislative as a universal *free* will on one side, and by the judiciary as a *recognitive* understanding on the other.

The French “National Convention,” on the other hand, was a legislative in which the “sovereignty of the Nation” was directly incarnated. The Nation is directly incarnate in every professed “Republican” (as the example of Charlotte Corday illustrates); and the principle of election by universal suffrage preserves that direct incarnation in the legislative. If we do not grant that every Republican is an incarnation of the will of “the People” (or of the God of Reason), we cannot enter into Charlotte Corday’s own view of what she had done; and in that case, we shall not understand either how “absolute Freedom” is “absolute,” or how it still contains the sublated conviction of Faith that “in God, we live and move and have our being.” But if we do not comprehend how election by universal suffrage is simply the rationalized form of the principle of “the lot” in classical democracy, then we shall not understand how Hegel can claim that “*this* universal Self-Consciousness does not allow itself to be defrauded of its *actuality* through *representation*.”

The rationale of the lot in the Athenian democracy was that sovereignty resided in the assembly, so that where individuals must be chosen to act for the assembly, the God alone should choose. In the modern “enlightened” Nation, the God of the community resides in every citizen, so the assembly of citizens must make the necessary choices by vote. The making of the choices does not derogate from the divine sovereignty of every citizen. Judging that Marat, the self-styled “Ami du peuple,”²¹ is actually an enemy of the people, Charlotte Corday sees herself as patriotically obligated to remove him precisely because of the power and influence that he exercises as a deputy to the Convention.

- 8./589. So the singular consciousness does not find itself, either in the universal work as a social substance, or in the deeds and acts of the social will. To do a *deed* the community must individualize itself into a head of state. But then all other single citizens are (unjustly) deprived of their share. This means that universal freedom can only produce a fury of annihilation.

The singular self-consciousness of Charlotte Corday could not find itself in the role of wife and mother (where Antigone, on the contrary, *wanted* to find herself). Obviously Hegel did not blame her for that in the actual Revolutionary situation she was in. His sympathies were on her side of the issue at the time, and he was violently critical of Robespierre.²² The “recognition” of the family in the marriage law is the foundation of absolute freedom as “substance”; but even this aspect of the natural consciousness was ideally “sublated” by the principle of the *levée en masse* of August 1793. The Committee of Public Safety decreed that bachelors of 18–25 were liable to military service, and that the entire population (both sexes) could be conscripted for service of some kind.

Charlotte Corday, the Republican, could not recognize her universal self in the “individual actions” of the Paris mob who committed the September massacres before the Convention even met. Nor would she have recognized herself in the notorious “Law of the Suspect” (17 September 1793), the legal *deed* of the Convention through which the mob-terror of the September Massacres became the authorized policy of the Nation. Yet she was a “terrorist” herself; and the mobilization and control of all national resources, together with the control of prices and wages, would not have been possible without “martial law” in some form.

The *dictatorship* was organized by Robespierre, and justified by him as the “despotism of liberty.” Hegel’s conceptual analysis aims to show why dictatorship was inevitable in this revolutionary situation (no stable executive can emerge from a legislative in which all social authority is concentrated, unless it overrides constitutional procedures); and why it must maintain itself by Terror (only the sanction of summary justice by martial law *can* override all constitutional safeguards). But he gives a very one-sided account of things when he speaks as if the Terror (the “fury of vanishing”)²³ was the *only* achievement of the “despotism of freedom.” Clearly we must ask ourselves *why* he looks at the work of the Committee of Public Safety only in this negative perspective. Let us see what sort of answer we can find as we go on.

- 9./590. Once the old social structures have been swept away, only the single citizen remains to be destroyed; and since he is nothing but an abstract living self the work of absolute freedom is the most abstract *death* possible.

The “despotism of freedom” is, of course, a living contradiction. In the interests of the preservation of national sovereignty only one view can be allowed; because of the urgent need for decisions, discussion and argument must be preempted. Several shades of “centre” opinion were actually represented among the twelve members of the Committee of Public Safety; but the dominant voice was always that of Robespierre, and the Convention itself did not argue about the

Committee's recommendations. In practice, therefore, Robespierre's decision was final; Absolute Freedom coincided with the singular self-certainty that was the "highest actuality." The negative object of the Committee's concern was the dissenting view of those whose sympathies still lay with the *ancien Régime*; and if we concede that the forms of communal "representation" to which those sympathies were attached were now dead and gone, that the "substance" was smashed like Humpty Dumpty never to be put together again, then we have to admit that the only "object" which presented itself to the "universal freedom" as still requiring to be negated, was the singular self "in its abstraction."

The universality that "does not allow itself to come to the reality of organic articulation" is the identity of patriotic fervour for the "Nation." This universality aims "to preserve itself in undivided *continuity*." We can infer what "continuity" would be from the contrast with the discontinuity that arises in its place. The "undivided continuity" is "at the same time internally distinguished because it is movement or consciousness in general. And indeed, for the sake of its own abstraction it divides into extremes which are just as abstract as that: the simple, inflexibly cold universality, and the discrete absolutely hard rigidity and self-willed point-separation [*eigensinnige Punctualität*] of actual self-consciousness."

This is not hard to interpret. No matter how oppressive the government may be, the surviving individuals remain *thinking points*. Their thoughts are known only to themselves. On the other side there is the Law (specifically the "Law of the Suspect") which is everywhere (because it is known by all the points), yet nowhere (because it is not spatially located).

Once we have identified the *extremes*, the "continuity" which they replaced (when the Law was passed) is not hard to grasp. The citizens singing the Marseillaise are a "continuity" of consciousness that is quite *undivided*; even when they assemble in clubs and discussion groups of the relatively likeminded, and make speeches expressing their own views, the "continuity" is not "divided" (though it contains "distinctions") because it is "consciousness in general." The "sundered" situation only exists when the decrees of the Committee of Public Safety have to be rubber-stamped by the Convention, and obeyed without discussion.

This whole standpoint is an abstract one, because the "points" of private self-consciousness are "abstract." Rationally speaking, they are all the same point; and in their patriotism they are the same *identical* point. Their private self-consciousness is an abstraction from that; and their free expression of their private self-conscious thoughts as a continuum of public "consciousness" remains "unsundered" as long as everyone has perfect confidence in the patriotic commitment of everyone else. What *we* can see, because we have first achieved the "Cartesian meta-physical" standpoint regarding the "truth of Enlightenment" universally, and have now inverted it into the "national" concreteness of "Absolute Freedom," is, first, that it is the public continuum of consciousness that is "concrete," while the privacy of self-consciousness is "abstract"; and secondly that the "abstraction" of the "public force" (which was first recognized as necessary for the protection of equal rights, i.e. for the preservation of the abstract points) is actually necessary for the

preservation of the national "identity." The national identity is the "metaphysical" foundation of the public continuum.

The situation of the "nation in danger," which makes the inversion of rational discussion into patriotic fanaticism unavoidable, reveals the contradiction that Absolute Freedom contains. With the overthrow of the "Estates," the emigration of the politically disaffected began; only a few days after the storming of the Bastille, the King's brother, the Comte d'Artois, went into exile as the leader of the first important group of emigré nobles. But the levying of troops to meet the foreign invasion (February 1793) provoked a revolt in the Vendée; and with the *levée en masse* of August 1793, the suspension of the Constitution (which followed in October) became inevitable.

The Constitution was only promulgated in June 1793. This is where we can see the *Gestalt* of "Absolute Freedom" as an "undivided continuity with internal distinctions" extended to "infinity." For the Constitution not only established universal suffrage (i.e. male suffrage, for with respect to sex Freedom never became *positively* absolute) and the right of referendum; it also proclaimed the "brotherhood" of all free peoples and their right to self-determination in the same way; and it even declared that society owed a living and a free education to everyone. This was the "continuity" that was shattered into "the discrete, absolutely hard, rigidity and self-willed point-separation of actual consciousness" by the establishment of the "despotism of liberty" in October.

The "sundering into equally abstract extremes" occurs, as Hegel puts it, "for the sake of the universality's own abstraction." The "abstraction of the universality" is the *absolute sovereignty* of the Constitutional Law itself. This abstraction has to be made (and recognized by all) for two opposite reasons. From the point of view of the consciousness that we are observing, it is necessary both for the definition of everyone's rights, and for the proper control and use of the "public force" that sets the proper boundaries of all rights. From our "metaphysical" point of view, absolute commitment to the upholding of the Constitution is the identity of "patriotism" upon which the "self-distinguishing continuity" of Absolute Freedom rests. Within this perspective the "abstraction of the universality" can be recognized as the *final* cause. Loyalty to the Constitution is absolutely essential; so when the new nation is in danger, and it is manifest that the community contains not only open enemies (in the Vendée) but many secret sympathizers with its external enemies, it is obvious beyond the need for argument that patriotism itself must focus upon the maintenance of the Constitution in its "sovereign" abstraction. Instead of every public utterance by a citizen being regarded as a contribution to the universal continuum, it is now studied first as an expression of the private self-consciousness, because the first question is whether the speaker is a true patriot (i.e. whether the privacy of his self-consciousness has been truly sublated in the "general will," or the "identity" of the Nation). The law itself (and the public force that maintains it as an "abstraction") must "for the sake of its own abstraction" devote itself to the obliteration of all secret self-will. This was Robespierre's "despotism of liberty"; and it is what Hegel calls "the sundering of the extremes."

Here in paragraph 590, Hegel is not simply concerned with the function of the Terror in the final liquidation of the old order, but also with the conflict between Robespierre and the Mountain on one side, and the social extremists (generally called the “Sans-culottes”) who wanted to establish government by direct democracy, and a new religion with a living actress personifying the “Goddess of Reason.”²⁴ The Sans-culottes wanted a redistribution of property; and the Convention did vote to redistribute the confiscated property of the enemies of the Republic. The social extremists were strong supporters of the Terror as the “popular axe” or “scythe of equality.” But in the spring of 1794, Robespierre had to execute their main demagogic champion, Hébert. The solid bourgeoisie who supported the Jacobins would not tolerate radical economic revolution and social anarchy.

Effectively, the great mass of patriots supported the “despotism of liberty” during the military crisis. Otherwise the new Nation could not possibly have survived. But we are not concerned here with that permanence of the *Gestalt* of Absolute Freedom. Our “metaphysical” interest is in the fact that, since everyone is equally a private self-consciousness, the “Law of the Suspect” puts everyone under suspicion of being a subversive. Only Robespierre is “the Incorruptible.” One “free singular self” is identified with the “universal in the abstract” and the others must all be wiped out wherever their self-will can be detected. Where previously there was a continuum of conscious communication there is now only an infinitely divisive doubt and suspicion; and the function of the despotic universal is to put every divergent self to death.

This function is performed as coldly and efficiently as possible. Dr. Guillotin came to the Estates-General in May 1789 (as a deputy to the Third Estate from Paris) full of enthusiasm for his newly invented machine. The deputies laughed (so Carlyle claims) when he said “I can whisk off your head (*Je vous fais sauter la tête*) in a twinkling and you have no pain.” I am not sure whether Hegel’s metaphors of the cabbage and the gulp of water also come from the rhetoric of the good doctor, but it seems quite possible.

- 10./591. The government comes to this wise one-word decree because it is necessarily a tyranny; it excludes its opponents and is therefore a “faction” opposed to the general will. Its victory over other factions cannot last, because it knows that it deserves overthrow. So it must suspect everyone of aiming to overthrow it; a suspect intention must therefore pay the penalty.

The Sans-culottes wanted to realize the ideal society of the Enlightenment in the terms and perspective of the Enlightenment itself. When the “scythe of equality” finally had to be turned on *them*, in order to maintain the authority of the government itself as the “abstract universal” of the legal constitution, the “wisdom of the government” was fully revealed. The Sans-culottes stood for the pure “freedom of the individual”; so the execution of Hébert signified “the negation of the singular as a *subsistent* (*Seienden*) in the universal” (590). This turning of the Terror upon its most extreme supporters—those who saw the community as a collection of free and independent points—was only the last stage of a struggle between social

factions. The various “factions” were bound together by economic and social interests which no longer receive any constitutional recognition (because the explicit ideology of the new nation is that of the *Sans-culottes*).

The situation of the Absolute Freedom that can only become an actual government through the exercise of Terror against all who want to go back to the old Regime on one side, or forward to democratic anarchy on the other, is a Hobbesian one. Only the singular self-consciousness can really know its own “secrets.” So first twenty-nine Girondist members of the Convention were arrested (2 June 1793) and many others fled—some of them becoming counter-Revolutionaries. Then the victorious Mountain split; and finally on 10 October 1793 (with two-thirds of the country in rebellion) the Convention decreed that the provisional government of the Republic was to be “revolutionary until the peace.”

The Committee of Public Safety actually included several shades of opinion; but after the execution of Hébert, it was clear that no one was safe from the guillotine. The law of 10 June 1794 made even suspect deputies subject to summary arrest, and deprived those accused of the right to legal counsel. Not even the members of the Committee of Public Safety could feel safe after that. The plotters who finally had Robespierre and several of his closest supporters arrested on 9 Thermidor (27 July 1794) included members of the Committee as well as other deputies. The “Incorruptible” could no longer count on the Paris mob to defend him; he received the sort of summary justice he had himself decreed, and went to the guillotine within twenty-four hours of arrest. But then the plotters themselves soon fell under “suspicion.” Thus the Terror burned itself out by its own logic. The proscribed members of the Convention who still survived, returned to their seats in December 1794, and the emergency regulations of the “despotism” were then repealed.

Hegel characterizes the problem perfectly. Only the faction that is actually in power can call itself the “government.” But whereas its governmental actions are clearly identifiable by everyone as “despotic” and “unconstitutional”—i.e. as an open transgression against the “general will”—the governing faction has nothing better than suspicion to go on. The government controls the actual world; but its subjects enjoy their “absolute freedom” in the world of pure consciousness; they are not ordinary criminals even if they nourish subversive thoughts, because the Constitution itself (the general will) exists now only in that world of “pure will.” It is only an “intention.” This is the key to our next transition; and the making of that transition is our topic from this point until the end of the section.

- 11./592. The terror of death teaches us that (as the erasure of all distinctions) self-consciousness is in itself (or abstractly) quite different from the positive affirmation of personality. *Terror* is the transition of Enlightenment’s “truth”; Thought becomes Matter.

If the suspicion of opposition to the government is all that there can be, and if this suspicion must be wiped out, then only the death of the embodied singular self-consciousness can secure the triumph of Absolute Freedom. All of the striving factions are “factions.” Hence they are *known* not to be identical with the general

will. The substitution of mere “suspicion” for proven “guilt” is only the phenomenal expression of the logical certainty that all singular selves deserve death. Thus Death is the universal *work* of Absolute Freedom (which cannot submit to servitude like the natural consciousness, because it is the absolute freedom of thought which cannot be renounced). The guillotine is its only objective realization because thought can here perceive its absolute essence as a purely negative force. Having wiped out all objective differences, the singular self-consciousness experiences the “truth of Enlightenment” and the objective nature of self-consciousness in its pure abstraction, when it passes from identity with God to direct continuity with the rest of matter as the guillotine falls.

This abstract equality of mortality is far removed from the positive “liberty” of the Declaration of 1789, or the universal “fraternity” proclaimed in the Constitution of 1793. According to the Declaration, the “general will” is the positive element within which all the singular wills of rational persons can express themselves; and according to the Constitution of 1793 all free communities are to be received into the universal fraternity. But instead, the actualization of the general will turns out to be a direct transition from “pure thought” to “pure matter.” What is directly realized is the two-sided Truth of Enlightenment.²⁵

In the “despotism of liberty,” we reach a situation where every self that either thinks for itself or presumes to act for the community, stands self-condemned by its own act. It deserves to die, and it executes itself according to justice. At this point the Cartesian *cogito* sublates itself; for if I think, then what I must think is that I ought *not* to be. Pure Reason blots me out. I experience the identity of the “Supreme Being” with “Matter” not as pure thought, but as pure will. The positive Concept of thinking as Absolute Freedom turns directly into the negative Concept of thinking as the sublation of the finite.

- 12./593. As the universal will Absolute Freedom has negation and hence distinction in it; so a new social structure develops out of it. The survivors have learned not to identify with the absolute negative, but to accept social differentiation of function.

When absolute freedom seeks to express itself as absolute rational equality, it stands revealed as the negativity of death. But in this absolutely negative disciplinary authority of the government over the anarchists who oppose it, the “pure self-equivalence of the general will” shows that it necessarily contains “*distinction in general.*” The General Will itself contains the distinction between the government and the governed.

Only the absolute distinction between the living and the dead, or thought and being, is involved in the Terror as a universal cycle of death in which the ruling faction sends its enemies to the guillotine, and then rides to the Place de la Révolution in the same carts a few days later itself. But the Thermidorean revolution (the overthrow of Robespierre and of his despotic Committee) was the first important catastrophe since Bastille Day in which the Sans-culottes (the devotees of absolute equality, and hence the practical agents of Pure Insight) played no significant part;

and when constitutional government was restored the basic distinction of 1791 between “active” and “passive” citizens was reestablished. Only taxpayers were given the vote.

Social distinctions were again accorded constitutional recognition (in company with the naturally given distinction of sex); the social organism was again treated as a standing substance. It was not reduced simply to the abstract shape of a constitutional law that was supposed to guarantee “equal rights,” but actually guaranteed only the death of all who were suspected of being opposed to it. The “multitude” of atomic consciousnesses allowed themselves to be apportioned once more into “spiritual masses.” The Army (which had already put down counter-revolutionary insurrections in the provinces) was used against the Sans-culottes in April 1795, and against Royalist mobs in October. (It was Royalist protesters who were put down by Napoleon’s “whiff of grapeshot”). In fact, the Army took over the despotic function of Robespierre’s Committee for several years, until Napoleon established the Empire. Then the old “spiritual masses” (the Clergy, the Nobility and the Civil Service) emerged in quite new shapes.

Outwardly Hegel ignores the decade between the fall of Robespierre (9 Thermidor 1794) and the establishment of the Empire; he does not allude to the replacement of the guillotine by the “whiff of grapeshot.”²⁶ We shall soon see why we do not need to be interested in the process by which the “substance” is reformed. Hegel describes how the new political world is different in a single paragraph, and then moves on to the next “experience.”

(d) *Moral Freedom*

- 13./594. This does not mean a simple repetition of the cycle from the ethical substance, through the stages of Culture. In absolute freedom there is no longer the [legal] world of singular individuality nor the two worlds of actuality and thought. All has come to the nothingness of a meaningless death; but this fate is consciously willed by the universal will of the community. This absolute negative turns over conceptually into a new *position*. The atomic person whom the guillotine chops vanishes as “being.” What survives is pure self-cognitive universal will (i.e. moral will). It is the law of the rational self that requires self-sacrifice; the self identifies with its universality (instead of being an atomic point). The *single* self is only the *form* of this pure Insight (and objective actuality is the selfless unknown).

For the purposes of the “science of experience,” the restoration of the social order—without which the whole movement of Self-Estranged Spirit could never become the stable *Gestalt* of State and Church that *personal* freedom requires—is a topic that only needs to be referred to in order to point out what is *new* in it.²⁷ The Terror does not send us back to the breakdown of Roman Law, and the despair of the Unhappy Consciousness. And the Marseillaise does not send us back to a felt ethical identity with the community like that which Plato pictured in the *Republic*. The movement of Culture has uncovered a great new principle which Hegel describes as follows in the 1805 “Philosophy of Spirit”:

This is the *higher principle* of the *modern period*, which the ancients, even Plato, did not know,—in the ancient period, the *beautiful* public life was the customary norm for everyone—beauty [being the] immediate unity of the universal and [the] singular, a work of art wherein no part sunders itself from the whole, but [there is] this unity of genius between the self that knows itself and its displaying; but the knowing of itself as absolute on the part of singularity, this absolute Self-containment [*Insichsein*] was not present. The Platonic Republic—like the Spartan State—is this disappearance of the individuality that knows itself.—Through this [modern] principle, the outward actual freedom of the individuals in their immediate thereness is lost; but their inner freedom (the freedom of thought)—is maintained,—the spirit is purified of its immediate thereness; it has entered into its pure element of *knowing*, and [is] indifferent to the singularity that is there; the Spirit begins here, *to be* as knowing; or there is its formal existence as the knowing of its Self;—Spirit is [now] this Nordic essence, that is self-contained but has its own being—there in the Self of all.²⁸

Because of the incorporation of this “Protestant principle”²⁹ the restored social order founded upon “absolute freedom” will be different both from the classical political system, and from the system of Culture with its divided world of actuality and thought. But the shape of the new self-conscious community that is still in the throes of birth, is not the concern of our “Science of experience.” We can say programmatically that it must integrate the “masses” of cultural activity, within the felt *national* unity of “liberty, equality and fraternity.”³⁰ But the prediction of the future is no more our business, than it is the business of the science of objective spirit as such. We have to observe how “absolute freedom” as a despotic negative is reintegrated within a more comprehensive concept of the positive freedom of universal and equal rights. This is a comprehensive “second inversion” that transports us back again into the inner world. This time it is the inner world of self-consciousness (i.e., of *action*) rather than the theoretical world of substantial “faith-consciousness.”

If it were not for the emergence of this new principle, Charlotte Corday would be the moral heroine of the new age. She wanted “to know and find herself, not as ‘this particular,’ but only as universal, and hence she could also bear the objective actuality of the universal spirit excluding her as particular.” But already the spirit of “absolute culture,” the broken and self-contemptuous spirit of Rameau, could not bear that. If we want to understand how the blot of Faith’s unhappiness is sublated *an sich* in the “truth of Enlightenment” (par. 573) we must look to a revolutionary heroine whose experience was more completely social than Charlotte’s. Among the reflections that Manon Roland wrote in prison before going to the guillotine we find the following:

When men say that the morale of love is worth just nothing, they make a big proposition very lightly, which if true might be applied to all human passions which produce splendid results; take away this morale and life is reduced to physical needs and appetites . . . If the morale of love is admitted, I believe it to be the most fertile as well as the purest source of great virtue and splendid action.³¹

The inspiration for this can be found in Rousseau just as readily as the inspiration of Charlotte Corday's Spartan patriotism. But, as we shall see, it anticipates the full development of the "Protestant principle" upon which we are about to embark. For the "love" of which Madame Roland speaks is directed not at a great general abstraction like the "brotherhood of man," but at this particular human.

Robespierre himself is the best model of "the culture that self-consciousness attains in reciprocal action with that essence [the General Will]." His consciousness and public persona is in radical contrast to that of the Young Rameau. There may (as Carlyle, following Mme de Staël, thought)³² have been a coward's consciousness behind Robespierre's "sea-green" complexion; but all that private selfishness was sublated in his public devotion to Virtue. Without that he could never have become the "despot of liberty." Young Rameau could not have done it, because the private self which Carlyle affected to despise in Robespierre, showed itself so plainly in him. The guillotine (which Young Rameau would surely have managed to avoid had he lived long enough to be faced by it) only guaranteed the reality of Robespierre's sublation of the "sea-green" personality.

Robespierre goes to the guillotine when his work is done, because his only important work is to send all forms of superfluous singular consciousness to the guillotine. When the singular consciousness was recognized to be *in itself* both "superfluous" and "necessary" Robespierre himself could be sent to the guillotine as superfluous.³³ The sign that the time was ripe for this was the turning of the "scythe of equality" upon its supporters. Hegel's logical analysis is politically sound at least in this sense: that after the execution of Hébert, Robespierre could be disposed of without the risk of a popular uprising. He could finally receive "the wages of sin" himself. The "wages of sin" as decreed by enlightened Virtue brings Culture to its final shape—back again to the sinful self-condemnation of the Unhappy Consciousness.

Hegel runs through the modes of external reward in which the self-estranged consciousness sought its "fulfilment" before coming to the "self-possession" of the moral life through this completion of the circle. The ordinary consciousness of the cultural world combined the judgments of "honor" and "wealth" in their *mixed* form; and the noble mind sought "honor" alone (taking wealth for granted). Deprived of his political (and hence of his economic) independence, the noble became the wealth-seeking courtier, because his honor would not allow him to work for a living (like those who make the "mixed judgment"). The consciousness of Absolute Culture arises from reflection upon this experience of the identity of opposites; this consciousness becomes Pure Insight when it turns contemptuously away from external actuality to its own inner realm of thought. The heavenly reward of Faith is then brought down to earth by Insight as the universal Utility of the Enlightenment. It is that Utility which stands before us as Dr. Guillotin's marvellously efficient instrument.

Even the new society of national political freedom, will continue to need the judicial terror of the death penalty. All of the distinctive *shapes* of Culture are stable forms of social existence; but all of them—soldiers and statesmen, noble courtiers

and laboring sans-culottes, pious Catholics and enlightened utilitarians—have now gone to the guillotine (or into exile with the certainty of death if they return). This is only *symbolic* of the general “loss” of which Hegel speaks here; the loss, itself, is a conceptual one in any case, since the Republic had its own soldiers, and probably some courtiers too; and (as Robespierre well understood) there were many pious Catholics among the most fervent patriots. But the paradox of a patriotism that operates by Terror drowns the whole world of culture “for us”; it is *we* who comprehend consciously why a new form of the Stoic retreat into the inner Self is now inevitable.

The “negation” represented by the guillotine has been knowingly produced by human Reason in pursuit of what it recognizes as the absolute form of its freedom. It is not like the Necessity that came upon Greek political freedom in the shape of an external might. The Ethical Substance of Zeus and his justice, has now become a “subject.” In its “general will” the free Nation has a mightier power than Zeus ever was; but that power has itself negated its own positive justice. And the “general will” really *is* the national will; it is not the mere whim of the “unlimited monarch” surrounded by a mob of clients, who themselves copy his behavior towards their clients in the contradictory world exposed by Rameau’s wit. The self-contradiction, the transformation of freedom into tyranny, of guaranteed right into the death sentence, is logically inevitable.

In the figure of Robespierre, everyone can see how the immediate identification of the singular empirical self with the general will must produce a Hobbesian war of all against all; and the lesson of the life-and-death struggle in this universal form is almost as easy to grasp as the lesson of the singular struggle of natural consciousness: a new form of authority must be accepted. The positivity of “human rights” passed over into the negativity of general Terror; now a new mode of authority, the authority of a subjectively autonomous *moral* law, must be recognized if the positive enjoyment of constitutional rights is to be guaranteed. The self—every self who wants to be a good citizen, as Robespierre did—must be its own moral law-giver. We must identify with our own universal inner selves (and condemn our own finite personalities to a conceptual guillotine) if there is ever to be a positive enjoyment of “liberty, equality and fraternity.”

We have met the “moral law” before—especially in the Heart’s Law and in Virtue. But hitherto it has appeared as opposed to the ordinary external law or custom. Here it appears for the first time as the law which *sublates and comprehends* that communal “general will”; it is recognized as the condition for the preservation of the civic virtue that identifies with public law. In the main movement of Culture public authority has operated to form and develop civic virtue. But “civic virtue” comes to its final shape as a contradiction; only the transition to moral duty not as a higher negative, but as a more comprehensive positive concept, can save it. Absolute freedom—the very adjective tells us this—is something that must never be lost, relinquished or sacrificed, once we have found it. The Moral World-View forces itself upon us, precisely as the only way to save it. But the fact that we find this moral freedom in “another land” (which does not enjoy absolute freedom) also tells us at once that we have not yet found it in its fully developed shape.

We are all such instinctive Kantians, and such natural children of the anarchist Enlightenment that erected the guillotine on the Place de la Révolution, that we find it hard to comprehend consciously that it was precisely the anarchic freedom of the Stoic cosmopolitan Enlightenment that perished on the guillotine. It is the “Absolute Freedom” that has accepted the restored social order (with its socially situated singular self) which now passes on to the Moral World-View in the Hegelian “science of experience.” Most of the ironic fun that Hegel will have with the Moral World-View springs from the fact that he knows (and we are presumed to remember) that it has the Revolutionary critique of the Enlightenment already behind it. The revolutionary actualization of the Enlightenment gives the Moral World-View a clean social slate; but the Terror has also shown that the constitutional establishment of moral autonomy as anarchic political equality is impossible.

The transition to Morality at this point is a purely conceptual one.³⁴ The moral self that arises from the comprehensive second inversion of the freedom and death of civic virtue, knows indeed that it must maintain the equal rights of all rational agents; that is its “absolute positivity.” But it has forgotten all the concrete social circumstances to which it must accord recognition, and the finite ends to which it must reconcile itself. It is a *pure* practical knowledge—the volitional knowledge of the moral law. Its own natural body with all of its needs has disappeared on the guillotine; and the world that is immediately there is now a great repertory of *morally* useful things. Nature, as the unknowable *Ding-an-sich* (whether Matter or Supreme Essence), is irrelevant. Moral Reason knows its duty—and that is all it needs to know.

In effect, we have now returned to Law-Giving Reason as the *Gestalt* of a concrete World; and this world is *within* the singular self, so the singular agent does not prove to be as impotent morally as it was “legally” when it appeared as a *Gestalt* of individual Reason; it does fail in the end, but the story of its failure is complex. After surmounting many contradictions, it finally discovers the contradictory shape that truly belongs to it; and out of that there will be born not a higher abstraction (the Test of Laws) but Reason’s true concreteness.³⁵

- 14./595. Thus self-estranged spirit gives itself a new Heaven. But now the thinking is self-conscious. In virtue of our capacity to *think*, we are *free* members, here and now, of a supersensible order: the moral world.

The moral spirit has “equated the *Gegensatz* of the universal and singular will with itself.” In Robespierre we still have the distinction between the “pure willing” (the General Will) and the “pure willer” (the despot of liberty himself); and because of this distinction, “the Incorruptible” is universally recognized as a tyrant. In the moral spirit the law and its executive are no longer estranged, but have become “transparent” to one another. “Rational utilities” can conflict, but moral autonomy involves a “respect” that outlaws the life and death struggle. Moral freedom, the good that is to be universally willed, and the singular agent who wills it, are “equalized.” Just as we passed over earlier from the actual world of culture to the heavenly world of pure thought, so now we pass over from the Last

Judgment that Insight brought to the actual world when it transported the secular heaven of the Enlightenment to earth in the Revolution, to “another land”—the noumenal inner world of the moral consciousness. This is different from the inner world of Faith, because we now have clear Insight. We are the self-conscious thinkers and legislators in this world.³⁶

We also pass literally to “another land”; for from France we move to Germany. When Napoleon fell, Hegel sought to console himself in his disappointment, by claiming that this transition in the *Phenomenology* was a kind of prophecy of what had occurred.³⁷ But that was true only in the sense that speculative Reason cannot foretell what will happen in “actuality.” In the world of “Absolute Freedom” any kind of failure and disappointment can occur. What Hegel’s hopes and expectations were in 1806, regarding the emergence of a new social order through the authority and inspiration of a *positive* tyrant, is plain enough in the Preface. All that his gloomy self-congratulation in 1814 can legitimately mean is that the disappointment of those hopes does not *invalidate* the transition here from the “land of what is” to the “land of what ought to be”; and I have already indicated the real significance of the fact that in 1806 Germany is *only* the “land of what ought to be.”³⁸

After 1814 Hegel was forced to look to Germany for the evolution of *what is* as well; and, of course, however much he had deprecated the “war of national liberation,” he could recognize that the German—and especially the Prussian—resistance to Napoleon, was inspired by the nationalist ideal of 1793. He recognized that the constitutional work of Stein and Hardenburg was the same sort of constitutional reconstruction that Napoleon had achieved, quite permanently, in France. His interpretations of his “actual” world were quite “rational” in both cases; and his refusal to indulge in philosophical prophecy, even in 1806 when his hopes were definitely high, was steady and consistent. It was really from the justified wisdom of this *refusal* to speculate about the future of a “Napoleonic” Europe that he could properly take comfort in 1814. He could so easily *not* have terminated his political reflections with the “self-destructive actuality” of the Terror.

We may surmise that his attitude in 1814 was a return to the mood of 1794. It is reasonable to guess that the Girondist sympathizers in the *Stift* regarded the “self-destruction” of Absolute Freedom as the decisive proof of how vitally necessary the completion of the “revolution that will be produced by philosophy” was.³⁹ It is clear that by 1806 Hegel did not think that the “German Revolution” would come simply “from the Kantian system and its highest completion.” Even in 1793 he did not think that. Here in the *Phenomenology* he has given us a clear model of how complex the conception of cultural life that is already expressed intuitively in the Tübingen fragment of 1793 becomes, when it is developed into a fully “syllogistic” theory of actual social change. The long drawn out dialectical development and critical degeneration of the *ancien Régime* explains the emergence of the enlightened ideology of “equal rights.” This philosophical anarchism inspires the Revolution. And it is only the Revolution that makes the “highest completion of the Kantian system” socially relevant. But even so, the necessary reconstruction of the social order cannot come from the Kantian system alone. The actual reconstruction requires a

“new Theseus”; and every culturally independent community must have its own Theseus.

The “estrangement” of Ought from Is is the last (and most “transparent”) shape of Estranged Spirit.⁴⁰ The perfected “Kantian system” is the “truth” of “Absolute Freedom” as freedom of *thought* only: “it counts as what is true in this ineffectiveness [of Spirit’s *inner* “land”]; Spirit uses the thoughts of it as a cordial to comfort itself.” Madame Roland’s prison meditations are an apt paradigm of this “cordial.” Her wisdom will have to be made actually effective before the new moral heaven can be transplanted to this world once more.

Notes

1. J. Boswell, *Life of Johnson* (Hill, rev. Powell), I, 471 (6 Aug. 1763).

2. I do not find the argument very clear either in paragraph 576 or paragraph 577. But it seems to me that in paragraph 576 Hegel wants to show that the absolute mind is necessarily *external* (and hence “material”); while in paragraph 577 he wants to show that “absolute Matter” is a pure concept (and hence “mental”). Properly speaking, therefore, paragraph 576 is about Deism and paragraph 577 is about Materialism. My “analysis” does not show this; but it does not matter much, because the argument is repeated in paragraph 578. W. van Dooren (1976) rightly says that both sides fall into “empty abstraction.” But van Dooren (like Loewenberg before him—1965, 247) does not want to acknowledge the historical references.

I agree with H. Kainz (1983, 81n.) that Hegel was probably not influenced by Bentham. It is mainly French writers that he has consciously in mind. He was, of course, very conscious of the rise of the mercantile bourgeoisie—it is a world of rich bourgeois in which Young Rameau moves. That the world of “Utility” is bourgeois was pointed out by G. Solari (1931 [reprinted 1974], 225) even before Lukács wrote. But it is the self-destruction of the Nobility with which he is directly concerned. It is the world of “Conscience” that is (pre-dominantly) the bourgeois world.

3. We can see from the *Lectures on the History of Philosophy* that the models Hegel had in mind were D’Holbach on one side, and Robinet on the other. This hardly requires proof, but for anyone who needs it, the evidence is there; and Hegel’s historical analysis in the *Lectures* confirms the interpretation of this metaphor from Faith. See *T.W.-A.* XX, 300–304; Haldane and Simson, III, 393–399.

4. Hegel’s reference to Descartes by name provides the clearest possible confirmation that Descartes is the original *Gestalt* of Pure Insight.

5. The reference of *Empfindsamkeit* is not easy to determine. Perhaps Jacobi and Schleiermacher (the “Unhappy Enlightenment”) are meant. But the view that Fichte’s moral formalism is what Hegel designates as “the abstraction that calls itself speculation” is very plausible. Of course, there may be some high-minded critic of “eudaemonism” hidden behind the *Gestalt* of Virtue, whom I have not managed to identify. But I think it is the standpoint of Virtue that Hegel has in mind here; and in that case *Empfindsamkeit* covers all who appeal to the “Law of the Heart.”

6. The “Declaration” was drawn up by a committee and submitted to the French National Assembly by Mirabeau in August 1789. It served as the Preamble to the Constitution accepted by the King in 1791. The following “rights” are particularly relevant at this point (we shall have occasion to refer to some of the others later):

1. Men are born, and remain, free and equal before the law. Social distinctions can be founded only on public utility.

4. Liberty consists in being able to do whatever does not injure another. Thus the exercise of every man's natural rights is limited only by those which assure the other members of society of these same rights. These limits can be determined only by law.

5. The law has the right to prohibit only those actions which are harmful to society. All that is not prohibited by law cannot be hindered; and no one can be compelled to do what the law does not require.

A "Déclaration des droits de la femme et de la citoyenne" was published by Olympe de Gouges in 1791. It was directly imitated from that drawn up by Mirabeau's committee. But the National Convention suppressed her "Women's clubs." Mary Wollstonecraft's *Vindication of the Rights of Woman* (1792—dedicated to Talleyrand, whom she knew from their discussions to be mainly against her) was a more thoughtful production arguing not for abstract equality but rather that "if woman be not prepared by education to become the companion of man, she will stop the progress of knowledge and virtue; for truth must be common to all . . ." (from the Dedication).

After the publication of her book Mary Wollstonecraft went to Paris (December 1792), where Tom Paine introduced her to Madame Roland and other Girondins. She witnessed the Terror but did not lose hope for the Revolution. She lived in France until April 1795. (The first volume of her *Historical and Moral View of the French Revolution*—which goes no further than the events of 1789 and was never completed—was written during the period of the Terror, and published in 1794).

7. I cite Charlotte Corday herself also from Carlyle's *French Revolution*, Part III, Book IV, chapter 1 (London, Macmillan, 1900, vol. II, 285).

8. St. Thomas justifies the burning of heretics in exactly this way (*S.T. II-IIq. 11 a. 3*); and he certainly belongs to the world of Faith rather than to the Unhappy Consciousness.

9. S. B. Smith (1989, 87–88) says that the demand for "absolute freedom" emerges from the disintegrated consciousness. But the "sunburst" of paragraph 11 can only occur because of the positive formation of the Enlightenment—and "Absolute Freedom" itself should not be directly identified with the "sunburst."

10. Hegel himself speaks only of the "world of Faith," but I think this extension of his meaning throws light on the dialectic of the second "world."

11. In the *Philosophy of History* Hegel speaks of "liberalism," whereas "absolute freedom" seems to be more a Jacobin concept (cf. A. Wildt, 1970, 268–269; 1974, 417). I doubt if this is more than an expedient accommodation. It was convenient in Berlin to give "liberalism" a bad name, and to dissociate the organic freedom of Hegel's own theory from it. Anti-clerical "liberalism" is not "situated"; Protestant conscientious freedom is (cf. *Philosophy of World History*—Lasson IV, 923; *T.W.-A.* 12, 526; Sibree, 444). Compare M. Kirn (1974, 362). Apart from the books and essays explicitly discussed in my notes, the following are definitely significant: H. Marcuse (1942), G. Lukács (1948); J. Hyppolite (1955, chapter 3; 1969, chapter 3); J. Habermas (1963); M. Theunissen (1970); W. ver Eecke (1975). But there are probably many items that I have missed.

12. Flay's note (1984, 366, n. 29) gives a good account of some of the astounding things that have been said about this transition. Hegel's argument depends fairly simply on the fact that enlightened Utilitarianism contains no principle of moral "respect." In the universal means-ends continuum there is no *determinate* "end-in-itself." (But see G. Besse [1968/

1969] for a defense of Rousseau's own ethics against the crude utilitarianism of the Jacobins.)

Spaventa was correct, I think, in arguing that there is no *moral* ground for the death penalty in Hegel's theory of punishment. But "utility" always prevails in the political realm. It is only the religious community that *must* "forgive" its members. Hegel is a "Hobbesian" in recognizing the essential role of Terror in politics.

13. "Terror" is a fundamental phenomenon of political life—it plays a vital role in "true Spirit" for example. But "*the* Terror" could happen only *once*, because there can never again be an enlightened community that believes in the *natural* goodness and rationality of all citizens, and is led by that to the Hobbesian discovery of universal suspicion.

(In the *Philosophy of Right* Hegel generalizes the motion from Freedom to Terror so as to embrace religious fanaticism generally. This motion from a *religious* foundation is quite different from the movement *into* morality here; and from the "vaporization" of Conscience in the Beautiful Soul the argument here moves to the *adequate* concept of religion. E. Kedourie (1995, 94–102) is one of many students who interpret Hegel's critique of Kantian morality in a one-sidedly *negative* way, because he has not understood the *systematic* order of the *Phenomenology*. On the negative side, however, his comments are very insightful.)

14. The Critical Editors may be right that Hegel's formula: "real universal will, the will of all *singulars* as such" is an echo of Sieyès. They cite from the German translation of Sieyès' *Political Writings* (1796): "the first communal will of a number of men who unite themselves in a political society is without doubt precisely the sum of the wills of all singulars." But this language of "summing wills" generates Rousseau's antithesis of the "general will" and the "will of all." The interesting aspects of the comparison between Sieyès and Hegel are first that Hegel avoids the mathematical language, and secondly that Sieyès obviously accepted the indirect electoral process of the National Convention as a "summing" of the wills of all citizens. Hegel held that the General Will is a genuine Will of All that is *beyond* the level at which singular wills can be counted and summed. Distinguishing between the General Will and the Will of All as if they existed at the "summing" level was *Rousseau's* mistake. Once we have corrected it we can recognize Rousseau's outstanding importance as the philosopher of "Absolute Freedom"—see the *History of Philosophy (T.W.-A. XX, 307–308; Haldane and Simson III, 402)*. The Rousseau reference was recognized by Hyppolite (1946, II, 441–442; 1974, 455–457; and 1955, 71; 1969, 54–55).

15. For Hegel's experience of the significance of the Marseillaise in 1792 see *Toward the Sunlight*, 63, 113–115.

16. It cannot be doubted that this is what is meant here. The "standing sundered masses" are the "estates of the Realm"—that is to say they are the *constituent parts* of the Water-Mass in paragraph 492. (The "sundered masses" here must therefore be distinguished from the "elemental masses" of par. 492. There is some support for this interpretation in par. 588.)

17. The most influential discussion of "Hegel and the French Revolution" has been that of J. Ritter (1957, trans. 1982). H. S. Harris (1978) is heavily indebted to Ritter; cf. also W. ver Eecke (1975). A different view will be found in G. Mende (1972). J. Habermas (1973, 121–141) is right in saying that Hegel's attitude was very ambivalent (121). It is the negative side of the ambivalence that shows plainly in the *Phenomenology*. K. H. Nusser (1970) defends Hegel against Habermas' claim that his position is contradictory. J.-F. Suter (1964, 1971) interprets Hegel's attitude well, but is not interested in "phenomenological logic." See also M. Kettner (1989).

18. “Absolute Freedom” has a “religious” sense. The Revolution was “atheistic”—see D. Rodin (1991). If we accept this view, then this section is Hegel’s own critique of Kojève.

19. For an insightful discussion of “Absolute Freedom” see R. Schacht (1972). The Hegelian critique of direct democracy is discussed by W. ver Eecke (1980).

20. But not necessarily that set of social orders. What is *necessary* is that the structure should be an organic one. We cannot say that it must be a spontaneous *growth*, for we have already passed the moment where spontaneous growth turned into degeneration. The best model of what Hegel had in mind is provided by Napoleon’s organization of the Empire.

21. Marat edited a popular newspaper called *L’Ami du Peuple*.

22. See especially the letter to Schelling, *Briefe* I, 12; Butler and Seiler, 28; we should also remember the reports of Hegel’s fervent oratory on behalf of “liberty.” (Schwegler is not very reliable in this connection, but the testimony of Sinclair is unimpeachable [see Letter 199, *Briefe* I, 394–395; not in Butler and Seiler]). K. H. Nusser (1970, 293–294) is right (as against Habermas) in pointing out that Robespierre is not the World-Spirit—or even a positive “World-Soul” like Napoleon. He is only a negative moment in the motion of the World-Spirit. But his assimilation of *Bildung* to *Herrschaft-Knechtschaft* (par. 282) is misguided.

23. For an illuminating quotation from the “Law of the Suspect” see R. C. Solomon (1983, 560, n. 153). Hinchman (1984, 149) has rightly noted that the word “Fury” is to be taken in its original Greek significance. From the downfall of natural ethical life, the singular natural self-consciousness emerged as the author of *legal right*. From the downfall of the “cultural world” the singular rational self-consciousness emerges as the author of *moral duty*. (W. ver Eecke [1975] compares Hegel’s negative attitude to the violence of the Terror, with his supposed appreciation of conflict in Lordship, Bondage and the Law of the Heart. He is right in arguing against J. Habermas that Hegel was not “fearful” of the Revolution, but wrong in claiming that “revolution remains acceptable” [566]. “Accepting or rejecting” what happens is not the task of philosophy.)

24. The cult of the “Etre Suprême” (which Robespierre did establish) was as far as the Jacobins dared to go. The enthronement of a living “Goddess of Reason” in Notre Dame was too great a violation of the religious sentiment of the country as a whole to be tolerated.

25. We can see, here, how the seemingly repetitive “Truth of Enlightenment” is *crucially* different from the “positive doctrine” that it appeared to repeat.

26. The most interesting of the *coups d’état* in this connection was the first. In the Spring of 1797, a free election based on the limited suffrage principle of the new constitution, produced an alarmingly conservative result. The two Chambers were full of Royalists, and constitutional monarchists. The three radical members of the Directory used the Army to get rid of their two “unreliable” colleagues; and most of the election results were annulled. Napoleon stayed out of the Parisian limelight at this stage. He waited until the military defeats of 1798 led to a resurgence of radical Jacobins calling for a popular dictatorship again. That was when he emerged as the dictatorial protector of the more moderate centre (18 Brumaire, An VIII, 9 November 1799). Instead of universal male suffrage, Napoleon used popular *plebiscites* to incorporate the principle of “absolute freedom” into his new order.

27. There are two mistakes to be avoided here. On the one hand, Judith Shklar’s assumption that the *Phenomenology* should be studied as a political theory leads to the view that it is a hopeless “lament” for the past that we cannot go back to. On the other hand, M. Westphal’s

“Protestant” awareness that we pass now from the experience of the “State” to that of the “Church” leads to the view that Hegel thought (like the Marxists later) that the State would “wither away.” Both mistakes rest upon the comprehension that Spirit must be communally embodied (which is a vital advance in the understanding of what the book is about). But Judith Shklar (1971, 1976) has not grasped “the *higher principle* of the *modern time* which . . . Plato did not know”; while M. Westphal (1979), who has grasped it, has not properly appreciated the critique of enlightened “anarchism” which Shklar fully understood. Like Shklar, L. Dupré (1966, 25–37) seems to think that there ought to be a theory of the State in the *Phenomenology*; but unlike her he admits that there is not. The “transition” is actually to Civil Society as we know it. This is clearly shown by R. Racinaro (1972).

28. *G.W.VIII*, 263, line 16–264, line 6; Rauch, 160–161. In his revisions of the manuscript here Hegel added an important marginal comment about the Greek *polis* and Plato’s *Republic*:

Plato did not set up an ideal, but rather grasped the State of his time in its inner [life]—but this State has passed away—[it is] not [the case] that [the] Platonic Republic is not realizable—because Plato lacked the principle of absolute individuality. What is actual [e.g. in Sparta] does not outwardly look like the [Platonic] Ideal, of course—because the observer confines himself to what is immediate—to the necessary [upon which Reason must operate]—[the] extravagance, decadence, wanton carelessness, viciousness of the individuals [that] it must be possible to put up with—the State is the *cunning* [that can use them] (*G.W.VIII*, 263, line 24–264, line 19).

This comment on the relation between Plato’s “polity” and the actual *polis* is relevant to our understanding of the relation between Hegel’s account of “Absolute Freedom” and the actual French Republic. (For the permanence of this moment in Hegel’s political theory see *Philosophy of Right* sec. 124 Remark.)

29. In *Faith and Knowledge* Hegel says that this “modern principle” or “Nordic essence” is “from the religious point of view, the principle of Protestantism”—*G.W. IV*, 316; Cerf and Harris, 57. M. Bienenstock (1983, 162–172) has given an insightful interpretation of *Bildung* as the self-conscious realization of human rational *power*. Rational power comes to full self-consciousness in Morality—otherwise the cycle would begin again. The view of G. Lukács that at Berlin Hegel gave to the Lutheran Reform the pride of place that the French Revolution has at Jena (1948, 580; 1975, 460–461) is correct, but slightly misleading. Even in the *Phenomenology* the essentially *critical* evaluation of the French Enlightenment and the Revolution is preparing the Berlin position. (Compare, for example, M. Kirn, 1974).

30. J. Hyppolite (1955, 77–78; 1969, 59–60) rightly says that the social structure envisaged in the second *Philosophy of Spirit* (*G.W.VIII*, 266–270; Rauch, 162–170) is inspired by Napoleon. Hyppolite (1946, 316–322; 1974, 326–333) preferred the general thesis of M. Bösse (1931) (that the only important difference between the *Phenomenology* and the *Philosophy of Right* was in the point of view) to that of F. Rosenzweig (1920) (that in the *Phenomenology* “the importance of the State was greatly diminished” [1920, I, 219]). He was right in that preference. (But Hegel did radically *transform* “the ethical ideal.”)

M. H. Hoffheimer (1992, 353–359) proposes that the “Lord of the World” in the Condition of Right is Napoleon. There can be no doubt that readers are intended to recognize the “return” of Roman times in Napoleon’s work. But paragraph 594 indicates clearly that he is *not* the primary referent. His world is different because the *moral* conception of personality

has come to birth. To mention the most crucial *legal* difference, there are no slaves (or serfs) in his world—and even the “rights of woman” have become a matter of theoretical discussion. The “natural” division between Antigone and Creon has begun to be liquidated by *moral* argument.

31. U. Pope-Hennessy, *Madame Roland* (London, Nisbet, 1917, 496).

32. See the first appearance of Robespierre in Carlyle’s *French Revolution* (with his footnote). Hegel’s own verdict was that Robespierre “took Virtue seriously” (*TW-A*, XII, 533; Sibree, 450).

33. Compare Hegel’s verdict on the *necessity* of Robespierre’s “tyranny” in the 1805 “Philosophy of Spirit” (*G.W.* VIII, 260, lines 1–13; Rauch, 157).

34. The actual social transition here is well characterized (logically) by J. W. Burbidge (1992, 101–102). The necessary mediation between singular and universal will is produced in the world of objective spirit by the conscientious recognition of Family and State as non-contractual communities. See (for example) M. Westphal (1984). But (as we can see from the way Hegel’s logical argument moves straight on to the “Moral World-View” here), the theory of Absolute Spirit does *not* presuppose even the concrete realization of “the modern bourgeois Protestant world”—still less its abiding permanence. Thus claims like that of E. Fackenheim (1967, 224–233) that in view of the terrible failures of that world in our century “Hegel would not be a Hegelian” today are quite mistaken.

35. This is where A. Wildt’s contention that from the “real General Will” Hegel derives “the steady exchange of government and opposition” is justified in the *Phenomenology*. But the derivation depends on the *Kantian* interpretation of “liberty, equality and fraternity” (and Wildt is well aware of that). Compare A. Wildt, 1970, 269 (=1974, 417). The necessary marriage between the Jacobins and Kant was less obvious to the Jacobins themselves (or to us since 1917) than it was to their German disciples. (This was a lesson that Hegel himself learned in 1793.)

36. S. Dellavalle (1992, 148) says there is “no trace” in the *Phenomenology* of the important distinction in the *Philosophy of World History* between the French and the German Enlightenment. He was simply looking in the wrong place—being too much under the influence of Hyppolite.

37. Letter 233 (to Niethammer, 29 April 1814; *Briefe* II, 28–29; Butler and Seiler, 307). For Hegel’s mature view of Napoleon’s failure see his *Philosophy of History* lectures (*TW-A*, XII, 533–5; Sibree, 451–452). L. P. Hinchman (1984, 150–154) shows clearly how Hegel’s critique in 1806 coheres logically with the views of his last years. J. F. Suter (1964, 318) is guilty of oversimplification when he says that “for Hegel the French Revolution belongs to an epoch that is past.” But the resemblances between Hegel’s attitude and Burke’s, to which Suter draws attention, deserve careful study.

38. Hegel reiterated in his Berlin lectures that it was folly to make a Revolution without a preceding Reformation (*Enz.* sec. 552; *TW-A*, XII, 535—Sibree, 453). The explanation of this “folly” is the “estrangement” of Pure Insight from Faith.

39. His correspondence shows that Hegel actually hoped that the Germans would learn the political lesson of the Revolution better than their French teachers—and when “Revolution” reared its head again in Paris in 1830 he decided that (thanks to their “Reformation”) they had done so. It is therefore right to regard the *Phenomenology* as Hegel’s last and greatest contribution to the “German Revolution” which he began to labor for at Tübingen. See especially Letters 85 (23 Jan. 1807) and 106 (13 Oct. 1807), Hoffmeister I, 138, 192 (Butler

and Seiler, 123, 151). For the early hope for a German Revolution to be produced by *philosophy*, see Letters 11 and 13 (to Schelling, 16 April 1795, and Schelling's reply, 21 July 1795)—*Briefe* I, 23, 28 (Butler and Seiler, 35). Some of the other evidences of this shared hope are indexed under "German Revolution" in *Toward the Sunlight*.

On the whole problem of Hegel's supposed "accommodation with Prussia" in his later years, the most balanced picture is that provided by H.-C. Lucas and O. Pöggeler (edd.): *Hegels Philosophie des Rechts* (see the valuable review-article by M. Bienenstock [1987]).

40. I do not agree with everything that B. C. Birchall (1978) says about Hegel's view of the Is/Ought distinction. But a careful student of the "Truth of Enlightenment," "Freedom and Terror" and "Morality" will soon see what is valid in his analysis and what is not. G. Vassilacopoulos (Ph.D. Thesis 1993, 58) quotes Shelley very aptly: "one could say that Hegelian philosophers become 'the mirrors of the gigantic shadows which futurity casts upon the present.' Turning vision to memory amounts to remembering the future . . ." But we must remember that the precondition of Hegel's prophetic power was his understanding of Napoleon's actual achievement. It is only *for us* that he seems now to have "remembered the future"; and we ourselves shall become "mirrors of futurity" only if we comprehend our own time well (see further, J. F. Hoffmeyer, 1994).

Chapter 8

The Voyage Home

VI C: Spirit Certain of Itself: Morality

We are now at the beginning of the final movement of (Objective) Spirit. Here we must expect to see the comprehensive inversion of True Spirit (or Ethical Substance) together with its direct inversion in Estrangement. The “result” should be a Concept of higher generality and ontological status—as indeed it is, since from here we shall pass to the concept of Religion as the “experience” of the Absolute Spirit. It is not surprising therefore to find that Morality involves an explicit encounter between the finite and the infinite Spirit. As we might expect, this first encounter still carries the marks of “estrangement.” The moral self is no longer estranged from itself, but it is still estranged from the life-world with which True Spirit was harmoniously identified. This situation is what has to be transformed in the evolution of Morality.¹

(a) Prospect and Retrospect

- 1/.596. The singular self, recognized first only in death, then legally as a person, and finally realizing its personality as actual living self in Culture and emerging as General Will, is now in self-conscious possession of itself. Its *truth* is this self-knowledge, so the goal seems to have been reached.

Since this is the beginning of the final movement of “Spirit” Hegel naturally opens with a brief survey of the earlier moments. The first position of the Objective Spirit was True Spirit. It was “true” because of the immediate identity of the living singular self with his (or her) universal Concept. The two sexes constituted the “particular” division of the universal community (the community that is the objective shape of finite Spirit). Active self-consciousness is specified sexually by nature; it is particularized, but not “individuated.” Self-consciousness pertains properly to the City, and is embodied in its two aspects: the man-made political assembly of the “fathers,” supported by their fighting sons; and the established tribal continuum, made in the course of nature by mothers and brought to consciousness by the social expectations and natural piety of daughters.

In the national fraternity of True Spirit the agency of the singular self receives recognition only after death. The emergence of the singular self as a recognized

bearer of legal rights is the death-knell of this beautiful harmony of life, in which personal recognition (or "honor") is accorded only to the dead. If a living individual claims and receives special respect in the Ethical Substance—say the King, or an "elder," or one's father, or an alien stranger—it is as the representative of a divine power, and especially of Zeus himself. It is the God who is appealed to; she is the injured party if right is violated, and it is she who will exact vengeance if that right is not properly maintained or reinstated.

The Roman armies replaced this rather chancy and disorderly harmony of life with one universal human law, and one continuum of humanly recognized "rights." But the universal continuum was soon shown up to be a mere cloak for the age-old "law of the stronger"; "natural law" and "natural rights" have to pass through the long and painful dialectic of the Self-Estranged Spirit in order to become fully rational; and now finally the rational self who is the conscious bearer of *moral* rights has come to birth.

This newborn moral self is so perfectly certain of its own self as its only "object," that death on the guillotine as a declared traitor to the community is indifferent to it. Polyneices faced that traitor's death indifferently also (for Sophocles makes Oedipus prophesy it to him); but the "object" of Polyneices was the kingship of the City, and the *Dike* of Zeus as god of kingship.² The moral self cares only for its own moral integrity, its membership in the "moral world-order."³

The moral self is "master [*Meister*, not *Herr*] over the *Gegensatz* of consciousness." This self has no private purpose distinct from the "general will." But its "mastery" is an absolute knowledge, which like that of the Stoic begins by resigning all claims to the control of anything real. The moral self knows that its will must be "good"; and it is satisfied when it knows that its will actually is good. It has no goals or expectations of "its own." The general will is its only "property" (not in the way that it was Robespierre's private property, but in the sense that the Good is what is most inward to it as its own). There is no *Gegensatz* now between its own certainty that its will is good, and the "object" (i.e. the universal Good).

- 2./597. My duty is what is *substantial*. But it is not an *ethos* stamped on me by nature, which is specific to me as male or female, while the whole truth has another side that is hidden. It is more like the Will of God in Culture and in Faith; but it is my own rational will, not a self-negating discipline or a flight to another world. It is the universal kingdom of practical Reason.

The knowledge that is the only "Substance" for the moral self is the knowledge of Duty. Duty is what is eternal. This self has seen all of the traditional structure of the world swept away; it knows that the natural world is a complex of tools for its use, and that its intuition of duty is the substantial form to be imposed on all of this dependent "matter." In this immediate aspect the moral world-order is "what is." But it is equally absolutely a mediated result of the action of the moral self; and in that aspect the knowledge of it is the knowledge of "what ought to be."

In the ethical world-order, our character gives us the *pathos* (the felt commitment) for what we must do. Both in the primitive and in the developed Aristotelian

shape, the virtues of character have a side of “not knowing.” The ethically virtuous (wo)man needs the (wo)man of practical wisdom, and Antigone needed a king like the Sophoclean Theseus, not the Creon whom she actually faced. But of course the Sophoclean Theseus had insight, not just character, to aid him (that is to say a lot of intelligence went into the ethical makeup of his *manly* character). He understood how the “syllogisms” of his finite community worked; and that was partly an accidental gift of nature (just as the birth of *two* princes, Eteocles and Polyneices, was an unfortunate chance).

Moral knowledge, on the other hand, has the inherited certainty and self-sufficiency of *pure* insight; so its likeness to Faith is more complex, and more interesting. Like the “new man” of Christian obedience, Moral Insight is “absolutely mediated”; it is culturally self-made, through the complete sublation of the natural self. But it will soon show itself to be the knowledge of membership in a spiritual community; and this knowledge does not have the “estranged” character of a promise or a hope. Nor does it have the “split” aspect of an insight that is obliged to be self-contemptuous. In the moral knowledge of duty, the rational community of the moral world-order is a living presence (*Gegenwart*). I am conscious of being immediately in the moral community as my substance.

Charlotte Corday, who came to Paris to emulate the great tyrant-slayers she had read about in Plutarch, was very conscious of the present community of the French Republic, but not of this community of absolute selves. She could (and did) speak of doing her “duty.” But in the perspective of the moral world-order we cannot call the assassination of Robespierre or of Marat a “duty.”⁴ The moral self cannot go forth to slay tyrants, for it must recognize the tyrant as another morally autonomous self. It is the immediately known *presence* of this universal community of rational selves, that makes it legitimate for Hegel to use the rhetoric of Reason, as he does so emphatically, when he claims that “*this immediacy . . . is all actuality . . . it is being in general or all being.*” The moral agent acts consciously for the whole community of moral agents. Reason no longer takes itself to be Utility; it knows that it is still an “end in itself” even in Marat. It has been “cleansed through the absolute negativity” of the guillotine.

- 3./598. This knowledge *is* action. The knowledge of what to do *is* my substantial world.
There is no morally significant ignorance.

Two things differentiate this moral knowledge from Faith. First it is *rational* insight; and secondly it is actual. But this “actuality” is of a very peculiar kind; the knowing that is *all actuality*, is actual only as *knowing*. There is a lot about the empirically external world that I do not know when I act; but that is morally irrelevant. It is what I actually do know that constitutes the situation in which my duty determines itself. What I know “absolutely” when I act morally is that my intention is good. In the moral perspective this is all that counts. It is an irrational guilt that poor Oedipus suffers, once he has said that he did not know his mother;⁵ and Antigone disgraces herself morally when she says she would willingly leave husband or son unburied at the command of the City. The natural and the social world still

have an independent sense for them, and exercise power over them. The moral world-order, on the other hand, is an objective world within the moral will. Every moral act realizes it, however unfortunate or misguided it may turn out to be in the external world. The world of freedom is quite independent of the natural order of physical causes. That is why we find H. A. Prichard discussing “shouting to revive a fainting man” as a possible duty.

We must understand that the general characterization of “self-certain Spirit” in these three introductory paragraphs is valid for the whole evolution of the Moral World that follows. When we reach the actual community of “Morality”—the community of “universal forgiveness”—we shall find that most of the paradoxes have dissolved, and the “comprehension,” both of the Ethical and the Self-Estranged Spirit in the doubly inverted result, is fairly easy to recognize. That community is visibly a “Lutheran” congregation; but we should ponder upon the fact that Hegel himself has logically required the inclusion of Oedipus, Antigone, Creon, sundry other Greek and modern tragic heroes, Young Rameau, Diderot, D’Holbach, LaMettrie, and Robespierre in the community that advances to comprehend its own Religion. This is more important than the required “forgiveness” of the high-handed attitude of the moral agent regarding any material facts that she does not “actually” know.⁶ The community of “rational faith” must both reconcile Faith with Insight, and comprehend the pagan world. Before it becomes Absolute Knowing (and ceases to be “Faith” altogether) it will comprehend a great deal more. In principle it must comprehend all properly “human” experience. Otherwise it will not be Science.

VI C(a): The Moral World-View

Self-Certain Spirit is articulated into three phases. All of them belong to the twenty years prior to 1807. The “Concept” of Morality (which does not properly know what it means to be the morally autonomous self) is established by the “rational faith” of Kant’s Critique of Practical Reason (though it reaches its most perfect form in Fichte’s Vocation of Man). The “experience” of this Concept consists of a logical criticism by Hegel in which the postulational point of view is shown to be guilty of shifting its ground in the manner of Perception. This leads us to “Conscience” as the Truth of Self-Certainty (and the level of proper “moral understanding”). That we shall deal with in our next chapter.

(b) Moral Postulation (Kant)

- 1./599. Duty is the essence (Truth). But what is the objective content of this self-consciousness? The content of duty is not an *object*. The objective world is a system of *natural* (non-moral) laws that is exactly as free of me as I am of it.

The only concern of the moral consciousness is its duty. This is its own rational *self*, so it is not an “object” in the ordinary sense. But duty is essentially something that is to be done. So, even though it is only my intended self (the “good will”) that

matters to me, I do need an objective world in the ordinary sense; for I must carry out my intentions, and so confirm for myself that I really do intend to do my duty. My moral self-consciousness is essentially “mediation and negativity,” i.e. it brings itself into being through (or by way of) the negation of something else. But it is not morally important to me in my own rational world-order, what that empirical order is like (though it is important for me to “observe” it as well as I can). I could be the bug in Kafka’s *Metamorphosen*; and I would then have a quite different set of empirical things to do, but it would not change my moral world-order. But I do need the empirical world for my rational self-realization; so when I insist that the shape and order of it does not affect my moral freedom, I am logically granting that the empirical world is also free to go its own way. Logically, the guillotine has cut the two worlds off from each other. But the dominance of Utility continues in a sublated way. I must *use* the order of Nature for the rational purpose of actualizing the Moral World-Order. This “estrangement” of the two “orders” remains to be overcome.

- 2./600. From this definition a “moral world-view” forms itself, which expresses the relation between free subject (moral laws) and free object (natural laws). The two are mutually indifferent and independent, but only Duty is essential, and Nature cannot *be* independent. This is the contradiction that will be developed.

What Hegel calls the “moral *Weltanschauung*” is very precisely the connecting link between the two “worlds”—the intellectual world of the moral world-order governed by the “laws of freedom” and the empirical world of nature governed by the “laws of necessity.” *Anschaung*, sensory intuition, is precisely the mode in which the moral self is aware of the natural world to which it is so completely indifferent. It is typical of Hegel (and directly consistent, for example, with his steady refusal to grant that there really are *two* worlds in his discussion of Faith) to insist that “the moral world-view” is precisely an intellectual way of intuiting this actual world of sense-experience.

This does not invalidate my claim that the moral self lives in its own “world-order,” and that Hegel always means us to keep this in mind. For that claim is entailed by the cumulative character of the Science of Experience. The moral self contains the “general will” of the political community—the will of the actual community that proclaimed “liberty, equality, and fraternity” as the “rights of man”—sublated into a new moral shape by the experience of the Terror. But the consciousness that we are observing has “forgotten” this; so the actual evolution of the moral world-view must be treated as the relation between the singular self and the world of sense-experience, because that is how it appears in the world of experience, which is the only world that our Science recognizes. The conflict of presuppositions that now arises is called *Glückseligkeit*; and the word itself carries the memory of Faith’s “communion of saints” within it.⁷

- 3./601. I can know and do my duty independently. But Nature does not care. I may be dutiful but unhappy, or undutiful yet happy anyway. So I am bound to complain that this is just not right.

From the Truth of Enlightenment, we have inherited the maximization of Utility as the goal of rational action. When that rational goal sought to actualize itself as the “greatest good of everyone” (or as liberty, bounded by equality, and reconciled in fraternity) the fact that at best it could only be “the greatest good of the greatest number” turned it into the universal utility of death as the price of the community’s freedom. That taught us the fundamental importance of “moral respect” as the foundation of all duty. It is precisely the evolution of the rational ideal of Utility that has taught us this; and now the alienation of the community of freedom from the world of nature, has put the achievement of universal utility beyond our reach.

In order to do my duty I must negate my natural impulses: and this means that I cannot be spontaneously or selfishly happy in any case. This is our inheritance from the social discipline of Culture with its ideal of noble-mindedness. But it has now been transformed into the rational insight that “moral freedom” is the true good; and unfortunately my moral freedom carries the world’s natural indifference along with it. Naturally selfish utilitarians are all round me. The discipline of Culture has operated upon them to produce only the self-satisfied individuality of Reason as the *Sache selbst*. There is Dick Whittington whose cat brought him luck, and Jack Horner who thinks himself a fine fellow because he stole his estate (or got it as a bribe); and in general there are all those bourgeois worthies who have made the “mixed” judgment, and who now live quite sincerely by the maxim that honesty is the best policy. They have no conception that moral improvement is what the world is there for; and all of my efforts to secure it are foiled by their very blindness. The experience of the moral self is precisely that of Virtue struggling with the World’s Way. The others do not understand the opportunities that they have; or they may not be equipped to use them. I have to do my duty fruitlessly, because no one understands; and I have to live with the knowledge that all my natural talents are going to waste. The “indifference” of the empirical order becomes “injustice.” I see no improvement in the world, no presence of the moral world-order, or of my true self in it.⁸

- 4./602. Felicity cannot be renounced, because singular selfhood and conviction are essential to morality. The enjoyment of moral success is essential. Even as moral disposition I must know that this enjoyment is possible. My natural condition must harmonize with my duty. But their disharmony is logically necessary too. Harmony can only *be* accidental, but I must *postulate* that it is certain. This ideal in my mind must coincide with my singular experience. Reason demands it.

In paragraph 601 Hegel says that moral consciousness may be *glücklich* or not at the hands of nature; and he explains this by saying that where the moral agent finds the occasion (*Veranlassung*) for acting, the action itself does not produce “the *Glück* of performance (*Ausführung*) and of the enjoyment of full accomplishment (*Vollbringung*).” It is clear that we must translate *Glück* and *glücklich* as neutrally as we can, since this “luck” depends on the indifference of the natural order. Moral conscience may be “unlucky,” i.e., it may not be fortunate enough to go through with what it intended, and so enjoy the sense of accomplishment. It is this enjoyment of

its own success in carrying out its intention that is now said to be the *Glückseligkeit* which the moral consciousness cannot renounce. Faith could *trust* in God for its blessedness in the Beyond; but the moral *knowledge* of the finite singular self must confirm her own moral conviction. If I never succeed in doing anything, how can I claim to be rational?

When someone labors for a cause that we hold to be lost, we can only say that she has “faith.” The situation of the ordinary moral agent is not quite so parlous as that; sometimes she has the enjoyment of successful accomplishment, and sometimes not. But if the luck of this relationship with nature is to be resolved into rationality, then the moral Faith that sets aside the failures, and takes the successes as the guarantee of “pure” (but finite) Insight, must be rational. My disposition (*Gesinnung*) to be moral is a kind of faith; it does not demand proof. It does not ask to see itself vindicated by success. But that moment of vindication is essential to moral consciousness as rational knowledge; and therefore, in spite of the attitude of the moral disposition, it is essential to a properly rational faith as well. For it is of the essence of moral Faith to pass over into action in the here and now; it must actualize itself here.

When Hegel defines the whole moral goal “with the consciousness of its moments expressed” we can see just how hopelessly paradoxical the situation is: “Fulfilled Duty is to be just as much purely moral action as it is realized *individuality*, and *Nature*, as the side of *singularity* as against the abstract goal, is to be one with the goal.” We can see “Reason’s certainty of being all reality” spelled out here; and we can appreciate that Morality is indeed a “World-View.” But “purely moral action” is action for the sake of duty alone (as the abstract goal). So how can any enjoyment of moral success fail to pollute that success itself and make it immoral? I enjoy the sight of what is achieved, because *I* achieved it, it is *my* action, the expression of *my* nature and talents. Unlike Jack Horner, I do not think that I am a “good boy” just because I am lucky. But how can my success be anything but the luck of having the natural gifts that the situation called for? I am just like Jack Horner, except that I can see clearly that if I congratulate myself on being a good boy, I am ceasing to *be* good. The moral consciousness is the fully rational shape of the Unhappy Consciousness. Because nature is “free” and its relation to moral action is completely chancy, all enjoyment of success is morally illegitimate.

In this parlous situation, the founding of moral knowledge upon the attitude of Faith represents the only hope. I can enjoy any and all moral success (not just my own), and I can take comfort in all moral “effort,” however unsuccessful it may appear to be in the world of my observation, because it confirms my thought of the moral world-order as the world of being that is eternally established. My certain knowledge of my duty leads to the “rational postulate” of a harmony between the world-order of freedom and that of nature, in the sense that moral action is always accompanied by the moral happiness of its own success. The existence of this harmony, this felicity, is neither logically nor empirically verified in the observable world, but I must postulate that in the world of “being” (the order of necessity that holds good, whether we know about it or not) it is realized. As *Glückseligkeit* the

harmony is a necessary aspect of the moral world-order; and the necessity to postulate this harmony makes the necessary existence of the moral world-order itself explicit for the first time.⁹

Primitively, the moral consciousness is the Good Will—the consciousness of the universal law of Reason (or *pure* consciousness; but this will is actual as my singular will, in my finite, empirical, consciousness. So the unity of the pure and the singular consciousness is conceptually necessary; and my felicity as a finite moral being is therefore necessary in the order of being, not merely as a goal of thought that may perhaps be imaginary.

What has become dubious in the course of this moral version of the Ontological Argument is precisely the question *whether* I am a moral being, and whether I deserve the postulated felicity of being sure of that. But the Cartesian certainty that “what thinks, is” is not subject to doubt; so we shall see the moral consciousness driven to try both hypotheses about itself—both that it is, and that it is not actually moral. The concept of Morality will be transformed as a result; but the concept of the self remains the direct knowledge of the necessary connection of thought and being, of pure consciousness with singular thereness.

- 5./603. This postulate leads to a whole cycle of postulates. My living nature is itself *purposive*, and its singular purpose is opposed to Duty; but the ordering of my own nature is peculiarly *my* moral concern. I am one consciousness, thinking and feeling; so I must moralize my desires. But also, in order to be dutiful, I must act against them. So the “conformity” of desire and duty is a postulate. Yet I have to experience it, too; so my actual morality is an endless progression which can never come to its goal. At the goal I should not be a moral agent. Either action or harmony, but not both at once. Morally it does not matter how this contradiction is resolved, but it raises doubt whether Duty is actual rationality.

As the *thought* of “what is”—i.e. as a postulated “being”—the harmony of nature and freedom in “felicity” is a future actuality, one that will eventually be experienced. It is what is “in-itself” but not yet “for-itself.” Hegel now reconstructs the whole Kantian and Fichtean programme of “practical faith”—the necessary postulates of practical Reason—as a dialectical progress from what is “in-itself” through what is “for-itself” to what is “in-and-for-itself”—the self being at all stages that of *Moralität*.¹⁰

Morality is fulfilled “in itself” in the moral happiness that I am calling “felicity”—that same harmony of moral duty with natural happiness which Kant called the “Summum Bonum.”¹¹ This entails the postulation by us of a being that is “not yet.” But Hegel will now show that no reconciliation of duty with enjoyment is possible even upon the postulate of an infinite extension of our finite being.¹² This postulate of “immortality” is the fulfilment of Morality “for itself”; and when we examine what morality is “for itself,” we find that the internal conflict of its moments leaves no room for self-enjoyment at *any* stage.

In order to see this we have only to consider how the moral self is necessarily aware of nature as “its own.” The world that is known to me as a theoretical

observer in sense-intuition, exists for my moral will as a mass of drives and inclinations. These conflict with my moral will; but it is the unity of my one self that is for me essential. So if I take it as my goal to produce a harmony of my desires with my moral will, the harmony of *Glückseligkeit* becomes a properly moral object. But how is this “harmony” to be conceived? The “faithful” analogue for it can be recognized in a remark of Madame de Sévigné: “The secret of happiness is to wish only that the will of God be done, and to believe that whatever happens is his will.”¹³ So let us first consider what this dictum means.

It is clear that if this goal can be achieved the motivation to act will be affected. The remark certainly contains a potential apology for quietism; but it would be wrong to take it as a recommendation of the Epicurean withdrawal from action, because the known will of the noble and pious lady’s God would never permit that.¹⁴ The “wish” and the “belief” of which she speaks are to be made by our moral effort. Madame de Sévigné is not supposing that we can be relieved of that effort, but defining how we should discipline our attitude toward the disappointments of our own will. That we do have both a will, and many desires of our own, she presupposes. The unity of our “wish” with the will of God is at a higher level altogether; it is brought about at the level of our reflective recollection and comprehension of conflicts and failures. No simple “harmony” of desires and moral will is possible.

Hegel intends now to exploit the quietist implication of supposing that we could achieve a simple abolition of our sensual will. But he does this in the interest of a recollective appreciation of an achieved reconciliation of Reason and Nature. He intends to show that the whole enterprise of “moral postulation” is a mistake. It is not this or that thinker (and specifically not Fichte) but the “postulates” of heavenly happiness, immortality and the holy will that are overthrown as internally contradictory. “Morality” (though not specifically the moral theories of Kant and Fichte) still survives. But it is shown not to be the “absolute” standpoint.

We were led to the postulate of the harmony of nature and freedom by the fact that both empirical consciousness and moral self-consciousness are necessarily present and presupposed in *one* indivisible finite agent. The “whole circle of postulates opens up” because, as sensually directed desire and pure will, the empirical (sensible and mortal) and the moral (rational and substantial) moments are “in themselves *one* consciousness”; and the certainty of *this* unity is precisely the pure knowledge that the moral self has of itself. This unity is what has to be morally respected; that is why we said that the guillotine taught us the *fundamental* importance of “respect.” The knowledge of this unity as a unity of opposites, a *Gegensatz*, is moral knowledge; the conquest of the natural self in favor of the universal self-knowledge is actual morality. But to suppose that sensuality could be finally sublated would be to abolish the self; and to suppose that it could ever actually come to be perfectly in accord with the moral will would be to suppose that actual morality can be abolished.

Actual morality is the perpetual making of a concord, which is not, and can never be, finally made. We must forever be “making progress in morality” (as both Kant and Fichte said, reviving the language of Panaetius which Kant found in

Cicero).¹⁵ The completion of the moral task must be postponed forever. According to the standpoint of “actual morality” the “harmony of desire and duty” is a regulative ideal that governs the performance of a task which is absolute as a task (i.e. it can never be completed).

At the same time, this is a harmony that I *must* experience. The harmony of nature with the Kingdom of Ends can remain a matter of moral faith (or *an sich*) because I am only a finite agent; but the harmony of my own pure and empirical self *must* be within the compass of my own will—for otherwise the infinite moral effort would not be rational. So the paradox is this: *eternally* the ideal of felicity must *be*; *perpetually* it must *not* be. It is the two models of “infinity” (the pure concept, and the schematized concept) that come into conflict with one another. The “dark distance” of infinity allows us to leave this antinomy unresolved; and the moral standpoint itself dictates that we *ought* to leave it undecided. We cannot decide it, because of its antinomic character. The infinite task is irrational in the conceptual perspective, and “felicity” is inconceivable as a mode of actual moral consciousness. But we do not need to resolve the contradiction because the decision is of no practical interest—we know what our moral task is, as singular consciousnesses, and that is all that matters.¹⁶

But the human “desire to know” cannot escape its own moral duty. The contradictoriness of the moral ideal of consciousness raises the vitally important question of whether our moral consciousness is “actual” or not. Is the moral self *actually* one self? Or is it *two* selves (like the Unhappy Consciousness)?

- 6./604. That I should be successful when I am dutiful is the first postulate—the goal of Reason in itself. That I should be happy in my dutifulness is the second—the goal of Self-Consciousness. The two postulates become “objects” in the actuality in which they are mutually “other”—God, or Reason in-and-for-itself.

The three “postulates” of the Critical Philosophy (meaning Kant and Fichte together) are usually summed up as “God, Freedom, and Immortality.” Hegel’s preference for “three harmonies”—which are securely founded in Kant’s texts—is determined by the three moments of his own logic of the Concept. First there is the conceptual harmony of the natural with the moral order in the “final purpose of the World.” Then there is the dialectical harmony of the natural and the moral self (which requires the postulate of “immortality”). And now, finally, we have the comprehensive harmony of the Concept (Rational Freedom) with the dialectic (Moral Struggle) in the Absolute Judge (God).

Theologically, the first postulate provides a rationale for the “creation” of a natural world in which free but finite rational agents have to act. Already when we speak of an “ultimate purpose (*Endzweck*) of the World,”¹⁷ it is plain that the implicit assumption is that the natural and moral orders of finite intelligence were created by a transcendent intelligent power which has practical rationality in common with the finite intelligence. So with the closure of the “circle of postulates” (par. 603, first sentence), the first postulate has now been supplied with an explicit systematic context that was originally only implicit.

In the case of the second postulate, the conceptual context is the autonomy of self-consciousness. Again this was the explicit assumption involved in rational moral consciousness from the first. So all that happens in the final postulate is that the self-conscious standpoint is projected backwards to embrace the whole world-order. *Another* self is “required” to whom the goal of the world-system belongs, just as our own moral harmony is the goal of each one of us. Only then will the two goals be “objects.” This provides us with the adequate context of a spiritual world in which moral action can be viewed as a relation between the pure (universal) self (God) and the (singular) empirical agent. God is the infinite spirit for whom the finite spirit is “other” (and vice versa). The harmony of the orders of nature and freedom is God’s rational objective; the harmony of moral and sensible will is the objective of finite spirits.

It may not be obvious why Hegel says categorically that the “moments” have not become “objects” until God is postulated. This is true enough about the universal moment; but why is it true about the singular moment as well? The answer is that unless I postulate God I cannot have any rational confidence that my moral objective (harmony of Reason and desire) is an actual “object” in logic. Since my own situation is an infinite task which cannot be completed, my “objective” may be a squared circle. Also, of course, the attitude of trust in the infinite spirit justifies our theoretical resignation and practical unconcern about the antinomies contained in the first two postulates. Hegel develops the argument for the postulate of God carefully—he has not even stated it yet as explicitly as I have done—by showing in the next two paragraphs just how shaky the first two postulates are without it.

- 7./605. In action there are many duties according to the circumstances; and empirical failures arise through empirical ignorances. For me, only pure dutifulness is holy; yet every perceivable duty is equally holy. So it must be God who makes them so.

In general the dialectic upon which we are now embarking can be called that of “holiness.” God is postulated as the absolutely holy will. The argument is fairly simple. My self-certain knowledge of myself extends only to the pure principle of duty. But my actual duty is determined by *my* perception of the worldly situation that I am in; many duties can arise from the many aspects of that situation. As moral self-certainty I am already implicitly Conscience. One result of my action may well be a bitter regret that I did not do something else. That is an aspect of my luck; but I cannot become embroiled in a conflict of duties, in the way that Law-Giving Reason becomes embroiled in a conflict of laws, or Law-Testing Reason is reduced to nullity by the paradox that quite opposite laws can pass its test.

In the situation as it is empirically known to me, I know absolutely what my duty is; but there is much that I do not know about the order of nature, and the consequences of actions. As I learn more about myself and the world, my empirical knowledge generates a continuous series of different duties; and my empirical ignorance is one important cause (at least) of my practical failures.¹⁸ In the light of experience I may say to myself that “I *ought* to have done something else (Y rather than the X that I did).” But this only means that Y has *become* my perceived duty in

any recurrence of the situation (or that Z is my duty now, in order to put X right as far as possible).

This experience, on my part, is necessary, if I am not to fall back into Robespierre's kind of "virtue"; for I must recognize that "pure Duty" has many faces, and that others are bound to see faces of it that I do not. When I am in direct conflict with someone else, there is obviously something wrong with the "insight" of one or both of us. But I am not, like Antigone and Creon, blind to every duty that is not stamped in my "character"; and it is impossible that mine should be the one *actual* moral will, in virtue of which (like Robespierre or the Queen of Hearts) I can cry "Off with his head." Nor can I laugh (sadly) like Rameau at the hopeless contradictoriness of things; we shall come back to the acceptance of disagreement in Conscience, but it is not part of the moral position initially. My postulate must be that the "Other" whose object is the harmony of the two worlds has made many duties "holy." We, the finite selves, have to patch them together on the hypothesis that they are God's jigsaw puzzle.

(c) *The Dialectic of Duty*

- 8./606. God must be the perfect moral will in which the harmony between moral freedom and natural happiness is realized. The natural and moral orders are thoughts that can only be in one consciousness; so the third postulate is the divine Lord and producer of the harmony.

The dialectic of Perception is now repeated at the level of finite and infinite spirit. In place of the perceiving consciousness we have the finite spirit that knows itself within the infinite Spirit; and in place of the *Ding* we have Duty as the One with many aspects. The first position is that the unity of duty is (finitely) subjective, and the multiplicity of duties is "objective" (i.e. it originates in the infinite Subject). Upon this view every singularly perceived duty is holy because it is the commandment of God (it is a "property" of his moral world-order).¹⁹ For God there is no division (as there is for me) between the absolute principle of duty (which we both know) and the great complex of sundered species of duty. He comprehends the natural and the moral world-order in their perfect harmony. For me, on the other hand, the order of nature is external, and my moral relation to it is completely chancy. When I comprehend that I am living and moving, not in Nature (as I naïvely thought) but in God, this chanciness is swallowed up in an absolute moral confidence. We are not just moving the parts of the "order of Nature" about as if they were pieces on a solitaire board which we have to arrange in their "moral" order. The natural and moral orders can only exist for a thinker. So their harmony already exists for the absolute thinker.²⁰

- 9./607. My aim is to actualize *myself* as moral. Pure duty, the moral universal, must emanate from God, and it is only because he makes my specific duty sacred that it is sacred for me.

This actively comprehensive (distinctively Leibnizian) conception of the relation between the infinite and the finite self is directly inverted when we turn our attention to the “being-for-self” of the singular moral agent. I want to express my own finite self. I am not nature in general; I am *this* nature, this set of inclinations and capacities. I must rationally aim to make “myself” into the most effective moral agent that I am capable of being; it is this singular self that is the objective of my practical knowing. The absolutely certain knowledge of duty (which is “objective” in the sense of being the same for all agents) is therefore precisely what I owe to the presence of God.²¹ God makes my specific duty holy for me, not immediately, but because I know this action to be what *he* wants me to do.

- 10./608. So my finite consciousness is only an imperfect moral consciousness, marred by empirical ignorance, and sensible inclination. I must look for felicity only as a gift of grace.

Now the two selves change roles; and the autonomy of the finite self vanishes. Once the certainty of duty is admitted to be the presence of God to me, the finite moral consciousness is recognizable as the rationally self-conscious mode of the Unhappy Consciousness. I do my duty as well as I can. But the knowledge that makes it Duty is not *mine*. *That* belongs to God (as the community of all moral knowers). What is “mine” is the *imperfection* of the moral act. My decision is determined on the one side by the accidental limitations of my knowledge; and on the other side by the sensible inclinations of my empirical nature. So why should I be morally happy? To know what measure of felicity I deserve—or even to speak properly of measurement—is impossible. What is necessary and certain is always that I am undeserving. Felicity is not a necessary aspect of my moral self-knowledge; I can only *hope* to receive it by God’s “grace.”

This is one place in Hegel’s argument where we can identify a definite reference to a specific author. Kant makes this appeal to the traditional theological concept of “grace” in his *Religion*; it was in Book I of the *Religion* that the traditional concept of “original sin” was given a rational interpretation, and a recognized status in the theology of pure reason. Kant wrote quite a lot about “grace” as the divine pardon accorded to a moral conversion. The crucial passage is the following:

That what in our earthly life (and possibly at all future times and in all worlds) is ever only a *becoming* (namely, becoming a man well-pleasing to God) should be credited to us exactly as if we were already in full possession of it—to this we really have no legal claim, [Footnote: But only a *capability of receiving*, which is all that we, for our part, can credit to ourselves; and a superior’s decree conferring a good for which the subordinate possesses nothing but the (moral) receptivity for it is called *grace*] that is, so far as we know ourselves (through that empirical self-knowledge which yields no immediate insight into the disposition but merely permits of an estimate based upon our actions); and so the accuser within us would be more likely to propose a judgment of condemnation. Thus the decree is always one of grace alone . . .”²²

- 11./609. I do still know what duty *is*. Yet I expect God, the perfect moral self, to give me what I don't deserve—at least proportionately to my *trying* to deserve it.

Kant's conception of "merit,"²³ (the sincere desire and effort to be "pleasing to God") provides the second, comprehensive, inversion of moral self-certainty. The surrender of the standard of holiness to God is the first (or simple) inversion of the moral standpoint. But the self that knows itself to be in sin (because of its clear knowledge of duty) and seeks sincerely to deserve the grace of pardon, by its inevitably limited and imperfect moral effort, both is and is not moral. It *is* moral in a new way. It is an "imperfect" moral consciousness, but the opposed moments of its unhappiness are not absolutely sundered (as they were in the pre-rational Unhappy Consciousness). My knowledge of duty is still mine, even though the reality of the Holy Will is in the Beyond, just as it was in the Unhappy Consciousness. I give judgment upon myself as my own accuser before the Divine Judge. But I ask for pardon, pleading that the sinner has done his best, and that this effort should be accepted in lieu of the full performance of duty. In the context of the original certainty of duty as the true self, this procedure is quite outrageous. But we shall see eventually that it is the foundation of Hegel's own conception of Forgiveness as the final advent of Absolute Spirit. It is good to keep this in mind as we follow the ironic reduction of the moral standpoint to immoral absurdity by its own standards which soon follows.

- 12./610. The moral consciousness is now complete. It represents the holy will (as God); but at the same time, it is its own imperfect will that is actual; and both the actuality and the represented ideal count in turn as what is in and for itself.

At this point the moral world-view is complete because it is evident to the moral consciousness that the two "sides" (universal duty and singular actuality) are really moments of one actual unity. But that unity is a contradiction, not yet a unified "self"; and it is this contradictory unity that the moral world-view itself comes to be aware of in the final stage of its development.

We already know what the contradiction is, for it is directly involved in the fact that the imperfect moral consciousness both is and is not moral. On the one hand it posits its standard of "holiness" in the postulate of God. For as Kant says "holiness . . . is a perfection of which no rational being in the world of sense is at any time capable."²⁴ As other than the actual thinker, the ideal of the holy will is only a *Vorstellung*. It is a moment in the "being in-and-for-itself" of the finite moral consciousness. But it is a vitally necessary moment, to be sure, for without it that actual consciousness would simply be "not-moral."

The presence of that representation of perfection makes the not-moral consciousness itself able to count as "perfect." But this possibility of counting as perfect depends upon the opposite perspective in which the *Vorstellung* is taken objectively. God is postulated as what is in and for itself, and my imperfect moral effort is received by him with the grace of pardon, so that it is not any longer in conflict with the moral law. In itself and for itself too (since I am my own accuser)

the imperfect consciousness does not satisfy the standard of duty. But this imperfect consciousness is reduced to a mere moment in my plea for pardon on the ground that I repent and will try ever harder. Thus it is my “moral disposition” that “no longer contradicts morality.”

- 13./611. So moral consciousness does not develop its own concept. Instead, it postulates a world. It does not recognize the contradiction either formally or materially. It knows only the abstract essence of Duty as itself, and thinks its world without comprehending it. Its moral world, like the natural world, is not transparent to it, not its own self-substance. Its own objective actuality is not essential; but it is the freedom of an embodied thinking so it imagines its own being, in a world to which thought gives being. In the last part of its “intuition” the moral consciousness admits this.

Hegel now explains the contradictoriness of the Moral World-View as a direct result of the “estrangement” of Thought from Being. He will, subsequently, develop all the “contradictions” in it, even though he has treated it as “complete” in paragraph 610 without suggesting that it is already contradictory (and I have tried to show how it can be consistently interpreted). His eventual object is to use the consistent interpretation for a rational Faith that can finally be turned into knowledge. The aim of his dialectical criticism at this point is to shear away all the postulational rubbish that is produced by a “thinking” rather than a “comprehending” interpretation of it.

The moral self does not know that in its postulation it is developing its own concept of its self. The self-certainty with which the “absolutely free” consciousness sublated the patriot-traitor riding to the guillotine in the Place de la Révolution, has been replaced now by the trembling hope of God’s “grace,” and the daily struggle to “deserve” it. The moral self “keeps rolling forward” (*fortwälzt*) on its immortal path of moral improvement without any consciousness either of the “*Gegensatz* on the side of the form” (i.e. the ambivalence regarding what is “in and for itself,” and what is a “moment”) or of “the *Gegensatz* on the side of the content” (i.e. the contradiction between “holiness” and “actual morality”). On its strenuous (and endless) road it knows absolutely (but also exclusively) that the pure essence of Duty is its true self. This was its starting point, and the moral world-view is now complete, and has become a self-maintaining *Gestalt* because we have returned to that starting point. The meritorious disposition “does not contradict morality.”

The endless road which it repentantly travels is all of it projected by its own thought as a world of being. Unlike simple Faith, the moral consciousness does know that it is thinking. But it does not know how to express the fact that what it thinks is “necessarily true,” except in terms of the ordinary standard by which we determine the truth of our thoughts. We ask whether the thought as a universal proposition corresponds with the singular images of our sense experience; does it agree with the actual representations of the world that we have? By this criterion the necessary truths of moral experience must be representations of another “world”; so we postulate that supersensible world accordingly.

This “otherness” of the truths of moral Reason is the “absolute otherness” in which the finite rational self must recognize its own self, if the truth is to become self-transparent as “Science” (par. 26). At the moment we have only reached rational Faith not rational self-knowledge. We are so far from self-knowledge at the moment, that the empirical self is admitted to be just as opaque to pure Insight as material nature. One of Kant’s basic arguments for the hope of grace, is precisely that we cannot be sure that we do not fully deserve it. He says very properly, “the accuser within us would be *more likely* to propose a judgment of condemnation.” But it is possible that, in the presence of an intellectual intuition of our noumenal selves, the accuser would vanish. The knowledge of this “proper actuality” of the finite self is “not essential.” This empirical self is part of the order of nature. That order is posited as “free,” just as soon as the freedom of thought from it is posited: the Kantian noumenal and phenomenal worlds are the final shape of “estrangement.” But then the world of freedom, the world where I may legitimately *hope* “to know even as also I am known,” must be postulated on the same model. It is postulated, that is to say, as “unknown.” All that we can do (and are doing) is imagine it.

We shall soon see that this necessary opacity of what is supposed to be purely “intelligible” puts the sincerity of the moral consciousness—the very thing that has emerged as the absolute truth of its self-certainty—in question. All who take Freud seriously will agree that Kant’s insistence that we have no intuitive insight into our empirical selves is one of his great insights (though he was not, of course, the first to have it). But if we do not know our intelligible world—if we can only *imagine* it, and the self that is in it—why should we postulate it?

(d) *Postulational Idealism (Fichte’s Vocation of Man)*

- 14./612. .If we regard this “thought-world” as the very *concept* of the moral self-consciousness we get a new shape for the exposition. The first position is “There is an *actual* moral self-consciousness”; and it is the knowledge that only what accords with duty is essentially actual. Its objective therefore is that any non-essential actuality should be brought into harmony with morality. But the morally actual self-consciousness is not itself this almighty Concept. That is a Beyond; it subsists outside consciousness but only in thought.

Before the essential insincerity of this postulational procedure can be considered, however, the procedure itself must be turned round into an exposition of the moral world-intuition as a self-concept. This was the logical advance that Fichte made. But Hegel does not follow any actual exposition that Fichte gave us of his own views. The requirement of methodical continuity imposed by our scientific aim prevents this; and our strictly observational stance allows for the arrangement of the data in the *order* that the method dictates. That is part of our work as scientists. Hegel has already presented the Kantian position in accordance with the logical progression of the In-itself, the For-itself, and the In-and-for-itself. Now this same order imposes itself as we move from the critical realism of Kant’s postulational thought, to the critical idealism of Fichte’s practical “knowledge.”²⁵ This is

not a logical step forward in the Science of Experience. It is only the proper "result" of the dialectic of postulation. It will be this unified self that goes through "displacement."

When we begin with moral self-certainty in this Fichtean perspective, we have to take the "primacy of the practical" with mortal earnestness. Far from being simply "there" independent of consciousness, and hence "free" to be as it will, the order of nature is posited by the absolute Self for its own moral purpose. What is absolutely first is the "actual moral self-consciousness." The natural order is nothing but the repertory of means through which this self-consciousness actualizes itself. "The world is my duty" and the "final purpose" of the world is the moralization of all actuality. We cannot now distinguish between the postulate of the harmony of morality and happiness in the world, and that of the harmony of Reason and inclination within the self, because the realistic distinction between self and world has been overcome, and when we speak of the "moral view of the world" we know that we are discussing why the moral self must exist for itself as a natural order of "things" and "other selves." We are no longer caught up in the dualism of Cartesian thought, for which there are thinking and extended substances; we are doing the new Cartesian "metaphysics" in which there is only the "being of thinking."

The *systematic* importance of this transition for Hegel is enormous. His whole "speculative" standpoint rests on this Fichtean unification of the natural and the moral world-order. From this moment onwards we are truly in the "kingdom of the Spirit," and Spirit (as the community of moral selves) is knowingly the sovereign of its own kingdom. This is where Reason comes properly to the "certainty" of "being all reality"; but at the same time, the achievement of Fichte is a formal one only. As a concrete achievement of the World-Spirit, his work cannot rank with that of the two giants of "thought"—Descartes and Kant—to whom Hegel accords the honor of mentioning them by name. At the beginning of chapter V Hegel pays tribute to Fichte (without naming him) by presenting the world of Bacon and Descartes in the conceptual frame of Fichte's "Idealism" (in spite of the fact that Fichte was a complete nonentity in "natural philosophy"). Here, where it is the relative achievements of Kant and Fichte in successive generations that is at issue, he exalts Kant by expounding the Moral World-View completely in its "thought-form," before going through the Fichtean position rapidly in what he distinguishes as "another shape of its exposition."

The advance is just the formal transformation of "critical realism" into "critical idealism." The qualification "critical" reflects the fact that the finite moral consciousness which is actual in our experience does not have the actual "might" to realize the moral purpose (which it can only imagine). In the *Vocation of Man*, the "Self-Concept" becomes the rational foundation of our moral Faith. But even for Fichte's idealism "God" is a separate postulate. We live and move in Him, but he transcends us, and we must have faith in him as a transcendent power. In our thought of him, the unity of self-consciousness with its posited object is present; but for us it is only present in thought, or as the represented object of our faith.

- 15./613. So, secondly, the moral self admits that “a morally *complete* self-consciousness does not exist”; and since what is moral must be complete, the second proposition is: “There is nothing morally actual.”

The formal move from Kant’s moral realism to Fichte’s moral idealism does not change our actual situation significantly; it only changes the way we talk in certain respects. The moral goal of our life is beyond us, and we have to trust in God for it. Whatever our formally absolute “knowledge” may be, the truth of our experience is that in the actual world there is no complete moral self-consciousness. Only the divine self who posits the natural world could be that. So beside the formal philosophical knowledge that our absolute consciousness of duty gives us, we must set the flat contradiction offered by our experience as finite: “There is no self in our world who is morally actual.” There is a subtle difference between Hegel’s two statements of the second moral proposition. We go from “there is no *morally complete actual* self-consciousness” to “there is *nothing morally actual*.” We should probably read the second formula as “there is *no morally actual* [self-consciousness],” both because it is natural in the context and because a flat contradiction of “the first proposition” is obviously intended. The only “things” in this idealistic universe are “selves” anyway—Kant’s problematic *Ding an sich* has disappeared. So the grammatical question is not important. What the dropping of the word “complete” (*vollendet*)²⁶ signifies is the move from the noumenal standpoint to the finite empirical one. At the noumenal level, the moral community of selves are united in God.²⁷

- 16./614. Thus, finally, the actual unity of the moral self becomes for it an ideal to be achieved, a *Sollen*.

Because of the contradiction that is now apparent, we have to say that the finite moral agent is only implicitly moral, not actually so. But, in possessing the knowledge of what it is “in itself” (the absolute knowledge of the moral law and of the “primacy of the practical”) the finite self is completely rational. That is to say, the moral self really knows that it is *one* self, united with all rational selves in the moral world-order. Fichte does not share Kant’s “Freudian” doubts. The relation of the finite empirical self to that truly absolute standpoint is the relation of “what is” (which is intuitively known) to “what ought to be” (also intuitively known). We expressed the status of “what is,” earlier, in the slogan “the world is my duty.” We can express “my duty” as the comprehensive standpoint of the *Sollen* by saying: To be the actual moral self is my *Bestimmung*; it is my definition of my own goal, that to which the voice of Reason calls me, or my *destination*.

- 17./615. In this goal both self-conscious actuality and duty are sublated moments, since they are not separate and free (as they were defined to be). They are “objects” for each other with distinct content, but their interaction is only represented in a higher consciousness. Thus the not-moral actuality, being raised up in thought, is taken by that other to be moral.

The Kantian presentation of the Moral World-View is in the mode of Faith; that of Fichte is in the mode of pure Insight. This is what makes the Fichtean account formally so important for Hegel; but we can see here that it is still the matter of Kant's theory that has to be expressed in the Fichtean conceptual structure.

In the first position the rational self-consciousness is *actually moral*, i.e., it is identified with the knowledge of Duty; in the second position, self-consciousness is identified with the actual self of experience, and the pure knowledge of Duty belongs to the absolute self. At this stage both identifications are "posited as sublated moments." But their unity is "synthetic,"²⁸ because they are separately represented. This separate representation of the terms as "singulars" goes back to the initial thesis that the physical and moral worlds are free from one another. That position is denied by Fichte's idealism; we now have a world of appearance (the finite selves) on one side, and a noumenal world (the absolute Self) on the other. But the interaction between them is only *vorgestellt*; it is the noumenal world (the moral world-order) that is actual. All of the finite selves are moments of the absolute Self; and their world of physical appearance is likewise just a moment in the coming to be of that absolute community.

There are two perspectives on the finite self. In the world of appearance it is "unfulfilled," and actually not-moral; but in its pure intuition of the moral world-order it knows that its *Bestimmung* is to be "fulfilled" (*vollendet*). As pure thinking, it is already united (or identical) with God; there is no *separate* divine consciousness, but only the consciousness that every member of the Moral World-Order can have (and *does* have when conscious of Duty).²⁹ Hegel interprets the transition from empirical to intellectual intuition in terms of the reading he has already given of Kant's theory of the moral disposition praying for "grace." I am sure this was *not* how Fichte saw it (though I have never been sure just how he did see it); but Hegel does not care about that, because this reading of Fichte's Moral World-Order is the one that will allow him to return to the actual world (the imperfect, merely phenomenal world) as the true actuality of the Moral World-Order, without any need for the "postulate of immortality." Any other interpretation of Fichte is covered by the blanket complaint that Fichte's philosophy is a theory of the *Ought*, because the standard of "what is" is taken from "pure thinking" and does not properly embody the "actuality" of our experience as flesh and blood.

When the transition to the noumenal standpoint is interpreted as a "forgiving" of the "*actually not moral*" self, "because it is equally pure thinking and raised above its actuality," we can see that Fichte's Moral World-Order really does provide the "Concept of moral self-consciousness itself" (par. 612) as Hegel conceived it. It is only in the "representation" of the religious consciousness that the "forgiving" of the finite consciousness (the judgment through which it is "accepted as fully valid") comes from "another." God is simply the "absolute Self" of the repentant sinner; and in the moral "disposition" that is repentant for its inevitable finitude, the "first proposition" ("that there *is* a moral self-consciousness") is reinstated. This enormous debt to Fichte is far more important than any misrepresentation of Fichte's actual views. Hegel never claims to be representing Fichte's

views; and for the experiential foundation of his Science it is enough that *we* can clearly see what has been done. The Kantian wine has been poured into the Fichtean bottle. Fichte's own wine may have to be matured differently; but no violence is done either to the wine or to the bottle that are actually used. That "bottle" is the *Vocation of Man* of 1800.

Of course, the debt to Kant is much more important. It is vital for us to recognize that without Kant's formulation of the standpoint of rational Faith (in the *Religion*) Hegel's return to actual experience from Fichte's moral Insight would not be possible. The two standpoints have to be combined in order to produce the speculative interpretation of forgiveness. It seems clear that Hegel came to that initially by thinking *against* Kant as he meditated on the Gospels at Frankfurt. But his conceptual conquest of the leap from philosophy to Religion involved in his Frankfurt view, was achieved through the formulation of Kant's *Religion* in Fichtean terms.

VI C(b): Displacement

Already in the first phase of the Moral World-View we noted the analogy between the evolution of this position and that of Perception. The finite moral will and the infinite Holy Will changed sides in the matter of responsibility for unity and multiplicity like the perceiving self and the object (pars. 605, 607). Now we shall develop the reconciled concept of the Moral World-View into a contradictory judgment by exploiting this primitive Gegensatz within it.

In this repetition of the self-deception (Täuschung) of Perception, we shall be organizing the motion of the Concept, and not simply observing the movement it has already made; for as far as I know, no one had publicly attacked the postulational link between morality and religion in the way that Hegel does here. But we have acted in this way before, and we shall not be violating Hegel's method as long as we do not ascribe any shifts to the practical faith that cannot be found in the rationalizations typically offered in its defense. We do nothing except arrange the data in a logically effective order.³⁰ The truth to be brought out is that rational Faith is not Reason, but exactly what Freud called "rationalization"; and Verstellung is the technique of shifting one's ground by which the believer preserves the supposedly rational right to believe in "postulates" which do not have a necessary connection with experience at all.³¹ If this shifting does occur we can properly claim to observe it, even though no one has pointed it out previously.

(e) The Overcoming of Postulation

- 1./616. Consciousness begets the moral world-view consciously. It is not alien or unconscious. But it posits the objective truth *outside* itself. This positing is for the sake of consciousness.

The first paragraph of the new section establishes the observational basis of the critique that is to come. On the one hand, rational postulation is a conscious act.

But how can we posit an “objective essence” (the moral world-order) by simply “begetting” it from our own thought? Is not this just what Kant decisively overthrew in the famous case of Anselm’s Ontological Proof? Not quite, because the argument does not depend on “pure thought” here, but on our practical experience. So the argument from our moral experience to the existence of an unseen moral world-order is more like the traditional “cosmological argument” which posits an infinite author for the fragmentary natural order that is visible to us. Obviously the argument is more plausible if on the basis of our finite experience of our “selves” we postulate an infinite extension of that selfhood. That is why it is the Fichtean moral world-order that must be critically exposed.

The Fichtean interpretation of the “primacy of practical Reason” is the most extreme form of moral self-certainty; for he makes the *postulates* into absolutely necessary assumptions (not subjective postulates that a moral reasoner *may* adopt if he wishes).³² On the Fichtean view there can be no genuine science or rationality at all unless the postulates are accepted. But at the same time Fichte’s view is the most plausible and consistent, because it is *speculative*. The rational self seems here to come to the peace and satisfaction of self-recognition that we are searching for. Fichte states the concept of God as the spiritual unity of his community; the language of piety, which is *sub*-rational in Kant’s universe of the enlightened understanding, is recognized by Fichte as the discourse of a *higher* form of Reason. So Fichte’s moral error is more dangerous than Kant’s (in the very same measure that it is more crass). According to Fichte, God is the actual moral self in us; but at the same time he remains the almighty power who is outside and beyond us, and we can be perfectly confident of the moral good-will of that transcendent almighty power. The being that subsists in and for itself is posited as subsisting both on our account (as moral self-consciousness) and through us (as *his* self-consciousness).

- 2./617. So it is a “nest of thoughtless contradictions” as Kant said.³³ Consciousness just jumps back and forth from one position to its opposite; and it is quite conscious of doing so. It confesses that it is not serious about any of them [compare par. 131].

Not many world-historical individuals are mentioned by name in the *Phenomenology*. But Kant shares with Plato the distinction of being mentioned twice. Both times (the first was in the Preface, see par. 50) he is the object of negative criticism. This is especially obvious here, where his own verdict on the Cosmological Proof is given by Hegel against the Moral Proof. But each time there is an unmistakable intention to give due recognition to his enormous achievement, and his vital contribution to the project of turning philosophy into the Science of Experience. In his critique of the empirical proof of the existence of God Kant was faithful to that project; in developing what everyone tended to call “the moral proof” he was falling away from it. Hegel is here calling the Kantian spirit to witness against the Kantian letters.

Hegel’s attack on the practical “nest of thoughtless contradictions” does not resemble Kant’s simple listing of the mistakes that he finds in the Cosmological Argument. Instead the moral consciousness is accused of shifting its ground in

order to avoid the contradictions that it actually commits. The moral consciousness knows what it is doing, and it needs to make contradictory assumptions in order to maintain its postulated world; the conclusion to be drawn is that it is *not sincere*. The postulated world-order is not really needed. It will be interesting to see what sort of determinately negated result this produces.

- 3./618. There *is* actual moral consciousness. This is initially taken as self-evident. The harmony of morality and nature is postulated because it is not present. A moral agent *is* present but actuality is not in harmony with it. The moral consciousness *acts*; and so the harmony is actualized, and the consciousness of virtue is its own reward. The postulate was not serious. It is *not* needed.

Hegel has invoked the shade of Kant. But it is the identifiably Fichtean position of the “last part of the moral world-view” that is the object of attack. This helps to confirm our claim that the Moral World-View is Kant’s Faith poured into Fichte’s conceptual Insight. Hegel’s procedure is methodically “necessary” in any case. In Fichte’s view the self comes back into possession of its “world”; the postulated world—and especially the “holy lawgiver”—were the simple inversion of “moral self-certainty.” The “last part of the Moral World-View” (par. 611) is needed in order to put “moral self-certainty” firmly back into its position of primacy; and this “new shape of its exposition” is also where “postulation” is taken seriously. It is the method of postulation that is the target of logical attack here.

We begin, therefore, with the “actual moral consciousness” of paragraph 612. It could be challenged directly because in paragraph 615 it was shown to belong to the noumenal world and so to be only imaginary. But Hegel prefers not to attack it directly, because he claims that Fichte’s moral idealism is “dogmatic.” The actual morality of the Fichtean self-intuitive moral self is an assumption that is simply taken for granted. Fichte’s moral idealism is the dogmatic shape of the Kantian view—a shape in which the formal move from realistic thought to idealistic conception is made, but nothing else is changed. This dogmatism makes the shiftiness of Fichte’s argument plain, whereas Kant’s “critical realism” is so deeply impregnated with theoretical scepticism that he never asserts any of the positions of the moral consciousness categorically at all. One can drive Kant’s critical rationalism into an explicit “Philosophy of As If”; but one cannot make it fall down under its own weight.³⁴

It is Fichte’s categorical claim that the whole critical philosophy must be placed in the context of the intuitive self-certainty of the dutiful self that comes to grief here. When we drag it through the “experience” of its own postulational thinking, the moral self-intuition is shown not to be an “intuition” at all. By dragging it through the whole experience (rather than by expanding directly upon the internal contradiction that has already been indicated) Hegel can get a “determinate negation” that makes further progress possible.

The intuitively self-certain Fichtean moral self makes its first postulate: its morality actually exists in the moral world-order; and it acts, because that is its essential nature. This action is the manifestation of the noumenal self in the phe-

nominal world. The placement of “actuality” is thereby “displaced” (*verstellt*). For, after all, public success is not what is important. The self knows itself; and it knows that it has done its best. This first displacement of “actuality” establishes the necessary actuality, in experience, of the harmony that is supposed to be “postulated” in the noumenal world. The moral self is perfectly satisfied with itself; its “felicity” is completely present.

Consider, for example, the righteous attitude that Fichte exhibited throughout the *Atheismusstreit*. He was called an “atheist”; but did he ever for one moment suffer misgivings about the possible justice of the accusation? How could he? He was always more obviously “God-intoxicated” than Spinoza (upon whose perfect sobriety the epithet, bestowed so enthusiastically by Novalis, sits rather uncomfortably). It is precisely Fichte’s “God-intoxication” that obliges us to say that for him the “postulate” is not necessary. The harmony is experienced in fact; to speak of it as *postulated* is a pretence. The students with their duelling clubs, and the other professors with their obstinate intellectual prejudices, may have been far removed from blessedness; but Fichte was as much in the presence of God as he ever could be. If there is still a veil of some kind between him and the Kingdom of God, it is one that the Kingdom of God itself requires; and we shall uncover the necessity for it as we go further in our exploration of this world where all of the assumptions, arguments and postulates are only pretences.

- 4./619. The dissonance between “ought” and “is” is therefore not serious. Action is what counts. But no; for it is only one single act, and the goal of Reason is the establishment of moral world-order, so we never really get forward. But no again, of course we do, for it is my duty now that matters. The laws of nature cause me to fail? Oh no, for it is my virtuous intent that is my duty. But still it is acting and the wholeness of the world-order that matters.

Fichte’s conscience is clear; his action in the phenomenal world agrees perfectly with the world-order of Reason. But the happy consciousness of what he has already done is momentary; we can never seriously say “*Now* I am blessed,” because there is always so much more to do. The dialectic of sense-certainty repeats itself in the world of moral certainty. The *Now* “is and is not,” because it is *by not being*. The moral self is like Faust; it cannot “bid the flying moment tarry.” Some observers thought (I know not with what justice) that Fichte might have kept his chair at Jena, if he had not brought the students down upon him by attacking their duelling fraternities; but that had to happen. Winning the argument with the professors was only one step in the moral transformation of the phenomenal world.³⁵ The transformation itself is, in principle, incomplete. No matter how much good we actually do, the world remains essentially nothing but an infinite complex of moral problems. The perfect “harmony” which is the *allgemeine Beste* is never completed; so it is as if nothing “good” is ever really done, because the moral situation is always in principle unchanged.³⁶

But that claim is absurd, because I am “making progress” towards the goal here and now. My duty, as I see it, is what concerns me; so I must not say that “nothing

is done,” just because I cannot do everything. Jena (professors and students together) was too much for Fichte; he found himself obliged to leave.³⁷ But he went confidently on his way to the next task. One can always look at any moral problem either way, according to whether harmony or dissonance—satisfaction or a new challenge—is what is wanted at the moment. Thus I can always give up on the phenomenal world, and insist on my own unity with God; and when I shift back to this position after a practical defeat in the outer world, it is not the *same* position as it was initially. It is less optimistic, but it is inwardly deepened by the experience.

The deepening comes from the awareness that the actual transformation of the natural order is essential to the moral order. When we face a moral defeat, we can say that actuality as nature has “its own laws,” which frustrate our attempt to realize the moral order in the visible world of nature. But then, by making “pure duty” all that matters (the “essence” as Hegel puts it) we cease to be serious about fulfilment (*Vollbringung*). For the fulfilment of “pure duty” is its actualization in the material world of singular things (which is the direct opposite of the purity of thought, and the universality of duty). So the retreat into the inner sense of a dutiful union with God must again be displaced in favor of Kant’s first formulation of the categorical imperative. Here the “harmony of morality with nature” is stated as a duty: “Act as if the maxim of your action were supposed to become through your will a *universal law of nature*.”³⁸

- 5./620. But if it is this world-order that is essential, then morality is not what matters most, after all; for in the ideal world-order, natural inclination and duty coincide. At that point there is no action (no taking sides). Thus, the moral goal is that there should be no moral action.

When we are faced with Kant’s first formula the self-affirmative aspect of moral action has been sublated altogether. If the highest good were really achieved, if there were no veil between the “knowledge” and the “faith” of the moral self-consciousness, then the situation would become radically *anti*-moral. In the Garden of Eden, all “action” (all striving against the way things spontaneously are) is disobedience to God; and the same would be true again in Heaven. So, by our first cycle of shifting we have come to see how radical the paradox is. Moral action, as infinite self-improvement, moves towards an ideal limit at which any action would become immoral. The absolute goal of action is that it should not merely become unnecessary, but *wrong*.

- 6./621. The cycle is one in which each stage sublates the seriousness of the previous one. There is a series of displacements. And if the goal were to be reached, moral action would cease.

We have now reached the point where the dogmatic hypothesis that “moral consciousness is actual” must be replaced by the hypothesis that it is only a project to be realized, it is “what ought to be.” Having got back to the Garden of Eden we have understood that the Fall is the necessary presupposition of the salvation that we seek.

Hegel drives this home by summing up the progress by which we reached Eden. He gives a simplified version in which the *crucial* step of paragraph 619 is identified. But I shall use what he here leaves out, in order to progress to the next stage.

First we said that the moral Eden must be postulated. But as soon as we began to act, we realized that we were already there—and talking to the Lord God. But that, we said when we thought again, is a mirage, an Eden of this moment, and of this act only. We are really in the wilderness and the Promised Land is always just as far off as it was, no matter what we do. We can see it, but we cannot reach it. Then we gave this position up in its turn, because the moral life is lived in *this* moment, and we must take this moment seriously, and not dismiss the experience of it as a mirage. So we accepted our exile from Eden, with the sorrowful admission that the Promised Land must remain where it is, and always where we are not, because if we were *in* it, it could not be our *goal*. As I said, this anticipates the next step; at the moment we have only recognized that if we say, with Thornton Wilder's George Brush, that "Heaven's my destination," we are saying that the goal of finite rationality is to blot itself out. George Brush is aiming not to be George Brush any more.

But the movement is a "forward rolling" sequence (*fortwälzen*) and it does not stop at this point. The next move is obviously to say (with R. L. Stevenson, and, in Hegel's world, with Lessing) that "to travel hopefully is a better thing than to arrive."³⁹ Kant and Fichte were *not* in fact serious about Paradise. But they *were* serious about the journey.

- 7./622. This sublation of activity must be displaced too. Moral action is the essence so there must always be a natural world to conquer; but moral *action* must be perfect (harmony of duty and sensibility). So the purposes of sensible life have to be reinstated. They are not to be suppressed, but to be in accordance with Reason; and in moral action they are so by definition. But the sensible impulse of nature is a real motive, and morality is not really the angle of inclination for inclinations; so the harmony is only a postulate. Even in the postulate, its fulfilment has to be displaced to infinity. Perfection must be given up because morality would be lost in it. Morality is both the activity of the pure purpose, and the consciousness of its self-purifying struggle to rise above sense.

The sequence we have gone through is a complete phenomenological motion. The postulate is sublated in action; the finite action is sublated in the *goal* (which is the postulate *fully* realized). But the defenders of the moral view were firmly agreed that the direct realization of the goal at this primary level *could not be* the true goal of moral Reason. The "*as if*" in Kant's formula ("Act *as if* the maxim of your action were *supposed* to become . . .") is crucial. It is not the perfect organization of the natural world that is the real goal of moral action because everyone understands that "felicity" means "*moral* satisfaction." Rather it is the perfect development of every moral self that is the goal; and for the fulfilment of that purpose, the natural world needs to remain a problem (and to be progressively but endlessly turned into an instrument of moral fulfilment). To put it another way, Kant and Fichte believed *not* in the "Kingdom of Heaven" but in the "Kingdom of God."

This provides a necessary transition from the first postulate to the second. For what we are saying in this shift of position is that it is not an observable harmony of the two world-orders that is important, but the self-ordering activity of the moral self. If this is set up as the true goal then it becomes *necessary* that no matter what progress towards moral harmony we make inwardly, the world as a whole must always be out of order. That is its (strictly instrumental) role.

But even the perfection of the moral self as an integrated will to put the world in order involves the same paradoxical unacceptability as a goal. Its achievement would annihilate the necessity for any *moral* striving (even if the inexhaustible problems of natural existence always left us with something to do).

The pattern of the dialectic here is somewhat different from that involved in the evolution of the first postulate. The moral agent starts by cancelling all of the goals of the sensible organism within the *pure* goal of Reason.⁴⁰ But this cancellation is displaced as soon as she acts. For there must be some sensible impulse or inclination that is validated by the moral decision and action. Thus, to take Kant's favorite case of deciding not to tell a lie for one's own advantage,⁴¹ I am still at liberty not to answer at all—and I may be silent for any of a great variety of reasons, moral or utilitarian. So if I *do* answer, it is not *simply* respect for duty that is involved in my truth-telling. I must have a more concrete purpose of self-affirmation in my action.

Kant would be in difficulty, certainly, if he did not grant the "morality" of Zeno of Elea, who is reported to have died under torture, refusing to name his fellow-conspirators in a plot against the local tyrant.⁴² On the other side Charlotte Corday's motive in proudly acknowledging her guilt at her trial was plainly not simply respect for the truth. She wanted to be a "martyr," a witness to her political ideal. Yet if Kant says—as I think he might—that her truth-telling was therefore "not moral," we can face him with the paradox that by making her *non-moral* motive so plain, Charlotte Corday was telling the whole truth about as completely as it is possible to tell it. In effect, her declaration was: I will be the only witness that you need, and that not just because it is my duty to the court, and I would disdain to tell a lie, but because it is my duty to the Nation to tell the whole truth about my motive as well.⁴³ She was an ideal utilitarian, and her "duty to the Nation" was determined for her by a purpose that overrode "respect for humanity" in the person of Marat; but if we ignore that and treat her as a Fichtean for this moment in court, how can a defender of the moral world-view either fault the morality of her confession, or deny that in her telling of the *whole* truth, *more* than a pure respect for the law was involved?⁴⁴

Hegel calls this self-affirmation "the middle or the means," without which the "pure consciousness" (of Duty) could not become actual; he clearly means to affirm that duty is the "determining ground" of the moral choice; but he insists that "choosing" involves more than the sense of duty, because action-choices are made in the sensible world. The moral consciousness recognizes this; and therefore it shifts from the first position (that inclination must be suppressed—*unterdrückt*) to the more moderate view that inclination must be in measured accord (*gemäss*) with Reason; and this is not a postulated harmony, but just what is actually brought

about by moral agency. The inclination (say Charlotte Corday's *patriotic* inclination) is in perfect accord with duty.

This position will not do either. It fits Charlotte Corday, who deliberately sought her situation (though she did protest at some imposed affronts to her maiden modesty). But it does not fit Zeno, who cannot have had any "satisfaction" in being tortured. There are many moral situations (especially those involving the virtue of "courage") which essentially require the painful sacrifice of natural comfort and welfare. But the impulse to avoid bodily suffering cannot be moulded into a natural "concordance" with the moral will; or perhaps I should rather say that in so far as physical pain can come to be sought and endured willingly, this "concordance" appears to enlightened Reason as a spiritual sickness, and hence as being immoral as well as unnatural. The moral degradation of the natural self in this way is the worst extreme of the Unhappy Consciousness.

So, when Hegel says now that "sensibility is a nature which has its own laws and impulse—springs implicit in it; hence morality cannot be in earnest about being the mainspring of impulses, the angle of inclination for inclinations," he expects instant agreement from the defenders of the ideal of moral harmony. The living body of the moral agent remains an object of moral respect; it cannot simply be reduced to an instrument of moral purpose—it has moral claims of its own. So the goal of moral action has not been adequately formulated as moral self-affirmation in the sensible world; again the goal must be displaced. It has become once more a harmony that cannot in fact be morally guaranteed; it must, after all, be "postulated."

But this displacement is a failure in its turn. For when we imagine the actual achievement of the postulated harmony, active morality disappears. There does not always have to be a conflict between moral will and natural inclination; but if it never occurs, then the self-positing of moral will in its independence cannot occur. The moral purpose needs to oppose itself to all others (at least theoretically) in order to be conscious of itself as "pure." But in a truly holy condition, even that theoretical self-knowledge would become an act of Satanic pride.

The consciousness of rising above the natural impulses of sensibility is essential to morality; so the moral self cannot be serious about the postulate of achieving a perfect psychological harmony any more than it was serious about making the moral law continuous with natural law. In fact, the second postulate turns back into the first one, as soon as we have to admit that our organic natural embodiment is an object of moral respect. Again we must shift to the postulate of an "infinite progress" in which the two sides of our being are "synthetically" combined as a perpetual alternation of opposition and reconciliation.

(f) *The Non-Moral Middle*

- 8./623. This intermediate state is what really counts, therefore. This cannot even be an advance in morality (for it involves a continuous diminution of it). But Morality cannot be more or less anyway, since the moral purpose is pure.

What we are now saying is that the condition of being between the successful “activity of the pure purpose” (where we experience the harmony of will and inclination) and the struggling awareness of a natural antithesis needing to be transcended and conquered, is the true moral goal. For this “in-betweenness,” this cycling from perfection to imperfection and back again, is the only way in which morality can be both “what is” and “what ought to be” at the same time (the state of being that is a postulate, and the postulate that is a state of being). It is the “infinite progress” in morality that is its final end. Now we have a visible contradiction, because the “infinite progress” is only progressive in reference to a “final end” that must not be reached. In other words, the moral standpoint is the standpoint of the *bad* infinite. “Coming closer” to the goal of morality means continually lessening the need for (and consequent existence of) morality; it is only because we know that the progress will actually be infinite, that we do not see that if it were a real progress it would also be a diminution (a loss of real morality for the future). The fact that the goal is (and must remain) infinitely removed means that the progress is not real. There is always the same infinite distance to travel.

Behind the paradox that the imagining of Heaven abolishes the moral life, there lies the logical fact that Heaven cannot really be imagined at all.⁴⁵ To take an example from the economic sphere (where quantification is natural) the fact that we have already achieved the outlawing of child-labor, and a forty hour week for adults, is not morally significant to those who are campaigning now for equal pay for equal work, or an economic system that secures full employment; and these are goals that can be quantified so that “progress” can be measured. Once we come to the problem of a *just* distribution of economic rewards for labor, or of securing perfect equality of opportunity in the choice of a career, no universally acceptable mathematical model or limit for “progress” can be defined; and if it could, there would still be the problem of whether *merit* should be defined in terms of actual performance rather than in terms of effort and potential.

Should we strive toward the social ideal of “rendering to each her due” (i.e. what she has actually “earned”) or towards that of “from each according to ability, to each according to need” (i.e. what the full development and deployment of ability requires)?⁴⁶ It is the actual dialectic of these conflicting ideals of justice that makes the supposition of an achieved consensus about equality of opportunity, or a just distribution of economic rewards, absurd in the first place. It even renders any permanent consensus about the meaning of “equal pay for equal work” impossible. This is the logical reason why a postulated “harmony between is and ought” cannot count as “absolute knowledge.” The postulated object of knowledge is not knowable at all; it is simply an evasion.

- 9./624. Thus being serious about the middle state is being serious about non-morality. We come back to the first postulate from the other side. Why should happiness be a demand, when it is not deserved? It can only be hoped for as an act of grace. This certainly is immoral, to hope for the irrational.

For Hegel, the sort of analysis that I have just given would be an “external reflection.” He is ready to offer this when no better way is open (e.g. in his use of the example of “property” against Law-Testing Reason). But if the *Gestalt* we are observing can be shown to destroy itself logically in its own evolution, he prefers to let it do so. So he calls the concern with the bad infinite progress a concern with “non-morality” and he lets the position go its way.⁴⁷ The conceptual summation (or “totality”) of the bad infinite progress is the conception of the “moral disposition.” The “worthiness” of this disposition is its pure will as such, its inward intention to resist temptation. This pure intention within the totality of embodied nature (partly disciplined, partly beyond discipline) is now supposed to deserve felicity, not through established merit, but by the free gift of grace on the part of an intuitive intelligence which can comprehend the whole extension of the bad infinite progress.

As I said earlier (par. 609) this is the comprehensive inversion of the moral certainty of Duty. The active self has recognized its failure, but remains sure of its intention; it has become radically unsure of itself, but it trusts absolutely in the other infinite self that truly knows all. In the sequence of actual displacements of the truth or “essence” that the moral consciousness takes to be crucial, this is the first one under which anything like “hypocrisy” (in its ordinary sense) can be comprehended.⁴⁸

Before we consider that extreme, however, we must look for a good paradigm of how the experienced independence of nature forces the moral consciousness to abandon the bad infinite cyclic experience of good works and moral satisfaction (Kant’s *Verdienst der Werke*, the theological “justification by works”) in favor of the surrender of the self-consciously imperfect moral consciousness to a hoped-for “justification by grace” (Kant’s *Verdienst, das uns aus Gnaden zugerechnet wird*).⁴⁹ The case of successful endurance of torture provided a clear example of why Heaven must be “postulated” as a reward for the actively deserving; that of breaking under torture provides an equally clear case of the merit that only a noumenal Judge could assess.

An almost perfect example is provided by Savonarola (as portrayed by George Eliot in *Romola*).⁵⁰ He is not at the level of a strictly moral Faith; but his unclarified Faith is at least partially penetrated by Pure Insight. Thus, he refused to allow the great “trial by fire” in April 1498, when two monks were prepared to walk through a fire, the one testifying that Savonarola was a true prophet, the other that he was a heretic; but he was convinced that God would support him when he came to the torture chamber himself. He found, of course, that he was mistaken, broke quite soon and confessed that his claim to be a prophet was false, before going to the fire himself as a declared heretic on 23 May 1498.

A few days before his death, he retracted his confession and declared that if he was to suffer he would suffer for the truth. He was tortured again, and affirmed his confession again. We can be quite certain that no one who had already experienced his own weakness would go through the trial again, unless he was utterly sincere. So there can be no doubt that in his own mind Savonarola died as a betrayer of the

truth and of God's light; but equally no sincere believer in immortality and the Holy Lawgiver can doubt that he hoped for and received the grace of pardon at the hands of his Judge.⁵¹

About Savonarola's "merit" we need not be sceptical. But once the "moral intention" becomes the absolute criterion of justification we must, it seems, stretch the range of the Divine Mercy to embrace even the lifelong self-deceiver Mr. Bulstrode in George Eliot's *Middlemarch*. Mr. Bulstrode—who must count as one of the supreme creations of the moral imagination in fiction—has for some thirty years been a champion of righteousness and good works in the town of Middlemarch. He is a banker, generally respected, though widely disliked for his overbearing insistence that everyone he supports must hold his opinions and live by his standards. But this piously authoritarian mask hides the guilty conscience of one whose fortune derived originally from the "fencing" of stolen goods; and he inherited it from his first wife, by deceiving her into believing that her runaway daughter by a previous marriage was dead. Bulstrode is Hegelian enough to take the public revelation of his secret as God's decisive rejection of the life of service with which he had always comforted his conscience. But his wife forgives him wordlessly—for even to *her* he cannot admit that what the public knows is the simple truth.⁵² And we cannot doubt that in his communings with God, he devoutly—"sincerely" is a radically "shattered" word in Bulstrode's case—hopes for "another chance." Can those who are prepared to postulate the Beyond (as Hegel, George Eliot and I are not) properly deny his claim? It seems to me that they cannot. But we cannot deny that both by Kantian standards and by those of common sense, Bulstrode is a *bad* man.

When Bulstrode, in his habitually self-deceiving way, manages to murder the derelict alcoholic who knows his secret, without consciously admitting to himself that he is doing that, we can say, I think, that he is plainly immoral. But in this paragraph, Hegel calls the "middle state of non-fulfilment" *non-morality* (*Nicht-moralität*) rather than immorality. In paragraph 636 he will say that the "imperfect moral consciousness" is "immoral" because it is "impure." Savonarola, who had as keen a sense of "purity" as anyone ever has had, would agree with this latter verdict. The difference between that context and the present one, as I think, is this: the "imperfect" moral consciousness judges itself with reference to its breaking, its failure to do what it intends, and its actually doing something else. In that perspective it is "immoral." But at the point that we have reached it is the "moral disposition" that counts. This is the constant intention to do right, or the unwavering desire to be "pleasing to God" (as Kant puts it in the *Religion*). Of this one cannot say that it is "immoral." Even the morally repulsive Bulstrode is moral "in his heart" as he might say; and we could perhaps agree, if we could ever find a heart in him, as his wife does.

But this "good heart" is a lot less than the actual moral will. So it is surely correct to call it "not-moral." We may even want to call it "immoral" in its prayer for what it does not deserve. But Hegel's point is that the *thought* (or the dream, or the hope) of arriving at the goal, of being united with God, must always accompany the

agent who thinks in terms of “progress,” or of another chance. Anyone who thinks in these finite terms of “doing better every day”—or even just “doing better next time”—can only have a burdensome conception, or *task*-consciousness, of what she is doing. The reward is necessarily put off; it is somewhere else, at another time. The high consciousness of doing God’s work joyfully and being his true blessed prophet, which we can observe in Savonarola, before he loses popular support and comes to judgment, is not for such a one as this.

Thus there are two kinds of postulants for grace: those who come from the endless road of finite burden-bearing (the road on which the joy is finite too, and the longing for a rest from one’s labors always present); and those who have the ideal vision of true “purity” (and a joy that is Heaven already) but who fail irretrievably to stand the test that they lay upon themselves. The repulsiveness of Bulstrode arises from his being a mixture of the two. He nourishes the conviction that he is in the second class, when in fact he cannot meet the ordinary finite standards of the first.

The important thing about the appeal for felicity as a gift of grace is that it is asking to be “let off,” either released from the treadmill, or simply forgiven for its failure. So “felicity” independent of moral effort is now what counts. The first time we went round the circle, we considered the case of the moral consciousness that is serious about its own actuality, so that this absolute relief from effort is rejected as unsatisfactory as soon as it is understood. But now that the actual moral consciousness has admitted its failure, now that it no longer claims to be “actual,” and has sunk into a “disposition,” there is nothing contradictory about the desire for “simple felicity.” What is problematic at this stage is how anyone can be rightfully excluded. We can only properly wish everyone good luck.

- 10./625. This second side of the moral world-view shows that the assumed disharmony between morality and happiness does not exist. If we are all struggling imperfect sinners, then good or bad fortune is only fortune not injustice. One is only cloaking envy of good luck if one complains morally. One ought to be glad for the lucky.

In paragraph 624 Hegel argues that the transference of moral judgment to the finite level of “improvement” destroys the basis for any absolute use of the predicates “moral” and “immoral.” As a result the position becomes “non-moral” and the real object of concern on the part of the non-morally active consciousness is to escape from its endless task, and to obtain a felicity which it freely admits that it does not deserve. This consciousness is “not-moral,” because it freely and clear-sightedly admits that morality is not achievable; and it *hopes*, this time without any real inconsistency, to be rewarded for its efforts to “make progress” in the light of the unattainable ideal. It hopes to be released from the moral treadmill. The real objective of its activity is not the self-made harmony of duty and inclination that arises in the full “actualization” of the “One Virtue, One pure Duty, One Morality” (par. 623); the inevitable suffering and frailty of the body have shown that such a self-made felicity is impossible. Its objective now is the felicity that comes as a free gift of divine grace; the moral agent has come back to the standpoint of the

reconciled Unhappy Consciousness. She knows—this time without the intercession of a mediator—that her suffering service in this world, imperfect as it is, will be balanced by blessedness in the Beyond.

But in this perspective, the supposed disharmony of morality and felicity in this world becomes an arbitrary assumption. We say that the good come to grief and the evil flourish like the green bay tree; but what do we know? We agree that the best that any of us can offer to God is a “disposition” to please him; and how do we know who has that? If we envy someone else’s “luck,” and compare it critically with what we can see of her outward record of action, all that this certainly shows is a bad, unpleasing disposition on our own part. None of us are really moral, for we do not find our all-sufficient felicity in “the One Virtue, the One pure Duty, the One Morality.” If we did, we would look neither right nor left at that sort of outward prosperity or failure.

In the “imperfect morality” which admits that duty is never really done dutifully (i.e. joyfully), calling someone “immoral” is only an arbitrary judgment; no one calls herself “immoral” (seriously) in this situation. The “immorality” that may be spoken of is only the imperfect aspect of her “morality.” Envy is a moral weakness against which we must fight; the general goodwill which is the disposition that is pleasing to God dictates that we should be glad for the mundane good fortune of anyone, and be disposed to believe that they can and will deserve it.

- 11./626. If our morality is *impure*, then the standard of purity must be in God, the holy law-giver. Actual morality becomes diversified because it operates upon a given world; but the multiplicity of duties are always the same duty in the moral consciousness that strives to be pure. The multiplicity is sacred as given by God. But this is a displacement because *my* duty is essentially mine as I know it. No external power can make it sacred for me; for no external power can be “holy.”

As soon as we restore the validity of the infinite standard of the “One Virtue, One pure Duty, One Morality,” our non-moral good-will towards the good fortune (whether heavenly or mundane) of everyone, becomes immoral. We are obliged to make this shift from the finite standpoint back to the infinite one, because our *hope* of non-moral felicity requires the postulation of a will which, being almighty, can achieve the absolute harmony of duty and inclination within itself. Our finite non-morality aims to be “pleasing to God”; it is “non-moral” because it seeks a non-moral kind of felicity. But it becomes “immoral” as soon as it views itself in the light of this perfect holiness. “Imperfect morality” is “non-moral” as long as it has two sides, the moral disposition, and the immoral hope. But in the light of the *pure* will upon which that hope hangs, only the immorality shows. If, like Savonarola, we move straight from the failure of actual morality to the throne of grace, there is no intervening stage of finite or imperfect moral consciousness with its non-moral hope. We pass directly from the moral to the immoral consciousness. Or rather (since the historic Savonarola’s whole horizon is bounded by faith and grace, and he never has the experience of “rational self-certainty” at all) we pass from simple union with God to the self-abnegation of the last phase of the Unhappy Conscious-

ness. Savonarola does not belong to our world of fully-developed Reason, because no “fall” as direct and dramatic as his can occur in our world. He belongs to the world of “Faith” (i.e. to the world of a Reason that is still undeveloped; and he falls back straight into the living hell of Luther before he left the monastery).⁵³

The imperfect moral consciousness that postulates the “holy moral lawgiver” now repeats the dialectic of the unity and multiplicity of duties. As the only holy will, the Lawgiver is the standard of morality as such. Like Savonarola, the imperfect will “counts as nothing.” But, as self-certain knowledge, this is the one conclusion that it cannot allow; so it is the Holy Moral Lawgiver who must in the end disappear. The certainty of its own knowledge has been the one unchanging constant that drives the moral consciousness through all of the displacements.

When we have been driven by our imperfection to accept our finitude and our estrangement from God and his Kingdom, we shall only fall back into heteronomy if we try to say that all of our duties are holy because they are God’s will. Savonarola can do this, but Fichte cannot.⁵⁴ Fichte knows that “autonomy” is the essence of morality, perfect or imperfect. What is not holy for me through my own knowledge is not holy in itself; and it cannot be made holy by another. So I cannot seriously maintain that God makes my duties “holy,” or even that any God who can be objectified as a *Vorstellung* is “holy.” That sort of *Vorstellung* cannot constitute my duty; so I cannot make that object holy either. Here we have finally displaced the essence into a simply *contradictory* form.

- 12./627. No. We need not postulate the holy will for *that*, but to provide a securely objective standard of what duty is. Duty as I know it, is all mixed up with inclinations. I have to be truly free, and know what to do; that knowledge can only be found in a supernatural being.

The pious moral consciousness (as I shall call the imperfect consciousness that is logically driven to postulate a holy will) now tries the opposite perspective. Instead of claiming that the holy will makes the content of duty “holy” by establishing the order of nature, it takes the multiplicity of duties to arise from its own “nature.” God is necessary to the imperfect consciousness as an ideal of the unity that it cannot achieve in its finite, toiling awareness of the moral life. God is precisely my *pure* knowledge.⁵⁵

Hegel himself does not seem to know how to express this “placement” clearly. It is a moral shape of the Unhappy Consciousness, and as far as I can make out, it is designed as a way of admitting that we may not know exactly what *our* duty is, or whether we have done it properly, because we are *biased* by our inclinations. We can always know what duty as such is, however, because God is present to us, and we can always turn to him if we will freely do so. This “pure knowledge” has to be “independent” of our finite nature; and since the empirical truth for the “imperfect” consciousness is that we do not *know* when we are acting “freely” the real existence of this “pure knowledge” in another, is a necessary postulate for the consciousness that is *disposed* to be moral but does not have any intuitive certainty

about how to do it. In this “shape” Kant’s problematic scepticism makes its way back into Fichte’s “self-certainty.” “God” is a *regulative ideal*.

- 13./628. God is the *perfect* moral consciousness, therefore. But since he is above sensible nature, he does not (cannot) do any actions. Either he is a happy consciousness without needing to deserve it, or he is no consciousness. We have to give him up.

But now it is precisely the “purity” (or the “holiness”) of God that is contradictory. The contradiction in the heteronomous postulation of God was objective. It was a conflict of thought, a conflict in the abstract concept of holiness: holiness cannot come from outside. In this final displacement the contradiction is concrete. The “holy” will, as a moment of my consciousness, is not a moral will at all; indeed it is not a will of any sort. God is above nature; not having nature as a context for action, he cannot do any actions. He does not realize himself, because he is not involved in any struggle, he does not have to negate anything. The poor tortured moral agent who breaks in the struggle to deny the natural self, knows at least that the struggle was worth something. It bears witness to the truth that moral being is a *made* harmony, something beyond nature. The absolutely Holy Will testifies to nothing.

God can be *said* to be “beyond” Nature if we choose; but he does not have to make over his naturally given self in order to *go* beyond nature. Spinoza’s God was generally held to be the purely positive affirmation of nature (i.e. not to be morally beyond it); that view was universally condemned as “atheism.” But if we give the “positive” relation up, as well as the “negative” (or active) one, what are we left with? Fichte’s God is beyond nature—which is the not-self that it posits. But in its moral beyondness, it ceases to be a self-consciousness altogether. Either way—whether as *almighty* will or as *holy* will—God is of no use to the moral consciousness.⁵⁶

- 14./629. In its “God,” however, consciousness can see the contradictions united; this makes the transition to conscience necessary.

In its experience of the Holy Lawgiver, the Moral World-View finally explodes its postulational attitude. God, as the postulate of that perfect morality which moral knowledge was originally certain of in itself, brings all the displacements together into the final shape in which the moral self-certainty is forced to recognize itself. The Moral World-View is a very interesting case of determinate negation, because it negates itself directly. “Experience” shows that the moral self does not need any postulated intelligible world. The dialectic of *sense*-perception was precisely what led us originally to postulate that intelligible world, as the concept within which the “displacements” of sense-perception could be reconciled and consistently comprehended. Now the dialectic of moral-perception has brought us round to the recognition that the intelligible world is truly within rational self-consciousness and nowhere beyond it.

The “determinate” aspect of this self-negation is precisely here. The moral law-giver is only absurd as a postulate. In the course of our “shifting” we have noticed

that everything “postulated” is actually experienced; and the “imperfection” of the rational moral consciousness, which the sequential development of moral displacement obliged us finally to acknowledge, is a positive advance. But the ideal standard of morality which the imperfect consciousness was led to postulate as an almighty power that graciously grants to it the felicity that it cannot secure for itself, is nothing but the logical imperfection (of heteronomy) into which the imperfect consciousness has fallen. In its final shape of the paradigmatic “holy will” (which cannot be “holy” because it would have to be moral first, and it cannot be that) the postulate of God becomes visibly what must be internalized. The “holy will” is not an independent being; in that status it is quite plainly a contradiction. But it is precisely the moment that the confidently “actual” moral consciousness lost hold of, when Savonarola was “put to the question.” This moment must now be comprehensively internalized. God is not a power to be postulated. We shall find, in the end, that he is indeed the giver of “grace”; and our receipt of grace will, in fact, take us beyond the moral level. But it will not take us beyond our own actual world of sense and Reason; and it will be a matter of experience, not of hope and prayer.

- 15./630. The moral consciousness knows it is “imperfect” because it is sensory, and its natural situation creates many duties (like “thing-properties”). It needs God, but its God only displays what Morality is in full. The “imperfect self” is the abstract thought, “God” is the concrete whole. Both conscious dutiful intent and natural being are essential aspects of moral actuality. The “shifting” has been between pure intention, and actual performance as essential.

The “imperfection” of the moral consciousness has several aspects. In the first place its situation in nature (both human nature and nature in general) clouds its purity. Our sensible nature is the source of many temptations, and Kant was wise to insist that we have no intuition of the purity of our own motive, even when it seems to us to be moral. In any case, external nature can put such pressure on the finite sensible organism which exists within it, that even a supposedly rational intuition is abandoned or betrayed.

Secondly, our empirical situation determines what we identify as our concrete duty in any case. Savonarola tells Romola, when he refuses to save her godfather from the death penalty for treason, “there are many grounds of action in this matter.”⁵⁷ His “many grounds” are the “host of duties through which consciousness is nonplussed” (as Hegel puts it). It is in this connection that Hegel makes the parallel between the Moral World-View and the perceptual world-view fully explicit. The active moral consciousness lives in a world of situations that are like perceptible things. Moral intuition is like sense-intuition. It makes us aware of the many moral “properties” of each situation.⁵⁸ “Displacement” has been a sort of logical hunt for a method of identifying the “essence” of the “moral thing.” But the quest has an illusory goal. Like sugar or salt dissolving, one moral situation dissolves into another when we act. The “other being” to which our quest has led us is like the universal world of intelligible forces; and the intelligible force in this moral world is manifestly our own Reason. The moral world is real because it is just the world that

we establish by our actions. The divine consciousness that comprehends the natural order is just a *Vorstellung* of our concrete moral situation. It is *our* moral Reason that comprehends our finite situation in the natural world. The basic contradiction of *Verstellung* consists in the pendulum swing between the “pure duty” that is “to be done” (an empty *Gedankending*) and duty as fulfilled (a perfect harmony of Freedom and actual existence). We need to realize that the “moral action” is a concrete whole, in which the “in-itself” of thought is identified with the “in-itself” of actual “thereness.” The conscious agent takes up the sensible situation and gives it an intended shape with a moral meaning. All of these moments are necessary in our moral activity: and they are all present in it. We do not need “God” as an almighty Other.

(g) *The Concept of Conscience*

- 16./631. The Moral World-View collapses because in the end it can see through its own distinctions. The phenomenal world is both irrelevant and vital; and pure duty must be both beyond and here. In the end consciousness can see that this is nonsense, and that everything pushed outside or beyond it, is really kept within it. Displacing one moment outwards (or beyond) is hypocritical. As Conscience, the moral consciousness rejects this hypocrisy. But taking all the “displacements” into the self will not change them. The self-certain Conscience ignores them; but that is just the first manifestation of hypocrisy.

At the beginning of chapter VII (par. 673) Hegel remarks that there was no Religion of Consciousness because “the supersensible, the Eternal, or whatever else one may call it is devoid of self.” He also confirms, however, that the religion of the Enlightenment makes good this defect, and that in the religion of Morality, God gains a “positive content” (pars. 675–676). But, says he, this positive content is “a being which is at the same time taken back into the self and remains locked up in it, and a *distinguished content*, whose parts are negated just as immediately as they are put in place.”

This tells us how we should interpret the whole section on Morality. In the final section, on Conscience, the Beautiful Soul, and Forgiveness, we have a divine content that is clearly understood to be within the moral self. This is the “religion of Morality” properly so called. But in the Moral World-View we have a “content” that is taken to be independent. For the consciousness that makes the postulates, God is, to begin with, another being in his own Kingdom. But the development of the concept of Morality itself, teaches us that in order to preserve moral autonomy God must be conceived as the Moral World in which we all live and move as noumenal selves; and the experience of Displacement has now shown that the whole procedure of postulation is illegitimate. We cannot make the Moral World independent of the self that supposedly lives and moves in it. No matter how we distinguish the “parts” of morality, and no matter what we try to project into the independent world, the projection has to be negated as soon as it is set up. Try as we may to justify projecting God outwards, and giving him an independent role

and responsibility in the world of the moral understanding, he remains locked up (*eingeschlossen*) in the moral self. We cannot make this God into “another self,” because then he would have to be our equal. The Holy One to whom no moral agent can be equal is a logical abortion.

When we postulate the noumenal world, we find ourselves forced to say contradictory things both about our phenomenal world and about the noumenal one. Phenomenal nature is morally null; but also it is this world that must be reshaped to display the noumenal reality; and the Good Will is the absolute essence, whose *noumenal* reality is all that counts; but it is not a will at all if it does not *act* in this phenomenal world, where its existence can be recognized.

When the whole experience is internalized in “Conscience,” the pattern of displacement and contradiction will necessarily repeat itself. So Hegel wants us to cast our minds back to the beginning of the Moral World-View, as we come to its “third movement.” We have to be mindful that what is internalized at the new beginning is the *result* of Displacement. We have to recognize the transition here as a conscious internalization of *God*: “what [this consciousness] declares to be the absolute *subsistent* (*Seiende*) outside of consciousness, it keeps locked up within the self of self-consciousness instead.”

The two extremes that we have tried to put upon God—the mastery of nature, and the holiness of duty—are simply the identical opposites involved in our own moral autonomy. It is right to identify the extreme of holiness with God finally, because only we in our finitude can experience the harmony of fulfilment. But we must not forget that this pure knowledge of duty was exactly the result that came forth by determinate negation when the “despotism of liberty” ended, and the virtuous tyrant himself went to the guillotine that he had set up. “Pure Duty is the essence,” we said then; but now we have been trying to reinstate Robespierre as the Holy Moral Lawgiver. We cannot picture God so, because Duty is just what must be *done*—and only we, not He, can do it.

So we are not serious, finally, about this last displacement. The holy voice of Duty is not the voice of Another, in another world; it is the voice of our own Conscience, the knowledge that we share with God, the divine voice within us in this world. To maintain the final displacement would be *hypocrisy*. This is what becomes clear when the imperfect moral consciousness begins to pray for the grace of a release from the moral treadmill. At this point the moral self, which postulated its own world in order to give meaning to Dr. Guillotin’s chopped cabbage or the gulp of cold water, recoils in moral disgust from the whole journey that it has made in the noumenal world. Life in our own phenomenal world must certainly have more meaning than was shown forth by the termination of Absolute Freedom in a death made quick and painless by science. But that deeper meaning is not to be found in an endless paean of gratitude for release from an impossible task. The Almighty Pardoner must be given up, and the Holy Lawgiver must be recognized as just the absolute moment of the free moral self from which the movement of postulation began.

This is a very formal advance. As we shall see, it is one that Fichte himself made; but he could never be accused of “despising the moral world-presentation.”

That description of the transition points to Jacobi's "immediate knowledge" as the comprehensive inversion that is needed. The inversion is simply from what comprehends us, to what we comprehend. We move directly and immediately from the standpoint of moral Understanding, which takes its object to be Beyond, to that of Reason, which knows that its object is "within." But we are also moving back to the level of "immediate certainty"—whereas the Holy Will was the infinite object of moral Understanding. We have only to remember the excesses of self-actualizing Reason, and the shiftiness of the rational individuality that is "real in and for itself" in its own eyes, to realize that the absolute content will not stay "locked up" in the dutiful self. God is no man's prisoner. Our initial moral sincerity turned into hypocrisy; we have inverted that hypocrisy into a properly conscientious sincerity again, now that we have recognized it. But we shall find that this is only the first "displacement" of the hypocrisy that we have unmasked. The God within us is still the Almighty Pardonner even if he cannot now make the Heaven and Earth of nature pass away for us. His whole existence as self-certain knowledge must now unfold; and the unfolding will bear a necessary resemblance to the story that we already know.

Notes

1. D. Jähnig (1971) states Hegel's view of the relation of the French to the German Enlightenment in its simplest terms. The French Enlightenment was anti-historical. H. Boeder (1977, 157) cites Joyce's *Ulysses* very aptly: "History is a nightmare from which I am trying to awake." The German Conscience can be historically situated once more.

2. *Oedipus Coloneus*, lines 1292–1307.

3. Hegel's title for the first subsection that is about to start—"The Moral World-Inshowing (or Intuition)"—directs us at once to *Fichte's* moral theory as the basis for his own dialectical "completion of the Kantian system." Kant himself spoke more often of the "Kingdom of Ends" than of "the Moral World" (though he did use that expression too).

There is a valuable discussion of this section and the next one by K. R. Westphal (1991). He examines Kant's position both in its original formulation, and in the reconstructed version offered by Onora O'Neill, and concludes that Hegel's "objections" (which he has extracted from the text here) are largely sound. His approach is thus quite different from that which I have adopted; and it forms (in my view) a valuable *complement* to my discussion. (I hope the converse will also be found to be true.)

4. Charlotte Corday tried first to obtain access to Robespierre. The "wild beast" Marat was only a second-best choice for her.

5. What his moral situation is *vis à vis* the unknown but aggressive traveller who was his father I shall willingly leave to more expert students of the Moral World-Order than myself.

6. Conscience need not be "high-handed" in any ordinary sense. It acts as wisely as it can, and begs forgiveness for errors caused by ignorance. The plea is made by Sophocles (for *Oedipus*) and accepted already by Aristotle (*Oedipus Coloneus*, lines 521–548, and *Ethics* III, 1, 1109b 35–1111a 2).

7. *Glück* belongs to this world, but *Seligkeit* is the "blessedness" of the other one—I shall call it "moral happiness" or "felicity."

8. It is a *logical* truth that the moral self can have no “sight of its object realized” because “pure duty” is an infinite object. But whether it sees its finite self realized is a matter of chance, and *must* be experienced as such. (Compare R. B. Pippin, 1991, 535–541.)

9. Kant’s concept of this Summum Bonum appears in all three *Critiques*: see *Critique of Pure Reason*, B 838–840; *Critique of Practical Reason*, *Akad.* V, 110–111; *Critique of Judgment*, *Akad.* V, 450 (sec. 87, where it is called *Glückseligkeit*). But see also especially Fichte’s *Critique of All Revelation*, section 2 (iii) (*Werke* V, 34–39; Green, 55–59); section 3 (*Werke* V, 41–42; Green, 61–62); and section 4 (*Werke* V, 60–62; Green, 77–79). Kemp Smith gives the original pagination of *Critique of Pure Reason* in his margin; Beck and Meredith give the pagination of *Akad.* V; Green’s Fichte translation likewise gives the pagination of *Werke* V.

10. In his useful survey of this section L. P. Hinchman remarks (1984, 162) that “Hegel’s account . . . differs substantially from Kant’s.” Hegel states everything in a different *way*. But it seems to me that, *as a whole*, his account represents Kant’s position justly. For an examination of this section which discusses its legitimacy as a direct critique of Kant see J. P. Vincenzo (1987). Cf. also J. E. Smith (1973 or 1974) and Q. Lauer (1973); but the best “Kantian” reading of the section—far more rigorous than mine—is K. R. Westphal (1991).

11. See in general the *Critique of Practical Reason*, Book II (*Akad.* V, 107–148; Beck, 111–153); and in particular *Akad.* V, 110 (Beck, 114–115). Since Kant himself regards the whole doctrine of the postulates as part of the “Dialectic,” I suppose he would not be much disturbed by the dialectical difficulties that Hegel develops; and since Hegel understood Kant’s conception of dialectic I suppose he was well aware of this—see especially *Faith and Knowledge*, *G.W.* IV, 345, lines 25–35 (Cerf and Harris, 95). His object is not to criticize Kant’s view, but precisely to show how Kant’s conception of the dialectical character of pure Reason can be overcome. (J. Robinson, 1977, 40–50 is very sensible about the whole question.)

12. The fittingness of the will to the moral law, and the infinite progress required for it, is spoken of at *Akad.* V, 122; compare V, 130–131. See also Fichte, *Critique of All Revelation*, *Werke* V, 38–39, 118 (Green, 59, 128).

13. I picked this up in general reading during my schooldays. I cannot find it now in the Penguin *Selected Letters* (trans. L. Tancock, Harmondsworth, 1982). But there is good evidence there that my forgotten source was not misquoting her!

14. I do not suppose Madame de Sévigné had read Abelard’s *Ethics*, but she has summed up his conceptions of “duty” and “Providence” in a single sentence; and yet his sense of moral urgency remained as intense and strenuous as Fichte’s. (G. Mensching [1988], who agrees with me about the epochal importance of Abelard’s moral theory, believes that it is “liquidated” in Hegel’s ethical theory. As will be clear by the end of chapter 9, we are at opposite poles on that issue.)

15. See *De Officiis* I, 46 (and other similar passages).

16. I suspect that something like this argument of practical irrelevance must occur in the sources (probably in Fichte). But I have not managed to find it. Kant certainly regarded the infinite progress towards a limit as being identical with the limit of God’s eternal standpoint (cf. *Religion*, *Akad.* VI, 48; Greene and Hudson, 43).

17. Kant’s discussion of the *Endzweck der Welt* is in the *Critique of Judgment*, section 88 (*Akad.* V, 453–455). But see also Fichte, *Critique of All Revelation*, *Werke* V, 50–51, 60–61, 93–94 (Green, 68, 77, 107–108).

18. I am not sure whether it is logically the *only* cause of any “failure” that is genuinely *mine* (as long as my will is good). Perhaps Hegel thought so (and perhaps the case can be

made out if the rigorous antithesis between the causal determinism of “nature” and the “freedom” of the moral world-order is presupposed). But I do not think the question is very interesting, because the presupposition of a rigid antithesis between “determinism” and “freedom” seems implausible to me.

19. For Kant’s doctrine of duties as divine commands see *Critique of Practical Reason*, Akad. V, 129–130. Compare Fichte, *Critique of All Revelation*, Werke V, 51–58, 88 (Green, 70–75, 102–103).

20. In view of Hegel’s earlier insistence that the common sense of the Enlightenment is to be interpreted in the light of the “Cartesian metaphysics,” it is worthy of note that the “postulate of God” can be found already in Malebranche, Berkeley and Leibniz in a form that corresponds quite well to Hegel’s sketch of the argument. Part of the reason why he ignores so many of the niceties in the distinctively Kantian forms of rational postulation, is that he is intensely conscious (and he wants to make us conscious) of the *continuity* of the tradition of rational theology. Whatever they may have thought and said about the “dogmatism” of their predecessors, Kant and Fichte were arguing as dogmatically as any of them. They owed much to Leibniz in particular.

21. Hegel puts it that there is “another essence which is consciousness, and the holy law-giver of pure duty.” This may be an echo of Kant’s “holy lawgiver” in *Critique of Practical Reason*, Akad. V, 131 note. But the context is rather different. Fichte (who uses the expression “moral lawgiver” often—e.g. Werke V, 60, 62, 88; Green, 77, 78, 103) also speaks of the “law-giving of the Holy one” and of “obedience to the moral lawgiver” being “moral only when grounded upon the *Vorstellung* of his holiness” (*Critique of All Revelation*, Werke V, 105, 140; Green, 116, 147).

22. *Religion*, Akad. VI, 75–76 (Greene and Hudson, 70).

23. See *Critique of Pure Reason* B, 836–837; *Critique of Practical Reason*, Akad. V, 130. (Compare also Fichte, *Critique of All Revelation*, Werke V, 37–39, 50, 86; Green, 57–59, 69, 101. But in Fichte there is no conscious loss of certainty.

24. *Critique of Practical Reason*, Akad. V, 122 (Beck, 126).

25. Kant regarded himself as a critical *idealist*; and his view of the world of our natural experience justifies this. But Hegel’s interpretation of the “postulation” of the noumenal world is that reflective thought is logically impelled to employ a “realistic” standard of truth. Fichte’s interpretation of the “primacy of the practical” turns Kant’s practical postulation into “self-knowledge.” But God still turns out to be a “moral postulate” upon this view.

26. In the idealistic perspective the moral consciousness is *vollendet* (complete) because it is all-comprehensive; in the realistic perspective it was *vollkommen* (perfect) because it needed nothing of what was thought of as remaining outside it.

27. Fichte was miscalled an “atheist” for identifying God with the “moral world-order”; by making the point about the difference between God’s “almightiness” and our moral *faith*, Hegel implicitly defends him against that highly prejudiced accusation.

28. The triad “thesis, antithesis, synthesis” is peculiarly Fichtean in Hegel’s view (and I believe that he never uses it except when he is discussing Fichte’s views). But “synthesis” comes from Kant; and the dyad of “thesis, antithesis” comes from the Antinomies of Pure Reason. Hegel does not use any of them in reference to his own speculative theory—cf. G. E. Mueller (1958). I use “antithesis” to translate *Gegensatz* (which Hegel took over from Schelling); and like Hegel himself, I use the triad only with reference to the Critical Philosophy.

29. This was the ground of the accusation of *atheism* brought against Fichte.

30. In large measure this arrangement has already been done. So, like the “Truth of Enlightenment,” this section appears very repetitious. It would be illegitimate if it were not so. K. R. Westphal (1991, 137) says “Hegel barely attempts to follow the procedures required by his own method.” But, in fact, it is his method that obliges him to deal with the material as he does.

31. On the meaning of *Verstellung* (and its English renderings) see especially J. Robinson (1977), 72–75. (P. Moran’s brief discussion [1980, 122–123] is not helpful.)

32. I do not pretend to know exactly how Kant regarded the postulates. But this seems to me to be the minimum position that he *must* have held; and I think that Hegel wants to attack the supposed rational grounds for the Kantian “hope,” as well as to suggest that it is only doubtfully moral.

33. This was his verdict upon the “Cosmological Proof”—see *K.R.V.* B 637. He formulated this proof as follows:

If anything exists, an absolutely necessary being must also exist. Now I, at least, exist. Therefore an absolutely necessary being exists. The minor premiss contains an experience, the major premiss the inference from there being any experience at all to the existence of the necessary [B 632–633].

The resemblance of this to the argument from “any moral consciousness” to the “absolutely necessary Holy Will” is obvious.

34. Hegel’s method is powerless against the “Philosophy of As If.” But we should always remember that Hegel does not want to “refute” *anyone*. It is part of his basic thesis that all of the *Gestalten* of the Spirit are self-sufficient, so that a rational self-consciousness which identifies with one of them can always mend its position in response to any critical attack. From the experienced impregnability of the theoretical standpoint of Perception which we all spontaneously adopt, and which none of us ever really leave (as Dr. Johnson showed so graphically in his “refutation” of Berkeley) we know already that the defensibility of Kant’s position is not what matters to Hegel. Kant’s system is the critical understanding of precisely that “perceptual” standpoint (in all its self-protective shiftiness both “scientific” and “moral”) which appeared *obvious* to the enlightened Protestant culture of Kant’s time.

35. See “On the Ground of our Faith in a divine Government of the World,” *Werke* V, 177–189. It is in this essay that the “Moral World-Order” is first spoken of. The *Critique of All Revelation* remains within the context of Kantian “enlightenment.”

36. J. Robinson (1977, 78) takes a different view of this transition: that “nothing gets done,” literally, because the agent becomes paralysed. This is a *possible* reading—and indeed to a common-sense reasoner it may seem to be the best one. (It is better, in my opinion, than that of L. P. Hinchman [1984, 164]). But once we grasp the fact that the dialectic of moral certainty repeats that of Sense-Certainty my interpretation follows naturally. (It is not logically possible for an “actual moral consciousness” to be “paralysed”; the “nothingness” of its necessary actuality springs from the lack of ratio between the “finite” and the “infinite.” I have expressed this reflective judgment as commonsensically as I can by my “as if.” But in actual moral experience “nothing gets done” because the moral situation remains unchanged; it is “what ought to be done” that moral certainty continues to be focussed upon. That is why the logical next step is to consider the situation where there is no “ought” left to focus on).

37. A very good sketch of how Fichte’s self-certainty caused him to put himself in a false position can be found in Daniel Breazeale’s “Introduction” to Fichte (1988, 40–95).

38. *Groundwork of the Metaphysics of Ethics*, Akad. IV, 421; Beck (1949, 80).

39. See Thornton Wilder, *Heaven's My Destination*; R. L. Stevenson, *Virginibus Puerisque* (essay vi, *El Dorado*). Stevenson was probably familiar with Lessing's famous choice between truth and the search for it (*Gesammelte Werke*, ed. Paul Rilla, Berlin, 1956, VIII, 27).

40. Hegel's word is *vertilgen* not *aufheben*; but the *Vertilgung* of the goals of sensibility is called an "*Aufhebung* of the sensible *Wesen*" as soon as we come to its displacement. What the "cancelling" or "sublating" means here is best inferred from Kant's account of the "determining ground" of the moral will. See *K.P.V.*, Akad. V, 24–25 (Beck, 1949, 135–136):

The principle of one's own happiness, however much reason and understanding may be used in it, contains no other determinants for the will than those which belong to the lower faculty of desire. Either, then, no higher faculty of desire exists, or else pure reason alone must of itself be practical, i.e., it must be able to determine the will by the mere form of the practical rule without presupposing any feeling or consequently any idea of the pleasant or the unpleasant as the matter of the faculty of desire and as the empirical condition of its principles. Then only is reason a truly higher faculty of desire, but still only in so far as it determines the will by itself and not in the service of the inclinations. Subordinate to reason as the higher faculty of desire is the pathologically determinable faculty of desire, the latter being really and in kind different from the former, so that even the slightest admixture of its impulses impairs the strength and superiority of reason, just as taking anything empirical as the condition of a mathematical demonstration would degrade and destroy its force and value.

41. Compare *K.P.V.*, Akad. V, 92–93 (Beck, 1949, 198–199) where Kant also makes the point that the happiness that is thus discounted *need not* be *in conflict* with Reason.

42. Diogenes Laertius, IX, 26 (Zeno gave false answers, but he was obviously being defiant, rather than seeking to mislead the tyrant. Kant, who is a willing casuist for the servant told to say "not at home," would surely accept this distinction.)

43. Her advocate (who was a stranger appointed on the spot, because the friend to whom she had written asking him to act for her, was away from Paris and did not receive her request) recognized that this very *wholeness* of her confession constituted the only plea that could be offered in mitigation of sentence. His speech for the defence was:

My client admits this murder; she premeditated it, in the very presence of death she shows no remorse, nothing but political conviction could have armed her hand and given her this calm, this sublime abnegation. I commend myself to the prudence of the Jury. (Joseph Shearing, 253).

44. In case anyone thinks it is morally outrageous to abstract from the fact that Charlotte Corday was telling the truth *about* a political assassination, we can easily find a suitably proto-Fichtean substitute in her first and most remarkable devotee, the German delegate from Mainz, Adam Lux. He had already been dissuaded from a public suicide in the Convention at the climax of a speech in support of the same Girondist political ideal. After he witnessed Charlotte's execution he worked night and day on a pamphlet about her, with the deliberate object of going to the guillotine in her honor. When it was published he was promptly arrested, and eventually he achieved his object. (He was *not* a utilitarian, and he regarded the assassination as a heroic *error*.)

45. Fichte (in the *Closed Action State*) and even Kant (in *Perpetual Peace*) thought otherwise. But they were thinking not “comprehending”—Kant’s distinction between a regulative Ideal and a constitutive one acknowledges the difference, but in the case of the Ideals of moral Reason, he did not properly acknowledge their antinomic character, because he had to postulate moral freedom, and a noumenal order. By taking “freedom” as an intellectual intuition and inverting the relation of the noumenal and phenomenal worlds, Fichte unwittingly revealed the implicit absurdity of Kant’s attempt to evade the antinomies of “pure thought.” That is what Hegel is now seeking to show.

46. No doubt Simonides (whose outward-looking definition of justice was used by Plato as the foundation for the first great systematic exposition of the inward-looking view—see *Republic* 331e) was citing a proverb; Marx (*Critique of the Gotha Programme*, 1875) was quoting Bakunin’s declaration (for the Lyons anarchists) in 1870 (see J. M. Davidson, *The Old Order and the New*, London, 1890).

47. *Moral* action aims at *moral perfection* (par. 622); “non-morality” aims at *doing my imperfect best*.

48. It must be said, in this connection, that Robinson’s discussion of “Displacement in Practice” (1977, 86–97) is based on a mistake. *Many* types of “displacement” are possible in a dialectical system such as Hegel’s. Only those that involve a *Kantian* concept of duty, combined with moral-religious faith in a noumenal order, can be accurately classified as *Verstellungen* of the self-certain moral world-view. (I have discussed Robinson’s cases in more detail in Harris [1987, 23–24].)

49. See *Religion*, *Akad.* VI, 75; Greene and Hudson, 70.

50. George Eliot was a consummate master of the “Moral World-View” in all its guises—having herself lived through its evolution into the final, properly Hegelian, shape of the “Choir Invisible” (which she has now indubitably joined in fulfilment of her highest hope). She knew that Savonarola did not fully belong to the “Moral World” (see note 52 below); and except for his necessary involvement in the affairs of Romola, Eliot’s portrayal of Savonarola’s career is rigorously controlled by her study of the historical sources. Since both her moral insight and her philosophical sophistication are far beyond that of most historians the portrait in *Romola* is to be preferred to all others here. (For the “Choir Invisible” see George Eliot’s *Poems*.)

51. See *Romola*, especially chapters lxiv–lxv, lxxi–lxxii. George Eliot’s own verdict (at the end of chapter lxxi) deserves to be quoted:

There is no jot of worthy evidence that from the time of his imprisonment to the supreme moment Savonarola thought or spoke of himself as a martyr. The idea of martyrdom had been to him a passion dividing the dream of the future with the triumph of beholding his work achieved. And now, in place of both, had come resignation which he called by no glorifying name.

But therefore he may the more fitly be called a martyr by his fellow-men to all time. For power rose against him not because of his sins, but because of his greatness—not because he sought to deceive the world, but because he sought to make it noble. And through that greatness of his he endured a double agony: not only the reviling, and the torture, and the death-throe, but the agony of sinking from the vision of glorious achievement into that deep shadow where he could only say, “I count as nothing: darkness encompasses me; yet the light I saw was the true light.”

52. See *Middlemarch*, chapters 10, 12, 13, 17, 18, 31, 41, 44–45, 53, 60–61, 67–76. (We discover Bulstrode's secret in chapter 61; the story of its public emergence, to the point where Mrs. Bulstrode learns of it, is in chapters 67–74. We shall have occasion to examine the significance of Bulstrode's inability to confess when we come to the *Gestalt* of "Forgiveness" later.)

53. See note 51.

54. Kant speaks quite often of a "holy lawgiver" (see note 19 above, and K. R. Westphal [1991, 154]). But the doctrine that obedience to the "moral lawgiver" is moral only when grounded upon the *Vorstellung* of his "holiness" is Fichte's (*Critique of All Revelation*, *Werke* V, 105, 140; Green, 116, 147). Kant never explains how obedience to God's *commands* can be "moral." It is clear that for Fichte this language is only a "sensualized image." But how can it be no more than that, if we are forced to admit that perfect morality *only* exists in that "image"?

55. This seems like the best moment to point out that the relation between Kierkegaard's conception of the "leap" of faith, and Hegel's sublation of faith, is far more complicated than appears in an account like that of W. P. Pomerleau (1977).

56. Fichte's Absolute Ego is explicitly declared to be "unthinkable" (see *Wissenschaftslehre*, 1794, *Werke* II, 253–254; Heath and Lachs, 224–225).

57. The crucial exchange between them is the following:

"My daughter, it is enough. The cause of freedom, which is the cause of God's kingdom upon earth, is often most injured by the enemies who carry within them the power of certain human virtues. The wickedest man is often not the most insurmountable obstacle to the triumph of good."

"Then why do you say again that you do not desire my godfather's death!" said Romola, in mingled anger and despair. "Rather you hold it the more needful he should die because he is the better man. I cannot unravel your thoughts, father; I cannot hear the real voice of your judgment and conscience."

There was a moment's pause. Then Savonarola said, with keener emotion than he had yet shown:

"Be thankful, my daughter, if your own soul has been spared perplexity, and judge not those to whom a harder lot has been given. *You* see one ground of action in this matter. I see many. I have to choose that which will further the work intrusted to me. The end I seek is one to which minor respects must be sacrificed. The death of five men—were they less guilty than these—is a light matter weighed against the withstanding of the vicious tyrannies which stifle the life of Italy, and foster the corruption of the Church; a light matter weighed against the furthering of God's kingdom upon earth, the end for which I live and am willing myself to die." (*Romola*, chapter LIX.)

The episode is fictional but it dramatizes one of the most difficult moral dilemmas of Savonarola's religious protest. He objected to the partisan policy of the Papacy, because he felt that it violated the ideal of Christian brotherhood; but his own resistance forced him to become a partisan.

58. This point was first made about the Ethical Substance (par. 446). But there "custom" and "nature" (sexual character) combined to save the ethical agent from the embarrassment of free choice.

Chapter 9

Arrival

VI C(c): Conscience, the Beautiful Soul, Evil and Forgiveness

The concept of the moral consciousness as a World-Intuition has been developed from its own initial certainty that “it is,” into the hypothetical judgment that “if it is, then it is not, because it really is in Another”; and that Other is not moral either. So we are thrown back to the original certainty of the moral consciousness that “it is.” But we now know that this certainty is not the intellectual intuition of a world that must be postulated by Faith; it is the actual “inner world” in which all of our spiritual experience occurs. As such, it is properly more comprehensive than the world of sense-experience. But it has still to reach back and envelop that world consciously. This is what happens in the Syllogism of Conscience, the Beautiful Soul, and Forgiveness.

The behavior of Conscience under the critical assault of “moral experience” will be quite different from the behavior of moral Faith. It will not move—except that its situation changes (par. 648). The “object” moves while the “subject” stands fast, until at the end of the attack, we can see that the Truth in its unshakable self-certainty is something quite opposite to what Conscience takes itself to be. When the full significance of its “going back into itself” is appreciated Conscience will stand forth as the Beautiful Soul.

Because Conscience, as “Spirit that is certain of itself,” is so close now to our own standpoint as spiritual observers, it is difficult to distinguish between the experience of this inversion “for Conscience” and the experience “for us.” On the one hand every Beautiful Soul must know that it is a Conscience which has a new and deeper insight into itself; the transition cannot just happen without being noticed. But on the other hand, not every Conscience has to make this transition. Indeed, it is not usual for a “good Conscience” (i.e. a dispositionally serious one) to make the transition; and a good Conscience (in the sense of a Conscience that has made the circle back to the final “grace-hoping” position of the Moral World-View) will be intuitively aware of how morally perilous the move to the position of the Beautiful Soul is. Most Consciences that reach the final position of mutual Forgiveness do so without any conscious transition through the Beautiful Soul. The “difference” between ourselves and the Consciences that do become Beautiful Souls, is that what we see as the movement of the Concept (i.e. as a logical “necessity”) is experienced as an act of free creative transcendence of finitude. (Every transition in Hegel’s “Science” has both of these aspects. That is why the “necessity” of the movement is so easily overlooked or misunderstood.)

The Beautiful Soul does not “obey the law that it lays upon itself.” From being an autonomous legislator, it becomes a “creator.” The “God” internalized in it as its “Law-giver” becomes directly known to it as its own creative essence. Thus the conceptual exposition of Conscience is not (as in the case of the Moral World) the prelude to (or map for) a “shifting” experience, but rather the revelation of an absolute autarchy which can only break open dramatically, when we find the right key. At first, under the critical impact of the world, it defines itself ever more closely, and becomes more and more evidently impregnable until it reaches the ultimate fastness of “genius” where it ceases to need criticism altogether, and haughtily declines to respond to it. Normal Consciences make the transition to Forgiveness with us; but some Beautiful Souls we shall just leave behind.

(a) Conscience as a World-Concept

- 1./632. Because there is and there is not actual moral consciousness, the actual consciousness with all its limits and imperfections has to be given validity. The gracious gift of happiness became the function of God, but that was a step backwards. What is thus projected (estranged) is for us (or logically) the pure self. So we can pass on to *Conscience*, the finite self that knows itself to be valid in all its contingency.

The crucial stage in the actual experience of the Moral World-View was when the postulated intelligible world became a place where the supposed moral consciousness was graciously, i.e. non-morally, rewarded, for wanting and trying to be moral when its “knowledge” was that it was not, and could not be, actually moral. It was formally contradictory for this non-moral consciousness to call itself moral, and to postulate felicity for itself; and the postulated Holy Will, which does nothing except grant this felicity, is a material contradiction; it contains contradictory moments in its content. This contradiction on both sides is important, because it is resolved into a consistent identity when the two sides are brought together. The “determinate negation” of the contradiction is a new self-consistent Concept that comprehends both the perfection of moral knowledge and the imperfection of moral experience.

The actual moral consciousness is the pure knowing of duty as such, the very same self-certainty from which we began after the death of Absolute Freedom; and that certainty is the very certainty that the self actually *is* because it thinks. But we know now that the intuited world of the moral consciousness is just the “pure thinking” of that actual self. Hence, although the Moral World-View can go on spinning indefinitely through the “displacements” of the moments that it inherited from Faith, *we* can now put the elements together and pass on to observe the self of the moral Conscience (which, as we have now realized, *contains* the moral world). Conscience contains the world, in the way that the Understanding with its Kantian concepts synthetically contains the great variety of sense-perceptual intuitions.

- 2./633. This is the *third* self emerging from the third spiritual world. Out of the ethical world came forth the [legal] *person*. This self is what it is formally recognized to be. It does

not form itself. The second self was the one that formed itself, and gave itself back to itself out of the estrangement of culture, the free citizen of the Revolution. Here U and S have sundered. U (the *general* will) is the object and content of the self, but it does not have a free existence as object; so this self has no world. Moral self-consciousness lets its universal constitute a world, but holds onto it at the same time (so becoming a play of displacement). Only as Conscience does it become an integrated self with its duty in this world.¹

The German word for Conscience is *Gewissen*. The word *gewiss* means “sure” or “certain,” and *Gewissheit* is “certainty.” So the “self of Conscience” is the spirit that is “sure of itself as absolute truth and being.” It has come forth from the moral world-order just as the self with legal rights emerged from the ethical world of True Spirit, and the self with natural rights came forth from the estranged world of Culture. The possession of “moral rights” is now to be compared with the possession of “legal” and “natural” rights.

The legal self is the “person” defined and recognized by law; even the slave has some rights in the legal order. It may be hard for her to secure those rights at the best of times; and (in defiance of Gibbon) we may well doubt that the Condition of Right ever was “the best of times.” But even the slave did have rights, and she could sometimes get “justice.”

In court the person has rights which exist because they are recognized by the law, and therefore, in principle, by everyone whose universal will is expressed by the law. Even the “will” of a dead person is “executed.” But it is only the law that is effective; the legal person is like a point upon that universal ground. The law is not the will of any self recognized by it; and the legal self is not free to assert itself in free self-creation—except perhaps in the matter of that will which is executed after its death (and even that is bounded by legal limits).

The “free” self with “natural rights” is the rational person who knows that *all* are free, and that the law should be the guarantor of everyone’s freedom. This is what is declared in the “Rights of Man and Citizen.” But this “absolute freedom” is identical with the point that stands for the singular free agent; so it guarantees nothing but death. No world is constituted by this law of rational freedom; it is the “spirit of estrangement” given back to itself. Every free and equal self has this General Will as its own objective. Absolute freedom is the freedom of the patriotic self. But this General Will has no mode of being that is independent of the self. The fact that this has already been seen to be true about the moral law of Conscience also, is ominous.

The moral self-consciousness lets its General Will, its moral law, go free to constitute a moral world like that of legal recognition; but at the same time it holds onto it like the self of naturally rational freedom, so that its world turns out to be just a displacement from one side to the other like a pendulum. Conscience must now integrate the two sides properly by finding a content in its own world (the restored legal world that is in process of construction now that the “despotism of liberty” is over and done with) for the morally autonomous will that emerged as absolute freedom at the climax of the “second world.”

Hegel says that the moral self finds a content for all three forms of law “in its self-certainty.” But what he calls here “the previously empty duty” was called the “self-certainty” or “pure self-knowledge” of the moral consciousness. The “self-certainty” of Conscience has to be something different from that; and the difference consists precisely in its concreteness. Conscience is certain of itself in its new legally-ordered world of equal “natural rights”; and it is certain of itself as the absolute freedom that defines, asserts, and realizes its own personal self. Hence it is certain of the self that is actually there in the world—the world in which the legal constitution is now founded upon “natural reason.” Consciousness, as Conscience, has immediate self-certainty; and this is not the intellectual intuition of a noumenal self in a moral world-order, but *das Dasein selbst*.

- 3./634. Conscience has attained a truth that corresponds to its certainty. So all displacement is overcome; it is a self-actualizing moral Spirit.

The “concreteness” of Conscience is what is underlined in paragraph 634; this paragraph simply repeats and reinforces the logical transition from the Moral World-View to Conscience. The criterion of Duty in the Moral World-View was the empty Categorical Imperative that we met in Lawtesting Reason. Conscience is not an empty form; it is a “concrete Spirit.” What that means was summed up in paragraph 633. The post-revolutionary Conscience incarnates its own legal world, with its “natural rights,” and its actual political freedom embodied in a determinate social structure. It does not claim (as Fichte did) to be able to project the ideal structure of a visible social order which would be directly continuous and harmonious with the Moral World-Order. Even Kant thought that this could be done for the world-order of the free communities. But the spirit of Conscience goes out to fight for Napoleon (and also against him) without any hesitations or displacements. It is a self-actualizing Reason that is not “subjective,” but confidently and firmly “situated” in its actual social world.

- 4./635. A case of moral action is an instance of active sense-certainty, a direct transformation of what sensibly is there into what morally ought to be there. In primitive sense-certainty, the spirit unconsciously transforms world into self [a linguistic universal]. Conscience does the same in the light of its immediate interest [“My child is ill,” says mother]. Conscience does not perceive its situation; for then it would have many duties. When one is being purely conscientious, one *knows* what is to be done. One is neither making nor testing “moral laws.” The “moral consciousness that was deedless” now moves into action.

In the moral world (as in the ethical world) cases of action were “things.” But Conscience goes right back to the beginning. It has the moral equivalent of Sense-Certainty quite spontaneously.³ Hegel presents this transition as one which the moral consciousness makes knowingly; and indeed Fichte made it. We have to remember the enormous influence of Kant and Fichte, and the great range of examples and applications of their views that they gave, in order to understand why

Hegel needs so many repetitive negations. I have tried in the analysis to isolate the positive doctrine and the systematic connection of Conscience with Sense-Certainty in Hegel's view. The text is fairly easy to follow, so the analysis is easy to check. In my commentary I shall concentrate on filling in the positive doctrines against which the negations are directed.

"Spirit that is self-certain" does not need either the casuistry that Kant so industriously supplied, or the Utopian constructions that Fichte offered. Hegel's language of "moral sense-certainty" should remind us of the "moral sense" school (especially Shaftesbury, who came within Hegel's cultural horizons quite early—probably at Tübingen).³

Kant was antipathetic to the moral sense theory. He insisted that Duty must be known, that it was universalizable as a "law," that it is not directly sensed or felt. So he belongs essentially to the Moral World-View, and we find him only negatively present in the Hegelian theory of Conscience. But Fichte—who gave the intuitively certain version of the "rational faith" in his earlier works (and climactically in the *Vocation of Man*)—is also a notable philosopher of Conscience, as immediate moral certainty.⁴ There is no such thing as a conflict of duties, he taught, because the criterion of duty is conscientious "conviction"; and that is a feeling. This "feeling of truth and certainty is the absolute criterion that we were seeking of the rightness of our conviction of duty." According to Fichte, "Conscience never *errs*, and it cannot err; for it is the immediate consciousness of our pure original Ego."⁵ One is reminded of Rousseau's dictum that "the General Will is always right, but it is not always enlightened"; and of course "the Law of the Heart" which we traced hypothetically to the Savoyard Vicar in *Emile*, is an important statement of the (still unsituated) morality of conscience. Conscience is now preserved from the excesses of sentimental conviction into which it there falls, by the definition in the legal and social order that it has now achieved.⁶

It is also Fichte (in the *Vocation of Man*) who regards moral action as the immediate conversion of sense-certainty into the implicit being (*das Ansich*) of the Spirit. Hegel attacks his sublime disregard for the independent reality of Nature in *Faith and Knowledge*.⁷ The stable world of Sense-Certainty is full of nameable things in space. But in time it is perpetual transience; and Conscience operates in the negative medium of time, so that actions are the responses to the moral sense and impulse of the moment. In the Kantian perspective of the Moral World moral situations become spiritual "things," so that conflicts of duty, or at least disagreements about duty, become possible, because the interests and impulses of the moral observer's place and moment become mere "properties" of a moral thing which is situated in a certain place (and can be observed from many other places). For Conscience this is impossible. The conscientious agent is in one definite place, and she must act at this moment. The situation of Conscience is unique, so all casuistry is ruled out.

We cannot fail to remark on the resemblance of this position to that of Antigone and Creon. Conflicts will not arise automatically from such natural factors as sex, because "characters" are no longer fixed by such factors; moral commitments are

more variable in the world of liberty, equality and fraternity. But there will inevitably be diametrically opposed views about virtually every action, precisely because the *natural* feelings of the ethical substance have as much validity as any others. Thus (as the Suffragettes discovered) there are now both men and women who agree fervently with Creon on one side; and on the other side both men and women who agree with Mary Wollstonecraft's argument in favor of universal education for moral development. Fichte was a member of this second party, but he would be appalled to see where moral education has led, with respect to the liberation of practical interests (and consequently of conscientious feelings). In this world of feelings the most harmonious seeming tendencies are full of social dynamite.

The final displacement of the Moral World-View left all of us as conscious sinners in the presence of a Holy Will. Neither side is capable of a proper "deed." The moral consciousness remains "deedless" (*thatlos*) because it could never decide what the object of action was. This was because it was so preoccupied with the inadequacies of its *Anschaung*. Now the internalization of the Holy Will as the voice of Conscience has produced a rational will that can act. It has a content, and it knows what the content is. It is "moralische *Handeln* als *Handeln*."⁸

5./636. Conscience is in no way insecure about itself. It needs no God-given standard.

6./637. It is not tied in knots about whether it really *is* acting freely (morally) or not. It knows that it is not doing pure Duty; it is following its own singular conviction.

The strict doctrine of Conscience eliminates all the problems that arise from the mingling of knowledge with faith. Fichte was as much involved as Kant in the effort to rationalize religious experience into a continuum with scientific knowledge. He constructed that continuum at the level of *Anschaung*, which was the basic level of theoretical experience in the Kantian critical philosophy. But it is plain that for Fichte "religious obedience" (even when mediated by the *Vorstellung* of "holiness") is only an alienated imitation of true morality. So the encounter with God (whether as gracious savior, or as holy will) does not properly belong to Fichte's moral world-order; and those who accused him of "atheism" were justified in the sense that the only law-giver for Fichte was the finite moral self.

It is exactly here, however, that the problem of Conscience arises. How is the blind and dark immediacy of moral feeling (which is supposed to be unerring) to be conciliated with the intellectual intuition of "moral law"? Fichte has climbed to his position by using the ladder of Kantian cognition. He cannot simply throw it away (and, as we shall see, he does not do so). Conscience is a mode of universal knowledge as well as a uniquely singular feeling.

It is clear that Conscience needs none of the "displacements" of moral knowledge except the last. The top rung of the moral-world ladder—the last placement of our moral feet—was the Holy Will as an objective standard of pure Duty in its unity. That standard (in the inverted shape of the knowing agent, instead of the observing judge) is internalized in Conscience.

This brings out a different aspect of what Hegel meant by saying that "the preceding moral consciousness" was "deedless." The intuition of the moral world was

concerned not with doing any specific thing in the empirical world, but with the fulfilling (*vollbringen*) of “pure duty.” “Pure duty” was the object of its intuitively absolute knowledge. Wanting to bring forth something else (such as a recognizable self-affirmation, compare par. 602) is “impure.” The consciousness of pure duty contradicts itself about this (par. 602 is exactly where Hegel declares for the first time that “*individual conviction* and the knowing of it make up an absolute moment of morality”); but if we look at the whole cycle of displacements when the test of experience comes, we see that it is the *Gesinnung* that is put before God in the end. Only in my disposition, i.e. only in so far as I do *not* act, am I moral. Any action of mine fulfils a determinate duty—one that is flawed or imperfect because I am the one who has determined or defined it. It does not correspond to my “pure” knowledge, and others can criticize it. When I am made aware of its one-sidedness I can only pray for God’s grace on the basis of my pure intention.

Conscience dissolves all the displacements—and particularly the final reliance upon the “purity” of the moral disposition—in the recognition that I am my duty, *and* my duty is to be *me*. The uniqueness of “my own conviction”—*eigene Ueberzeugung*, underlined by Hegel as an unmistakably Fichtean expression⁹ which also carries an echo of Luther at the Diet of Worms—is what makes my duty mine. My conscience is my singular self-certainty as Reason: “Here I stand, I can do nothing else”; and (like theoretical Reason) this practical Reason is “all reality.”

- 7./638. Conscience identifies its being-for-self [its conviction] with its being-in-self [its duty]. This resolution is a running negation. The self contains its own nature, and conscience expresses its law as the “distinction” of duty at this moment.

Fichte’s definition of Conscience contains two elements. First, one must be formally conscious that some act is one’s “duty.” Here all of the familiar critical apparatus of the Kantian philosophy is brought into play: the good will, the moral law, pure respect, the Categorical Imperative. But secondly, this duty is imposed upon one in its absolutely specific form by one’s own “conviction.” Others may see other duties here, in perfect conformity with the abstract concept of duty; but those duties in the plural are not Duty in the singular. Concretely there is only *this* duty given me by my conscience which has determined this (formally satisfactory) duty as *mine* by “conviction.” So, as Hegel says, whereas the moral consciousness (in its World-View) grasped itself only as the *Ansich* or essence, when it becomes Conscience it grasps its “being-for-self” (or its self) as well. It has not lost its grip on Duty as “the essence”; but there is no longer a conflict (or disharmony) between “pure Duty” as universal, and “actuality” as singular. The self-affirmation of the necessarily existent and singular self has been accepted as a moment of Duty. The positivity of duty (as universal thought), and the negativity of the self (as unique thinker), run together into “pure” negativity. This coincidence is logically possible because Duty is always an Ought; nothing that already is can be Duty, but only what (as pure thought) is negative of what actually is. It is the universal and the singular negativities that “coincide” (*zusammenlaufen*). This pure negativity of the thinking self is not a living organic body, but a Cartesian pure

intellect. It simply “distinguishes” within the range of possible duties (the pure essence) which one is to be validated at this moment. The one which is thus distinguished becomes the concrete unity of Duty (the in-itself) and Conviction (the for-me). That is to say it becomes valid “in and for itself.” This unity is actualized in what I conscientiously do.

- 8./639. This negative will is strictly universal. It is only the duty I know to be mine, that is really Duty. The law is for my sake, not vice-versa. But formal Duty is the aspect of being-in-itself, which is distinct from the being-for-self of conviction because it is for others too. This being-for-another is incorporated as a necessary moment in conscience.

The possibility of turning the concrete moment of conviction against the formal moment of duty as such is at once clear. It is especially obvious to someone who has not had a Kantian education. Charlotte Corday meditated long and hard; and she had as strong a conviction of doing her duty as anyone has ever had. But none of us can call assassination a “duty” without mental discomfort. So Hegel did not use the word at all, until we reached the Moral World-View. The correct understanding of Duty, as he uses it, is given by Kant. Therefore we must now look for the self-affirmation that subverts the Kantian formal concept with full knowledge of it, and for the sake of an ideal which “fulfils” the moral law, but claims to be higher.

It is legitimate to say about Fichte’s doctrine of Conscience that “it is now the law that is for the sake of the self, not the self that is for the sake of the law.” For it is personal conviction that makes duty concrete. But the thinker who said this was consciously sublating Kantian morality, not just supplying the moment of concrete content that it lacks. Jacobi was, of course, inspired by the example of Jesus, when he made his rather grandiloquent claims in his open letter *To Fichte*:

Yea, I am the atheist, the godless one, the one who, in defiance of the will that wills nothing, wills to lie as dying Desdemona lied, or to lie and deceive as Pylades did in feigning to be Orestes; to murder like Timoleon, to break law and oath like Epaminondas, or John de Witt; who wills suicide like Otho, or temple-robbery like David—yes, I even will to pluck the ears of wheat on the Sabbath for no other reason save that I am hungry, and because the law is made for man and not man for the law . . . For I know, I know with the most holy certitude within me—that the *privilegium aggratiandi*, for crimes of this sort against the pure letter of the absolutely universal law of Reason, is man’s authentic right of majesty, the seal of his dignity, of his divine nature.¹⁰

Hegel does not want to go to this extreme of “subjective Beauty” yet. He has introduced Jacobi’s claim at this point for the opposite reason. For the moment he wants to show us, not how the Beautiful Soul is implicit within “Conscience,” but rather how “duty” remains present in conviction as the “essence” of morality. I may be quite convinced that what I do is my duty. But what I do (my *Handlung*) exists as a public “fact” (*Tat*); it is a “being,” and everyone knows that I was the one who did it. Everyone else can evaluate it by the formal standard of pure duty. This

variable evaluation is only an abstract moment compared with the concreteness of duty in action; but it is a necessary moment, because conscience produces actions, not an inward disposition. It makes the self exist visibly for others as well as for itself. For this reason, as we shall soon see, conscience must speak its conviction; the “deed” cannot speak for itself.

- 9./640. This being-for-another remains as the separate substance. But Conscience must be recognized in it. Conscience exists in a community of consciences—a difference from the Moral World-View which has no recognized status [cf. par. 447] and so is a play of subjective uncertainty. Personal conviction *is* personality as self-conscious. What is done with this recognized conviction, is therefore moral consciousness existing—the recognition is its *harmony*.

Conscience operates upon a singular immediate certainty. It is not a great whirl of competing certainties, but the simple global certainty that “Now I must do this” (like “Now it is Day”). The “substances” that are not really there for it at the beginning, are generated by its actions. The completed act—analogue to “Here is a tree (or a house)” —is “Here is what I have done.” For Conscience, as for Faust when he translates the Gospel, the only acceptable translation of *logos* is a radical rewriting: “In the beginning was the Deed.”¹¹ But the deed creates the *fact*—Faust’s word *Tat* means both. We all hear him commit himself. Our common memory is the element and the substance in which his action “has *standing* and *actuality*.”

Again, the contrast with the Moral World-View comes to our aid. What remains constant in all the shifts of consciousness in its moral world is the morality of “duty in its purity.” But that does not show at all, in our ordinary world. There is nothing moral “out there” that is universally recognized. The “moral disposition” is not actual; and the “achieved actuality” is not spiritual. Conscience has overcome that problem; it has successfully united Duty with actuality, because explaining itself is a necessary moment of the act. To speak (as Faust does) can be a self-sufficient act of conscience. Usually there is something else I must do; but I must always be willing and able to say what I have done. Otherwise it will not be “my act” that is seen at all. We can see, now, why it is only self-expression in *speech* that fully satisfies the concept of “action” in the spiritual animal kingdom. The post-Revolutionary “animal kingdom of the “spirit”—the rationalized bourgeois society of 1806, in which the singular rational selves are “real for themselves, in and and for themselves”—is the world of conscientious agents.

Of course, I don’t have to be explaining all the time, in order to be conscientious. It is enough that I know what I am doing, and can describe my duty if I need to; Conscience must essentially be reflectively thoughtful.

- 10./641. Looking back to paragraphs 394ff., we see that initially the *Sache selbst* was treated as a predicate [pars. 411–412] by the honorable consciousness. Now this abstract goodness is the subject in which all the moments of objectivity are united. Having been first ethical custom, then law and external authority, the *Sache selbst* is now subject [cf. pars. 17ff.] and has concrete content.

The individual with a satisfied conscience is at peace with the world. She will not rail at the luck of things (as the moral consciousness does in par. 601) or envy the situation of others (as the imperfect consciousness does in par. 625). This rational self-sufficiency first appeared in the Spiritual Animal Kingdom"; but Conscience is not an image of the world of nature in which a multitude of separate individual beings strive to preserve and express themselves. That animal kingdom is now "inverted" because the objective "common good" of the enlightened kingdom has now been internalized by the self. "Conscience" is the same "self" in everyone; it is a fully spiritual world.¹² The conscientious person is not "worthy," "honorable," "public-spirited"; she *is* her own personal conscience; and she is its abstract essence, which carries with it the principle of universal respect for conscience in everyone.

Hegel gives us a very useful summary of the stages by which the *Sache selbst* arrives at this Kantian universal subjectivity. Beginning as the "general good"—the abstract logical category that can be "predicated" of worthy agents and actions—the Thing Itself becomes the "ethical substance" in the world of True Spirit. Here it has two sides: the tribal custom and the political constitution. In the world of *Bildung* it gains outward thereness as God's Law. For after the external compulsion of Roman Law breaks down, the long process of self-reconstruction depends upon the ideal authority first of the unselfconscious projective thought of Faith, and then of the consciously rational action-programme of the Enlightenment. The experience of the Revolution turns this outwardly oriented programme inward, so that in the postulational theory of Kant and Fichte, the *Sache selbst* gains the "self-knowing essentiality of thinking." But only now in Conscience is the Thing Itself plainly recognizable as the universal *subject*, i.e. as the "subjectivity" of the "ethical substance." The "ethical substance," moreover, has become universally moral on the way, i.e. it has become the universal community of liberty, equality and fraternity.

If we want a name for the *Sache selbst* that will cover all of its "shapes," "the human good" would not be wide of the mark (the qualification "human" escapes Aristotle's strictures on the Platonic Idea of the Good, while retaining enough Platonic resonance to connect the *Sache selbst* of Chapter V with Hegel's definition at the beginning of the Introduction: "the actual knowledge of what truly is"). It is "the general good" that the "honorable" consciousness grasps; and it is essentially a predicate, for it is the *good of* humanity as such. So with only a small effort of supplementation, we can give a coherent interpretation of the *Sache selbst* in all of its important appearances in the *Phenomenology* on the basis of what Hegel says here.

In Conscience this "predicate" becomes "the *subject* that knows these moments upon itself." It has "substantiality in general" in the form of the "moral law," the *Ansich* which it makes into a recognized substance in the action. It has outward *Dasein* as a visible (and spoken) fact. Its "essentiality of thinking" is the concrete inward consciousness of this duty as mine by conviction. When we say that Conscience "contains" this moment and "knows it *an ihm selbst*" we are again insisting that Conscience must be explicitly self-conscious in a verbal way, i.e. it must be able

to explain and justify itself. None of the moments is self-sufficient. Conscience has “lordship” over them (*sie beherrscht*). What this means is that Conscience can shift from one to another in its explanation, according to what is needed; but this shifting will not be a redefining of what is “essential.” As the unity of the moments, Conscience itself remains always what is essential; and it can make all of its moments visible. It never needs to retreat into an invisible sphere.

This comparison with the abstract *Sache selbst* completes the account of Conscience as a Concept. We shall now see, at some length, that it is not just a formal concept (like the Moral World which “shifts” at every turn in experience) but an actual Concept that keeps its balance in all circumstances.¹³

(b) The “Experience” of Consciousness

- 11./642. Conscience is, first of all, knowledge. It needs to know the *whole* situation, but it also knows that it does not know everything. I do not just express *myself*, but act in the world, which is not a mere manifold, but a system of circumstances. I cannot know or consider all the ramifications. I do my best, and for me, that is enough. My situation is what I know it to be.

When we first reached the Concept of Conscience (in par. 631) Hegel pointed out that the “world of displacement . . . will not become anything else in its essence through its going back into itself.” We shall now see just how true that comment was, as all the aspects of “moral perception” reappear. But the “experience” of Conscience does not shift it round in a circle; it drives the Concept deeper and deeper into itself until it inverts into the Beautiful Soul.

In practice the criticism of Conscience begins with the question of what knowledge a conscientious agent needs. The main drift of the argument is obvious, so we can use our intuitive preconception of it to follow the movement of Hegel’s technical language. This is a valuable advantage, because there are always places where we have to struggle with the conceptual armour to elicit the precise import of the argument.

A *Gegensatz* makes its appearance in action (viz., the antithesis of “what is” and “what ought to be”). This has several specific aspects (“singular determinations”) of which the first is the agent’s knowledge of the actual situation. This is the moment of universality in or upon this conscientious knowing. What that means (as Hegel explains in plain language) is that we ought to grasp the situation in an “unrestricted” way. This may be a deliberate invocation of the “bad infinite,” but let us take it commonsensically, i.e. let us set a standard that might in ideal circumstances be met. We would ordinarily say that in acting “conscientiously” we need to know everything morally relevant to the visibly finite list of options that are open to us. But knowing is only one moment in action; the crucial point is that we have to decide and to act now, before the control of the options is lost to us. So what we might ideally achieve if the understanding of the situation were our main object (and not just the necessary first moment in our deciding what to do) is just what we

cannot achieve right now, when we need it. We know (says Hegel, but in strict logic we are only bound to fear and to suspect) that we do not (read: *may* not) know everything relevant. Since we ought to be “sure,” our decision, whatever it is (and however lucky we may be with the results) does not meet the standards of a rational conscience.

The mention of “luck”—which I have injected deliberately in line with my commonsensical reading of the text so far—brings up the other limit of knowledge in action. We almost certainly do not know all of the relevant existing circumstances (which might be possible for us if we made “knowing” our object). But on top of that we *cannot* know all of the morally significant consequences of whatever action we may decide upon. In the “genuinely universal and pure connection of knowing” we simply want to know how things are, i.e. we want to make being and thought coincide in a perfect identity. But in action there is the antithesis between how things are and how they ought to be. To know how things are is possible (with a degree of accuracy appropriate to the subject matter as Aristotle might say); to know that our action will produce the situation that our conscience dictates is not.

The reaction of the actual world to the negative activity of our active thought is not completely foreseeable. Even if we do produce the situation that we envisaged, this intended result of our action still has a hidden side; and with respect to consequences I cannot conscientiously keep the bad infinite out of the picture. I do know categorically, whenever I act, that the consequences will spread out indefinitely in all directions; so I cannot conscientiously ignore that knowledge. I am thoughtfully conscious of the natural order (the “absolute *other*”) as a “manifold in itself.” But like a stone thrown into a lake my action generates novelty in all directions. It makes the bad infinite exist *für sich*, or on its own account.

Hegel says that the “actuality subsisting in itself,” against which action is directed, is an “absolute multiplicity that divides and spreads out endlessly, backwards . . . sideways . . . forwards . . .” The forward chain of consequences needs no comment; and the “sideways” effect upon the active situations of others (whose actions have their own independent chains of consequences) is easy enough to grasp. But the spreading of the actuality “backwards into its conditions” needs some consideration. The “obvious” interpretation is to say the situation is already a bad infinite of “conditions” before I act (and hence it is a logical truth that it cannot be known sufficiently well to meet the rational standard of conscience). But when I avoided this interpretation earlier, I was not simply guided by my own commonsensical empiricist prejudices (though I admit they are there). I was influenced more by a properly Hegelian imperative. We must not allow “absolute scepticism” to raise its head again.

Hegel seems to assert clearly at this point that the bad infinite only becomes “actual” because of the action. It is only as a result of my action that the situation *becomes* a bad infinite of backward-spreading conditions for me. There are morally significant facts about my own motivation, and about the way I interpreted the situation, and the way other people represented themselves to me, which only become knowable by me in hindsight. It may seem now as if I am simply reading my own

post-Freudian conception of action back into Hegel's world. But, in fact, there is a Kantian doctrine of the unconscious self; and the whole Hegelian doctrine that "philosophy is the comprehension of its own time in thoughts" rests on the clear recognition that the past always belongs to the present, and hence it necessarily has a perpetually novel aspect constituted by our present standpoint upon it.

I think this is what Hegel is referring to here. In the perspective of Conscience it is the Kantian negative insight that is important: we do not intuit our own motives, we do not comprehend the "conditions" of our supposedly conscientious conviction; and the action itself, as we and others react to its consequences, opens up a backward vista that is like a bottomless abyss. Psychoanalysis has given us techniques for handling this, and even (in a measure) for comprehending it, and mastering its terrors. But any reader of the Bible, of Dante or of Shakespeare, knows that the discovery-experience itself is not exclusively post-Hegelian.¹⁴

This self-knowledge is, by definition, what the conscientious agent cannot have; and the actuality of the bad infinite in *all* directions is generated by the action itself regarded as a *Gegensatz* between the existing situation and the objective goal of conscientious action. Thus an honest Conscience is always guilty. The self-satisfaction of conscientious "conviction" is just the internalized form (comprehensively inverted because it includes all the finite limitations of the previous moral consciousness) of the almighty and all-knowingly gracious God who accepted the incomplete performance as complete, the imperfect as perfect; and the God's-eye view is impossible. But the inevitability of "guilt" is a "metaphysical" concern. Come what may we do have to act; and we all agree that when someone does "the best she can" in the light of what she knows, the action deserves to be called "conscientious."

- 12./643. There could be many duties even within the situation as I know it. I decide (by conviction) what my duty is. This conviction is an empty form (it can apply to anything) but it actually has my natural inclinations as its content. My conscientious duty can only arise out of *my* feelings. If it came from anywhere else it could only be an imposition on me. So Conscience is necessarily capricious.

The "second determination" of Conscience involves what we may call "abstract deliberation." When I am thinking about what I ought to do, then (on the assumption that I do not decide that I must find out more before I can act upon the case—in which event it would cease for the moment to be my own concrete case) I find myself with various options depending on how I look at it, which aspects are important to me, and so on. No matter how firmly I insist that a "concrete" conflict of duties is impossible, I do have to choose between duties in the abstract, or between the possible "maxims" (to use the Kantian expression) that could be made categorical by my personal conviction. "Pure conviction" is like "pure duty." It is an empty subjectivity to match with the empty objectivity of the moral law. The actual subjectivity that identifies duty by conviction is my empirical self with all of its "natural" content of impulse and inclination.

Thus the “conviction” upon which I act is a concreteness of my embodied being. No objectification of the self that we have so far come upon has the concreteness that attaches to my feelings and sensations. I may of course be a “patriot” (like Adam Lux, however, rather than like Charlotte Corday);¹⁵ or I may be a public-spirited civic “worthy”; or a parent concerned for my children. But my conscientious conviction about any of these things comes from what we rudely but insightfully call a “gut-feeling.” “Conscience” is a gut-commitment; and it is not Reason that the guts are full of.

- 13./644. This capricious decision is my “duty.” I can think of it as my duty to get rich (for family’s sake, or for the sake of my social usefulness). Others may think this is a *Betrug*. Violence is moral self-assertion, so-called “cowardice” is the duty of saving my (socially useful) life. One is only immoral if one does not know what to say.

We have lots of “gut-feelings.” So conscientious conviction is at the mercy of the “free will” that Kant called *Willkühr*. As observers, we can set up an abstract scale topped by the patriotism of a good Fichtean like Hölderlin’s friend Jakob Zwilling, who died at Wagram;¹⁶ and containing, in order, the civic respectability of Hegel’s Frankfurt employer the wine-merchant Gogel;¹⁷ and the parental concern of Hölderlin’s mother Frau Gock.¹⁸ At the bottom of this scale comes the gut-conviction of the Abbé Desfontaines that he has the strongest possible right to go on living—and to do it in comfort.¹⁹ Any of these “convictions” (or a host of others that can be placed along the scale between them) can become the actual conviction of Conscience.

The wine-merchant Gogel certainly wanted every year’s end to find him a little richer than the year before. He ran a family firm, and his dead brother’s children depended on him as well as his own; so if he was sometimes a bit like Scrooge in his business we can easily see how he could salve his conscience with the argument that Hegel here provides. He did become a Senator of Frankfurt in 1806; so he was certainly alive to “the *possibility* of being useful to his neighbors.” But we may well imagine that customers whose unsatisfactory wine he would not take back, or Hegel himself, as the house-tutor of the Gogel children, sometimes thought that Johann Noé’s “worthiness” was all a *Betrug*—just the hypocritical façade erected by someone who was already well-off, but was insatiably greedy for more.²⁰

The soldier who runs away can always claim that the battle was lost anyway, and that his *duty* is to save his life with all of its potential social usefulness. What others call “courage,” or his duty to stay and fight, he sees as a violation of the only *real* duty that he had left. Hegel “abstractly” divides this conscientious duty into two, with the obvious intention of suggesting that there is a *Betrug* involved in arguing that self-preservation is a “duty” because one is socially useful. But the real vitriol comes out, when he suggests that “immorality” can only consist in the clumsiness or ineptitude of not knowing what to *say* about what one is doing or has done. Conscience is self-sufficient, as we have already seen, because it knows how to explain itself, or how to accord itself the proper recognition.

- 14./645. An outsider's opinion is irrelevant. He only sees a single side of my case. I can accept or reject his advice as I choose. There is no content that is universal as such; hence nothing is duty until I decide that it is. The good of mankind or of my community is not an object of duty more than my welfare; as opposed to my welfare it is just as determinate. *My* prosperity is a contribution to the general welfare; my spending puts money in the pockets of others. Duty is not to be determined by calculations of utility.

The deepest logical problem about Conscience is that all genuinely felt "convictions" are equally immediate. There are only the two pure forms, the objective form of Duty—or the Categorical Imperative as a test of "maxims"—and the subjective form of Conviction—identification with my "self." The two empty forms can coincide upon *any* content; and once they have both closed upon it, the resulting "Conscience" is unassailable. Every other content that might be put forward is equally determinate. Since every actual duty has its universal and its singular side, we might think that abstractly singular duties can be compared with respect to their universal scope. But consider the case that Sartre made famous. Is there any point in telling the young man who is supposed to have a conflict of conscience about joining De Gaulle's Free French force in Britain, as against caring for his widowed mother, that "la patrie" is the general good? Obviously not. He will do whatever he is going to do without really being affected by that.²¹

In the peacetime situation, when the Republic and its constitution are firmly established and safe, the argument will be even more pointless. A "crisis of conscience" will arise then only through a protest against the subsisting general order of things, i.e. it will emerge as the Law of the Heart. Morality as personal conviction wants always to be more than a heteronomous obedience to established law or custom. But this actually means that, in principle, the "freedom of conscience" is a right to be and to do *less* than was categorically required by the ethical identification with objective "justice" that was spontaneously achieved by True Spirit. Charlotte Corday knew that the assassination of Marat was "against the law." But she had a "good conscience" about it; and although we can hardly call her a true paradigm, we must admit that she had a better right to a good conscience, than Eichmann or others like him, who have claimed to have a good conscience because they were only "*obeying* the law."

The most interesting aspect of Conscience is its ready assimilation of the bourgeois doctrine that there is a necessary harmony between private and public prosperity. Not only does getting rich mean that one is able to be more benevolent, but by spending for one's own enjoyment one shares the wealth. Thus private prosperity is good for the community as a whole. Hegel seems to have brought in this "economic" argument about the harmony of private and public good in order to distinguish the standpoint of the "Real Individuals" from that of "Conscience" proper. For, of course, a good Conscience never *uses* this argument; but a merchant with a "good conscience" will indignantly reject the argument that a public servant is more conscientious than she is. The moral response to all utilitarian arguments is that nobody can actually measure private and public good successfully; and the self-sufficient certainty of "conviction" despises all this calculation of more and

less. But the consequence is that we have to leave Conscience to define itself.²² No external standards, either of custom or of rational calculation, can be imposed on it.

- 15./646. Conviction is the unity of pure thinking and individuality, of duty and inclination. It recognizes no independent authority, and takes charge of Peter's keys. Duty is self-determination pure and simple.

Hegel now summarizes and repeats the argument of paragraphs 642–645. The object of this summing up, which emerges at the end of paragraph 646, is to facilitate the move from a Fichtean to a Jacobian position. As a result of its complete self-sufficiency with respect to knowledge, and its absolute impregnability to criticism with respect to its decision, Conscience “has the majesty of absolute autarchy, to bind and to loose.” The unmistakable reference to the power that Christ gave to Peter, which the Papacy inherited, leads us directly to Luther's defiance at the Council of Worms, and so to the *Protestant* conscience as the power that can bind and loose itself. This is the “majesty” that is above the law (as Jacobi claimed). Conscience is “self-definition.” It knows no Lawgiver, because it is itself the Test of Laws. It is in accord with duty (*pflichtmässig*) because it *says* so.

According to its explicit claims, conscience is the unity of *pure* Duty (the being-in-itself of the rational self) and perfect Conviction (the being-for-itself of *this* self). Luther is convinced that he “can do nothing else” because “God” requires him to stand firm. God is the absolute object of his “pure thought,” and it is he, the individual Martin, who must stand by God, just as he prays that God will stand by him. In this communion of the two, the mediating unity is “the self-certain Spirit.” Nothing can stand as an independent authority against this spirit. God's truth, for example, is in the Bible; and Martin does not claim to be the only, or the best, scholar of the text. But he must act in terms of the knowledge that he has; and it is just the obstinacy of a gut-conviction, just the fact that his reading and his feeling are *his*, that he sets against the long tradition of the Church. He was by no means the first to argue long and hard for this view, without convincing the Council. Why can he not give in? Because it is against his *Gewissen*, against the certainty of the “Spirit” within him.

But if the soldier can argue that he has a conscientious duty to save his life, and the merchant can prove that by enriching himself, he is automatically doing his duty to his fellows, what does “conformity to the moral law” mean? “Duty” is an absolutely empty form that is sublated in Conviction; and Conviction affirms whatever the “natural individuality” of this specific Real Individual (or “spiritual animal”) supplies as a content. No one has ever put the argument of Luther's opponents at the Diet more powerfully than Hegel does here. Against all the traditions and discipline of the universal community, Luther sets his nakedly opinionated self-will. To stand firm was his duty, because he saw it as his duty; and the important thing was that his own community supported him. However self-willed it may be, Conscience is never simply “private judgment”: it is a private judgment that demands universal recognition. This is what we now have to observe.

- 16./647. This pure knowledge of self is what has to be respected by all as what their *own* self-hood is.

Luther's experience is essential to Conscience, because the Spirit is explicit in it. He has to stand by *his* reading of the Bible, because Christ, the "selfhood of all," rose for him in it. But there had been others before him, who were "convinced" of their duty to stand by their own insight.²³ Luther was the one who had a community behind him strong enough to maintain his "self-certain Spirit." His community recognized the universal right and duty of maintaining one's own conscience as one's own. It is important to put the "right" first, because Luther's opponents understood well enough that he thought he had a "duty." What puzzled them was the origin of his supposed right to define it as he did; it is the *right* of Conscience that must be generally recognized.

The right involved here is the right of a "being" to exist. Even in the sphere of legal right, the recognized being is a "spiritual" one (which means in empirical terms a "being" that is constituted by language). The law constitutes an unborn baby, or a child too young to speak, or a lunatic, or a dead man, or a trust set up by the will of someone long dead, or a company of investors, as a recognized "person" with rights that are defined by the law. But Conscience is the *self*-definition of a person in terms of a law that she gives for herself at the moment of definition. Thus, we cannot exclude the self-definition of the merchant who holds it is his duty to get rich, or that of the soldier who says it was his duty to run away. These, too, are self-defining individuals, just as much as that lonely figure of blind obstinacy or divinely inspired insight (or simply of a new form of social consciousness, depending on your point of view) at the Council of Worms. Consciences are all (materially) *different*; and they are all (formally) *equal*.

- 17./648. But what I do exists for observation apart from me; and others may or may not approve of it. So my universal certainty and their universal recognition become dialectical uncertainty and non-recognition in actual situations. Others judge me by what I did and said; but I may be just as much beyond it as they are. So displacement starts again.

At this point we move from the "moral certainty" of the agent, to the "moral perception" of the observer or judge. The Moral World is intellectually intuited as a kind of "space." All of the "views" are together, and we try to make them into a rational order of coexistence on the model of the world of perceptible things. But Conscience, as the moment of intellectual certainty, is a time-line. It does constitute moral "things"; but the "things" do not pre-exist for it (as they do for the Kantian moral Perception). The moral things that it constitutes are its "actions"; but it demands recognition for its "self" as the self-positing, or self-defining, agent. So there is, after all, room for a dialectic of displacement between the things that are posited, and the self that posits or defines itself in them.

The things in their simple being, the actions once done, are nobody's Self at all. Everyone can arrive at their own opinion about any act. Discovering that we all

disagree about something, in a sphere where everyone's opinion deserves respect, creates a situation of "perfect uncertainty" about the actual spirit of the agent. She may be inspired by the Devil, who is a liar, and the father of lies. The actual self who did the action can protest against this cloud of judgment in two distinct senses. On the one hand, no one else can really enter exactly into the conviction of the moment when I acted—"You weren't *there*," as we say. On the other hand, I myself have now moved on too; I am just as much somewhere else as all my judges are. I may still remember how I felt then; but there is nothing necessary about this. In other words I can claim that everyone else's judgment is *misplaced*; but equally I can *displace* myself. So universal displacement is just as much a necessary aspect of Conscience as universal recognition, because both sides (the active conscience, and the recognizing community) are "free from the determinacy of *this* action."

- 18./649. In so far as what I did is not what the other would have done he can justly suspect my motives; and he needs to assume the worst.

The observers cannot help but be in doubt about the agent Conscience, once they find that their views of the act differ. But this uncertainty must be resolved in the negative, says Hegel. For if Conscience is sure that it is right, then it must, in its own defence, be self-righteous. Many consciences do not work like that. But it is obvious enough that some do; and Hegel will show that the ones that do not, are no longer in the pristine condition of absolute self-certain "conviction."

Between Luther and his opponents, for example, there was no possibility of compromise. They were bound to see one another as servants of the Devil. How can he say that his arrogant defiance of the whole world is his duty? Does he not know that one must be humble, ready to admit the possibility of mistake, and so on? But the opponents of Luther had not reached the "autarchy" of Conscience at all, so we must move on to a case where there is genuinely reciprocal recognition. Consider the attitude of a soldier who fought in some battle till he was wounded and left for dead, when he hears a staff officer (who never came under fire himself) speaking of the moment when he realized that the only "right thing" left to do was to get away while he had the chance. For the man fighting in the line next to him who ran away, and admitted afterwards that he was just "scared to death," the soldier who almost died might have some sympathy. But this officer who sent others to their death, and then quite "conscientiously" saved himself, must appear *evil*. That choice was not on our soldier's moral map at all. His own action, which we are assuming he does not in any way regret, would make no sense if he allowed that the staff officer's choice was conscientious. The choice that coheres with his own would have been for the officer to ride the other way down the hill, and throw himself into the battle properly.²⁴

This example does not work in quite the same way in both directions. Even if the wound was permanently incapacitating, the staff officer does not have to claim that the soldier who is now a pensioner, or a Blue Coat beggar, did "wrong." He can say simply that their situations were different, and so their "duties" were different.

Conscience only becomes necessarily “self-righteous” when a negative judgment of the other is directly implied by what I did, or by what I now feel that I must do. In other cases, I still have all the abstract casuistry of the Moral World-View at my service. Thus, the man who was wounded can say of the one who panicked that he fought bravely enough until it got too much for him: “He did his best (and God will pardon him).” But when he says “May God have mercy on him” about the staff officer, he means something else entirely. There cannot be any proper “forgiveness” between them as long as the officer maintains his “conscientious” stance.

- 19./650. Once the moment of conscientious commitment is over, the act appears to be simply the satisfaction of a desire. An act of conscience has to be respected in its relation to the self.

Even the conscientiously unforgiving self does move on. So the time may come when it does not matter any more. If we take our battle to have been Marlborough’s victory at Blenheim (1702), and suppose our wounded woldier to have been on the winning side, we can readily imagine him coming (years later) to much the same view of the whole business that Robert Southey’s “old Kaspar” expresses to the little boy who wants to hear about it:

“But what good came of it at last?”
 Quoth little Peterkin.
 “Why that I cannot tell,” said he,
 “But ’twas a famous victory.”²⁵

Someone a bit more philosophical than Kaspar (as one of the losers might well be) could perhaps join his staff officer over a mug of ale while they compared their stories and laughed over their adventures in what appeared years later to have been a pointless commitment in any case. The battle does appear to us in Southey’s poem as fulfilling the “pleasure and desire” of someone (though hardly of the direct participants); and once the surviving participants come to this view of it, the need for moral judgment lapses.

It is not immediately obvious what fresh point Hegel wants to make in this paragraph. But if we look at the flow of the argument as a whole, it becomes clear. The moment of *Dasein*—abstract and concrete—is what is at issue. Hegel says in paragraph 649 that both the agent and the observers are free from the *Bestimmtheit* of duty. But, he adds here in paragraph 650, the “action” is not just this *Bestimmung* of being. The “knowing and conviction of it as duty” is what must be recognized. The “determining of being as such” produces only a “common actuality” (something to be laughed over in the tavern years later). It is the “known being” (the *Gewusstsein*) that requires to be recognized: the action as informed by the agent individual’s knowing of it. This is the *Dasein* that has to be the “recognized being” of Conscience. In other words, Hegel is once more setting aside the babel of external criticism. He uses it only as a means to bring out the verbal character of Conscience as its absolute form. It is not what is done, but what is said about it by the

agent, that matters. We begin to learn here that what others say is not decisive. This is confirmed by what follows. The fact that others are bound to take my conscience for a bad one, only becomes important when I begin to have a bad conscience myself—and that is not yet the case.

I said earlier that unlike the consciousness of the Moral World, Conscience does not shift or displace itself. But Hegel himself speaks of its “displacing” what it sets before the community in paragraph 648. So we should look more closely at what happens in paragraphs 648–650. The reappearance of displacement is a mark of vulnerability. But for the present it only serves to reveal why and how Conscience is absolutely invulnerable from outside. Conscience does not adopt a different position like the “moral consciousness.” It holds firm to its own position always; but being “moral sense-certainty” it is perpetually displaced by the world. Willy-nilly it has to go on to the next moment of its life all the time. The situation that it is in, changes; and what it says about itself must change too, because the *past* self is not its “actual” self any more (but only a sublated moment of the present self). Thus “forgiving and forgetting” is a normal part of the life of Conscience; and for the moment, this is just the last phase of the “experience” that teaches it how to escape from external criticism altogether.²⁶

- 20./651. The *self* enters into being in conscientious action. What is *respected* is its conscientiousness. General recognition is not concerned with the act’s effects, but with the agent.

In the world of Conscience everyone understands the limits of conscientious knowledge and control. That is why we feel that Oedipus is unfortunate, and not a criminal. Oedipus himself, as Sophocles portrays him at Colonus, has discovered the position of Conscience. He demands general recognition of the fact that, in spite of the objective horror of his deeds, he has done no moral wrong.²⁷ His “immediate” actions are not what count. We have to comprehend the situation, first of a man attacked by strangers on the road, and in real fear for his life, and then that of one invited to become king of a strange city, with marriage to the widowed queen as the necessary condition for this. The “action in itself” has its intrinsic being in the order of nature; but the conscious act of the self has its being in consciousness; and although the singular self may forget, and must eventually die, the general consciousness is permanent. So by its recognition it can give to the conscious act an objective reality just as permanent and stable as that which the natural (or immediate) act enjoys. The natural effect of Oedipus’ marriage is that his own children are his siblings. But that was never known and meant to be, and it does not *have* to be recognized. Both Oedipus and his children can fairly complain—as both he and Antigone do—that they have not been accorded proper moral recognition.²⁸

- 21./652. Thus here again it is language that is the mode of being of Spirit. My conscience is what I *say*.

Conscience is the linguistic existence of the self *for* itself and for others (cf. par. 508). The *statement* of conscience is the objectification of the self involved in Fichte's Identity principle. "I the subject am identical with this objective definition" is what is symbolized by "I = I." In order for this to be true, however, *every* "I" must accept my self-definition as truly "what is there." The statement of Conscience is the statement of "what is *here*," and everyone must see it as "what is *there* in *that* place."²⁹

- 22./653. This self-definition is not self-inverting but self-certain [contrast pars. 520ff.]. Ethical life could command and lament. The Moral World-View is silent. Conscience is a *voice*; and language is the essential medium for the mutual respect of its self-definition. Without that, the self could not distinguish itself from what it has done. Conscientious action is the actualizing of self-certainty, not the making of a plan into a visible thing.

Because Conscience is self-definition (in action and speech together) in the sphere of universal recognition, it cannot suffer inversion, as the language of honest Culture does, through the fact that language exists for others as well as oneself. That is why the dialectic of uncertainty, which forces those who are conscientiously opposed to me to regard me as *evil*, does not affect the absolute *autarchy* of my conscience. Others may misunderstand me, so that I am obliged to explain myself further; but no matter how long this goes on, I remain the authority. If the other says she understands, but the understanding contains a secret inversion (like the one that is explicit, not secret, in the discourse of the Young Rameau) then we are not at the level of Conscience, but have simply slipped back to the level of *absolute* Culture. We must distinguish this sort of conceptual backsliding from the forward movement of Conscience itself toward confession and mutual forgiveness.

The "return of the Spirit into itself" is what is expressed in the fact that the last word in any proper discussion of Conscience is with the conscientious self. Oedipus and Antigone bewail their lot, but they know that they must bear it. The Chorus does not respond with conscientious sympathy, but with the insistence that one cannot argue with what the Gods (or the City) decree.³⁰ So although Oedipus, particularly, states a conscientious position, it is not founded in the universal context of a self-conscious community.

Hegel's characterization of the Moral World-Consciousness is interesting. He sees the process of *Verstellung* as arising because this consciousness cannot say what it knows. It cannot define the essence of its position in objective terms, because it remains in the inner world, and has only an external connection with the publicly visible world of *Dasein*. Conscience can overcome this alienation, precisely because its expression is essentially linguistic. The conscientious self is visibly "there" for the first time in a sensibly public world that does not limit or impede its spiritual freedom. The determinate action is finite (and may have an objective essence that violates what Conscience was really aiming at, like the actions of Oedipus); but the speech of conscience faithfully expresses its conviction.

Thus conscientious action is just the sort of immediate transition from inward secrecy to outward publicity that was defined as the “action” of Reason in paragraphs 401–404. One might be tempted to think that a merely verbal performance cannot be of much significance; but it was everything to Luther at Worms. Mere speech is often *not* worth much; “hypocrisy” is the shadow that Conscience necessarily casts, because it is so easy to say what is false. But that of itself makes the importance of conscientious speech vivid—as we can see in the story of Peter’s denial of Christ.

- 23./654. Conscience is what it says it is. It is not legitimate to doubt its “truthfulness.” That everyone should define himself thus, is the essence of the right.

Peter was convicted by his own conscience instantly as soon as Jesus looked at him. But when one *is* speaking as conscientiously as one can, it is no use to object by raising the Kantian critical possibility that there is a hidden selfish motive. We do raise that possibility, but when we do so we are not at the level of Conscience proper. We are either being cynical with the Young Rameau, or we are beyond the stage of simple conviction altogether, and are communing with a conscience that knows its own essential badness.

When Oliver Cromwell adjured the General Assembly of the Church of Scotland (in a letter of August 1650): “My brethren, I beseech you in the bowels of Christ, think it possible you may be mistaken,” I am sure that he was not challenging their conscientious “honesty.” He wanted them to reconsider the facts, and to come to a different conscientious conviction. His very language shows, I think, that he *relied* upon their conscientiousness. This is the world of the saints, who are communing with one another. Some of us in the visible community may not be saints, of course; we may be among the damned. But that is a matter of God’s predestination and election; with that theological doctrine, we have put the Unhappy Conscientiousness (in its final shape of Kantian rational scepticism) decisively behind us. We hope to find ourselves among the elect; and the only earnest of our hope that we can have is to live conscientiously, and to express our genuine moral convictions. In this perspective, a conscientious declaration is not a statement of empirical belief; it constitutes the truth performatively. Any errors that can be proved or suspected in it must be such as to leave this constitutive function unaffected.

Conscientious truth is not testable like empirical assertions; it is the truth of “self-definition.” As such it is not subject to doubt, or to further investigation; it is the object not of doubt and question, but of moral respect. All that we have the right to ask, is that it should declare itself. Conscience must recognize its community, as surely as it demands to be recognized.

(c) *The “Loving Heart” (Novalis)*

- 24./655. Thus Conscience is “above the law” [cf. pars. 375–377]. It is moral *genius*, which knows that its voice is the voice of God, and that obedience to it is divine service.

The Conscience that has come to perfect self-consciousness in response to all of the abstract criticisms that can be offered, has transformed its own Concept in the process; from being the voice of God as Lawgiver it has become the voice of God as Creator. In its perfect autarchy it does not give and obey “laws” (as it seemed to be doing when it first appeared). The character of its language has changed; it *defines* itself; and that self is the universal self. But the definition is *not imperative*. Conscience demands absolute respect; so, of course, it must accord absolute respect likewise. In rejecting all the imperatives that others see as valid, it must reject any imperative interpretation of the significance for others of its own self-definition. Instead, it uses language aesthetically; it *creates* itself, and it sets us an example of how to create ourselves.

Logically, the Beautiful Soul is the *Gegensatz*, the contradictory shape implicit in the shape of Conscience. We have seen Hegel reduce the duty of conscientious conviction to “truthtelling”; but being “true to oneself” can be quite consistent with “telling a lie” in the phenomenal world. Earlier we quoted Jacobi’s claim that Conscience has the “right of majesty” (the right to pardon offences); and the first example he offered was “dying Desdemona.”³¹ Jacobi’s “moral Self” is plainly the sort of ideal *Gestalt* that we need at this point. But Hegel’s further designation of sovereign conscience as “moral genius” (*moralische Genialität*) brings in several other figures by implication—notably the brothers Schlegel and Novalis. We shall come upon an unmistakable reference to Novalis, a little further on (par. 668); and this, together with the jibes at “genius” in the Preface (pars. 68–71), confirms the reference to that circle. Among the geniuses who philosophized in “fragments” was Schleiermacher (he was one of the anonymous contributors to the large collection published in the *Athenaeum* in 1798).³² This is important because in *Faith and Knowledge* Hegel identifies his *Addresses on Religion* (1799) as the highest “potentiation” of the Protestant principle of subjective “beauty.”³³

The figure of the “Beautiful Soul” has its philosophical origin in Shaftesbury; and it was naturalized in German literature by Wieland. Hegel certainly read Wieland; but Jacobi was more influential in his development. Jacobi’s *Woldemar* (1779) was certainly important in Hegel’s early reflections upon this *Gestalt*, since he read and discussed *Woldemar* in a group at Tübingen (perhaps as early as 1790).³⁴ The most widely known example of the Beautiful Soul, however, was in Goethe’s *Wilhelm Meisters Lehrjahre* (1795) Book VI.³⁵ Novalis does not use the expression, but his *Heinrich von Ofterdingen* contains, in Hegel’s opinion, the perfect shape of the Beautiful Soul as unsatisfied (and hence “unhappy”) *Sehnsucht*. Hegel would expect his readers to know all of these sources, and also Schlegel’s *Lucinde* (1799)—where some earlier pious model of intellectual beauty (from Wieland or Jacobi?) is vigorously assaulted and dismissed by a new paragon of *sensual* liberation.³⁶

For all of these writers the most important philosophical influence is that of Hemsterhuis (although Jacobi may depend on Shaftesbury as well); but the crucial definition of this ideal of “beauty” in the Kantian terms of the Moral World was given by Schiller in his essay “On Grace and Dignity” (1793).³⁷ Goethe himself

exploits in a very gentle way the same dialectic of moral “dignity” and aesthetic “grace” upon which Schlegel seizes so vigorously.

Finally, Hegel’s text makes it perfectly clear that the *Hyperion* of Hölderlin (1797, 1799) contains the most perfect (and the most positive) projection of this *Gestalt* of consciousness. But as we shall see when we come to it, the use that Hegel makes of *Hyperion* as the “hard heart” is one that tells against any reference to this model at the beginning of the discussion.

As the allegory in Friedrich Schlegel’s *Lucinde* dramatically suggests, these necessarily “fragmentary” ideals of pure subjectivity are all different. This is inevitable, just as their “fragmentariness” is inevitable, because we are now beyond all possible rational laws and rules. “Love and do what you will” is the only principle of action left. But the Beautiful Souls do not have to “love one another.” If Schlegel is right—and I think that at least he is logical³⁸—they cannot do so. His ideal grabs the face of the one that I take to be Jacobi’s, and tries to wrench it right off, saying that it is only a mask. These subjective ideals can criticize one another, but there is no common standard by which a decision can be reached between them. It is the impossibility of constructive communication and argument implied by their subjective “fragmentariness” that makes them “evil” in Hegel’s eyes. He accuses both “common sense” and “genius” of

trampling underfoot the roots of humanity. For the nature of humanity is to drive towards agreement with others, and its existence is only in the bringing to pass of a community of consciousness. The anti-human, the bestial, consists just in standing still within feeling, and only being able to communicate through feeling (par. 69).

The “fragmentary” variety of the divine feelings of “genius” would make it difficult (and even misguided) for Hegel to focus his critique upon a single target. We should be sensitive to the fact (which Schlegel’s “Impudence” uncovers) that Hegel’s attack can strike opposite enemies at the same time. Thus the accusation that “its action is the intuition of *its own* divinity” may seem to be valid only against the explicitly *humanist* religion of Schlegel and Novalis. But by intimating that the “Beautiful Soul” of Jacobi and Goethe wears “Modesty” as a mask, Schlegel himself is showing how the complaint can be made valid against the writers whose piety is outwardly more orthodox.³⁹ Hegel’s agreement with this view can be inferred from what he himself said (in *Faith and Knowledge*) about Schleiermacher’s conception of the Protestant minister as a “virtuoso of feeling.” Schlegel and Novalis are, if anything, slightly superior to the orthodox religious aesthetes, because at least their intuition is not an “art without works of art,” even if it has only their completely “idiotic” private selves as its subject matter.⁴⁰

25./656. This lonely service is at the same time a communal one. What the voice says is “objective,” and has universal force. To express it is to set oneself up as a pure, hence a universal, self. Everyone respects it and we all feel good for being conscientious. The voice can still be distinguished from what I do; but I know that God is within me, not outside. I refuse to be alienated from that divine voice (so God remains

present not lost). God and I are related within my consciousness, and the relation is unity not distinction (which would require a middle): I know that I am one with God (a religious knowledge which is expressed outwardly as the utterance of my community).

The orthodox writers (and especially Schleiermacher) fit Hegel's description of "this solitary divine service" as one that is "at the same time the divine service of a community." But it is Novalis whose artist-figure is most truly solitary or lonely (*einsame*); and just as the Heinrich of Novalis is questing for a new kind of religious community, so it is clear too that Schlegel is striving to project the image of an Earthly Paradise, as a first step toward its creation. The creative artist is actually the best model of the perfect closure of Conscience, because whereas Conscience depends upon recognition by a community of like consciences that already exist, there cannot, by definition, be a community already prepared to recognize the genius-Conscience, at the point of inward antithesis where it passes beyond "law" and *creates* a higher kind of duty. As a *world*-shape (or a *Gestalt* of Spirit proper) the moral Genius logically has to *have* a community; but this community is one that it must itself create. This project is already implicit in Schleiermacher's conception of the Protestant ministry; but it becomes perfectly explicit in the work of those writers who do not have any formal qualification as preachers, and who do not themselves occupy a pulpit.

A novel like *Lucinde*, or the *Lehrlinge zu Sais* of Novalis is the outward expression (the "intuition") of this lonely "divine service" as an object of consciousness. For in works of this kind (or even in the "Confessions of a Beautiful Soul" in Book VI of *Wilhelm Meister*) the "objective element" provided by the literary portrayal is "the utterance of its knowing and willing as those of a universal." The self of this genius-Conscience becomes universally valid, and its action becomes a "deed in execution" (*ausführenden Tat*) in the literary work (just as much as in one of Schleiermacher's sermons, though the present participle *ausführenden*—"in process of execution"—does rather favor the actual preacher in the pulpit).

Certainly not all readers of the literary works took them as seriously committed declarations of Conscience (though it is hard, at least for me, to find anything "entertaining" in *Woldemar*, or even in Book VI of *Wilhelm Meister*). But they are all just as earnestly intended as Schleiermacher's *Addresses*. So we are doing no more than justice to them (and to Hegel) in applying what Hegel says to them:

The actuality and stability of the self's doing is the universal self-consciousness [of the readers]; but the utterance of Conscience posits the certainty of itself as pure, and hence as universal self; the others [i.e. the readers] let the action count as valid, for the sake of this talk in which the self is expressed and recognized as the essence. The Spirit and the Substance of their union [*Verbindung*] is thus the mutual assurance of their conscientiousness, good intentions, the rejoicing over this reciprocal purity, the cordial refreshment in the sovereign grandeur of the knowing and uttering, the cherishing and fostering of such outstanding excellence.

Because of the direct continuity of this with the final moment of the normal Conscience, it may seem as if the description can only apply to a real congregation like Schleiermacher's. But in fact the Protestant congregation does not indulge in this self-congratulation. They let the pastor do it for them. Any reader of a few pages of *Woldemar* on the other hand will find the characters doing it *ad nauseam*; and it is we, the readers, who have to let the talk, the embraces and the enthusiasm, pass for the real "activity of soul in accordance with virtue." When we turn to *Lucinde*, the scandalous knowledge that makes this book "conscientious" (i.e. the awareness that Schlegel is writing about his union with Dorothea Veit, then still a private relationship for which no public recognition had been demanded or received), neutralizes any sense of spiritual edification in the ordinary sense. But if we ignore that scandalous aura—as we can do easily enough in our own social context—the tone of virtuous mutual congratulation becomes quite evident.

It is clear, however, that Hegel has Jacobi and Schleiermacher in mind at this point (rather than the conscientious "immoralism" of Schlegel).⁴¹ Julius and Lucinde cannot congratulate themselves in the language of *Conscience*; and Hegel now goes on here to consider the relation between the Sunday-consciousness of living in God, and the weekday-consciousness of living in the physical world. In so far as the Beautiful Soul still distinguishes its "abstract consciousness" in the noumenal world from its self-consciousness in this present world, it has its spiritual life "buried" (*verborgen*) in God.⁴² But withdrawal from the everyday world provides no solution. The perfected Conscience has already overcome this distinction between the self-consciousness of life in this world and the "abstract" objective consciousness of the noumenal world. That distinction is typical of the Moral World-View; the Beautiful Soul cannot return to it. It still knows, just as the ordinary dutiful, rule-guided Conscience did, that the religious presence is identical with the actual consciousness of just this self, now and here in the real world. This self, here and now, is one with God. God is not buried in the inward depths of an intellectual world that is somehow "beyond" this one.

The Beautiful Soul falls short of "absolute Spirit" because it is aware of this identity in an immediate way. We must take seriously the proposition that it is "one with God." We have a properly spiritual connection when the two terms (the infinite and the finite) each recognize the other as "other," and they are only united in a third term that mediates their otherness through its identity. The Beautiful Soul still lacks that mediating term, because it is the immediate consciousness of identity with God.⁴³ But it is already a form of *Religion* because it

knows the immediacy of the presentness of the essence within it as the unity of the essence with its self [or in other words, it knows] itself as the living in-itself, and this knowledge as Religion—which as intuited knowledge, or knowledge that is out there, is the speech of the community about its spirit.

As we know already, this absolute self-sufficiency is the "evil" side of the "knowledge of good and evil." Hegel said in the Preface that "the anti-human, the bestial, consists just in standing still within feeling, and only being able to commu-

nicate through feeling” (par. 69). We can underline the justice of this comment very dramatically by pointing out that Hitler saw himself, and was seen by some of his admirers, as a “Beautiful Soul.”⁴⁴

But we must not overlook the fact that this absolute evil, the very pit of the self, is also the portal of salvation. When the middle term is finally introduced into this closed self, we shall have the *absolutely* human community, the community of the comprehensive knowledge that “forgives” all in coming to know it “absolutely.”

- 26./657. Here the self of self-consciousness has become [Fichte’s] absolute Ego. This is an extreme where both consciousness and world have become abstractions. This *pure* self-consciousness is the poorest shape of consciousness, a disappearing, a certainty that is absolute *untruth*.

The intuition of the identity of the self with God is the intuition of Fichte’s primordial Ego which posits itself as equal to itself. Fichte himself describes this “intellectual intuition” thus:

Briefly: this thinking is the absolute principle of our being; we strictly-constitute our own essence through it, and our essence consists in it. In other words, our essence is not a material content [*Bestehen*], like that of the lifeless things; on the contrary it is a conscious-being, and a *determinate* consciousness to be sure; that which is to be pointed out at present.

That we think in this way, we know immediately; for thinking is just precisely immediate consciousness of the determining of one’s own self as Intelligence; and here especially of the intelligence pure and simple as such-a-one. An immediate consciousness is called *Intuition*; and since no material content [*Bestehen*] arising from a feeling is intuited, but the intelligence immediately as such, and only that, this intuition is rightly called *Intellectual Intuition*. But it is also the only one of its type which occurs *originally* and *actually*, without freedom of philosophical abstraction [from it], in every human being.⁴⁵

This “impulse of absolute self-activity” may be more easily recognizable by most of us in Goethe’s “creative force within us which can create what ought to be.” Self-consciousness has become *for itself* this pure Concept. The way the Romantics conceive the absolute primacy of Genius, or Fichte conceives the absolute spontaneity of the Ego, is exactly the way that we are now portraying it to ourselves. The distinct moments (of self and world) through which it is “real”—i.e. through which it is consciousness of “self” and “world” empirically—are volatilized into abstractions for this consciousness itself. Everything in the world gets its value and its interpretation from the creative act of the self. What it is “for itself” (its action), the “in-itself” (truth, duty, the “essence”) and “what is there” (nature and culture) are all equally mere abstract concepts. The actual Concept is the creative genius.

This pure and absolutely creative self-consciousness is the poorest and emptiest *Gestalt* of consciousness. It is “poor” in the same way that sense-certainty is poor (par. 91). But there is this difference: whereas Sense-Certainty is robbed of its “riches” by necessity, the creative “genius” robs itself. What matters morally is that

the “truth” of this self-certainty is also the absolute “untruth” of arbitrary subjectivity. It is the sort of free self-definition that has *no* objective validity even for itself (not to speak of others). Hegel has already argued that Conscience must be condemned by others (par. 649). Now he wants to show that the pure soul must face its own impurity, that the Beautiful Soul must be ugly “for itself.”

- 27.658. The substance here is the self’s knowledge as its own. The self is its own object, and all distinction is lost in it; it is the Unhappy Consciousness turned into Self-Consciousness. It is a union with God that is purely negative. It is a creative experience that loses everything, a speech that hears only its own fleeting echo. The echo cannot be identified as a return to self, because this self never leaves itself at all; it refuses to let Nature be, or to accept being for itself. It flies from the world and has its own emptiness for object; this beautiful soul is a *lost* soul.

The Substance that is implicit within this absolute self is “knowledge as its own knowledge.” There are several *implicit* meanings here. First, for all of the creators of “beautiful soul” images, the “knowledge” that is implicit in the created picture is Fichte’s “doctrine of science”; the *Wissenschaftslehre* is the science of all human knowledge (and of all experience as a function of the rational self’s necessary knowledge of what knowing and experiencing the world is). Even in Goethe’s picture—which is less “modern” than the others, and closer to the religious experience of the pre-Revolutionary world—we can see this. This Beautiful Soul is “always going forwards, never backwards” and “feels every day more facility in doing what [she] holds to be right”;⁴⁶ she is the Fichtean Conscience to a T.

“As consciousness it is divided into the antithesis of itself and the object which is for it the essence. But this object is precisely what is completely transparent, it is *its own* self.” This “antithesis” will eventually become serious; but at the moment, the “object” is God, and God is the inner self. “God” as the self’s knowledge of its own rational “essence” is the “*substance* that subsists *in itself* as *its own* knowing”; this Beautiful Soul feels itself to be in unity with all life.

But this perfect union turns into the immediacy of a quite self-absorbed self-expression, when the Beautiful Soul attends to its actual life in the world. The Beautiful Soul is the Unhappy Self-Consciousness, but it does not *feel* like that. It feels “happy” for the very same reason that the Unhappy Consciousness is “unhappy”: because it cannot achieve any abiding “objectivity.” The Unhappy Consciousness cannot overcome the world; the Beautiful Soul will not let the objectivity of the world count for anything. It lives in its own dream world instead.

Even Julius and Lucinde in Schlegel’s literary vision exemplify this extreme. Their life together is an image of “Pleasure” unshadowed by “Necessity”; and we know that that is what they wish for, rather than what they actually experience. Julius claims that they have actually *achieved* the Garden of Eden pictured in sentimental love stories:

Today I found in a French book this statement about two lovers: “They were the universe to each other.”

It struck me—and I was moved and smiled at the idea—how something that had been set down so thoughtlessly as hyperbole had become literally true with us!

Actually it's also literally true for this kind of French passion. They discover the universe in each other because they've lost their sense for everything else.

We haven't. Everything that we loved before, we love even more warmly now. It's only now that a feeling for the world has really dawned on us.⁴⁷

But this life is from moment to moment at the level of "sense-certainty"; and there is no sign of an honest acceptance of *death* in this Arcadia. "The *Kraft* of *Entäusserung*, the *Kraft* to make itself into the thing" is lacking. Nothing but the book (the speech-echo) was made of this life; and as far as "dread" and Unhappy Consciousness is concerned, Hegel proved a true prophet—for these "free spirits" were soon to become devout Catholics.⁴⁸

Except for Friedrich Schlegel (and Novalis) the "object" that is the "essence" for the Beautiful Soul is the empty feeling of "divinity"; and even in the aesthetes, the empty sense of "genius" is all that many of their officially philosophical fragments expresses. What saves *Lucinde* is the fact that it is written for (and is largely about) Lucinde not Julius. *Heinrich von Ofterdingen* is not so exclusively narcissist as Hegel's rather cruel comment (in par. 668) about dying of consumption would lead us to believe. But it does illustrate Hegel's complaint that "all life and all spiritual essentiality . . . has lost its *Verschiedenheit* from the *Ichselbst*"—for there is nothing in it that is not strictly emblematic of the poet himself and his "magical" creative power.

For the most part, however, Hegel is thinking of the orthodox religious philosophers here. The "unhappiness" of their condition is concealed by the empty abstraction of their experience. The conscious "alternation" of salvation and damnation has become a fluctuation of aesthetic emotion that is adequately expressed and exhausted by *words*. But we are now dealing with a *Gestalt* of Reason, and indeed with the most perfectly self-conscious *Gestalt* of human rationality: the Self-Concept. The Unhappy Consciousness, even in its perfectly stabilized or reconciled shape (that of the sinner absolved) was only implicitly rational. The Beautiful Soul absolves itself in its conscientious speech; but this speech, like sense-certainty, lives and dies in the moment. Language is the only expression that is spiritual enough to be adequate to this self; and just for that reason the self is evanescent. It does nothing in the world except to die.

The clearest case of this ultimate failure of the Beautiful Soul is to be found in Hegel's complaint against Schleiermacher's conception of Protestant devotion as an "art without works of art."⁴⁹ The speech is completely "satisfied" in its immediate expression. It does not ask for a critical response (cf. par. 69). It is not a "cultural" movement towards the *Dasein* of a new self, through the negation of the actual self.

Hegel is now setting up the antithesis between "talk" (*Rede*—including artistic utopias) and effective action; and the *involuntary* fragmentariness of much Romantic work (its actual incompleteness) illustrates his point quite well. The

Romantic “genius” was always ahead of himself, escaping from himself, beyond what he conceived yesterday, but did not manage to finish. He was always a creator for himself, never a satisfactory creation—never an achieved actuality, because so intensely an agent. In the moral religion of a Protestant thinker like Schleiermacher, even the fragmentary works that the romantic artists did achieve could not be recognized as valid.

But, in any case, like the artist’s self-realization in *Rede*, neither private life and private happiness, nor a “yearning” for some higher “heavenly” condition, will satisfy the criterion of *Dasein* and *Wirklichkeit* that Hegel is employing in this paragraph. Only political commitment to the creation of a new social world would be adequate. Hegel’s comment about “living in the anxiety of soiling [*beflecken*] the heavenly glory through action and thereness, and fleeing from contact with actuality in order to preserve the purity of its heart,” may be an echo of Hölderlin’s *Hyperion*.⁵⁰ But the identification of the source is not equivalent to the identification of the intended reference, since Hyperion is precisely the Beautiful Soul who does *not* let this anxiety paralyse him. When Alabanda will not explain his conspiratorial connections, Hyperion suffers the temptation to go home and cultivate his garden (like Candide or Julius and Lucinde); and he does, indeed, go home, but he does not stay there. When it turns out that staying home would have been the path of wisdom, because the glory and purity of his political ideal does indeed get badly stained, Hyperion dies in battle (at least symbolically, for he is taken to be dead when his body is carried from the battlefield).

Hyperion’s is the full story of the “hard Heart,” to which we have not yet come. The importance of his “temptation” is that it shows us what is meant by *Handlung* and *Dasein* here. All of the “beautiful souls” are devoted to “good works”; but their private domestic activity is not *historical* action. Historical commitment is what all of the beautiful souls are afraid of (and only Hyperion overcomes the fear). As far as the public world is concerned, they are satisfied with preaching and pious talk. The figure for whom his whole “world” is just the echo of his talk is easily recognized as the Heinrich von Ofterdingen of Novalis.⁵¹ But the one who actually goes home to his garden—specifically to the Garden of Eden—is Julius with his Lucinde; and in that instance the avoidance of *Dasein* takes an important *symbolic* form. In their private Paradise the “outward action and thereness” of a formal marriage service is deliberately avoided. Their marriage is a “conscientious” one; they *say* they are married, and that makes it so.

Schleiermacher defended this “conscientious” concept at the time.⁵² This is important, because his religion of inner feeling is the most significant philosophical and social manifestation of the “hollow object” which—in its “yearning” aspect at least—is metaphysically “unhappy.” I am obliged to speak of “metaphysical unhappiness” here, because none of the “Beautiful Souls” that are portrayed in the literature is unhappy in its own perception of itself. Julius and Lucinde enjoy the life of Paradise Regained. Similarly Goethe’s model is plainly convinced that she has finally achieved the only true happiness that is possible on Earth.⁵³ When Hegel finally uses the term “beautiful soul” he applies it directly to the ideal of an author

who never uses the term at all (Novalis); and he qualifies this completely “blessed” ideal as “unhappy.”

He also uses the name ironically, for his use of the qualification “so called” clearly implies that this soul is not *really* “beautiful” at all; and I think the adjective “unhappy” fleshes out the irony. The “unhappiness” of the “Beautiful Soul” is like the unhappiness of the unjust man in Plato (let us say, specifically, the “unhappiness” of Thrasymachus or Callicles). It is something that *we* can observe, but which the souls themselves are unaware of. Hyperion is certainly aware of unhappiness, until he becomes the “hermit in Greece.” But then, when he has actually reached the ultimate depths of metaphysical “unhappiness,” he also takes himself to be blessed. Hegel’s reference to the Unhappy Consciousness fulfils two functions: on the one hand it rounds out the career of “rational selfhood” into its full circle; and on the other hand, it shows what a gap there still is between our view of the observed consciousness, and its view of itself. We are now only a single step away from a perfect coincidence with our object, but it is the furthest of all steps: the Beautiful Soul takes itself to be enjoying “blessedness” when it is really damned in the Hell that it has made for itself.⁵⁴

The “beautiful soul” of the literature—and the aesthetic religion of Schleiermacher’s *Addresses*, or the “loving life” of Fichte’s *Way to the Blessed Life* (1806)⁵⁵—is a *lost* soul, and the aesthetic cult of Paradise is a cult of Paradise Lost. The beauty that it loves is an object of longing; it is precisely what it *not* visible in the world.⁵⁶ We can see what is wrong most clearly by comparing this religious “love” with the Greek religion of art. In the Greek experience the beauty is realized, present, and political; and in tragedy even human mortality is faced and accepted into the synthesis. Reconciliation with death is where even Schlegel’s religion of the Earthly Paradise breaks down, and stands revealed as being just as much a hopeless “longing” as the purely spiritual ideals of “inner beauty.” Either Julius or Lucinde will die, and the other will have to come to terms with that loss. In the end both must die anyway, and if the real significance of life is in their shared experience of life as “sense-certainty,” where is the “substantial” meaning of it? Is it not “hollow”?

To put it another way, what response can Friedrich Schlegel make to Sartre’s dictum that “Man is a futile passion”? Of course the Hegelian response to that dictum would not satisfy Sartre in any case; but at least there *is* a Hegelian response. Julius and Lucinde, on the other hand, seem to be in exactly Sartre’s situation; they “want to be God” in an unrealizable sense. That is their “unhappiness”; the difference between Schlegel and Sartre is precisely that Sartre *knows* he is unhappy.

28./659. We have still to consider this absolute self-consciousness as an actuality that appears; i.e. we must consider conscience as agent. As *this* self it is distinct from the rest of the community (which is a multitude of singular consciences). In this aspect the right of conscience is just the right to justify having my own way. The content of this self-will comes from my natural individuality; and I am well aware that my purpose is my own, and that the others can see this too.

The Concept of the Beautiful Soul has now been completely stated. When we turn from the speech of the Beautiful Soul to its actions, we are coming to its "experience." The difficulty that the Beautiful Soul faces is that in the actual world it is only a singular agent; and even if its words are its world, an outside audience for those words is needed. This audience are all "reflected out of the universality [of their mutual admiration society of life in God, or of the "love of humanity"] into themselves [as private beings-for-themselves]." All are agreed that it is the spontaneous impulse to do what is beautiful and loving that matters; but they come into conflict both with their spontaneous impulses and with "general feelings"—the "antithesis of singularity to other singulars and to the universal necessarily enters." Thus "the antithesis between what it is for itself and what it is for others" is necessarily one aspect of the Beautiful Soul's consciousness.

We saw already (in par. 649) that others (i.e. some others, at some point, necessarily) are bound to find fault with the "good" conscience, and declare it to be "evil." This practical situation is not changed by the sublation of Kantian moral maxims with their formal universalizability. We do, indeed, already have a perfect model of the shape that critical judgment must take here, in the assault of Schlegel's "Impudence" upon the "Beautiful Soul" of Jacobi and Goethe. The action that can be evaluated in many ways as long as we are in a world of Kantian consciences, can be evaluated only in two ways when we are among the moral geniuses. In the world of "tested laws" my action could be "good" in many respects (some of which might not concern me) and "bad" in many respects (none of which would trouble my "conviction"). But now the act can only be "authentic" (from my side) or "hypocritical" (from the other side).

In the community of the moral genius, everyone is self-exempted from the continuum of rational discussion. We are all "exceptions." We may talk much about our "principles" in the world of Conscience, but we *all* become "exceptions." We are all "beautiful souls" just as surely as we are "conscientious."

One of the great values of *Lucinde* as a *Gestalt* is to make us see this. The exception from social rules that was claimed by Julius and Lucinde has now become almost commonplace. It is certain that most of us now agree that the inner "marriage of true minds" is what is essential, and that the socially recognized bond should be dissolved when that living bond is dead. Very many, though not a majority, now think that the social ceremony is superfluous; and many more, who would not claim an exception for themselves, can see the "beauty" of the ideal involved. Indeed, since our courts are more and more willing to maintain the full rights of these "beautiful people," they have almost ceased to be socially exceptional in any important sense. But they still illustrate perfectly the logic of the conscientious exception; and we can still understand why *Lucinde* was in Hegel's time a very scandalous book. I hope it is also obvious that the book is no longer scandalous because we now comprehend the logic of conscience more fully, and realize that every conscientious person is necessarily an "exception."

The concomitant of this comprehension is that we now talk about "hypocrisy" rather than "immorality." Any exception whose "beauty" is not visible to us

becomes an arbitrary self-exemption from the abstract principles that are still there in the background ready to be called upon whenever we want to justify a negative response. Here in paragraph 659 Hegel lets this submerged critical context come to the surface again. Its new shape, which I have largely anticipated, is in paragraph 660.

- 29./660. On the side of outward being, the values of self-consciousness are reversed. Inwardly it is the self that is concrete universality; outwardly, for the communal consciousness, it is *duty*. Any single self must therefore count as evil in that it wants its own way. Its protestations of conscientiousness are *hypocrisy*.

The moral genius does not live simply in the ideal community of its imagination (or the community of its real, but fortunately invisible, readers). There is a real community of which it is part, but which it can ignore, because they do not understand. This was true even before it became a “genius,” since even the convinced conscience must expect a babel of criticism, which it knows how to discount (par. 650) because “they simply are not in my position.” The full emergence of the shape of Conscience as the creative act of self-definition (which follows necessarily from the discovery that there is no critical voice that can effectively reach the convinced conscience) inverts the primitive belief of Conscience itself that it is “dutiful.” But it also shows us the way in which the self-certain Conscience can finally be reached and broken open.

The explicit argument of paragraph 660 (along with that of par. 659) only spells out in full the underlying structure of what is stated as a simple *fact* in paragraph 649. But at that point it was not gone into, because it was not relevant anyway; the convinced conscience blandly rejects the opinion of others that it is evil. It knows that the others don’t “know” (Fichte’s stout defence in the *Atheismusstreit* is a perfect paradigm case). Now the *Gegensatz* (between what *is* and what *ought to be*) is internalized in the beautiful conscience itself, through the opposite evaluations made by the consciences that recognize one another.

This “reflection out of its universality into itself”—this consciousness of the self as a singular member in a “universal consciousness” that belongs to the community—can only occur when the determination of what is essential swings over to the side of the observing community. Initially the balance is all the other way. The moral “genius” is precisely the dutifully convinced conscience that has recognized that its conviction is all that counts (or that it “creates” its own “duty”). But the observing community is still there, and for it the moment of “duty” is still bound to be the “essence,” i.e. duty is still distinguishable from the moment of self-affirmation (or at least distinguishable from what *is there* for an outside observer). Duty is the *Ansich*, the ideal of what ought to be there.⁵⁷ The observing consciousness declares the active genius to be “hypocritical” in claiming to be “conscientious.” Why should the renaming of the evil strike home at this stage, when the simple accusation of being “evil” was shrugged off before? That is what we still have to discover.

- 30./661. The movement of the antithesis is that *first* the conscientious self must be brought to confess its selfishness; its hypocrisy must be exposed. The simple fact that it *pretends* to be good is only the reality of hypocrisy. For cloaking one's own self-will in good words is using what is supposed to be the real thing [the in-itself] as instrument (showing contempt for it and proving that it does not really matter).
